

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE ANNUAL CYCLOPÆDIA.

A

ABYSSINIA, an empire in eastern Africa. Menelek II, who succeeded Johanniss II as Negus Negusti, accepted an Italian protectorate by a treaty concluded on May 2, and renewed on Sept. 29, 1889, in a convention for mutual protection. The country is made up of the kingdoms of Tigre, including Lasta, Amhara, including Gojam, and Shoa, with the Bogos, Shoho, Mensa, Kunama, Barea, Habab, Beni-Amer territories; the region of the Galla and Kaffa tribes; and Danakil and Adal, on the coast. The total area is about 190,000 square miles, and the population is estimated at from 4,500,000 to 5,000,000. The chief towns are Gondar, the capital of Amhara, with 5,000 inhabitants; Aksum, the ancient capital of the empire, with about as many; Adua, till recently the capital of Tigre, which has 3,000; Ankober, the former capital of Shoa, with 7,000; Liche, the present capital of Shoa, with 3,000; and Makalle, the present capital of Tigre. The principal occupation of the people is raising cattle, sheep, and goats. There are forests abounding in valuable woods, and indigo, cotton, sugar-cane, the date palm, and the vine grow thriftily, but little attention is given to their cultivation. The products most largely exported are ivory, skins, butter, gums, and mules. Nearly all the foreign commerce passes through the Italian port of Massowah. The money of the country consists of Maria Theresa dollars, still coined in Austria for this part of Africa, besides which bales of cloth and salt are used as currency.

War in Tigre.—In a devastating war for supremacy in the northern kingdom Ras Mangascia was victorious over his adversary, Ras Alula, in the beginning of 1893. In March Alula had reorganized his forces, and the war broke out afresh.

AFGHANISTAN, a monarchy in central Asia. The present Ameer, as the hereditary sovereign is called, is Abdurrahman Khan, a grandson of Dost Mohammed, who was placed on the throne after the British invasion of the country in 1879-'80 in consequence of the massacre of the British envoy and his suite at Cabul. The kingdom is divided into the provinces of Cabul, Herat, Candahar, and Turkistan, and the district of Badakshan. The boundary dividing Afghanistan on the north from Russian Turkis-

tan and the khanates under Russian influence is the river Oxus and a line drawn by an Anglo-Russian boundary commission from Khamiab, on the Oxus, in a southwesterly direction to Zulfi-kar, on the Heri-Rud, thence southward to the peak of Kuh Malik-i-Siyah, near the Helmund, and then, with a bend to the east, to the Kwaja Amran range. The Persian frontier on the west is tolerably well defined, as is the western part of that between Afghanistan and British Beluchistan. Farther east, in the Zhob valley and the Waziri country, and in the southeast, in Kafiristan, Chitral, Swat, and the upper basin of the Indus, the Indian Government is extending its political influence over the tribes that the Ameer claims as his subjects. In the extreme east, the Pamir region, the boundaries between Afghanistan, and Russia's sphere on the north, Chinese Turkistan on the east, and India on the south are indeterminate and subject to dispute.

Besides the Ghilzai, Durani, and other Afghan tribes who inhabit the central parts of the country, the population, which exceeds 4,000,000, includes the Tajiks, probably of Persian origin, who cultivate the soil and ply peaceful trades, and in the north the Aimaks and Hazaras, who are supposed to be descended from the former Tartar conquerors, and the Uzbecks. A large part of the Hazaras and the Kizilbashis are Shiite Mohammedans, while the rest of the population are Sunnites.

The regular army established by Shere Ali has been revived by Abdurrahman, who is said to have about 50,000 troops. The tribal levies are incorporated with these as irregular auxiliaries, with the exception of the horsemen, who still follow their feudal chiefs. Gifts of ordnance from the Indian Government arm 6 mule batteries, 2 field batteries, and an elephant battery. There is an arsenal in Cabul for the manufacture of ammunition.

Commerce and Production.—Afghanistan is noted for the abundance and excellence of its fruits, on which a large proportion of the people mainly subsist. Apples, pears, peaches, almonds, quinces, apricots, plums, cherries, grapes, figs, mulberries, and melons thrive to perfection, and quantities of preserved fruits are exported. Wheat, barley, chick peas, beans, millet, rice, maize, and panic grass are cultivated. The cas-

tor-oil plant, madder, and asafoetida abound, and of the latter there is a large export to India. Lead, copper, iron, and some gold and precious stones are mined. Silk is produced extensively, and felt, carpets, rosaries, and postins or sheepskin coats are exported. Horses, wool, spices, timber, and nuts are also exported largely. The chief imports from India are cotton piece goods of British and Indian manufacture, China tea, indigo, and sugar. The imports of Russian merchandise from Bokhara in 1890 amounted to 3,944,568 rubles, and the exports to Bokhara were 3,983,270 rubles in value.

Anglo-Afghan Disputes.—The military defenses of northwestern India were considered complete when the mountain passes through which hostile armies have entered the Indus valley were occupied and fortified and strategic railways and arsenals established in Sindh. The passes and all the mountain region before the last Anglo-Afghan war belonged to untamable hill tribes, which were supposed to be subject to the Khan of Kelat or the Ameer of Cabul. Since then the British authorities, besides increasing the numerical war strength of their army enormously and training a native auxiliary army offered by the feudatory princes, have established a new military frontier, which is intended to confine the scene of any armed struggle with a Russian army in Asia to the region beyond the Himalayas. By advancing to Quetta they have, moreover, contracted the front open to a direct attack, and can place troops in the field to face a Russian advance coming in any direction through Afghanistan and forward troops and supplies several times more swiftly than can the Russians. The fortress of Quetta is a position that can not be turned, and the waterless and impassable nature of the country on either side renders the single line of railroad communication entirely safe from an enemy in front, while the energetic work of pacification carried on for several years past has secured it against treachery from within. The Quetta Railroad and the two broad-gauge railroads up the Bolan and Harnai passes permit of the rapid accumulation of forces behind the extended works of Quetta, which a defeated general could hold until the enemy, lacking railroad communications, would be compelled to relinquish the positions he has seized whenever a crushing force, brought up by rail, advances upon them. In securing this position it was necessary not only to annex a great part of Beluchistan, but to begin the disintegration of Afghanistan by conquering neighboring hill tribes belonging politically, as well as ethnically, to the Afghan kingdom. The fact of their political allegiance to the Ameer, formerly insisted upon in order to hold him morally responsible for the misdeeds of the wild hill men, was denied by the Indian authorities after they began the difficult task of subjugating them, in order to keep up the fiction of a buffer state, a strong, free, and independent Afghanistan. Abdurrahman, who had been induced to employ his military forces in reimposing the Afghan yoke on the alien races of Afghan Turkistan, and in extending his conquests over Roshan, Shignan, and Wakhan, even establishing posts in the Pamirs in order to dispute their possession with the Russians and the Chinese,

turned his attention to the defense of his southern borders against the encroachments of his ally. In the east the British planned to extend their political frontier quite up to the Hindu Kush range, although the Yusufzais and Mohmands beyond Peshawur and the tribes of the Swat and Kunar valleys and Kafiristan have hitherto acknowledged no foreign master except the Ameer of Cabul, whose rule has been asserted also among the Dards and Kohistanis beyond Cashmere and Gilgit, and in Chitral and Yassin, farther north. The feverish haste of the British to annex these alpine districts did not spring from a fear that the Pamirs and the icy passes of the Hindu Kush and the Himalayas in this region could ever be used for the passage of a hostile army. The object was to create a buffer under British dominion which will prevent all intercourse between the people of India and the Russians when the latter shall have established themselves in the Pamirs, and thus guard against the intestine political dangers that would arise from the immediate proximity of another powerful European military empire in a region where a fortified military frontier and a strict frontier guard are unnecessary and impracticable.

The operations against the Pathan hill tribes near the new railway line and in the Peshawur district led to a coolness between the Ameer and the Indian Government, which was increased when the British seized and fortified a strategic position on the farther side of Pishin in territory that was unquestionably Afghan. The khanates bordering on the Pamir region have sometimes paid tribute to Afghanistan and sometimes to Cashmere. If the British had done nothing to excite his jealousy in districts nearer Cabul the Ameer might have allowed them to work their will in these distant provinces. As it was, he used all his craft and influence to frustrate their designs. When Aman-ul-Mulk, the Mehtar of Chitral, died, he was succeeded by his son Afzul, who was well disposed toward the British. But before the death of Aman-ul-Mulk Afghan troops had been pushed up the Kunar valley, and hardly had the young chief assumed the government when he was confronted with a pretender, Sher Afzul, who with the assistance of the Afghans entered Chitral from Badakshan, seized the fortress of Chitral, put the new chief to death, and proclaimed himself Mehtar. The British authorities at Gilgit gave their countenance and aid to Nizam-ul-Mulk, brother of the murdered Mehtar, who about the beginning of 1893 defeated the usurper, who fled into Afghanistan, and established himself in the chieftainship. The English were thus enabled to continue their operations among the mountain tribes beyond Chitral. After they had occupied a place called Chilas with a garrison and erected a permanent fort they were attacked by 1,500 of the neighboring Kohistani mountaineers, who were finally driven off after a desperate battle, in which 200 of them were killed. The British then took the offensive, and marched against the villages of the hostile tribes, destroying one after another, until the natives made their submission. Of the British, 23 were killed, including Major Averell Daniell, the leader of the expedition.

The Ameer raised a strong protest against the British occupation of the village of Biland-Khel

in the Kurram valley, east of the Kurram pass. He instructed the Afghan Governor of Khost to regain possession of the place by force when the British commander refused to heed his remonstrance. To avoid a collision the Indian Government, in March, ordered the troops to be withdrawn from Biland-Khel to the other side of the Kurram river, after obtaining an agreement from the Ameer to leave the boundary question open for future settlement. With a view to the restoration of an amicable understanding and the settlement of this question and the trouble among the tribes on the Indian frontier, Abdurrahman was invited to a conference with Lord Roberts at Jellalabad. The Ameer declined to meet Lord Roberts to confer upon questions touching his relations with his subjects, which he claimed the right to deal with according to the sacred laws of the Afghans without outside interference. He declared that he had armed the Afghans to meet an attack from either England or Russia, while willing to co-operate with England in a satisfactory plan for defending the northwestern frontier against the latter. Europeans who were in the Ameer's employment at Cabul were dismissed, or found it advisable to resign and leave the country on account of the threatening actions of the Ghazis.

The Pamirs.—The Pamir region is a remarkable plateau in the heart of Asia, where great mountain ranges come together. Its length from north to south is about 250 miles, and its breadth 120 miles. Winter lasts eight months, but during summer the Kirghis find rich pasture for their fine cattle and strong mountain horses. The sovereign rights over this country have been claimed by the Emir of Khokand, by the Afghan Ameer, and by the Chinese of Kashgar. Instigated by the British, the Ameer deposed the Khan of Badakshan and attempted the subjugation of the khanates of Shignan and Wakhan. The Chinese, with the approval of the British, advanced up the slopes from Kashgar and established garrisons in the eastern Pamirs, while the British themselves, on the southern border of the Pamirs, seized Hunza and Yasin and posted garrisons in those places. As successors to the rights of the Emir of Khokand the Russians claimed the entire region, which was now partitioned between the Afghans and the Chinese, with the exception of a narrow strip in the middle. An Anglo-Russian agreement made the Oxus the limit of the Russian sphere up to its fountainhead. The English held that the Murghab, in the north of the Pamirs, was intended, but the Russians contended that the Panjah branch, which runs close to the new British frontier, must be considered the true source of the Oxus.

In April, 1892, the Afghan forces attacked a Chinese garrison stationed at Somatash, a small town in the western part of the Pamir region. The Chinese were driven out, and their authorities remonstrated with the British Government, which had previously upheld the Afghan claim to sovereign rights over the greater part of the Pamirs, but was now disposed to admit the Chinese claim to all the territory from Somatash eastward. While negotiations were proceeding on this basis the Russians sent 1,200 infantry, cavalry, and artillery, under Col. Yonoff, to expel both the Afghans and the Chinese and take

possession of the whole region. The Chinese forts in the eastern Pamirs were evacuated on the appearance of this superior force, but preparations were made in China to re-enforce the garrison in Kashgar and strike a blow for the possession of the disputed territory. This design was not carried out because a diplomatic arrangement promised more satisfactory results to the Pekin authorities, who had no real interests here except to safeguard Kashgar. When the Russians reached Somatash the Afghan advance guard fired upon them, and the fort was not taken without a fight, in which all the Afghans were killed or made prisoners. After this the Russians held undisputed possession of the Pamir region, and a part of the troops went into winter quarters there. During the winter 300 Russian troops were kept in the Pamirs, and in April, 1893, two battalions of infantry and two batteries of artillery were dispatched from the northwest to increase the army of occupation. The British Government entered into direct diplomatic negotiations with Russia for a delimitation of the respective spheres of interest in this region, based on ethnographical considerations and the previous political relations of the inhabitants. These negotiations were necessarily slow, and the Russian Government gave the assurance that no further active operations should be undertaken and no new expedition or re-enforcements sent to the Pamir during 1893. The Russians were reported, however, to have already required the Afghans in Wakhan to surrender Kala Panja. This position commands the passes leading to Chitral, while the possession of the Little Pamir gives access to Kanjut through the Wakhjirui pass. In June, 1893, 500 Russian infantry, two sotnias of Cossacks, and mountain artillery left Marghilan for the Pamir region. These re-enforcements, it was said, were to remain in the Alai valley, except those that were necessary to relieve the guards stationed in the Pamirs. The Chinese Government was not content to leave to diplomacy alone the care of its interests in the part of the Pamirs that commands Kashgar. Three military outposts west of Kashgar were held by Manchu and Mongol troops, an experienced general was placed in command at Kashgar, and large reserves were kept at Kulja and Tarbayatai, while a strong garrison of the best Manchu troops, with Krupp and machine guns, was sent from Chihli to Shensi. The Pekin Government was not interested directly in the portions of the Pamirs leading to Afghanistan or Cashmere, but was determined to maintain its claim to the region lying between the Transalai and Alichur mountains. The Chinese minister to Russia was instructed by the Tsungli-Yamen to concede nothing in the neighborhood of the Kara-kul lake, and to insist on sovereign rights over all the territory eastward of a line drawn from the southern extremity of the lake for 60 miles southward, and including all the country inclosed in the spur of the Tian-Shan range, which runs southward from the Ekizeh pass, and is known as the Kartag mountains. This district is inhabited by the Prute tribe of the Kirghis, who have never become reconciled to Chinese dominion, but would be likely to co-operate with the Chinese against the Russians.

Russian Progress.—The Russian administration in the province of Ferghana has been building a road leading into the Pamirs and Kashgaria. The Russian trade with Central Asia has so increased that the Transcaspian Railway is not sufficient for the traffic. A new railway or a canal is demanded. A plan is contemplated for connecting the Amu Daria with the Caspian by a navigable water way, which would afford the necessary facilities for transportation, and at the same time could be utilized for the irrigation of thousands of square versts of rich land suitable for the cultivation of cotton. A railroad from Orenburg to Tashkend is also under consideration. The Asiatic visitors to the fair at Nijni Novgorod are annually increasing. Even Afghan merchants are represented there. During 1893 the Emir of Bokhara and the Khan of Khiva visited the Czar in St. Petersburg. A dispute which arose regarding the use by the Russians and Afghans respectively of the water of the river Kushk, in the neighborhood of the delimited Russo-Afghan frontier, was settled in the summer of 1893 by Col. Yate and a Russian commissioner, who met on the spot to study and decide the matter in consultation.

ADVENTISTS, SEVENTH-DAY. The following is a summary of the statistics of the Seventh-Day Adventist Church as they are given in the Seventh-Day Adventist Yearbook for 1893: Number of districts, 7, viz., Atlantic, Southern, Lake, Northwest, Southwest, Pacific, Foreign; of conferences or territorial organizations, 45; of ministers, 244; of licentiates, 156; of churches, 1,102; of members, 38,778; amount of tithes, \$302,310. The foreign conferences taken separately, including churches in Australia, Great Britain, Central Europe, Denmark, New Zealand, Norway, South Africa, Sweden, Polynesia, Germany, Russia, South America, the West Indies, and Central America, return 37 ministers, 18 licentiates, 108 churches, 3,524 members, and \$52,710 of tithes. The General Conference Association balanced its resources and liabilities at the end of 1892 at \$261,732. The Foreign Mission Board returned its receipts at \$60,886, and its disbursements at \$46,362. The International Tract Society returned its resources and liabilities at \$7,844; the Educational Society at \$119,378. The receipts of the National Religious Liberty Association for six months had been \$12,121. The International Sabbath-School Association reported the number of schools as 1,552, with 35,223 members, and an average attendance of 26,075; and the gifts of the Sabbath schools to missions amounted to \$18,456. Publishing houses in connection with the Church are established at Battle Creek, Mich., Chicago, Toronto, Ont., and Oakland, Cal.; and other publishing houses in London, Christiania, Norway, Basel, Switzerland, and Melbourne, Australia. The educational institutions are Battle Creek College, Mich.; Union College, College View, Neb.; Healdsburg College, Cal.; Walla Walla College, College Place, Wash.; South Lancaster Academy, Mass.; Claremont Union College, near Cape Town, South Africa; and the Australasian Bible School, Melbourne. Health institutions are maintained at Battle Creek, Mich., and St. Helena, Cal.

The General Conference met in its thirtieth session at Battle Creek, Mich., Feb. 17. Thirty-

three conferences and 4 mission fields were represented. In the resolutions adopted on public questions, emphasis was given to the position of the Seventh-Day Adventist Church as demanding the most complete separation of Church and state. One series of resolutions took the form of an appeal and protest against a decision of the United States Supreme Court declaring the United States a Christian nation, and against the passage of an act of Congress directing the closing of the Columbian Exposition on Sunday, as a violation of the Constitution and invading "the dearest rights of the people, by legislating on the subject of religion, deciding a religious controversy, and establishing a religious institution"; appealing as Christians "on the ground of the divine right which Jesus Christ has recognized and declared—the right of every man to dissent even from the words and religion of Christ"; as Protestants, "on the ground of the historical right to protest against every interference of government in the affairs of religion"; as American citizens, "on the ground of the specifically declared constitutional right to the free exercise of religion according to the individual conscience"; as men, "on the ground of the natural right of mankind to render to the Creator such homage, and such only, as each believes to be acceptable to him." The resolutions represented "that the only proper objects of civil government are the happiness and protection of men in the present state of existence, the security of life, liberty, and property of the citizens, and to restrain the vicious and encourage the virtuous by wholesome laws, equally extending to every individual." But religion can be directed only by reason and experience and is cognizable only at the tribunal of the Universal Judge. Other resolutions protested against a bill proposed in the Legislature of Tennessee exempting Seventh-Day Baptists, Adventists, etc., from the penal operation of the Sunday laws, provided they observe one day in the week as a day of rest, declaring that consent to the act "would be only to surrender to the state our God-given right to be religious or not religious, to observe or not to observe a day, according to the dictates of our own consciences and the convictions of our own minds; and would be only to consent that the state shall take judicial and supervising cognizance of our religious beliefs and our conscientious observances"; as well as to consent to have enforced on others that (the observance of Sunday) which they would not have forced on themselves. The conference also protested against the exemption of Church property from taxation. The local conferences were advised to hold workers' institutes for the study of "religious liberty subjects." For propagating the principles of the denomination in foreign countries a more vigorous and thorough work in Great Britain was determined upon; assistance was pledged in the establishment of a school for workers in Australia; the Foreign Mission Board was advised to send an American family of suitable experience and qualifications to Constantinople; the opening of a mission in India was advised, to include health and medical missionary work, teaching, Bible work, canvassing, and translating and publishing small works in the native tongues;

suitable persons were invited to engage as self-supporting missionaries; the establishment of a Chinese mission school in Chicago was decided upon; the selection was advised of young men of good education to be sent to countries in which there is no Adventist literature, study the languages, and prepare such literature in them. Action was taken for strengthening or introducing the publications of the denomination in the Danish, Swedish, and German languages, and in Holland and Finland; the acquisition of the denominational periodicals to be controlled by the General Conference, and a unification of the publishing interests, were decided upon; a committee was constituted to prepare a plan for the examination of candidates for ministerial license and credentials. This committee reported a schedule of topics upon which such examinations should be conducted. Recommendations were made for opening new schools in Texas; at Parkmount, near Bainbridge, Ireland; a training school for persons of mature age at Battle Creek, Mich.; a school at Grayville, Tenn., was approved; and the establishment of other local schools in the South for white students and colored students was recommended.

ALABAMA, a Southern State, admitted to the Union Dec. 14, 1819; area, 52,250 square miles. The population, according to each decennial census since admission, was 127,901 in 1820; 309,527 in 1830; 590,756 in 1840; 771,628 in 1850; 964,201 in 1860; 996,992 in 1870; 1,262,505 in 1880; and 1,513,017 in 1890. Capital, Montgomery.

Government.—The following were the State officers during the year: Governor, Thomas G. Jones, Democrat; Secretary of State, Joseph D. Barron; Treasurer, Craig Smith; Auditor, John Purifoy; Attorney-General, William L. Martin; Superintendent of Public Instruction, John G. Harris; Commissioner of Agriculture, Hector D. Lane; Railroad Commissioners, Henry R. Shorter, J. T. Holtzelaw, appointed in February to fill the vacancy caused by the death of Commissioner Lawler, Wiley C. Tunstall; Chief Justice of the Supreme Court, George W. Stone; Associate Justices, Thomas N. McClellan, Thomas W. Coleman, J. B. Head, and Jonathan Haralson.

Finances.—For the fiscal year ending Sept. 30, 1892, the State treasury statement is as follows: Balance on Oct. 1, 1891, \$176,089.40; total receipts for the year ensuing, \$1,783,532.65; total disbursements, \$1,767,659.80; balance on Sept. 30, 1892, \$191,912.25. Of this balance the sum of \$132,561.80 was derived from the special tax of $\frac{1}{4}$ mill for the relief of Confederate soldiers, which was then payable under the terms of the law authorizing the tax, leaving an available balance of only \$59,350.45. In order to prevent a deficit during the year 1893 and subsequently, the General Assembly was obliged to raise the State tax rate from 4 to 5 mills. The State debt on Sept. 30, 1892, amounted to \$9,293,100; but there is outstanding a considerable amount of old bonds, which, if brought in to be refunded under the terms of existing laws, would increase the debt to the extent of \$249,500.

Valuations.—In 1891 the total assessed valuation of taxable property was \$275,316,491, an increase of \$16,236,916 over the preceding year. This was the highest valuation attained since

the civil war, being more than double that of 1876. But in 1892 the taxable values dropped to \$260,926,127, real estate being valued at \$154,690,657, and personal estate at \$106,235,470. "The causes of this marked decrease," says the Governor in his message to the Legislature, "are not far to seek. During the year 1892 cotton continued to be marketed at a price below cost, and there was great depression in the iron market. Many premature enterprises were compelled to cease operations and go through the process of liquidation. Speculative values, which discounted future prosperity with too sanguine hopes, settled down under the inexorable law of supply and demand. Unhappy differences, waged with unwonted bitterness over State politics for more than a year before the State election, disturbed public serenity and retarded confidence."

Legislative Session.—The General Assembly, which convened at Montgomery on Nov. 15, 1892, and adjourned on Dec. 12 to Jan. 19 of this year, concluded its work on Feb. 21. Early in the session the returns for State officers were opened and counted, and the regular Democratic candidates were declared elected. The vote for Governor was found to be 126,959 for Thomas G. Jones, and 115,524 for Reuben F. Kolb. The friends of candidate Kolb were anxious to contest the election, but as they had not a majority in the General Assembly they were unable to secure the passage of a law authorizing such a contest. One of the most important results of the session was an act providing for registration of voters and introducing the Australian system of voting in all elections. Under this act the duty of preparing the official ballots is imposed on the probate judges in each county. The ballots shall be printed on plain white paper of such thickness that the printing can not be distinguished from the back. The names of candidates shall be arranged under the designation of the office for which they are nominated, and in alphabetical order according to surnames. At each polling place there shall be at least one booth or voting compartment for each 100 electors registered and for any fraction of 100 exceeding 50. These booths or compartments shall be fitted with a shelf or table, and so constructed that the voter may mark his ballot secretly. He shall indicate his choice by placing a cross before the name of his candidate, or by writing in a name and placing a cross before it. A voter who can not read may, in preparing his ballot, have assistance from one of the inspectors of election, to be chosen by the voter, or of a person appointed by the inspectors for that purpose, and the inspectors may appoint as many assistants as they deem necessary in the preparation of his ballot.

Another important act of the session introduces a complete change in the management of State and county convicts. The entire control of the convict system is thereby intrusted to a board of nine managers appointed by the Governor, of which he is *ex officio* president. The convicts are to be classified and graded, and although they may still be let out under contract, yet in every such case they shall be fed, clothed, lodged, and doctored by the State, and shall be under the immediate custody of the

warden or other person employed by the State. After the termination of existing contracts no State or county convict shall be employed in any mine. The State convicts shall then be employed in diversified industries, and among other things shall manufacture articles commonly needed at the Penitentiary and other State institutions. The managers of such institutions shall not purchase any article when it can be obtained from the State Penitentiary. For the purpose of carrying out this act, the Board of Managers is authorized to acquire land and erect buildings, as the present Penitentiary buildings are inadequate. The net income of the Penitentiary for the year ending Sept. 30, 1892, and for five years next ensuing, is appropriated for this and other purposes of the act. Schools shall be established for the convicts, at which attendance shall be compulsory. County convicts may be worked on county roads, and shall be under control of the Board of Managers.

The Governor was authorized to enter upon negotiations for the consolidation and adjustment of the bonded State debt, on the basis of 4 per cent. interest, and was empowered, if he should find such a course practicable, to issue new 4-per-cent. bonds to an amount not exceeding the State debt, and to exchange them at par for the outstanding bonds.

Provision was made for selling at auction, at the county courthouse of each County, the State lands known as swamp and overflowed and indemnity swamp lands. The sale is to begin on the first Monday of December, 1893, and continue till all such lands are sold or offered for sale; but none are to be sold at less than 25 cents an acre.

In order to secure sufficient revenue for current expenses, the tax rate for 1893 and 1894 was increased to 5 mills; but the Governor was authorized to suspend the collection of a part of such tax in either year, if the condition of the State treasury should warrant.

An industrial school for white girls was established, and the sum of \$5,000 in the year 1895, and \$10,000 in the year 1896, was appropriated for its use. For each of the years 1893 and 1894 the sum of \$11,500 was appropriated for encampments of the State militia. A license tax was imposed on the capital stock of corporations, and a privilege tax upon express companies, graduated according to the length of their lines in the State. Insurance companies of every kind were required to pay a tax equal to 1 per cent. of their gross premiums from business in the State, after deducting return premiums on canceled policies and losses actually paid. Telephone companies were taxed 1 per cent. on their gross receipts.

A law was passed permitting a contest in the case of elections for members of the General Assembly, for chancellor, for judge of the circuit court, and for certain minor officers, but in no other cases. An amendment to the State Constitution was proposed, authorizing the General Assembly to confer upon trustees of school districts the power to levy a special school tax of not more than one fourth of 1 per cent. on the assessed valuation of the district, and to apply the money collected thereunder from the white taxpayers exclusively for the benefit of chil-

dren of the white race, and the money collected from colored taxpayers exclusively to the education of colored children. For the years 1893 and 1894 the sum of \$350,000 was appropriated annually for public schools.

Other acts of the session were as follow:

To prevent the perpetration of fraud by directors and managing officers of corporations.

To regulate the taking of oysters from the public reefs in the State.

To compel the determination of claims to real estate, and to quiet title to the same.

Establishing the first Monday of September in each year as a holiday, to be known as Labor Day.

To punish officers and agents of banks and banking institutions who receive deposits knowing that such banks and banking institutions are insolvent.

To provide for more competent men in the transportation service on railroads in the State.

Requiring sleeping-car companies to pay a privilege tax of not less than \$500 and not more than \$1,000.

To regulate the business of building and loan associations.

To encourage the building and operating of cotton and woolen factories in the State.

To relieve married women from the disabilities of minority.

Authorizing commissioners' courts and county boards of revenue to aid indigent Confederate soldiers.

To subject shares or interests in the stock of private corporations to levy and sale for the payment of taxes.

A bill providing for a convention to revise the State Constitution was defeated in the House.

Education.—For the school year ending in 1892, the number of children of school age in the State was 550,522, of whom 309,628 were of the white race and 240,894 of the colored race. To aid them the State appropriated \$350,000 out of its general taxes, and in addition thereto the interest on the sixteenth section fund, the United States surplus revenue fund, and the amount of poll taxes, making a total expenditure during the year of \$627,911.66.

The State Superintendent reports that the number of schools during the past two years has been greater than ever, with a better attendance, and that the people are supplementing the public appropriations with their private means to a degree not heretofore known.

The Alabama Institute for the Deaf, the Academy for the Blind, and the School for Negro Deaf Mute and Blind, maintained by the State, in Talladega, are not intended as asylums or homes, but are really parts of the public-school system of the State. The property of the State at this place is estimated at \$125,000. In November, 1892, the number of pupils was as follows: White deaf mutes, 82; white blind pupils, 54; colored deaf mutes, 14; colored blind pupils, 13; total, 163.

The State pays for the maintenance of these schools on the *per capita* plan, \$217.53 per pupil for the deaf and \$230 per pupil for the blind.

Convicts.—On Aug. 31, 1892, there were 2,098 prisoners under confinement in the State, of whom 1,183 were State convicts and 915 county convicts. The greater part of these were employed in coal mines, but by the provisions of the law passed this year by the General Assembly the early removal of all convicts from such employment is contemplated. For the

period of twenty-three months, ending on the date last mentioned, the net income from convicts was \$157,702.58.

Militia.—The total number of officers and men in the State militia is about 2,730, but at least 40 per cent. of this number are inefficient from lack of discipline and proper equipments.

Pensions.—The special State tax levied for the relief of Confederate soldiers and their widows yielded a fund for distribution in 1892 amounting to \$181,362.02. There were 4,955 applications, and each applicant received \$26.50. A special fund for the blind, for which there were 38 applicants, yielded \$31.57 to each applicant.

Manufacturing.—In 1893 Alabama had 20 cotton mills in operation, containing 109,448 spindles and 1,900 looms, which consumed during the year 39,700 bales of cotton, or 18,714,057 pounds. The capital invested was about \$3,000,000. In 1880 there were 16 mills, with only 49,432 spindles, consuming yearly 7,271,791 pounds of cotton, and representing a capital of only \$1,246,500.

Lumbering.—Alabama ranks third in the South in the amount of available timber it contains, and in variety of woods it has few equals. Virgin forests cover nearly one third of the State, and this vast area of timber land is intersected in every direction by navigable streams. The principal timber woods are pine, white oak, hickory, black walnut, and wild cherry. The principal forests of long-leaf pine are to be found in the Gulf coast and central pine belt of the Coosa valley region, and in a limited area in Walker County; estimated in all to contain about 12,000 square miles. These lands are said to yield from 5,000 to 6,000 feet of good timber per acre. The short-leaf pine forms a considerable proportion of the forest growth in the upper part of the coast pine belt and in the uplands in the northern part of the State. The yellow pine still continues the chief lumbering wood of the State. The mills sawing pine lumber are mainly around Mobile and Pensacola.

The increase of lumber mills is as follows:

YEARS.	No. of establishments.	No. of employees.	Value of products.
1860.....	286	\$1,873,484
1870.....	248	2,350,663
1880.....	354	1,647	2,649,685
1885.....	689	4,412	7,991,808
1892.....	760	5,200	9,986,000

The output of other forest products, such as turpentine and rosin, has largely increased, particularly in the southern portion of the State, where there are now 35 establishments with a total average annual production of \$675,000.

Phosphates.—There is a tract of land across the State between the thirty-second and thirty-third parallels of latitude locally known as the "Black Belt." In this tract, particularly in the central and western parts, greensand marls and phosphatic nodules have been found which promise as well as the Florida phosphates. Some effort has been made to develop these deposits, and the phosphatic marls particularly have been used locally, but the district is not well supplied with transportation facilities at present. Under a stratum of greensand marl 5 to 6 feet thick occurs a sandy, indurated, nodular rock 2 feet thick,

cemented by carbonate of lime, which yields from 200 to 800 tons an acre of phosphatic nodules, yielding 20 to 38 per cent. of phosphoric acid.

Mobs.—On this subject Gov. Jones addressed a communication to the General Assembly on Feb. 6, of which the following is a portion:

It is an unpalatable but nevertheless startling truth, that within the past two years no less than 16 citizens of Alabama have been taken from jails or the custody of officers of the law and executed by mobs. This record is aggravated by the fact that there was not the slightest doubt in any of these cases of the conviction of the accused if guilty; and in two instances at least the parties, if guilty, were not deserving of death, according to any law of God or man. The courts were open and trustworthy, and the laws were freely and impartially administered in each of the localities where these helpless prisoners were slain. In each instance comes the same plea by the officers of the law of overpowering numbers, or sudden surprise preventing resistance. In none of these assaults was a weapon drawn or a shot fired by the officers of the law in defense of their prisoners or the outraged honor and dignity of the law. Assaults upon jails and taking out of prisoners by mobs to put them to death are as flagrant insults to the dignity and sovereignty of the people as would be an attempt to disperse the Legislature by force or overawe its highest court by violence. The State can no more permit the one to be done than the other with impunity, without losing the respect of the people and practically abdicating its functions.

The Governor believed that these outrages would be stopped if the sheriffs were given more ample powers and if there should be more promptness in trying the persons accused. To this end he recommended various changes in the laws.

Political.—After the State election of August, 1892, the leaders of the Jeffersonian Democracy, as the faction that supported Reuben F. Kolb for Governor was styled, believing that they had been defeated through fraud by the regular Democracy, refused to join their opponents in supporting the national Democratic ticket. But they were unable to carry all their followers into the opposition, and at the November election were more easily defeated than in August. When the Legislature met, late in November, Kolb and his friends demanded a law that would enable them to contest the regularity of the August election, but were refused. Under these circumstances there was no legal method by which they could establish their claims. Their party organization was continued, however, and in May of this year they submitted a proposition to the regular Democracy suggesting that a primary of the white voters of the State should be held early in 1894, at which the person having the highest number of votes should become the candidate of the white voters. This proposition was rejected, and both sides began preparations for another contest in 1894.

ANGLICAN CHURCHES. Statistical.—The official Yearbook of the Church of England for 1893 gives prominence, in view of the movement for its disestablishment, to certain facts concerning the condition and life of the Church of England in Wales. The net income of all the Welsh beneficed clergy, taking into the account tithe rent charge and glebe, pew rents, Easter offerings, fees, and every other source of revenue, amounted in 1892 to £183,000. The total of all voluntary offerings for missions, education, support of the poor, etc., was £219,000.

In the thirty-three years following 1840 the total sum expended on church building and church restoration was £1,089,247, while the corresponding sum for the eighteen years succeeding these to 1891 was £1,127,476—a rate of expenditure in the former period of £33,000 a year, and in the second period of more than £62,000 a year, the total for the half century being £2,216,723, or an average of £2,216 for each parish. The statistics of communions give results showing that among the same number of people for every three communicants in England there were four in Wales, and the reports of confirmations give similar results.

The Rev. Dr. Deed, honorary secretary of the Church of England Incumbents' Sustentation fund, founded nearly twenty years ago by the Marquis of Lorne, has prepared the following tabular statement of the result of an analysis of the "Clergy List" and of "Crockford's Clerical Directory":

CLERGY LIST.

POPULATION.	VALUE OF BENEFICES.					Totals.
	Under £100.	£100 to £150.	£150 to £200.	£200 to £250.	Over £250.	
Not given.....	82	28	18	30	44	147
Under 250.....	845	457	473	642	404	2,821
250 to 500.....	156	364	448	849	1,058	2,875
500 to 1,000.....	63	272	396	923	1,326	2,990
Over 1,000.....	58	309	570	1,776	2,965	5,678
	659	1,430	1,900	4,925	5,797	14,011

CROCKFORD'S CLERICAL DIRECTORY.

POPULATION.	VALUE OF BENEFICES.					Totals.
	Under £100.	£100 to £150.	£150 to £200.	£200 to £250.	Over £250.	
Not given.....	24	33	18	26	36	137

	1,074	1,817	2,274	4,955	4,105	13,625

It is shown in the forty-fifth report of the ecclesiastical commissioners that during the year ending Oct. 31, 1892, numerous grants were secured to benefices, which raised the total value of augmentations made by the commissioners since 1840 to £791,300 per annum. In the same period the value of the benefactions secured to benefices by private donors exceeded £170,000 per annum. The accounts showed a falling off in the income derived from estates, and the commissioners anticipated a still more serious diminution for the current year, owing to strikes and the losses of agricultural tenants. The commissioners had therefore been obliged to reduce the appropriations.

The ecclesiastical commissioners announced in February that they were prepared to receive, on or before Dec. 1, 1893, offers of benefactions of not less than £100 each in capital value toward making better provision for the care of souls, with a view to such offers being met by the board with grants of capital sums, during the spring of 1894, it being understood that the means at the disposal of the commissioners for meeting benefactions being much reduced, the board did not undertake to meet all the offers

which might be made. The commissioners were also prepared to receive offers of benefactions of not less value than £2,000 each in favor of parishes or cures containing populations of 6,000 and upward, with a view to such benefactions being met by grants, not exceeding £60 per annum in each case, to be appropriated toward the maintenance of assistant curates. These grants, too, could only be a few in number. In connection with these announcements the specific conditions were published, on which the grants would be made.

Addressing the House of Laymen of the Convocation of Canterbury, the archbishop spoke of the evidences of material strength in the Church of England, embodied in the returns made in answer to a Parliamentary inquiry in 1891, as "not short of surprising." Neglecting all expenditures of less than £500, there had been spent in the building and restoring of churches in England and Wales in the eighteen years then ended more than £20,500,000. In the four poor dioceses of Wales alone more than £1,000,000 were so spent. Upon Church schools in the same period £20,000,000 were spent in England and Wales. The voluntary outlay of the Church appeared, in fact, to be not short of £5,000,000 a year.

Convocation of Canterbury.—At the meeting of the Convocation of Canterbury, in February, particular attention was given to the reduced incomes of the rural clergy. A resolution was passed in the lower house requesting the president to appoint a committee "to inquire into the statements relative to the depressed condition of clerical incomes, and to consider what steps should be taken for their improvement." Speaking upon this resolution, Prebendary Salmon quoted statistics showing that at present one third of all the benefices in England and Wales were under £200 in annual value, and that the distress of the poorer clergy was serious and widespread. The incomes of the poorer benefices had decreased very rapidly within the last ten years, and some action was necessary to deal with the matter. It was said that there were plenty of men with private means to take the poor livings, but such men were decreasing in number every year, and great difficulty was experienced in securing suitable persons. A comparison of the stipends of nonconformists with those of the clergy would show that in the Presbyterian Church the average was £317 a year, as against an average of £230 in the Church of England. Separate committees were appointed on the subject in the upper and lower houses, which will communicate with one another. A committee was appointed in the upper house to inquire into the subject of fasting communion. The lower house requested its Committee on Education to report the best measures by which, in its opinion, Church schools may be maintained and their efficiency increased.

The Houses of Convocation met March 16 for the purpose of considering the Church Patronage bill, then pending in Parliament. The bill was reviewed in all the houses, a number of amendments suggested, and approved as a whole. The House of Laymen resolved that no act dealing with the subject would be satisfactory which did not provide some such safe-

guards against the acquisition of rights of patronage by unfit persons as were contained in the bill of 1887 as it was passed by the House of Lords. In the upper house the Bishop of London, in moving the approval of the bill, said

They were bound to persist in their efforts until they had made a real change in the administration of the patronage of the Church. The speaker would like to go very much further than the present bill went, because personally he was of opinion that the evil was not merely the abuse which attended the sale of advowsons and of next presentations, but that the sale itself was so great an evil that there ought to be a means of getting rid of it altogether. The circumstances of the day made it even more important that, if possible, the heads of the Church should make it visible to the whole body of the people, as well as to the Church itself, that they thought those serious evils were a blot upon the system in which they were living, and that those who were charged with the supervision of the Church recognized the fact, and that it was not their fault that those evils still continued to exist. They would have, no doubt, to struggle personally for their position in the country, and at any rate they ought to make it perfectly clear that when they were doing so they were not fighting for the maintenance of all those abuses which had been so very frequently the ground of attacks made upon them, and the ground, too, of the charge that they thought very little of that which touched the honor of the Church to which they belonged. They desired as heartily as any of their assailants desired that the Church should be purely administered upon high principles, and that all abuses should be corrected as soon as they were discovered.

The archbishop spoke concerning the Welsh Suspensory bill as a measure involving the most serious possible consequences, because it was avowedly the first step toward disestablishment, and as furnishing an occasion on which the whole Church should speak. He proposed that meetings be held, which should speak clearly the opinions of the sections of the Church, and following them a meeting together—for the first time in their history—of the Conventions of York and Canterbury, with the Houses of Laymen; besides them the churchwardens of all England and Wales, and ten laymen elected from each archdeaconry; the meeting to be held about Whitsuntide, and questions of politics to be avoided in all the proceedings.

At the meeting in May petitions from lay members of the Church of England were read, urging the importance of placing in a succinct form before Church people a statement of the spiritual and educational wants of the country. The Bishop of London suggested that if anything was to be done in the matter, it should be by procuring the insertion of a general statement in the official yearbook. The following report was presented concerning the fasting reception of the holy communion:

(1) That in the apostolic age the holy communion was administered in connection with the gathering together of Christians to share in an appointed evening meal. (2) That the practice of communicating in the early morning appears to have arisen about the close of the first century, probably in order to secure a safer as well as a more reverent celebration, and by the time of St. Cyprian to have become so fully established that it was regarded not only as the preferable but as the proper practice, and as commemorative of the Lord's resurrection. (3)

That the practice of communicating in the early morning, together with the common association of fasting with prayer, led to the practice of communicating only when fasting, and that fasting reception of the communion became the regular and recognized usage of the Church before the end of the fourth century. (4) That from the close of the fourth century this regular and recognized usage was formulated in rules for the clergy in canons of local and provincial councils. (5) That fasting reception of the communion was the prescribed rule of the Church of England during the Anglo-Saxon period, and continued to be so to the time of the Reformation. (6) That these strict rules were nevertheless subject to relaxation in cases of sickness or other necessity. (7) That at the Reformation the Church of England, in accordance with the principle of liberty laid down in Article XXXIV, ceased to require the communion to be received fasting, though the practice was observed by many as a reverent and ancient custom, and as such is commended by several of her eminent writers and divines down to the present time. (8) That, regard being had to the practice of the apostolic Church in this matter, to teach that it is a sin to communicate otherwise than fasting is contrary to the teaching and spirit of the Church of England.

A report was adopted upon evening communion in the following terms:

(1) That in the apostolic age the holy communion was administered in connection with the gathering together of Christians to share in an appointed evening meal. (2) That the celebration of the holy communion in the evening was thus apparently the practice of the Church during a large part, at least, of the first century. (3) That about the close of the first century the celebration of the holy communion is found separated from the agape or appointed evening meal, and transferred to an early hour in the morning; and, except on certain special occasions, evening celebrations of the holy communion ceased in course of time throughout the Church. (4) That at the Reformation the Church of England made no express regulation concerning the hour of celebrating the holy communion, the only apparent rule being that it should be celebrated in the earlier portion of the day and in connection with matins. (5) That evening communion was introduced into the Church of England in the present century on account of alleged necessity, it being maintained that many would not be able to receive the holy communion unless it were occasionally administered in the evening. (6) That, regard being had to the continuous custom of the Church, as well as to the necessity now alleged to exist, it is the bounden duty of every one who publicly administers the holy communion in the evening to assure himself of the reality of the need in the parish where he is appointed to serve.

A report from the committee appointed to consider the distress prevalent among a large number of the clergy showed that to raise the income of all to £200 a year would require, at the average of £50 a year for each, an income of £210,000, or a capital sum of £7,000,000. To raise this capital sum at once would not be possible, nor perhaps to raise the income and continue to raise it for some time to come; but it ought not to be impossible to raise £100,000 a year. The report suggested that one half of this sum should be raised as a general fund, and the other half as diocesan funds and proposed plans for raising and administering the funds. The lower house voted a protest against any attack upon the *status* or emoluments of the Church of England as "entirely unjustified by any lack of zeal or devotion to its work by the

sources from which its endowments have been received, or by any other cause"; and expressed "its deep sense of the cruelty and injustice of the Established Church (Wales) bill, as its inevitable effect would be to cripple the Church's power of usefulness, or most unfairly to interfere with efforts for its extension." Resolutions were adopted declaring the importance of a clearer definition of the relations between elementary and secondary education:

That in arranging a more complete system of secondary education it was essential that the voluntary principle should have free scope; that any attempt to inaugurate a system of secondary education on the principles that have been acted upon in Wales was very much to be deprecated; that the Church, as well as every other religious body, has a right to claim that her children shall be properly instructed in the principles of their faith; and that Churchmen be earnestly invited to watch and oppose all endeavors to alienate local Church education endowments from their original intention.

The Houses of Convocation met again July 4. In the upper house the Committee on Ecclesiastical Fees reported that the question had been found so complicated that it was impossible to make any recommendations at the present time. The joint committee of both houses on the Sunday opening of museums reported resolutions:

1. That this house desires again to press upon the clergy the duty of warning the rich and leisured classes against the increasing misuse of Sunday for purposes of mere amusement, as (a) tending to impair both for themselves and others the sacred character and distinctive value of the Lord's Day, and (b) involving addition to the Sunday labor of those who are called upon to minister to such amusement.
2. That it is the duty of the Church to remind the people of England that the foremost privilege of the Lord's Day is the privilege and responsibility of worship, and that this must be safeguarded at whatever cost.
3. That since it is evident that an increasing number of persons, for whom Sunday is the only day of leisure, find the reasonable use of libraries, picture galleries and museums on that day to be wholesome and profitable, it is necessary, in the highest interest both of visitors and attendants, that such Sunday opening should be carefully guarded against unfairness or misuse.
4. That in no circumstances ought any library, institution, gallery, or recreative resort to be permitted to be open on Sundays for payment.
5. That if these conditions are observed, the cause of true religion has, in the opinion of this house, nothing to fear from the reasonable and careful extension of the system of Sunday opening described in the report.

Without passing upon the resolutions, the further consideration of the subject was postponed to the next group of sessions. A petition was presented against the ecclesiastical teaching of some of the clergy, in which was included the statement that

It is generally known that certain clergymen of the Church of England in possession of influence and authority are deliberately undermining, by their teachings and public writings, the faith of this country in the trustworthiness of the Holy Scriptures, and are altogether repudiating the common faith of Christendom.

The lower house adopted, on the subject of religious teaching in public elementary schools, resolutions

That the great progress in popular education is a matter for which the Church has cause to be thankful, the original impulse to which was given chiefly by its members, and the furtherance of which has

been steadily maintained by them; that the system of religious teaching in board schools under the act of 1870 is unsatisfactory in principle, and . . . has been found to be far from satisfactory in working, and requires to be seriously considered and steps taken for its amendment; and that . . . it is important that all pupil teachers in Church voluntary schools should receive definite religious teaching from the clergy of their parishes.

A resolution was adopted as an *articulus cleri* concerning the formulation of a scheme of united action for the preservation of Church schools, and for the proposing of sources from which the requisite funds are to be obtained. The house urged the furtherance of every means calculated to remove the evil of intemperance. The House of Laymen invited the archbishops to confer respecting the formulation of a corporate policy on the question and concerning the provisions of a bill to be introduced into Parliament. The House of Laymen resolved concerning the Sunday opening of museums

That the day of holy rest is a divine institution appointed by God at the beginning as a day for rest and worship; that the observance of Sunday has been an incalculable blessing to all classes of society, especially to working men and women, and this house deprecates every movement which tends to increase Sunday labor or to make the Lord's Day a mere day of amusement, and is of opinion that such public institutions as museums, picture galleries, and libraries should not be opened on Sundays.

Convocation of York.—The Convocation of York met Feb. 7, and discussed motions referring to the incomes of the clergy; fees chargeable by registrars and bishop's secretaries, to consider which a committee was appointed; and shorter services.

At a special meeting of the convocation, held March 16, the Church Patronage bill was considered and, certain amendments having been suggested, was approved as amended. A committee was appointed in the lower house to take into consideration the present circumstances and prospects of the Church elementary day schools, and advise whether any action, concerted or otherwise, ought to be taken. Concerning the Welsh Suspensory bill it was resolved

This house affirms and urges that (1) the Church in Wales is the lineal descendant of the ancient British Church known to exist at least as early as the Council of Arles, 314 A. D.; (2) the scheme now before Parliament, as the first step toward disestablishment of the Church in Wales, involves a wholesale desecration of the Church property; (3) Church property is not national, but (almost, if not wholly, without exception) the gift of individuals to the Church for the work of God, and the clergy receive no payment whatsoever from the state or state funds; (4) the voice of the majority of the people in Wales can never make the plunder of property just or right; (5) if carried, the bill will be a national crime, for which it will be difficult to find a parallel in the history of England since England became a nation; (6) this house calls upon every parish and every member of the Church (of whatever political opinion) throughout the country to take active and immediate steps to arouse opposition to the present action of the Government as regards the Church in Wales.

The clergy were admonished by the archbishop to be very careful not to make the movement in this matter a political one.

The House of Laymen met in special session April 4. On the presentation of the report of

the joint Committee on Clerical Incomes, a resolution was adopted recommending the formation of a sustentation fund in each diocese where required, to assist the poor clergy. The house pledged itself to resist by every means in its power "the measure now before Parliament for the robbery of the Church in Wales," and suggested to the archbishop an organization of the province to prevent the passing into law of any measure "by which endowments of the Church shall be taken from her and devoted to secular purposes." Resolutions were adopted in favor of the Church Patronage bill; promising approval to any well-considered scheme for the increase of the episcopate; and declaring that, as the great majority of pupils in the board schools are the children of Christian parents, "no settlement of the religious question can be acquiesced in which will not guarantee to these children the teaching by Christian teachers of the articles of faith as contained in the Apostles' Creed, and of their duties to God and their neighbors as summed up in the Ten Commandments.

Missionary Societies.—The annual meeting of the Church Missionary Society was held in London, May 2. The receipts for the year had been £282,805—larger, with one exception, than in any previous year. The expenditure had exceeded that of any previous year by £5,004, and a deficit was returned of £15,335. The general review of the year embodied in the report showed that of the more than half a million native Protestant Christians in India, 114,000 were at the close of 1891 connected with this society. A real impression had been made in the country at large upon the system of Hinduism, in connection with which the work of the mission colleges, the Anglo-vernacular schools, and the woman missionaries of the zenana societies was gratefully recognized. Mohammedanism also had yielded trophies to the gospel, both in India and the countries under Mohammedan rule. The mission schools in China, Ceylon, and Japan were doing excellent work among Buddhists.

The one hundred and ninety-second annual meeting of the Society for the Propagation of the Gospel in Foreign Parts was held in April, the Archbishop of Canterbury presiding. The gross income of the society for the year had been £127,148—an increase of £10,628. The increased revenue was due in large part to the society's appeals for Mauritius and Newfoundland after the disasters by fire and hurricane in those dioceses.

The society is about to publish a digest of its proceedings, journals, manuscripts, letters, and reports, with a record of all the missionaries it has supported, from the date of its incorporation by royal charter in 1701 to the present time. This work is expected to be of great use in giving the early history not only of the Church in the United States, on which, up to the date of the acknowledgment of independence in 1784, the society spent nearly a quarter of a million of money, but of the foundation of the Church in every colony of the empire. The missionary work in India, as well as in countries outside the limits of the empire, will be recorded at length. The work will be illustrated by portraits of 14 of the archbishops of Canterbury, who have been presidents of the society; of Bishop Seabury, the first bishop in the United States; and of the Rev.

G. Keith, the first missionary sent to America in 1702; and with pictures of many colleges in foreign parts, which the society has helped by endowment or otherwise.

The year's income of the South American Missionary Society was £10,582. The sum of £3,577 had been paid out for chaplaincies, and £3,772 for missions to the heathen. The reserve fund amounted to £3,002. The annual report described the work of the society in the Falkland Islands and various parts of South America. Satisfactory educational progress was reported from Tierra del Fuego, where, however, the native men and women were suffering from the effects of the alcoholic liquors introduced by the white man. Excellent progress had been made among the 2,000,000 heathen Indians of the Paraguayan Chaco, who no longer had to take liquor instead of money in payment for their skins or work, and among whom drunkenness had, therefore, to a large extent been abolished. The Paraguayan Government regarded the mission with the greatest favor. Mr. A. Busk had given the society 1,158 acres of land for mission purposes in that region. In Chili the civil war had left sad traces, and missionary work was carried on in the midst of danger to life and property. The work of this society lies within the diocese of the Bishop of the Falkland Islands, which includes the whole of South America except British Guiana.

The Universities Mission to Central Africa reports that its income for 1892 was £21,488, the largest amount ever received by the society in one year. The sum of £11,200 was also received for endowment of the Nyanza bishopric. The expenditures for the year amounted to £19,835.

The British Syrian Mission, which is described in its annual report as "essentially a women's mission to the women of Syria," comprises a training institution at Beirût for girls who are under contract to teach in the day schools of the mission, and of whom the most promising are often adopted by friends in England. The 39 day schools have 3,500 pupils of various creeds; besides these, schools for the blind are sustained with a staff of Bible women, harem visitors, and Scripture readers. A work was carried on among the soldiers of the army in the Lebanon; and among the most recent developments of the work were evangelistic work among the Bedouin and a small woman's medical mission. The European staff numbered 17 women and 3 men, and there were 99 European and native teachers and 81 Bible women and Scripture readers. The income of the mission was £5,500 a year.

The Society for Promoting Christian Knowledge, which began in 1840 by giving £10,000 to the Council of the Colonial Bishopric's fund "for the endowment of sees in the colonies and dependencies of the British Empire," has up to the present time voted £88,000 toward the increase of the colonial episcopate. It has helped the endowment funds of 17 dioceses in Canada, North America, and the West Indies, of 12 dioceses in Africa, of 7 dioceses in Asia, and of 16 dioceses in Australia and New Zealand.

The total income of the missions to seamen for the year was £35,496, or nearly £5,000 more than that of the previous year. The increase was mainly derived from legacies.

The gross income of the Church Pastoral Aid Society for the year just closed reached nearly £70,000, which is a considerable advance upon all previous years—the highest amount before received in one year being £60,288, in 1864-'65.

The annual report of the Poor Relief Corporation shows that 1,084 appeals were received during the year and 784 grants were made of sums ranging from £5 to £25. The subscriptions amounted to £2,951, against £2,799 in the previous year, and the donations to £5,103, against £4,298.

The report of the Society for Promoting the Employment of Additional Curates gives its income as £87,476, or £121,511, including grants from the Ecclesiastical Commissioners and diocesan and other societies. The shrinkage in receipts was continuing, and the most obvious cause of it was the decrease in clerical incomes. The society had renewed 1,111 grants and made 50 new ones, and the committee wished to put another 50 recommended cases on the list, but had had to decline for lack of sufficient means.

The Liberation Society.—The annual meeting of the Society for the Liberation of Religion from State Patronage and Control was held in London, May 8. Mr. Illingsworth, M.P., presided. The year's receipts of the society had been £5,475, and its expenditures £5,066. The report mentioned the choice at the last general election of a larger number of members favorable to disestablishment than had ever sat in a previous Parliament, and referred to several bills before Parliament as favorable to the principle of disestablishment. Resolutions were adopted recognizing the importance of the measures to prevent the creation of new vested interests in Wales and Scotland, prior to the disestablishment of the churches in those countries; expressing satisfaction at the evidences of a majority in the House of Commons in favor of the Suspension bill for Wales; disapproving the Church Patronage bill; opposing certain acts by the London School Board bearing on religious equality in the schools, and particularly efforts to disturb the existing compromise in regard to reading the Bible in schools, "which had worked satisfactorily for the past twenty-two years."

At a meeting of the council of the Liberation Society, held Nov. 15, 1892, facts were presented showing that at the last election Liberal candidates had been generally found in harmony with the friends of religious equality. Twelve members of the committee of the society had sat in the last Parliament. In the present Parliament were 18 members of the committee, while nearly 100 members of the House of Commons were members of the society. In Wales, 31 out of 34 members elected at the last election were in favor of disestablishment. In Scotland, 48 out of 72 members were pledged to support the disestablishment of the Church in that kingdom—an increase over the previous numbers. The entire Liberal party were pledged to support disestablishment in Wales and Scotland, and the number of members in favor of disestablishment in England was unprecedentedly great.

Resolutions were passed expressing satisfaction at the improved prospects for disestablishment; invoking public support to measures for disestablishment in Wales and Scotland; urging

further amendments in favor of nonconformists, of the burial laws, and the passage of the Places of Worship and Leaseholds of Chapels Enfranchisement bills; and calling for the removal of religious disabilities, the adequate representation in the public offices of all sections of the community, and such legislative and administrative changes in the appointment of magistrates as will remove discriminations against nonconformists.

The Church Association.—The report of the Church Association, made at its twenty-eighth annual meeting in May, represented that owing to the legal confusion, as it was described, produced by recent judgments in ecclesiastical cases, the association had abandoned litigation for the present, and had undertaken greater activity in other directions. The scheme of future policy adopted by the conference of October, 1892, included a demand for Church reform, the inevitable though disastrous alternative being disestablishment and disendowment; and a Church reform bill now under consideration would be introduced in due course. The National Protestant League had increased in membership to 6,775, and 19 new leagues had been opened. The general receipts had increased by 30 per cent., and were now £4,962, including a loan of £250 from the guarantee fund. The meeting resolved

That, so long as a large section of the clergy, encouraged by the bishops, were avowedly disloyal to the Protestant religion established by law, abused their trust by introducing sacerdotal teaching into the national schools, and rested the defense of the Church's endowments on the dishonest plea that no serious change of doctrine ever took place at the Reformation, the Protestant laity could not be expected to contribute to the endowments of the national Church, however willing they might be to strengthen the hands of individual clergymen who remained faithful to their engagements.

In a detailed scheme of future policy, issued in October, 1892, the council of this association explained that the outcome of the judgment of the Privy Council in the case of the Bishop of Lincoln imposed on Protestants the duty of witnessing more publicly and systematically than heretofore against the false doctrines embodied and symbolized in a ritual, now for the first time pronounced to be legally permissible in the Reformed Church of England, provided that ceremonious acts be avoided. Church reform was therefore suggested as an aim, "the inevitable, the disastrous alternative being disestablishment." The heads of necessary reform to be insisted on were: (a) The granting of legal redress to the laity, without any hindrance of justice by the episcopal veto; (b) the fusion of the ecclesiastical courts into the High Court of Justice, or the assimilation of their procedure to that of the civil courts; (c) the substitution of deprivation for imprisonment in the case of contumacious clergymen who refuse obedience to the orders of the courts; (d) an ecclesiastical franchise for lay members of the Church, secured and capable of enforcement by law, as in the case of churchwardens; (e) the concession to the laity, "as of right," of an effective share in the administration of Church matters; (f) the power being given to the incumbent, or to any churchwarden of the parish, to remove without a faculty any ornament or addition which may have been

illegally introduced into a Church. The scheme then proceeds to recommend in detail future action in regard to organization, mission work, parliamentary work, use of the press and of publications, and individual activity.

Church Defense Institution.—The annual meeting of the Church Defense Institution was held in London, July 5. The annual report remarked upon the eventful period which Church and state had passed through since the last annual meeting, reviewed the steps that had been taken to agitate against the Welsh Suspensory bill, and expressed thankfulness for many signs of Church progress which had been witnessed during the year. The Institution had issued more than two million copies of publications, including 100,000 copies of the letters sent to the "Times" by Earl Grey, Dean Vaughan, and Mr. Bosworth Smith. Its receipts had been £8,444. Resolutions were adopted recognizing the enthusiasm shown by Churchmen, without distinction of party, as displayed in public meetings to resist "the Government attack" upon the endowments of the Church and in the Archbishop of Canterbury's meeting of May 16, and pledging continued energy in the same direction.

A small body of clergymen withdrew from the Established Church in the latter months of 1892, with the intention of forming a sect on strictly evangelical lines. They prepared an appeal to Protestants in which the question of ritualism was dealt with at length. A prayer book completely revised on Protestant lines was contemplated; and some of the existing religious communities external to the Established Church were expected to supply episcopal organization.

At the instance of the Central Committee of the Union of Clerical and Lay Associations, a company has been formed with the title of "The Church of England Evangelical College and School Committee (Limited)," in order to promote institutions in which, together with a general education, instruction shall be given in accordance with the evangelical principles of the Church of England.

Free and Open Churches.—The twenty-seventh annual meeting of the Incorporated Free and Open Church Association was held March 16. Earl Nelson presided. The report spoke of the increased public interest taken in the movement for free churches, and reviewed the history of its growth during the past fifty years. During the first half of the century pew rents flourished, especially in large towns. Pews were considered an effective mode of raising a stipend for the minister. Now, though somewhat tardily, pew rents had been found to be out of harmony with the spirit of the age. They had ceased to be a certain means of income, and in many cases had failed to provide any income worthy of the name. The decadence of pew rents was, however, not synonymous with a collapse of the pew system. The old private pew and the old exclusiveness had disappeared, but the appropriated churches remained. There was never more reason than to-day to preach true religious equality. A special fund had been started in aid of the movement, toward which, as a nucleus, the council had set aside one tenth of their income.

The eight hundredth anniversary of the

consecration of Winchester Cathedral, which it is recorded was dedicated April 8, 1093, was celebrated April 8 and 9 by a series of musical services.

Legal Questions.—The first sentence under the Clergy Discipline act, 1892, was pronounced by the Bishop of Rochester, in the Consistorial Court of the Diocese, upon the Rev. Alfred Edward Ormonde Harris, vicar of the parish of Stoke, who had been convicted of being intoxicated on divers occasions while conducting public service. After an address on the heinousness of the offense of the defendant, a "definite sentence and final decree" was pronounced and signed in due legal form, depriving him of "all his ecclesiastical promotions within the diocese of Rochester."

The court of the General Synod of the Church of Ireland gave judgment, Nov. 18, 1892, in an appeal lodged in behalf of Col. Fox Grant against a decision of the Dublin Diocesan Court dismissing a petition that the existence of a "cross on or immediately behind the communion table" in St. Bartholomew's Church should be declared an offense against the ecclesiastical laws, and a violation of the canons of the Church. The cross was erected in a wooden stand, the top of which was level with the communion rail, and was placed between the rail and the reredos. The petition complained that it appeared to the congregation to stand on the table, or to be connected with it. The court reversed the decision of the court below, and adjudged that the gilt cross mentioned in the petition was, in the position in which it stood, a violation of the constitution and canons of the Church of Ireland, and that each party should pay his own costs in the appeal.

Episcopal Church in Japan.—A memorandum regarding the Episcopal Church in Japan, signed by Bishop Hare, of the Protestant Episcopal Church, and Bishop Bickersteth, of the Church of England, sets forth that the Church should be presented to the Japanese in its composite form, as exhibited in its English and American branches, rather than in the specific form in which it would be represented by either branch alone. The work of foreign bishops is regarded as provisional. The whole state of thought and feeling among the Japanese forbids the introduction into Japan, as permanent institutions, of branches of either the English or the American Church, and nothing would offend the national feeling and hinder the extension of the Church more than giving the Japanese just cause for suspecting a desire or intention to impose upon them a permanent foreign episcopate. Every wise principle of propagating the gospel in Japan demands that the work of the bishops should be regarded as that of so directing the missions of the American and English Churches that a Japanese independent and self-supporting Church shall be the result. Indeed, these churches have so far committed themselves to this policy that a Japanese Church with its own constitution and canons has been in existence for four years. The English and American bishops are not regarded by the Japanese, and should not be regarded by us, as having jurisdiction over dioceses fully delimited, but rather as forerunners in the episcopate of Japanese bishops who will exercise jurisdiction over such permanently de-

financed dioceses as the expansion of the Japanese Church may in future demand. Reasons consistent with these considerations are given in the paper why both episcopal residences should for the present be in Tokio, with delimitations of the boundaries of their jurisdictions.

The General Synod of Canada.—The Anglican Church in Canada comprises the ecclesiastical provinces of Canada, consisting of the nine dioceses of Nova Scotia, Frederickton (New Brunswick), Quebec, Montreal, Ontario, Toronto, Niagara, Huron, and Algoma; and the province of Rupert's Land, in which are included the seven dioceses of Athabasca, Mackenzie River, Selkirk, Moosonee, Qu'Appelle, Saskatchewan, and Calgary; with the three unattached dioceses of British Columbia, Caledonia, and New Westminster. The subject of consolidating these provinces and unattached dioceses into a single jurisdiction has been under discussion for several years. At a conference of delegates from the various dioceses held at Winnipeg in September, 1892, a scheme of union or conference was drawn up, which, having been submitted to the provincial and diocesan synods, was approved by them with several amendments. In pursuance of arrangements made at this conference, the delegates to the proposed general synod—including 14 of the 19 bishops and about 80 other representatives—met in Toronto, Sept. 13. After discussion a report was adopted declaring the assembly to be the first general synod of the Church in Canada, to continue an integral portion of the great Anglican Communion, holding and maintaining the doctrine and sacraments of Christ and the order and government of the Church as set forth in Holy Writ, the Book of Common Prayer, the Psalms of David, and the Thirty-Nine Articles of Religion. The General Synod, exclusive of Newfoundland, is to consist of two houses, the House of Bishops and that of the Clergy and Laity. The president of the general synod shall be styled the primate, and shall be selected by the House of Bishops from among the metropolitans and the bishops of dioceses not in ecclesiastical provinces. Further declarations were adopted "that the General Synod when formed does not intend to and shall not take away from or interfere with any rights, powers, or jurisdiction of any ecclesiastical synod within its own territorial limits as now held or exercised by such diocesan synod"; and "that the constitution of a general synod involves no change in the existing system of provincial synods, but the retention or abolition of provincial synods is left to be dealt with according to the requirements of the various provinces as to such provinces and the dioceses therein may seem proper." It was ordered that delegates shall be residents of the dioceses from which they are elected or appointed, provided that certain dioceses in the northwest may for a time, under certain conditions, appoint others. The synod insisted on the necessity of religious teaching in the public schools, and adopted the "Lambeth Conference Articles" "as a basis for negotiation with any of our separated Christian brethren with a view to union." The lower house requested the bishops to bring the burial service into harmony with the Canadian climate, the present procedure at the graveside being condemned as leading to many deaths

from exposure. The title of Archbishop was given to each of the metropolitans, and the Metropolitan of Rupert's Land—Bishop Machray—was appointed primate of the Dominion and president of the synod.

The Church Congress.—The Church Congress met at Birmingham, Oct. 3. The Bishop of Worcester presided, and gave prominent attention in his opening address to the relations of workmen with the Church. The present was the first meeting of the Congress in that important industrial center, and it was more than any other one a workmen's congress. For the first time workmen had been placed on the Subjects Committee—had been invited to choose the subjects for discussion at the workmen's meetings—and a special effort had been made to enlist their sympathies by Sunday-afternoon meetings in the town hall. The regular proceedings opened with a discussion of the subject of "The Increase of the Episcopate," with special reference to the needs of the diocese of Worcester and the city of Birmingham, in which the principal speakers were Wilfred de Winton, J. D. Goodman, and the Archbishop of Canterbury. In a discussion on education the Dean of St. Asaph considered religious education under the three heads of "The Study of the Holy Scriptures," "The Doctrines of the Church of England," and "Church History"; the Hon. and Rev. E. Littleton, of Haileybury School, spoke on "Education in Secondary and Public Schools and Education in the Home"; and the subject was continued by the Rev. J. Percival, Head Master of Eton School. Papers on "Church Services and Symbolism" regarded the position of the holy communion in worship, and "Symbolism, its Use and Abuse," and were presented by Viscount Halifax, President of the English Church Union; Sir R. Lighton, the Dean of Winchester, Archdeacon Farrar, and Canon Venables. The papers on the subject of "Preaching and a Preaching Order" were mainly pleas for the establishment of a preaching order. "The Relative Duties of Employers and Employed, and of the Clergy toward both," was the subject of an extended discussion by A. M. Chance, of Birmingham, Sir William E. Houldsworth, M. P., Archdeacon Wilson, of Manchester, and several other speakers. The relations of the Church of England with the Church in Ireland were described by the Right Hon. R. Warren, of Dublin; with the Episcopal Church in Scotland, by the Bishop of Edinburgh; with the Church in the colonies, by the Rev. Morris Fuller and Sir Arthur Hodgson; and with the American Church, by the Bishop of Minnesota. The subject of the Church of England in relation to other bodies of Christians included the topics "Lines and Limits of United Action with Christians outside our own Communion" and "Proposals for Corporate Reunion." The speakers were G. W. Child, of Oxford, the Rev. Charles Gore, the Archbishop of Dublin, and the Bishop of Edinburgh. The subject of "Science and Faith" was discussed by Sir George Stokes, the Bishop of Peterborough, and T. Lauder Brunton. On the subject of "The Church and the Poor," Mr. Lyttleton Gell, one of the founders of Toynbee Hall, the Rev. F. A. Winnington-Ingram, and Mr. Edward Clifford, honorary evangelistic sec-

retary of the Church Army, made the principal addresses. The subject of "Foreign Missions" was discussed under the heads of (1) evangelization of the heathen, variety of methods, and (2) the duty of Christian states toward native races with regard to the regulation or support of or interference with missions and trade, by the Rev. A. T. Wirgman, the Rev. R. L. Page, and Bishop Bickersteth, of Japan. On the subject of "The Ministry of the Laity, Diocesan and Lay Readers, Deaconesses and Sisters, Lectors and Catechists," the opening paper was read by the Bishop of Lichfield, and the Dean of Lincoln read a paper on "Deaconesses and Sisterhoods." Pertaining to the subject of Christian and devotional life, papers were read on "The Christian in Home Life," by the Bishop of Hull (Dr. Blunt); "Spiritual Power, its Source and Operations, its Imperative Need for the Church at Large, as well as for the Individual Christian Life," by the Dean of Bristol; "Quietness," by Archdeacon Perrowe; "Proportion," by Canon Newbolt; and "Religion in Social Life," by Prebendary Webb-Peploe. "The Relations between the Church and the Press" were discussed by J. T. Bruce, editor of the "Birmingham Daily Post," the Rev. Edmund McClure, of the Society for Promoting Christian Knowledge, the Rev. A. R. Buckland, editor of "The Record," the Rev. J. E. C. Weldon, and other speakers. In the discussion of the question of "The Disposal of the Dead," the friends of cremation were represented by Dr. A. B. Hill, of Mason College, Birmingham, the Rev. Brooke Lambert, and Sir Douglas Galton; and the advocates of earth to earth burial, by F. Seymour Haden and G. V. Poore, of University College, London. Other subjects considered were "The Parish Councils Bill," "Lord's Day Observance," "Home Missions," and "The Financial Condition of the Clergy," including the inadequate provision for the clergy, its present effects and ultimate consequences, and the suggestion of remedies in the shape of (1) the duty of the clergy toward one another and (2) the duty of the laity toward the clergy. The subjects of "Licensing Reform" and the "Connection of Church and State" were discussed at the workmen's meetings.

ARGENTINE REPUBLIC. a federal republic in South America. Under the Constitution of May 15, 1853, the republic bore the name of the United Provinces of the Rio de la Plata. In 1860 Buenos Ayres came into the federation, when the Constitution was modified and the present name adopted. The Constitution is modeled closely after that of the United States. The executive head of the State is a President, elected for six years by representatives of the 14 provinces. The legislative authority is vested in a Congress consisting of a Senate and a House of Deputies. The Senate has 30 members, 2 specially elected from the capital, and 2 from each of the provinces, chosen by the respective Legislatures. The Senatorial term of office is nine years, and Senators must have an annual income of \$2,000. The House of Deputies consists of 86 members, elected directly by the people for a term of four years. The Vice-President presides over the Senate. One third of the Senate is renewed every three years, and one half of the House every two years. The ses-

sions of Congress are from May to Sept. 30 of every year. The President is commander in chief of the armies, and appoints all civil, military, and judicial officers. Each province has its own legislature, and a governor elected by the people, who is invested with extensive powers, independent of the central executive. In the election of April 10, 1892, Luis Saenz Peña was chosen President, and Z. S. Uriburu Vice-President, and they entered upon their term of office Oct. 12, 1892. The ministry in the beginning of 1893 was constituted as follows: Minister of the Interior, Dr. M. Quintana; Minister of Foreign Affairs, Dr. T. Anchorena; Minister of Finance, Dr. J. J. Romero; Minister of Justice, Public Instruction, and Worship, Dr. C. S. de la Torre; Minister of War and Marine, Gen. B. Victorica.

Area and Population.—The area of the Argentine Republic, including the territories and Patagonia, is estimated at 1,125,066 square miles. The population was estimated at the end of 1888, at 3,793,800. In 1891, 73,597 emigrants arrived in the country, of whom 23,266 landed in Buenos Ayres. Of these, 15,511 were Italians, 4,290 Spaniards, 2,915 Frenchmen, and 832 Germans. Buenos Ayres, the Federal capital, had a population of 543,065 on July 31, 1892.

Finance.—The budget for 1893 estimated the total revenue at \$91,100,000, of which \$55,000,000 were derived from import duties, \$8,250,000 from export duties, \$4,020,000 from storage, etc., \$4,000,000 from stamps, \$12,150,000 from excise duties, \$3,500,000 from the post-office, and \$4,180,000 from various other sources. The expenditures were estimated at \$75,100,000, of which \$31,100,000 were for the public debt, \$13,880,000 for the Ministry of the Interior, \$980,000 for the Ministry of Foreign Affairs, \$3,905,000 for the Ministry of Finance, \$7,345,000 for Public Instruction, \$11,640,000 for the Ministry of War, and \$6,300,000 for the Ministry of Marine.

The public debt, according to an official report, amounted to \$302,407,748 gold, and \$63,107,950 currency on March 31, 1892. Of this sum, \$204,958,909 gold represent the external debt, \$89,406,641 gold, and \$43,993,089 currency the internal debt, \$8,042,198 gold and \$10,614,861 currency the floating debt, and \$3,500,000 currency minor issue. The property belonging to the National Government is valued at \$703,793,172. The report for 1892 of the British Vice-Consul at Buenos Ayres places the total debt much higher than the official statement, his figures being £105,124,978, or over £25 per inhabitant. The United States consul, in his report for the same year, says it is difficult to know what the figures are, owing to the wide discrepancy between the statements of the officials.

The Army and Navy.—The regular army consists of 1,590 officers, and 6,498 men. The militia numbers 236,000 men.

The navy consists of 1 sea-going armor-clad, 2 ironclad monitors, 2 deck-protected cruisers, 7 gunboats, 2 transports, 7 dispatch boats, 1 torpedo school ship, 4 steel torpedo boats, and 4 spar torpedo boats. In July, 1892, was launched at Elswick, England, the "Nueva de Julio," a steel cruiser, 350 feet long, of 164 feet draught, a displacement of 3,500 tons, 14,500 horse-

power, and a speed of 22½ knots. Her armament consists of 4 6-inch and 8 4½-inch breechloading rifles, 12 3-pounder, and 12 1-pounder rapid-firing guns, 2 machine guns, and 5 torpedo tubes. The navy is manned by 1,530 officers and men.

Commerce.—The total value of the imports of merchandise in 1891 was \$67,165,807 in gold, and the total exports amounted to \$96,708,325. The imports of textiles and apparel amounted to \$17,176,059; food substances, \$8,223,265; iron and manufactures thereof, \$4,508,825; drink and alcohol, \$3,687,195; wood and manufactures thereof, \$2,359,587; railroad, telegraph, and other material, \$17,869,199; coal, coke, oil, etc., \$4,139,441; chemicals, \$2,414,608; pottery, glass, etc., \$1,203,290. Of the exports, animals and animal products were valued at \$58,484,484; agricultural produce, \$21,267,314; manufactured products, \$9,754,664; forest produce, \$2,145,510; minerals, \$1,287,594. The following table shows the value of the trade with different countries in 1891:

COUNTRIES.	Imports.	Exports to
Great Britain.....	\$28,817,803	\$14,797,740
France.....	7,925,041	23,681,722
Belgium.....	6,475,951	16,644,689
Germany.....	6,204,889	11,484,228
Brazil.....	1,498,289	9,087,493
United States.....	3,446,691	4,196,966
Italy.....	4,205,165	3,246,930
Uruguay.....	2,649,225	4,502,845
Chili.....	18,804	4,872,848
Spain.....	1,567,975	1,288,859
Paraguay.....	1,840,012	450,471

The first six months of 1892 showed an increase over the same period in 1891 of \$4,500,000 in imports, and \$4,000,000 in exports, indicating a gradual recovery from the crisis of 1890-'91.

Navigation.—During 1891 were entered at the ports of the Argentine Republic 3,496 sailing vessels, of 697,517 tons, and 7,369 steamers, of 4,577,575 tons, and were cleared 2,643 sailing vessels, of 62,108 tons, and 6,547 steamers, of 4,052,759 tons.

Communications.—The total length of railroads open for traffic in 1892 was 7,676 miles. Concessions were granted for 3,170 miles more, of which a part is under construction.

The length of telegraph lines in 1891 was 20,415 miles, of which 11,250 miles belong to the Government, 8,050 miles to railroad companies, and 1,115 miles to cable companies. The postal correspondence of the country has increased in five years over 300 per cent., and as to the amount per inhabitant it stands high even in comparison with European countries.

Boundary Treaty with Chili.—A protocol providing for the settlement of the difference between the two countries regarding the international boundary was negotiated with Chili at Santiago by Dr. Villarosa, acting as a special commissioner. It was signed on May 2, 1893, and ratified in September. By its terms Chili is to claim no territory east of the Andes, and the Argentine Republic abandons its claim to a port on the Pacific coast.

Jewish Colony.—Pursuant to Baron Hirsch's scheme for founding colonies of Russian Jews in the republic, large tracts of land were purchased at a very low price with the depreciated currency, and a colony has been founded about nine

miles from Palacios station, on the Buenos Ayres and Rosario Railroad. The colony, which has been named Moises Ville, received its first settlers early in 1891, the party consisting entirely of Russian Jews, and numbering 220 people, including women and children. In this tract there are 180 lots, of 100 hectares, divided into concessions of 25 hectares. Of 2,850 Jews, principally from Russia, who arrived during the year, 462 have been settled in this colony. The concessions are allotted on six years' time to purchase at the price of about \$350. Interest at 5 per cent. will be charged after the first crop has been raised and marketed. Food, implements, cattle, seed, etc., are allotted to the colonists on the same terms as the land. The affairs of the colony are administered by a committee of four. About 90 adobe dwellings, with thatched roofs and earthen floors, have been built. The language is Russian and German, though many of the colonists speak Spanish, and nearly all understand it. They preserve their traditional habits, and their rabbi has much influence over them. Some have proved unfit for the work and have been returned to Europe, others taking their places. A synagogue, schools, and various other improvements are projected.

Revolutionary Movements.—The administration of President Luis Saenz Peña has been a troubled one from the beginning. Nominated by a coalition between that wing of the National party which adhered to Gen. Roca, as against the wing headed by Dr. Roque Saenz Peña, and that portion of the Union Civica led by Gen. Mitre, as against the Radical wing led by Dr. Alem, Dr. Luis Saenz Peña was elected through a violent suppression of the Radical vote, caused by the arrest and imprisonment of the Radical leaders, under a state of siege decreed by the Pelligrini Government on the eve of the election. The Radicals, thus disfranchised, looked to revolutionary methods for redress, and began to lay plans for revolts in the different provinces, their apparent object being to secure control of the provincial governments and force President Saenz Peña to resign. They did not contemplate an overthrow of the republic or the secession of any province therefrom. From the manner of his elevation to the office it was expected that Dr. Saenz Peña would govern with a coalition of the Roca and Mitre parties; but it was observed, soon after his inauguration, in October, 1892, that the new President, presumably influenced by his son, Dr. Roque Saenz Peña, showed a disposition to ignore Gen. Roca and his friends and to govern with the Mitre party and the adherents of Roque Saenz Peña, and a war of political intrigue was thus begun. A revolution was started in Santiago del Estro, where followers of Gen. Roca were turned out and adherents of Roque Saenz Peña installed in their places. This was a direct attack upon Gen. Roca. He was a member of the national Senate, had been President of the republic, and was probably capable of commanding more influence than any other man in the country. His support would have been a tower of strength to the Executive, but thenceforth he held himself aloof from the Administration. Differences arose in the Cabinet within two months after

Saenz Peña entered office, and a dissolution was narrowly averted in December, 1892. Meantime an insurrection against the provincial government broke out in the province of Corrientes, and the President dispatched Señor Avellaneda as a special envoy to restore peace. Early in January, 1893, a difference arose in the Cabinet respecting this action and the general policy of the Government in intervening without the express authority of Congress in the internal affairs of the provinces. On Jan. 9 it was announced that the insurgents had taken the city of Caseros and made an attack, 5,000 strong, upon the army of the Governor of Corrientes at Santa Lucia, and the Government on the following day dispatched 2 gunboats with troops and artillery to be placed at the service of the special envoy. Thus supported, Señor Avellaneda stopped the fighting at Santa Lucia, took command of the provincial forces, and succeeded in a short time in effecting disarmament on both sides. This disarmament, however, did not restore quiet in the province. Personal encounters, robbery, sacking, and other acts of violence were of daily occurrence. At this time Dr. Alem, the chief of the Radical leaders, who had been seized and imprisoned pending the presidential election, publicly announced that the sympathy of the Radical party was with the revolution, and a numerously signed *pronunciamiento* was issued from Corrientes, urging the citizens of Buenos Ayres to join in the insurrection. On Jan. 22 a mass meeting of 5,000 citizens of Buenos Ayres passed resolutions condemning the intervention of the President and Cabinet in Corrientes. On Feb. 8 Dr. Wenceslao Escalante, President of the National Mortgage Bank, decided to accept the Ministry of the Interior, which had been made vacant several weeks before by the resignation of Dr. Quintana. Dr. Escalante coupled his acceptance with the condition that the Federal forces should be withdrawn from Corrientes, leaving affairs there to be dealt with by the provincial authority. Early in February several thousand colonists of the province of Santa Fé took up arms in protest against the imposition of a new wheat tax, and the governor sent troops and artillery to quell the movement. Upon rumors that a revolution was about to begin in Buenos Ayres, President Saenz Peña called out the military and held them in readiness to suppress the threatened outbreak, and on Feb. 3 a decree was signed, mobilizing the National Guard and forming fresh lists. On March 23 Dr. de la Torre resigned the Ministry of Justice, and Dr. Amancio Alcorta accepted the portfolio. Early in April a revolt in the province of Catamarca began to assume serious proportions, the insurgents having captured the railroads. On April 30 Dr. Anchorena resigned the Ministry of Foreign Affairs because of the approval by his colleagues of the alteration of the boundary protocol with Chili. On the opening of Congress, May 18, the President transmitted his annual message to that body. It was fairly cheerful in its allusions to internal affairs, and represented the financial condition of the country as improving. But ministerial crises began almost immediately, and on June 7 the entire Cabinet resigned, the President having sent communica-

tions to the different ministers intimating that he desired their retirement, as he had decided upon a change of policy.

New Ministries.—On June 8 a new Cabinet was formed as follows: Minister of the Interior, Dr. Wenceslao Escalante; Minister of Foreign Affairs, Miguel Cane; Minister of Finance, Dr. Avellaneda; Minister of Justice, Public Instruction, and Worship, Dr. Amancio Alcorta; Minister of War, Gen. Viejobueno. Escalante and Alcorta retained the portfolios held by them in the old Cabinet. Dr. Avellaneda had acted as special envoy in Corrientes. It was a fusion Cabinet, by which the President hoped to gain the confidence of all parties. It failed, however, to accomplish this object. Gen. Roca and Gen. Mitre both publicly expressed their dissatisfaction, while the Radicals were not in the least placated. The new ministry enjoyed but a brief existence. Within a week Dr. Escalante resigned the Ministry of the Interior, owing to the opposition raised by his reply in Congress to an interpellation regarding the insurrection in Catamarca, and his action precipitated a crisis which led to the breaking up of the Cabinet on June 26. A new Cabinet was formed at once, but finding it impossible to carry on the Government of the country, the members offered their resignations to the President, July 1. The President summoned Gens. Roca and Mitre and Dr. Pellegrini, his immediate predecessor in the presidential office, to advise regarding the situation. No agreement was reached, as the councilors could not agree, and the crisis continued until July 8, when the whole ministry sent in its resignation. Then the President, finding it impossible to form a Cabinet of members belonging to the moderate parties, as a last resort offered the Government to the Radicals. This offer the Radicals promptly declined, and Aristobulo del Valle, one of the Radical leaders in the Union Civica, when it overthrew the Celman Government in 1890, was intrusted with the formation of a new Cabinet. On July 6 the result was announced as follows: Minister of the Interior, Lucio Lopez; Minister of Foreign Affairs, Valentin Virasoro; Minister of Finance, Marano Demaria; Minister of Justice, Public Instruction, and Worship, Enrique Quintana; Minister of War, Aristobulo del Valle. It was essentially a Radical Cabinet. The Nationalists, however, had a majority in Congress, and most of the provincial governments were controlled by them. The time had come for the long-contemplated Radical revolution to begin in earnest. On July 20 serious fighting occurred in the province of San Luis, the insurgents attacking the city of San Luis, and capturing the governor and ministry. On the following morning a similar movement was begun in the province of Buenos Ayres, where fighting began simultaneously in 20 different towns, and in the province of Santa Fé, where severe fighting occurred in the city of Rosario, and railroad tracks were torn up and telegraph lines cut. On the same day a meeting of Radicals was held in the city of Buenos Ayres, and Dr. Alem issued a manifesto declaring that the time had come to reconquer the rights and liberties of the people. The Federal Government requested Congress to declare a state of siege in

the provinces of San Luis, Santa Fé, and Buenos Ayres. Dr. Costa, Governor of Buenos Ayres, informed the Government that he needed no Federal support, but the Governor of Santa Fé begged that assistance be sent to him at once. On Aug. 1 Congress rejected the proposal for Federal intervention in the insurrectionary provinces, and Señor del Valle, in a speech from the steps of the Government building, told the people that Congress did not represent the country, and that the Government was resolved to enforce respect for the liberties of the people. The ministry had previously issued a decree ordering "the disarmament of the irregular forces of Dr. Costa, Governor of Buenos Ayres," and this decree the Minister of War was now intrusted to carry out. On Aug. 2 Gen. Roca resigned his seat in the Senate, of which he was president, and announced his intention of retiring to private life. Meantime events were moving rapidly with the revolutionists. Insurrection broke out in the provinces of Salta and Tucuman, fighting was renewed in the province of Corrientes, and the government of San Luis was in the hands of the insurgents. In the province of Santa Fé the governor resigned, the vice-governor, who continued to resist, was captured and shot, and a provisional government was proclaimed by the Radicals. In the province of Buenos Ayres, which was regarded as the decisive battle ground of the revolution, most of the towns were taken without much bloodshed, and the conflict centered around La Plata, the capital city of the province, which the Radicals had invested with an army 8,000 strong. Dr. Costa, the provincial governor, resigned and fled, leaving a farewell message to the Legislature, in which he charged the Federal Government with abetting the revolution and impeding his efforts to restore order. He also denounced Señor del Valle as a dictator and President Saenz Peña as a foolish old man. The Radicals entered La Plata, and, having proclaimed a provisional government, appealed for a truce pending the decision of the national Congress on the question of intervention. Such was the condition of affairs when on Aug. 8 Señor del Valle, with 2 gunboats and 3,000 Federal troops, entered the port of Ensenada, 6 miles from La Plata. Here he effected the disarmament of both the Radical and the Provincial forces. Proceeding thence to La Plata at the head of the national troops, Señor del Valle took over the provisional government, ordered the disarmament of the contending factions, and appointed Dr. Carlos Tejedor, a former Governor of Buenos Ayres, as national arbitrator to restore order in the province. The Radicals claimed recognition for the Government established by them at La Plata; but this was opposed by Congress, and the Cabinet being divided upon the question, a ministerial crisis was precipitated. Señor del Valle, Minister of War, and Señor Demaria, Minister of Finance, resigned ostensibly on account of differences with the national Congress; but actually they were forced out by a combination of the friends of Gens. Mitre and Roca, and their action led to the collapse of the Cabinet. A new Cabinet was formed Aug. 13 as follows: Minister of the Interior, Dr. Manuel Quintana; Minister of Foreign Affairs, Valentin

Virasoro; Minister of Finance, Dr. José A. Terry; Minister of Justice, etc., Eduardo Costa; Minister of War, Gen. Luis Campos. The new ministers were for the most part well known and experienced politicians, and members of the National party or the Union Civica. Señor Virasoro held the portfolio of Foreign Affairs in the preceding Cabinet, Dr. Quintana was Minister of the Interior in the first Cabinet of President Saenz Peña, Señor Costa was Attorney-General and Minister of Foreign Affairs under President Pellegrini, Dr. Terry was a lawyer and Deputy and a director of one of the principal banks in Buenos Ayres, who had not held executive office before, and Gen. Costa had been chief of staff.

A State of Siege Proclaimed.—Fighting was renewed at La Plata after the announcement of the new ministry, and continued in all the insurrectionary provinces. On Aug. 15, the Federal Congress, which up to that time had refused to intervene in provincial matters, resolved upon the proclamation of a state of siege throughout the republic, and in favor of Federal intervention in the provinces of Santa Fé and San Luis. The resolute action of the Government did much to restore public confidence. National troops took possession of all the public buildings in La Plata, and the officers of the provisional government set up by the Radicals abandoned the place: Dr. Tejedor, the Government arbitrator in Buenos Ayres, suspended all the legislative, executive, and judicial authorities; several officers of the garrison at La Plata were arrested by order of the Minister of War; and arbitrators with powers similar to those of Dr. Tejedor were sent with troops to San Luis, Santa Fé, and Corrientes to restore order in provinces. But although temporary quiet was restored, the Radicals did not abandon their revolutionary plans. Desultory fighting continued in several of the provinces, and a revolt against the newly elected Governor, Delarosa, occurred in the province of Tucuman, the rebels capturing and occupying the capital city and overturning the Government. Ex-President Carlos Pellegrini, as Federal arbitrator, was sent with a body of troops to quell the rising. Revolts occurred in the provinces of Cordoba and San Juan, and in Santa Fé the rebels captured Rosario, the second city in size and importance in the republic. On Sept. 20 the national troops in Cordoba, Tucuman, and Corrientes were in the mutiny, and it was found that Col. Espina had succeeded in exciting a revolt in the navy and was in possession of two gunboats and the old ironclad "Andes." The President and ministry passed the night at the Government House and a considerable number of Radical leaders and several officers were arrested and taken aboard an ironclad. It was also determined to mobilize the entire National Guard.

Gen. Roca in Command.—By Sept. 25 it had become evident that the whole country was convulsed by insurrectionary movements, and that the severest measures of repression would have to be used. The Government invested Gen. Roca with the command of all the troops, and prominent Radicals were ordered to be arrested and imprisoned, wherever found. The Govern-

ment charged Dr. Alem, as a member of the Senate, with suborning the army, and asked Congress to authorize immediate measures against him. Upon assuming command Gen. Roca ordered a vigorous campaign against the insurgents in all the provinces. The jails were soon filled with the Radical leaders. There was no further mutiny among the troops, and the great body of the navy remained loyal to the National Government. The revolting vessels were recaptured. Col. Espina, who was taken prisoner, was tried by court-martial and sentenced to be shot. The force, under Dr. Pellegrini, recaptured Tucuman, and disarmed the forces there, which made but little resistance. The rebels in Santa Fé were defeated after two days of fighting, and the city of Rosario, the headquarters of the revolution, was recaptured on Oct. 1 by Gen. Roca. Dr. Alem was found in Rosario, and, the Senate having ordered his arrest, he was taken to jail with a large number of less prominent leaders of the revolution. On Oct. 3 the Minister of Foreign Affairs advised the Argentine minister to the United States of the surrender of Rosario, and added: "The whole province is now pacified, and the entire country is perfectly quiet. Under these circumstances a great movement of conservative opinion has prevailed, by which the proceedings of the National Government have received the approbation of the people and the army and navy. These have demonstrated their discipline, loyalty, and strength in support of the Constitution and public order."

ARIZONA, a Territory of the United States, organized Feb. 24, 1863; area, 113,020 square miles. The population, according to each decennial census, was 9,658 in 1870; 40,440 in 1880; and 59,620 in 1890. Capital, Phenix.

Government.—The following were the Territorial officers during the year: Governor, Nathan O. Murphy, Republican, succeeded in April by Lewis C. Hughes, Democrat; Secretary, N. A. Morford, succeeded in June by Charles M. Bruce; Treasurer, William Christy, succeeded in April by James A. Fleming; Auditor, Thomas Hughes, succeeded in May by Howard C. Boone; Attorney-General, William Herring, succeeded in April by Francis J. Heney; Superintendent of Public Instruction, George W. Cheyney, succeeded by F. J. Netherton; Railroad Commissioners, H. B. Lighthizer, E. B. Gage, G. W. Beecher, J. S. O'Brien, succeeded by J. J. O'Brien, Charles Leach, George M. Gage, Reese M. Ling; Chief Justice of the Supreme Court, Henry C. Gooding, succeeded in May by A. C. Baker; Associate Justices, Richard E. Sloan, succeeded in April by Owen T. Rouse, Edward W. Wells, succeeded in April by J. J. Hawkins, Joseph H. Kibbey.

Finances.—The following is a statement of the Territorial debt, bonded and floating, exclusive of interest, on Jan. 1, 1893: Old bonds outstanding that can not be funded, \$392,000; new 5-per-cent. bonds issued for the redemption of bonds of 1883, \$202,785; new 5-per-cent. bonds issued for the redemption of floating debt incurred prior to Jan. 1, 1891, \$92,330; floating debt incurred since Jan. 1, 1891, less cash on hand, \$101,400; total debt, \$788,515. Under the recent act of Congress providing for refunding the whole county debt and a portion of the Ter-

ritorial debt, new 5-per-cent. bonds have been issued to the amount of \$1,227,000, of which \$931,885 represents the county debt and \$295,115 the Territorial liability. Although the act of Congress was approved June 25, 1890, the bonds were not finally sold until August, 1892, and the proceeds from their sale were not available until December of the same year, since which time the Treasurer and Auditor have been at work complying with the provisions of the act and adjusting the Territorial finances.

During 1891 and 1892 the Territorial expenditures exceeded the receipts by \$78,013.53. A tax rate of 50 cents on each \$100 of valuation for general fund purposes is needed to conduct the Government on a cash basis, but the present rate established by law is only 35 cents.

Legislative Session.—The seventeenth Legislative Assembly convened at Phenix on Feb. 13, and adjourned on April 13. For the purpose of encouraging storage of water for irrigation an act was passed giving the owners of storage reservoirs the right to make use of the natural channels of streams in the Territory for conducting the waters stored in such reservoirs to the place or places where they desire to use them, and the further right to divert such waters from such natural channels at such places as may be most convenient. By another act any person, company, or corporation was authorized to appropriate any of the unappropriated waters or the surplus or flood waters in the Territory for delivery to consumers and for rental, milling, irrigation, mechanical, domestic, stock, or any other beneficial purpose, and to that end was authorized to construct reservoirs, dams, flumes, canals, ditches, and other necessary ways. The first appropriator of water under this act shall always have the better right thereto.

A Territorial reform school for juvenile offenders was established in the county of Cocino. A fund for the erection of buildings is to be obtained from the proceeds of a special tax of one half mill to be levied in each of the years 1893 and 1894. A similar tax of two fifths of a mill is to be levied in each of these years for a normal-school building.

Other acts of the session were as follow:

To regulate and prohibit the carrying of deadly weapons concealed.

Authorizing the boards of supervisors of the several counties to pay bounties for the destruction of lynxes, wild cats, lovas, timber wolves, bears, panthers, and mountain lions.

Requiring witnesses in criminal cases to enter into written recognizances to appear and testify at the trial of the cause.

To provide for keeping barbed-wire fences along the highways in repair.

To punish cruelty to animals.

Requiring owners and operators of irrigating canals to remove from the banks of their canals all cockle-burs and sunflowers growing thereon.

To regulate the practice of dentistry.

Establishing a Territorial museum for the collection and preservation of the archæological resources and of specimens of the minerals, flora, and fauna of the Territory.

Providing for the inspection and regulating the slaughtering of animals for sale in the Territory.

Establishing a Territorial library.

Providing for the publication of a second volume of reports of decisions of the Territorial Supreme Court.

Enacting a general law for the incorporation of cities, towns, and villages having a population of 500 persons or more.

Revising the law relative to the assessment and collection of taxes.

Providing for annual encampments of the Territorial militia, and perfecting the laws governing the militia.

Valuations.—The total assessed valuation of property in the Territory for 1893 was \$28,486,183, an increase of \$563,021 over the valuation of 1891. Included in the assessment are the following items: 3,463,507 acres of land, \$5,198,515.35; improvements thereon, \$1,604,014; city and town lots, \$2,986,591.40; improvements thereon, \$2,642,682.40; 401,812 cattle, \$3,742,936.65; 421,797 sheep, \$847,463.48; 44,342 horses, \$1,072,878.89; 1,807 mules, \$51,050; 1,325 asses, \$13,589.50; 4,005 goats, \$5,553; 6,071 hogs, \$19,286.65; 1,087 miles of railroad, \$5,969,781.26; all other property, \$4,332,340.42.

Education.—During 1892 there were 275 teachers in the public schools of the Territory, employed on an average six and a half months, at an average salary of \$79.77. The number of children of school age in the Territory was 15,463, of whom 9,997 were enrolled on the school lists. The total amount paid in salaries was \$140,712.21, and the total expenditure for school purposes was \$205,810. In the 214 school districts the total value of school property was \$329,419.49. Among the private schools conducted by religious societies are several Catholic academies and parochial schools. Higher education is represented by the Territorial University, which was opened at Tucson in October, 1891. The value of its grounds, buildings, and equipment is \$90,665. The institution is under the control of a board of regents appointed by the Governor, the Secretary of the Territory and the Superintendent of Public Instruction being *ex-officio* members of the board. Its endowment consists of two separate funds: First, the territorial tax of about \$4,500, to pay interest on bonds pledged to the university, annually levied, available for building and general purposes; second, the college appropriation from the national Congress, increasing annually from \$15,000 to \$19,000 for the year 1893-'94, with provisions for a continued yearly increase of \$1,000 until it becomes \$25,000 annually, restricted to use for salaries and equipment. The enactment establishing the university provides that it shall consist of five departments: First, literature, science, and arts; second, theory and practice and elementary instruction; third, agriculture; fourth, normal instruction; fifth, mineralogy and the school of mines. With adequate provision for instruction in science and literature and in the branches required for thorough training in business methods, as well as in art, this university devotes particular attention to agriculture and mining, the two great industries of Arizona.

Cattle-raising.—The completion of two transcontinental railways through northern and southern Arizona in 1880 and 1881 suddenly opened a vast grazing region of unsurpassed excellence, and the opportunity was seized by eager capitalists, both at home and abroad, to invest in the new El Dorado. Thousands of

cattle immediately subsequent to the completion of these lines were imported into the Territory from Mexico and from Utah and Texas. For some years, with virgin pastures, the three and four year old steers were turned off from the ranges in large numbers every autumn soon after the rainy season, and disposed of in the local markets and in California as prime beef, bringing profitable prices, and the business greatly prospered. But as the herds increased the grass supply diminished throughout the Territory to such an extent that it was impossible to mature prime beef on the open ranges, and the cattle owners were forced, at great pecuniary sacrifices in most instances, to sell their steers as feeders to buyers from California, Montana, and Kansas.

The steers from two to five years old, as recently as the spring of 1893, were purchased by thousands and shipped to these States at considerable profit to the middleman, and are there matured for market.

While no accurate data are at hand, it is estimated that over 200,000 head were shipped from Arizona to California, Nevada, Montana, Kansas, Nebraska, and Texas during the year ending June 30, 1893. Severe drought during the last two seasons served to hasten these shipments and greatly add to the number of cattle sent away. But such has been the shrinkage in the value of certain classes of cattle that the price offered for them did not permit their owners to incur the financial risk of relieving their ranges to the extent that was desirable to escape disaster, even though the railroads penetrating the Territory made special rates "for starving cattle." As indicating the loss in this business, it may be noted that the number of cattle assessed in the Territory decreased from 644,209 in 1892 to 491,812 in 1893, and the valuation fell from \$5,047,207 to \$3,742,936.

Irrigation.—Probably not more than 10,000 acres are successfully cultivated in the Territory without the aid of irrigation, and these are to be found in the northern part in valleys of high altitude. The extent to which irrigation has been developed and land reclaimed is shown by the following figures:

COUNTIES.	Miles of canals.	Acres served.
Maricopa.....	346	270,000
Yuma.....	128	106,000
Graham.....	902	72,000
Pima.....	55	12,500
Apache.....	125	14,000
Total.....	851	573,500

Of the 346 miles of canals in Maricopa County, 38 miles were constructed during 1892, furnishing 60,000 acres with water. With these canals there are also about 2,000 miles of laterals used for the distribution of the water on the land irrigated. In Yuma County, 24,000 acres of the 105,000 under irrigation were reclaimed during the same year.

Mining.—During the past seventeen years Arizona has produced gold, silver, and copper to the value of \$94,293,648. Mining was fairly begun in 1876. In that year \$336,564 worth of silver bullion was produced. The industry rapidly developed, until in 1881 the silver bul-

lion shipped by Wells-Fargo Express Company amounted to \$6,278,893, and the total product of gold, silver, and copper for the following year reached \$9,298,267, the highest point ever attained. A rapid decline in the price of silver during the past three years has resulted in closing nearly all the silver mines, reducing the output for last year to \$287,426, while the value of the total product of metals (including copper in ores) shipped for treatment was \$6,782,607. The reduction in the silver output has been in a measure made up by the increased production of copper.

Of the copper companies in the Territory five gave an output for the year of 88,712,507 pounds. During 1893 there has been a marked movement in prospecting and mining for gold, with such favorable results that the total mineral product for the year will probably reach \$6,000,000.

Forests and Lumber.—The chief timber region of the Territory is in the northern and central portion of Arizona, and covers an area of about 2,750 square miles. The high mountain ranges of the south and eastern portions of the Territory are also very liberally timbered. Pine wood is generally found at altitudes of 5,000 to 10,000 feet. Below this line the timber is juniper, live oak, mesquite, and palo verde. The two last named supply the fuel of the Territory. It is estimated that the total quantity of pine timber fit for commercial purposes is 10,000,000,000 feet. Nearly all of this is located in the northern and central portions of Arizona, and will be of little service to the southern section until rail communications are completed. At present the lumber for this section is supplied by California and Oregon, at prices varying from \$30 to \$60 per 1,000 feet, the high price being due to cost of transportation. The value of merchantable lumber in the pine forests of the north, where the output ranges from 10,000,000 to 12,000,000 feet annually, runs from \$12 to \$15 a 1,000 feet.

Church Statistics.—The strength of the various church organizations in the Territory is as follows:

Methodist Episcopal: Missions, 12; preaching places, 23; preachers, 15; membership, 654; Sunday schools, 20; pupils, 1,098; value of church property, \$45,200.

Methodist Church, South: Churches, 6; preachers, 13; membership, 374; value of church property, \$20,500; Mexican missions, 2; membership, 68; church property, \$3,200.

Presbyterian: Churches, 5; ministers, 3; adherents, 500; enrolled communicants, 280; value of church property, including Indian training school, \$30,000.

Baptist: Churches, 9; preachers, 9; membership, 550; value of church property, \$2,000.

Episcopal: Churches, 5; membership, 320; value of church property, \$18,000.

Catholic: Churches, 9; chapels, 13; resident priests, 9, and a presiding bishop. The number of adherents of this Church is nearly as large as those of all other churches combined. There are two commodious hospitals under the care of the Catholic sisters, who have also charge of two orphan asylums. There is a number of other charitable institutions under the direction of this Church.

Mormons: Churches, 16; members, 8,910, including Sunday-school children. It is estimated that of the members 3,813 are on the Sunday-school roll.

Petrified Forest.—In Apache County, in the eastern portion of central Arizona, about 20 miles from Holbrook, a town on the Atlantic and Pacific Railroad is Arizona's petrified forest. The area it occupies is covered by the land grant of the Atlantic and Pacific Railroad, every alternate section of which is reserved by the Government. It is estimated that there are about 10,000 acres in this forest, which consists of huge logs, in some cases six feet in diameter. The ground is nearly all covered by trunks and limbs of petrified trees of every size and color, quantities of which have been shipped to various parts of the world and converted to ornamental uses. Recently persons have been wantonly destroying many of these logs with giant powder, blowing them open in order to obtain crystals that are found in the center.

Silver Convention.—A convention of the silver leagues of the Territory was held at Phenix in the latter part of May, at which the silver problem was discussed and resolutions were adopted favoring the free coinage of silver at the ratio of 16 to 1.

ARKANSAS, a Southern State, admitted to the Union June 15, 1836; area, 53,850 square miles. The population, according to each decennial census since admission, was 97,574 in 1840; 209,897 in 1850; 435,450 in 1860; 484,471 in 1870; 802,525 in 1880; and 1,128,179 in 1890. Capital, Little Rock.

Government.—The following were the State officers during the year: Governor, William M. Fishback, Democrat; Secretary of State, H. B. Armistead; Auditor, C. B. Mills; Treasurer, Richard B. Morrow; Attorney-General, James P. Clarke; Superintendent of Public Instruction, Josiah H. Shinn; Commissioner of Mines, Manufactures, and Agriculture, George M. Chapline, appointed Dec. 13, 1892, to fill the vacancy caused by the death of John D. Adams on Dec. 7, 1892; State Land Commissioner, Charles B. Myers; Chief Justice of the Supreme Court, Sterling K. Cockrill, who resigned in April, and was succeeded by H. G. Bunn, appointed by the Governor May 1; Associate Justices, Burrill B. Battle, Simon P. Hughes, W. W. Mansfield, and Wilson E. Hemingway, who resigned on March 13, and was succeeded by Richard H. Powell, appointed by the Governor May 10.

Finances.—The following figures are taken from the latest report of the State Auditor: General revenue fund, balance on Oct. 1, 1890, \$427,571.30; total receipts for the two years succeeding, \$1,109,693.81; total expenditures, \$1,349,524.18; balance on Oct. 1, 1892, \$187,740.93. Common school fund—balance on Oct. 1, 1890, \$263,183.54; total receipts for the two years, \$668,587.07; total expenditures, \$907,774.78; balance on Oct. 1, 1892, \$23,995.83. Permanent school fund—balance on Oct. 1, 1890, \$274,201.82; total receipts for the two years, \$5,253.10; total payments, \$989.46; balance on Oct. 1, 1892, \$278,465.46. Sinking fund—balance on Oct. 1, 1892, \$2,935,282.75; total receipts for the two years, \$1,355,753.22; total payments, \$3,028,306.08; balance on Oct. 1, 1892, \$1,262,729.89. Special sinking fund—balance on Oct. 1, 1890, \$445,775.13; total receipts for the two years, \$258,521.87; total payments, \$690,158.27; balance on Oct. 1, 1892, \$14,138.73. The total

receipts of all funds in the State treasury, including the balances of Oct. 1, 1890, were \$8,589,934.76; the total disbursements were \$6,354,133.27, and the total balances on Oct. 1, 1892, \$2,235,801.49. The bonded State debt on Oct. 1, 1892, as reported by the Auditor, consisted of principal, \$1,931,100; overdue interest, \$2,978,332.50; total, \$4,909,432.50.

After the discovery, in 1891, of the defalcation of ex-Treasurer Woodruff, a rigid investigation was made into the financial operations of the State prior to and during his term, and a surprising condition of affairs has been thereby revealed. In a message to the General Assembly on Feb. 2, 1893, Gov. Fishback states the facts discovered in the following language:

1. The returning board, which investigated the condition of our State treasury more than a year ago, published on Sept. 30, 1891, the humiliating statement that, so far as the books of the Auditor and Treasurer were concerned, it is impossible to learn from them, in their present condition, whether Woodruff's shortage be only about \$55,000, or more than \$138,000. This is true, and, whatever the explanation, it is inexcusably disgraceful because it is true.

2. There has recently been offered for payment to the State Treasurer \$3,000 of coupons, which, according to the records, are stolen property. They belong to the State, and are out of her possession, and, as far as any records show, may have been lying in hiding for twenty years past, while many thousands of dollars of others are unaccounted for.

3. There is, according to the Simms report, \$92,530 of interest-bearing scrip, known as Page scrip, missing from the vaults of the treasury, and there may be \$40,000, \$50,000, or even \$100,000 of other fraudulent or stolen evidence of debt out somewhere in the markets of the world still lying in wait for some dishonest treasurer to redeem them; nobody and no record discloses how much, or where.

4. The bond register shows \$11,000 of bonds, which have been redeemed but are missing from the vaults of the treasury. Whether canceled and burned, or again out in the markets of the world, it is impossible for the books or register to tell.

5. The irregularities and complication of the bond register and bookkeeping in the offices of Auditor and Treasurer, originating as early as 1869, preclude the possibility of knowing how much fraudulent or stolen evidences of debt of various kinds are against the State, covertly biding their time, when they will be slipped in and redeemed unawares, just as has been attempted twice within the past few months. This condition of things constitutes a constant menace of robbery of the taxpayers of the State.

Valuations.—The latest tabulated statement of the assessed valuation of property in the State covers the years 1890 and 1891. For 1890 the valuation of real estate was \$109,417,158, and of personal property, \$65,320,597; for 1891 real estate was valued at \$113,645,924, and personal estate at \$63,983,050. Included in the valuation of 1890 were the following items: Town and city lots, \$25,463,479; other land, \$71,399,352; 209,445 horses, \$3,995,314; 132,736 mules and asses, \$7,587,304; 1,007,058 cattle, \$6,445,710; 233,081 sheep, \$246,344; 1,330,343 hogs, \$1,562,139. For 1891 the valuation of town and city lots was \$27,785,185; of other land, \$72,976,204; of 208,670 horses assessed, \$3,555,115; of 134,083 mules and asses, \$7,465,338; of 999,030 cattle, \$6,068,413; of 238,779 sheep, \$248,479; of 1,243,488 hogs, \$1,411,076. The rate of taxation for State purposes remains unchanged.

Legislative Session.—The regular biennial session of the General Assembly began on Jan. 9, and ended on April 8. An important result of its labors was the passage of an act completely changing the policy of the State toward its convicts. This act places the control of the State Penitentiary in the hands of a board of managers, consisting of the Governor, Secretary of State, and Attorney-General, which is authorized to procure from the present lessees of State convicts a cancellation of their contract at any time before its expiration, provided the terms of cancellation are equitable to the State and do not require any payment to the lessees. The board may also purchase, from the funds at its disposal, any lands, buildings, machinery, live stock, and tools necessary for the use and operation of the Penitentiary, to the end that the largest number of convicts that can be accommodated and made self-supporting may be confined therein. Until the General Assembly shall have made suitable provision for confining all the convicts within the walls, the board is directed to employ the excess at labor outside, either under contract or under the State-account system, as it may deem best; and if it has funds, it may purchase or lease and equip a farm or farms, at which those convicts not suitable for contract labor, and not self-supporting within the walls, may be employed. The system of labor shall be the State-account system, or the contract system, or partly one and partly the other, as the managers shall deem best; but no contract shall be let for any convict labor, if equally remunerative employment can be furnished by the State and worked on State account. No contract shall be made by which the control of the convicts shall pass from the State or its officers; and the State shall never be deprived of the right to direct how its convicts shall be lodged, fed, clothed, guarded, worked, and treated; and the management and discipline of them shall in all cases remain under control of the State and officers employed and paid by the State. The board shall establish within the walls of the Penitentiary such industries as they may deem best, but there shall be such industries established, among others, as will furnish the charitable institutions of the State with articles necessary for such institutions. The officers of such institutions are required to purchase of the Penitentiary articles so manufactured whenever they are in need of such articles, paying therefor the market price. The board is further authorized, if it believes that the venture will be profitable, to open and operate on the State-account system a coal mine on any of the coal lands belonging to the State, the labor to be performed solely by convicts. From such mine all the coal needed for the several State departments and charitable institutions shall be supplied at the market price, the remaining output being sold in open market. No convict shall be worked in any coal mine until he has been examined by the Penitentiary physician and pronounced physically able to perform the labor, and in no case shall any person under eighteen years be so employed. The board may also employ convicts in cutting timber on and clearing and fencing timber lands belonging to the State, the timber so cut being sold for the benefit of the State, and such lands when cleared may be

farmed by the convicts. A tract of land having granite or other building stone therein may be bought and convicts employed in quarrying on the State account. The board shall have full control of all details of management of the Penitentiary, and, in addition to the income now accruing from convict labor, shall have at their disposal the sum of \$30,000 to carry out the provisions of the act. Numerous provisions are made for more humane treatment of convicts. By another act, convicts are made competent witnesses to testify as to the treatment of their fellow-prisoners, the quality of their food, and the sanitary condition of the Penitentiary.

For the protection of miners a law was passed regulating minutely the construction and use of mine equipments, and providing for a State system of mine inspection under the control of a State mine inspector appointed by the Governor.

Exportation of fish and game from the State was forbidden until after April 12, 1901.

A peculiar enactment respecting the settlement of estates provides that when all the heirs and distributees of a deceased intestate are of full age, it shall be lawful for them to sue for and collect all demands and property of the intestate, and to manage and control the estate, without any letter of administration being granted, in all cases where the creditors of such estate consent, or where the heirs or distributees have paid all valid debts and no contingent liabilities are outstanding.

A board of World's Fair directors was created, and the sum of \$15,000 was appropriated for their use, provided the voluntary association known as the Arkansas World's Fair Association should make a gift to the State of the building which it had erected in Chicago out of funds subscribed by its members. This sum was to be borrowed from the Direct Tax fund in the State treasury, and such part thereof is to be repaid by the State as shall be needed to pay all claims presented against this fund during the time specified for presenting such claims.

The sum of \$20,000 was appropriated for the preparation and publication of a new digest of the public statutes of the State, including the acts of the present year.

A new law was passed regulating the taxation of sleeping- and dining-car companies, express companies, and telegraph companies.

An amendment to the State Constitution was proposed giving to the county courts, together with a majority of the justices of the peace of each county, authority to levy a tax not exceeding 3 mills on the dollar, the proceeds of which may be used in the respective counties for making and repairing public roads, building court-houses, jails, bridges, and other internal improvements.

Other acts of the session were as follow :

Making it unlawful to catch, kill, or injure the bird known as prairie chicken for the term of five years from the passage of the act.

Providing that no mortgage or other instrument shall be a lien or incumbrance of any kind on any crop to be planted, unless the crop be planted within twelve months after the execution thereof, but this shall not apply to crops already planted when the instrument is executed.

Allowing surety companies to become sureties on official bonds.

To prevent the killing of fish by the use of dynamite or other explosive material.

To establish one board of trustees for the management of all the charitable institutions of the State.

Making the payment of a poll tax a prerequisite for voting.

To provide for the dissolution of corporations.

To prevent the importation and sale of unwholesome articles of food.

To prevent preferences among the creditors of insolvent corporations.

Establishing that part of the St. Francis basin within the State as a levee district, and incorporating a board of levee directors therefor.

Amending in certain details the law providing pensions for Confederate soldiers.

Requiring the method of reading and designating the survey of lands in the State by sections, parts of sections, townships, and ranges to be taught in the common schools.

Compelling railroad companies to run at least one passenger train each way over their roads in the State on every day, and to make stops at every station where they sell tickets, except at flag stations, where they must stop if signaled.

To cure defective acknowledgments of deeds.

To define who are and who are not fellow-servants.

Providing that when two or more persons are indicted in the same indictment either may testify for or against the other defendant or defendants.

Education.—The following public-school statistics for the years ending June 30, 1891, and June 30, 1892, are reported by the State Superintendent of Public Instruction :

ITEMS.	1891.	1892.
Children of school age, white.....	806,890	807,781
Children of school age, colored.....	112,176	114,471
Number enrolled, white.....	178,389	187,361
Number enrolled, colored.....	68,880	64,191
Average attendance, both races.....	128,625	140,445
Teachers employed, male.....	8,557	8,990
Teachers employed, female.....	1,888	1,651
Average monthly salary, male.....	\$35 12	\$36 37
Average monthly salary, female.....	\$32 18	\$32 80
New schoolhouses erected.....	298	173
Value of new schoolhouses.....	\$78,342 88	\$97,847 49
Total value of school property.....	\$1,057,236 55	\$1,765,881 00
Total revenue for schools.....	\$1,076,815 84	\$1,096,269 51
Total payments for schools.....	\$1,076,815 84	\$1,151,652 91
Wages paid teachers.....	\$907,141 59	\$987,150 97
Number of schools taught.....	4,251	4,725
Average length of school year.....	76 days.	74 days.

The public-school revenue is derived, first, from a State tax of 2 mills on the dollar levied on all taxable property, the proceeds of which are paid into the State treasury and apportioned therefrom to the several counties; second, from a poll tax of one dollar, which is collected and disbursed by the county authorities; third, from such local taxes on property, not exceeding 5 mills on the dollar, as each school district may see fit to levy for its own use. The amounts derived from these taxes in 1891 were as follow : State tax, \$321,545.39; poll tax, \$154,728.40; local tax, \$600,102.40. For 1892 the revenue from the State tax was \$341,621.88; from the poll tax, \$167,419.81; from the local tax, \$571,923.02. These amounts were insufficient to maintain the schools during a length of time necessary for efficient work.

Charities.—At the State Lunatic Asylum there were 410 patients on Nov. 30, 1890; during the year following 116 new patients were admitted and 101 discharged, leaving 425 on Nov. 30, 1891. During the year ending Nov. 30, 1892, 105 new patients were admitted and 97 dis-

charged, leaving 433 remaining at the close of the year, of whom 361 were of the white and 71 of the colored race. Early in 1893 the new buildings, for which the General Assembly of 1891 appropriated \$85,000 as a construction fund, were completed, and accommodations were thereby furnished for 300 additional patients.

At the School for the Blind there were about 200 pupils on Jan. 1, 1893. For the two years preceding the average attendance was 146 pupils, and the cost of maintaining the institution \$74,236.43. At the Deaf-Mute Institute 138 pupils were in attendance on Jan. 1, 1893.

Penitentiary.—At the State Penitentiary there were 716 convicts on Jan. 1, 1892; 880 others were received during the year, and 10 who had previously escaped were recaptured, making the total number in the institution during the year 1,106. Of these, 266 were released by pardon, commutation, or expiration of sentence, 87 died, and 51 escaped, leaving 752 in prison on Jan. 1, 1893, of whom 207 were of the white race, 530 were negroes, and 5 Indians. At that time only 268 were confined within the Penitentiary walls, the remainder being employed by the lessees in various parts of the State. Three hundred and eleven were engaged in farming, 98 in repairing railroads, 15 in shipping wood, and 60 in brickmaking. The receipts from the lessees for the year ending in May, 1892, were \$32,123.48.

Militia.—Through the efforts of Gov. Eagle during his term a State militia was organized, consisting of 11 companies of infantry, 1 of cavalry, and 1 of artillery. The infantry companies have been organized into a regiment, are well armed and equipped, and are under fair discipline. The cavalry company is also ready for active service, and the artillery has been provided with two guns and the necessary equipment. The arms, camp equipage, and figures for these companies have been supplied from an appropriation made by the General Government. During August, 1892, an encampment of these organizations, which lasted one week, was held in the arsenal grounds, Little Rock.

The Woodruff Defalcation.—In the suit brought by the State against the bondsmen of ex-State Treasurer Woodruff a report was made in November, 1892, by the special master, Thomas H. Simms, appointed by the court to investigate the facts, in which he found the balance due the State from the late Treasurer to be \$43,857.75. This sum is in addition to the admitted cash deficiency of \$68,740.57, which the bondsmen voluntarily restored to the State soon after the discovery of the ex-Treasurer's irregularities. The master also charged that the ex-Treasurer, in attempting to cover up his shortage, had been guilty of obtaining orders from the State Debt Board for the issuance of scrip under false pretenses, and that he had also embezzled certain scrip belonging to the State. On the strength of the facts found by the master, the ex-Treasurer was indicted by the Grand Jury of Pulaski County on Dec. 17, 1892, for three different offenses. His trial did not occur till October, 1893, when a disagreement of the jury resulted, and the case was continued to the next term of the court, when a new trial will be held.

Cotton-Growers' Convention.—A convention of delegates from 29 counties in the State met at Little Rock on March 10, and, after discussing the subject of cotton culture, adopted resolutions that included the following:

That we, the representatives of the cotton-producing counties in the State of Arkansas, in convention assembled, recommend that this convention do proceed to organize as a permanent organization, to be known as the "Cotton-Growers' and Merchants' Association."

That we recommend that there be local organizations of this association organized in every cotton-growing county, and that the said local organizations shall, when possible, co-operate with any farmers' organization now existing.

That we recommend a reduction in the acreage of cotton for the year 1893 to such an extent that by a corresponding increase of the acreage in grains, grasses, and cereals sufficient produce might be raised in the country to feed the men and animals necessary for the cultivation of cotton and the independence of the farmer or planter.

That extraordinary effort be made to especially produce an abundance of corn, meat, hay, peas, oats, and other necessities for the planters' use.

That we appoint a sufficient number of delegates to the Interstate Cotton-Growers' Convention to represent Arkansas in this matter, and to take action looking toward a hearty co-operation of all the cotton-growing States for the end of reducing the cotton acreage to an extent equal and not in excess of the demand, so as to keep the price of cotton to a figure at which a profit may be realized.

ASSOCIATIONS FOR THE ADVANCEMENT OF SCIENCE. American.—The forty-second meeting of the American Association was held in Madison, Wis., Aug. 17-22, 1893. The officers of the meeting were: President, William Harkness, of Washington, D. C.; Vice-Presidents of sections: A, Charles L. Doolittle, South

WILLIAM HARKNESS.

Bethlehem, Pa.; B, Edward L. Nichols, Ithaca, N. Y.; C, Edward Hart, Easton, Pa.; D, Stillman W. Robinson, Columbus, Ohio; E, Charles D. Walcott, Washington, D. C.; F, Henry F. Osborn, New York city; G, Charles E. Bessey, Lincoln, Neb.; H, J. Owen Dorsey, Tacoma Park, Md.; I, William H. Brewer, New Haven, Conn. Permanent Secretary, Frederick W. Put-

nam, Cambridge (office Salem), Mass. General Secretary, Thomas H. Norton, Cincinnati, Ohio. Secretary of the Council, Herman L. Fairchild, Rochester, N. Y. Secretaries of the Sections: A, Clarence A. Waldo, Newcastle, Ind., in place of Andrew W. Phillips, who was not present; B, W. Le Conte Stevens, Troy, N. Y.; C, Henry N. Stokes, Chicago, Ill., in place of John U. Nef, who was not present; D, David S. Jacobus, Hoboken, N. J.; E, William H. Hobbs, Madison, Wis., in place of Robert T. Hill, who was not present; F, Leland O. Howard, Washington, D. C.; G, Beverly T. Galloway, Washington, D. C., in place of Frederick V. Coville, who was not present; H, Warren K. Moorehead, Xenia, Ohio; I, Nellie S. Kedzie, Manhattan, Kan. Treasurer, William Lilly, Mauch Chunk, Pa.

Opening Proceedings.—The preliminary meeting of the council with which the meeting begins was held in the Park Hotel on Aug. 16, when, besides other details, business pertaining to local arrangements, etc., was decided upon. About 80 new members were elected. The first general session with which the public meetings begin was held in Library Hall of the University of Wisconsin, which institution had placed its buildings at the disposal of the visiting scientists, at 10 A. M., on August 17. As is the custom, President Joseph Le Conte called the meeting to order and promptly introduced his successor, Prof. William Harkness, as the presiding officer. In taking the chair, Prof. Harkness made a brief address, in which he spoke of the aims and objects of the association, comparing them to those of the French Academy and of the British Association for the Advancement of Science. The former labored for the promotion of science by conferring honors and medals upon scientists, while the latter acted by stimulating independent research and rewarding such work by pecuniary prizes. The object of the American Association was similar to the latter, and if it had not yet attained the standard of its British prototype, it certainly was in a fair way of reaching it before long. Another object of the American Association was the bringing together of all workers in science—men and women—into closer relations with each other. At the close of these brief remarks the Rev. J. W. Cochran offered prayer, and then brief addresses of welcome were delivered by Mayor John Corscot, representing the civic authorities of Madison, and by Gen. Lucius Fairchild, chairman of the local committee of arrangements. President Charles K. Adams, of the University of Wisconsin, extended a hearty welcome to the scientists in behalf of the university. The annual report of the association was then presented by the permanent secretary, Prof. Frederick W. Putnam, who announced the deaths of 32 members during the past year. Among these was John S. Newberry, a past president of the association, head of the department of geology at Columbia College School of Mines; Prof. Eben N. Horsford, of Cambridge, Mass., an original member of the association; Dr. Henry Wheatland, of Salem, Mass., founder of the Essex Institute in that place; Martha J. Lamb, of New York city, editor of the "Magazine of American History"; and Dr. Philo R. Hoy, of Racine, Wis.

The receipts of the association during the past year amounted to \$8,238, and the expenditures \$6,510, leaving a balance of \$1,715. The association has a research fund, the interest of which is expended in the encouragement of scientific research. The fund now amounts to \$5,840, and it is increasing every year.

Address of the Retiring President.—The Association met in the Assembly Chamber of the Capitol, on the evening of May 17, to hear the retiring address of President Joseph Le Conte. Owing to the absence of Gov. Peck, the Attorney-General, J. L. O'Connor, welcomed the association in a few well-chosen words, and then gave way to Prof. Le Conte, who discussed "The Present Status of Science as to the Origin of Mountain Ranges." It was customary, he said, for the president in his annual address to give a *résumé* of the progress of science for the expiring year. But the field of science was so great that he felt obliged to confine his paper to one subject. Then, taking up the theme of his address, he defined a mountain as the result of a single earth effort, occupying a short or a very long time, while a mountain range was the result of a succession of earth throes. The thickness of the strata of mountains varies, but it is always great. In the Appalachians the Palæozoic is 40,000 feet thick, the Mesozoic of the Alps is 50,000 feet, and the Cretaceous of California is 20,000 feet. The sediments of the Appalachians thin out to the west to only 1,000 or 2,000 feet, so that mountains may be considered as lines of exceptionally thick sediments. They are, at the same time, lines of exceptionally coarse sediments. Foldings and faults are also characteristic of these features of the earth, the folds being single or many, and the faults being sometimes of enormous extent. Faults of 20,000 feet occur in the Western region. The component materials of mountains are fragments of rock, coarse gravels, and sands, and their huge mass rises in folded structure above the general surface of the globe. Sometimes, as in the Uintah mountains, there is but a single enormous fold; and again there is fold upon fold; and yet again there is occasionally great complexity, the strata being thrust under and over in a vast fanlike form. There are also sinclines and anticlines, which are often greatly appressed, as in the Appalachian range, where 19 have been counted in a distance of 65 miles. Mountain strata are not equally affected by cleavage, some seeming to be very solid, while in the case of others the whole mountain appears to be cleavable from top to bottom. The earth wave sometimes breaks with surprising abruptness, and again it slopes away very gently.

Many theories have been offered in explanation of these phenomena. Bare facts are not science. Facts must be grouped and systematized. But as this work goes on, it is liable to grow daring and speculative, until it is necessary to demand a careful discrimination between what may be styled formal and causal theories. It is agreed that mountains were originated by a process of horizontal mashing and vertical uplifting of the earth's crust. But what caused this mashing and uplifting? A true formal theory must advance gradually. Mountains are born of sea-margin deposits. We find by ob-

servation that existing offshore deposits are coarse at the top, shading down to fine by the same law as that marked in the structure of mountains. But the enormous mountainous deposits would have been possible only where there was a corresponding subsidence of sea bottom. The earth sinks by loading, and rises by unloading. Of this the Colorado plateau furnishes an illustration. It was originally 20,000 feet high, but 12,000 feet have been removed by erosion, which has caused the remaining 8,000 feet to rise above the general level. It may be regarded as now proved that the cosmic behavior of the earth is that of a rigid solid. A solid globe of glass six feet in diameter will change shape by the pressure of its own weight. The earth does the same. But as the earth is not homogeneous, its radial contraction will be unequal, and hence there will be ridges. The contraction theory assumes that the earth was once an incandescent ball, now cooling; and this cooling compels yielding along its lines of weakness. This is known abroad as the "American theory," and was originated by Prof. Le Conte. He also outlined other theories of mountain origin, and pointed out their defects, declaring, however, his entire willingness to give up his theory whenever any better one had been presented.

Proceedings of the Sections.—The association is divided into eight sections, each of which is presided over by an officer having the rank of vice-president of the association. Subsequent to the opening proceedings each section meets by itself and effects its organization by electing a fellow to represent it in the council, a sectional committee of three fellows, a fellow or member to the nominating committee, and a committee of three members or fellows to nominate officers of the section for the next meeting. As soon as this organization is effected the secretary of the section reports to the general secretary, who then provides him with a list of papers that, having been considered suitable by the council, may be read and discussed before the section. On the first day the proceedings are usually confined to organization and the delivery of the inaugural or vice-presidential address.

Sections.—A. *Mathematics and Astronomy.*—This section was presided over by Charles L. Doolittle, of South Bethlehem, Pa., who chose as the subject of his address "Variations of Latitude." He said: "All astronomy," says Laplace, 'depends upon the invariability of the earth's axis of rotation upon the terrestrial spheroid and upon the uniformity of their rotation.' He adds that, 'since the epoch when the application of the telescope to astronomical instruments gave the means of observing terrestrial latitudes with precision, no variations in such latitudes have been found which could not be attributed to errors of observation; which proves that since this epoch the axis of rotation has remained very near the same point on the terrestrial surface.' The question still persists whether it represents more than a first approximation to the truth. Various authorities were cited to show the correctness of this view; but as the geological evidence is clear that at one time the poles were temperate and the temperate zone a field of ice, the question is still an open one. A very plausible explanation of these things is by the assump-

tion that the earth's axis had in times past wandered from its former place. Hence the problem that the practical astronomer is asked to solve is that of determining whether progressive changes in the position of the pole are now taking place. Concerning these the most logical course at present is to suspend judgment. With regard to periodic changes, on the other hand, we can speak with more confidence. Considerable progress has been made in the investigations along this line, chiefly by such authorities as Küstner, Newcomb, and Chandler. The latter especially has made notable contributions in his valuable papers printed in the 'Astronomical Journal.' These and other researches which were discussed clearly demonstrate the fact of specific periodic variations of latitude. For further improvement in our knowledge of this subject we must look to continued observations at a number of points carried on for this express purpose, and so conducted as to eliminate all systematic errors. A plan is under consideration for establishing four permanent latitude stations on the same parallel of latitude at intervals of 90 degrees in longitude as nearly as may be. These will presumably be equipped with identical instruments of the most approved form, and the same stars employed at all of them. It is possible that within a very few years we shall see some such system in full and successful operation." The following-named papers were read and discussed before the section:

"A Construction for the Imaginary Points and Branches of Algebraic Loci," by Frank H. Loud; "Upon the Latitude Variation Tide," by Alexander S. Christie; "The Screw as a Unit in a Grassmannian System of the Sixth Order," by Edward W. Hyde; "Latitude Determination at Bethlehem, 1892-'93," by Charles L. Doolittle; "A Determination of the Constant of Aberration by a Modified Form of the Loewy Method," by George C. Comstock; "Applications of the Generalized Logarithmic Theorem," by Alexander Macfarlane; "On the Inscription of Regular Polygons," by L. E. Dickson; "On the Possibility of the Algebraic Solution of the Gen-equation of the Fifth Degree," by Mansfield Merriman; and "Space," by Samuel S. Laws.

B. *Physics.*—The presiding officer of this section was Prof. Edward L. Nichols, who holds the chair of Physics in Cornell University, Ithaca. The topic which he discussed was "The Phenomena of the Time Infinitesimal."

Prof. Nichols pointed out the importance in physics of the study of phenomena occupying short intervals of time, particularly of the first minute intervals following abrupt changes of the conditions of equilibrium, and also of the successive time elements, which go to make up a cycle in the case of periodic changes. He reviewed at some length the most significant researches already completed in the field, and traced in detail the development of the "method of instantaneous contacts," which has been so fruitful in the experimental study of alternating current phenomena, claiming that their complexity had obliged the modern electrician to be both a mathematician and a physicist. In much the same way a generation ago the new and difficult phenomena of cable telegraphy served to train the men who stand as pioneers and chieftains in electrical science. The special adaptability of photography to the investigation of

short-time phenomena was dwelt upon, and the results obtained by the application of the photographic method were presented. This address Prof. Nichols illustrated by photographs, in one of which he showed a bullet in flight, photographed in an interval so brief that the missile seemed at rest. In another picture the bullet was shown in the act of shattering a pane of glass with all the incidental perturbation of the surrounding air.

The following-named papers were read and discussed before this section:

"Application of Interferential Methods to Measurements of Expansion of Long Bars," by Edward W. Morley and William A. Rogers; "A Preliminary Study of the Constants of the Morley Interferential Comparator" and "On the Effect of Evaporation upon the Relative Dimensions of Bars of Metal partially submerged in Water," by William A. Rogers; "On Physical Addition or Composition," by Alexander Macfarlane; "Some Rapid Changes of Potential studied by Means of a Curve-Writing Voltmeter," by George S. Moler; "Some Applications of Electric Heating in Physical Laboratory Practice," by Edward L. Nichols; "Note on the Use of a Rotating Disk in Photometry," by Ervin S. Ferry; "Irregularities in Alternate Current Curves," by Frederick Bedell, K. B. Miller, and W. F. Wagner; "Experiments with an Alternate Current Condenser," by Frederick Bedell; "On the Elasticity of Metals" and "Fatigue in the Elasticity of Stretching," by Joseph O. Thompson; "The Elastic Strength of Solid, Liquid, and Gaseous Dielectrics," by Alexander Macfarlane and G. W. Pierce; "Elastic Properties of Glass," by William S. Franklin and L. B. Spinney; "On So-called Negative Lightning" (with lantern illustrations), by W. LeConte Stevens; "An Automatic Toeppler Pump," by Edward W. Morley; "Note on the Surface Tension of Liquids" (with lantern illustrations), by Ernest F. Nichols; "The Effect of Temperature and of Electric Driving on the Period of Tuning Forks," by John S. Shearer; "On the Continuous Spectrum of the Alkalies," by Benjamin W. Snow; "Electrolytic Polarization," by John Daniel; and "An Apparatus for the Generation of Oxygen and Hydrogen by Electrolysis," by Edward L. Nichols and George S. Moler.

C. Chemistry.—The vice-president in charge of the section was Prof. Edward Hart, who fills the chair of Chemistry at Lafayette College, Easton, Pa. His address was entitled "Twenty-five Years' Progress in Analytical Chemistry." "One of the marked changes in analytical methods which the lapse of years has brought about is in the time necessary for their performance. In 1868 analyses were made, almost without exception, by persons usually employed in teaching. Only here and there in the larger cities an adventurous pioneer, depending altogether for support upon fees received for doing analytical work, had established himself. Nowadays careful analysis is the foundation stone of nearly all our larger industries, and the number of determinations made has increased a millionfold." Then taking up his subject more in detail, he referred to the steps through which the analysis of iron had been developed. Determinations of silicon, that formerly required a day, were now made in fifteen minutes. The number of efficient chemists had largely increased. In 1868, in the Lehigh valley, there were not more than three competent analysts, while to-day there were more than fifty. Methods of mineral analyses and the improvements made in them were discussed quite fully. A greater knowledge of the

chemical nature of the metals had created new uses for them. These were mentioned. Improvements in chemical apparatus were cited, and the torsion balance of Dr. Alfred Springer, of Cincinnati, indicated as one of American invention. This led to a mention of improved chemical reagents. The value of electrolytic methods in analytical chemistry, and the developments in this direction, were discussed. Volumetrical analysis and spectrum analysis received their share of treatment in the advances made, and these were briefly pointed out. In closing, he called attention to the fact that the chemists in this country had contributed no little proportion to the advancement made, and begged that this be not forgotten when the subject was considered. Those who advanced the practical part were worthy of praise equally with those who devoted themselves to the theory. "Because they do not devote their lives to a study of the behavior of orthochloroparapropyl benzene with sulfonitro-protocatechnic acid therefore we should not hold their work worthy of contempt."

The following-named papers were read and discussed before this section:

"On the Atomic Weight of Oxygen," by Edward W. Morley; "The Acetyl and Benzoyl Derivatives of the Pentoses," by Winthrop E. Stone; "The Electrolytic Oxidation of Glycerol," by Winthrop E. Stone and H. N. McCoy; "The Constitution of Paraldehyde and Metaldehyde," by William R. Orndorff and John White; "The Action of Sodium on Acetone," by Paul C. Freer; "Some Experiments on Sampling by Quartation," by Porter W. Shimer and S. K. Riefnyder; "Solubility of Lead Oxide in the Normal Tartrates and other Normal Organic Salts, with Observations on the Rotary Power of the Solutions thus Obtained," by Louis Kahlenberg and Homer W. Hillier; "The Analysis of Lubricating Oils containing 'Blown' Rape-seed and 'Blown' Cotton-seed Oils," by Thomas B. Stillman; "On the Nitrites of some Amines" and "Natural Gas from New Lisbon, Ohio," by William A. Noyes; "Narceine, a New Formula and New Derivatives" and "The Structural Formula for Narceine and its Synthesis from Narcotine Pseudo-Narceine," by George B. Frankforter; "A Tempered Steel Meteorite," by Edward Goldsmith; "On the Occurrence and Distribution of Nitrogen in Deep Artesian Wells of the Mississippi Basin" and "The Action of Gaseous Hydrochloric Acid and Oxygen on the Platinum Metals," by Erastus G. Smith; "The Electro-Deposition of Iridium: a Method of Maintaining the Uniform Composition of an Electroplating Bath without the use of an Anode," by William L. Dudley; "The Advantages of Extended Examinations of River Waters," by E. H. S. Bailey and Edward C. Franklin; "On the Systematic Errors affecting all the Atomic Weights of Stars" and "On a Review of Atommechanics," by Gustavus Hinrichs; and "An Unusual Form of Calcium Glycerate," by Launcelot W. Andrews.

D. Mechanical Science and Engineering.—The president of this section was Prof. Stillman W. Robinson, of the University of Ohio, who delivered an address on "Recent Advances in Mechanical Science."

Three facts support the proposition for systematic training in the sciences underlying the profession of the engineer, viz.: 1. The important present and future bearing of engineering practice upon the welfare of the country.

2. The comprehensiveness of the training, embracing the fundamental principle of all the mechanical arts and manufactures.

3. The extended influence of a sound engineering practice. The teachers of engineering are thus in the highest degree accountable for the proper utilization of the forces and materials of Nature's laboratories. Before the existence of schools of engineering, progress in the corresponding works and industries was comparatively slow. The works requiring the engineer formerly were large buildings and road bridges, where abundant material and rule of thumb took the place of science. Less than one hundred years ago the first civil engineering schools were established, and but a few till within fifty years. Later came the schools for mechanical engineering, and still more recently those for electrical engineering. As a rule, demand for these schools preceded them. Note the profusion of works of engineering which have appeared since, such as large bridges, buildings, machines. No doubt all human progress was hampered by the dearth of engineering science as existing one hundred years ago. Admitting the importance of engineering schools there is yet considerable confusion of ideas in what should be embraced in those schools, and standard courses representing the united judgment of the engineering teachers of the country would be hailed with satisfaction; not that all will adopt any one standard in entirety, but that all may have standards with which to compare in order to the attainment of the highest ends in teaching, and on the part of the engineering professions.

"Test of Plant of the Hygeia Ice Company of New York City," by Messrs. Hupfel, Griawold, and Kennedy; "Experimental Determination of the Quickness of Action of a Shaft Governor," "Tests of Automatic Fire Sprinklers" and "An Accurate Method of Measuring Heavy Liquid Pressure," by David S. Jacobus; "On the Changes in the Dimensions of Metals which may be due to Changes in Molecular Structure Depending on their Age," by William A. Rogers; "Improved Form of Transmission Dynamometer," by Stillman W. Robinson; "Economical Compression in a Steam Engine," by J. Burkill Webb; and "A Mechanical Index," by C. Wellman Parks.

E. Geology and Geography.—This section was presided over by Charles D. Walcott, who is palaeontologist of the United States Geological Survey with special charge of the palaeozoic division of invertebrate palaeontology. He chose as the subject of his address "The Geologic Time as Indicated by the Sedimentary Rocks of North America." Dr. Walcott quoted the opinions of eminent geologists as to the age of the earth. Alexander Winchell held that the present rock formation lasted 3,000,000 years. W J McGee put the figure as high as 680,000,000 years, while Charles Darwin estimated it to be 200,000,000 years. The general conclusion of all geologists was that the globe is of vast antiquity, compared with which man's age is insignificant. Maps showing the appearance of the North American continent at different epochs were produced, and he gave the conclusions arrived at after the investigation of the rock formations in Nevada, where the observations were conducted on an area of rock of nearly 40,000 square miles and having a thickness of 21,000 feet. Of this mass of rock 6,000 feet in thickness is limestone and 1,500 feet sandstone and shells. It required 1,200,000 years, the lecturer said, to deposit the sands and shells, and 16,500,000 years for the

formation of the limestone deposit, this being based on the present rate of deposit of limestone in the ocean. With this as unit of geological measurement the total time required for the formation of the North American continent was about 45,140,000 years, which, added to the unknown time required for the formation of the crystalline rocks, about 10,000,000 years, would make over 56,000,000 in all. Geologic time, according to Dr. Walcott, must be measured by tens of millions of years, although some have taken hundreds of millions of years into consideration in their calculations, while others, the physicists particularly, have refused to accept such long periods.

The following-named papers were then read and discussed before the section:

"Gravels of Glacier Bay, Alaska" (with lantern illustrations), by Henry F. Reid; "Use of the name 'Catskill,'" by John J. Stevenson; "Section Across the Coastal Plain Region in Southern North Carolina," by Joseph A. Holmes; "Notes on Further Observations of Temperature in the Deep Well at Wheeling, W. Va.," by William Hallock; "Recent Investigations in the Cretaceous Formation on Long Island, N. Y.," and "Northward Extension of the Yellow Gravel in New Jersey, Staten Island, Long Island, and Eastward," by Arthur Hollick; "Character of Folds in the Marquette Iron District," by Charles R. Van Hise; "The Fossil Sharks of Ohio," by Edward W. Claypole; "Hillsdale County Geology," by Horatio P. Parmelee; "Exhibition of Trilobites showing Antennae and Legs," by Charles D. Walcott; "Remarks on the Genus *Arthropycus* Hall," "On the Value of Pseudo-algae as Geological Guides," and "Studies in Problematic Organisms. The Genus *Fucoides*," by Joseph F. James; "Some Questions Respecting Glacial Phenomena About Madison," by William Hollick; "Amount of Glacial Erosion in the Finger Lake Region of New York," by David F. Lincoln; "Ice-sheet on Newtonville Sandplain," by Frederic P. Gulliver; "Additional Facts bearing on the Question of the Unity of the Glacial Period," by G. Frederick Wright; "Changes of Drainage in Rock River Basin in Illinois," by Frank Leverett; "Graphic Comparison of Post-Columbia and Post-Lafayette Erosion," by W J McGee; "An Illustration of the Effect of Stagnant Ice in Sussex County, N. J.," and "A Phase of Superficial Drift," by Rollin D. Salisbury; "Tertiary and Quaternary Stream Erosion of North America," by Warren Upham; and "The Emergence of Springs," by Thomas C. Hopkins.

F. Zoology.—The presiding officer of this section was Prof. Henry F. Osborn, of Columbia College, who chose as the subject of his address "The Rise of the Mammalia." In discussing this topic, he dwelt especially upon the methods employed by palaeontologists, and upon the broad generalizations that had been made by students of fossil mammals. Among these was the generalization of Marsh, that all early types of mammalia had small brain cavities. Cope has shown by the growth of the feet that all early types had five toes upon both the fore and hind feet, and that the foot rested upon the sole. He had also shown that while the primitive types possessed cone-shaped teeth, the more differentiated they became the more complex the teeth were. An interesting statement in regard to the dental formulas of various orders was given. Without going into details, it may be said that the speaker argued for the three great groups of mammals—monotremes, marsupials, and placentals—a common origin far back of Jurassic times, for

the three were then plainly differentiated. These classes arose from a promammalian type, which was, in its turn, an offshoot from a still simpler form, a second offshoot from which developed into the reptilian type of life. The horse he considered as originating on the North American continent, and he pointed out the interesting fact that the disappearance of many of the huge forms of mammals that once peopled our western plains seemed coincident with the introduction of grasses.

The following-named papers were then read and discussed before the section:

"Notes on *Aspidiotus Perniciosus*," "Erastria Scitula, a Valuable Insect to Introduce into America," and "Sphida, a Myth," by Charles V. Riley; "Seat of Life in the House-fly," by John B. Smith; "The Respiratory Mechanism in the Lamprey," by Simon H. Gage; "The Correlation of Structure and Host-habit in the Encyrtinae," by Leland O. Howard; "The Mammals of the Upper Cretaceous," by Henry F. Osborn; "The Production of Races and Varieties of Bacteria in Mixed Cultures" and "A New Sporozoön in the Intestinal Villi of Cattle," by Theobald Smith; "The Insect Guests of the Florida Land Tortoise," by Henry G. Hubbard; "A Comparative Study of the Lung with Special Reference to the Communication of one Air-sac with Another," by William S. Miller; and "Some New Revelations Regarding Color Sense in the Human Retina" and "On a New Apparatus for measuring the Strength of Color-sense," by John H. Pillsbury.

G. Botany.—The presiding officer of this section was Prof. Charles E. Bessey, who fills the chair of Botany and Horticulture in the University of Nebraska, and is well known as the author of numerous text-books on botany. His address had to do with "Evolution and Classification." He pointed out the anomalous fact that while botanists have long recognized that the present scheme of classification was defective, they still adhered to it. Theoretically discarding it, practically they used it. He showed that there may be degradation as well as advancement in evolution, and that what seemed the lowest forms of dicotyledons from their floral structure were not necessarily primitive types. He therefore interpolated the apetalous orders of the ordinary classifications among the polypetalæ as degraded types of polypetalous flowers. He outlined what seemed to him to be a natural classification, considering the ranunculaceæ as the most primitive flowers. The greatest deviation, therefore, from this type was the highest in organization. He believed that with but little modification the sequence of orders in our modern text-books could be used to express the natural relationships of plants. Of course, such a scheme as a lineal arrangement was out of the question. He, in common with many others, recognized the composite as the most highly organized of the dicotyledons, and the orchidæ were placed at the head of the monocotyledons.

The following-named papers were read and discussed before the section:

"Photography as an Instrument for recording the Microscopic Characters of Micro-organisms in Artificial Cultures," "Comparative Study of the Structure and Junction of the Sporangia of Ferns in the Dispersal of Spores," and "Symbiosis in the Roots of *Ophioglossa*," by George F. Atkinson; "Observations on a Rust affecting the Leaves of the Jersey or Scrub Pine" and "Results of some Recent Work

on Rust of Wheat," by Beverly T. Galloway; "Prophylla of Gramineæ," by William J. Beal; "A New Injection Needle for the Study of Lower Plants," by J. Christian Bay; "On the Food of Green Plants," by Charles R. Barnes; "The Solandi Printing applied to Botanical Work" and "The Shrinkage of Leaves in Drying," by Byron D. Halsted; "Further Observations on the Fermentation Tube with Special Reference to Anaerobiosis, Reduction, and Gas Production," by Theobald Smith; "Two New and Destructive Diseases of Cucurbits," by Erwin F. Smith; "Preliminary Statement concerning Botanical Laboratories and Instruction in American Universities and Colleges," by Conway MacMillan; "On the Quantitative Analysis of the Colors of Flowers and Foliage," by John H. Pillsbury; "The Minute Structure and Development of the Motile Organ in the Leaf of the Red Bud," by S. G. Wright; "Distribution of the Gramineæ in the United States," by Samuel M. Tracy; "Present Aspects of the Nomenclature Question" and "A Consideration of a Species based on the Theory of Evolution," by Nathaniel L. Britton; "A Revision of the Genus *Physconitrium*" and "*Ulotia Americana* Mitten and *Orthotrichum Americanum*, Beauv.," by Elizabeth G. Britton; "Deviation in Development due to the Use of Unripe Seeds," by John C. Arthur; "The Principal Diseases of Citrous Fruits now being studied at Eustis, Fla.," and "*Cephaluros Mycoidea* and *Phyllostipha* sp., Two Parasitic Algae New to North America," by W. T. Swingle; "An Analysis of the Conditions affecting the Distribution of Plants," by Frederick V. Coville; "Lichens of the Black Hills," by Thomas A. Williams; "The Bibliography of American Botanical Literature," by J. Christian Bay; "Notes on the Development of *Marattia Douglasii*," by Douglass H. Campbell; "The Fructification of *Juniperus*," by John G. Jack; "The Roots of Orchids," by M. B. Thomas; "A Sclerotium Disease of Plants," by P. H. Rolfs; "Preliminary Notes on some Chromogenic Bacteria of the Ames Flora," "Notes on *Kasselia Pyrata*," "Crossing of Cucurbits," and "A Case of Poisoning by the Wild Parsnip, *Cicuta Maculata*," by L. H. Pammel.

H. Anthropology.—The presiding officer of this section was J. Owen Dorsey, of Tacoma Park, Md., who was connected for many years with the Bureau of Ethnology, Washington, D. C. The subject of his address was "The Biloxi Indians of Louisiana." The name Biloxi, he said, was probably a corruption of the name which the Biloxi Indians gave themselves, which is Lakes, or Lakasa, and means the first people. The Biloxis were known to have lived in 1689 at Biloxi Bay, Miss. In 1763 they moved to Louisiana, and of the whole tribe there are only about 17 individuals now alive. Descent is in the female line, the child belonging to the mother's family and not to the father's. Among the Biloxis were three divisions, one being known as the Deer branch, the other as Grizzly Bear branch, and the third as the Alligator branch. The relationship of the members of the first branch to the deer was characterized by the fact that they did not eat deer meat and looked upon that animal as sacred. The same was the case with the grizzly bear and the alligator.

Among their curious superstitions are the following:

A Biloxi can not marry his wife's brother's daughter nor his wife's father's sister, but a Biloxi man can marry his deceased wife's sister and a Biloxi woman can marry the brother of a deceased husband. The Biloxis believed that the spirit of a deer revived and went into another body, and that this could be repeated thrice, but that when the fourth deer was

killed the spirit never revived. The Biloxi do not talk about the thunder being in cloudy weather, because that being is very mysterious. Thunder stories can not be told except on a fair day. When the Biloxi see a humming bird they say that a stranger is coming. They say a humming bird always tells the truth. When the fire crackles it is a sign of snow or rain. A much hotch picking on a house is a sign of coming death. If a child steps over a grindstone its growth will be stopped. No Biloxi will kill or eat a snipe, because that bird always gathers deer fat, was the sister of the thunder being, and an account of her appears in the myth of the thunder being.

The following-named papers were then read and discussed before the section.

"Songs of Sequence of the Navajos" (illustrated by the phonograph), by Washington Mathews; "The Result of Excavations at the Ancient Argillite Quarries, recently discovered near the Delaware River on Gaddes Run," by H. C. Mercer; "Indian Migrations," by C. Stainland Wake; "The Instinctive Interest of Children in Bear and Wolf Stories," by William H. Brewer; "The Delicacy of the Sense of Taste among Indians," by E. H. S. Bailey; "Caches of the Saginaw Valley," by Harlan I. Smith; "Is the Polysynthesis of Duponceau characteristic of American Indian Languages," by John N. B. Hewitt; "Primitive Woman as a Poet" and "Some Drawings by Kootenay Indians," by Alexander F. Chamberlain; "Psychology at the World's Fair," by Joseph Jastrow; "Some Account of a Purification Ceremony and a Sacred Stone in Use among the Mission Indians of California," "The Indian Stone Adzes," and "Some Facts concerning the Obsidian Blades called Swords, from Northern California," by Horatio N. Rust; "Observations in regard to the Use of Argillite by Prehistoric People, made by Explorations of Ancient Village Sites in the Delaware Valley," by Ernest Volk; "The Evidence of Glacial Man in America," by G. Frederick Wright; "The Antiquity of Man in America," by W. J. McGee; "The Prehistoric Man of Mexico," by A. S. Herrera; "Buried Deposits of Hornstone Disks," by John F. Snyder; "A Shawnee Town and its Exploration," by William E. Myer; "Remarks upon Sheet-copper Designs from the Hopewell Group, Ohio," by Warren K. Moorehead; "The Ancient Necropolis of Ancon, Peru," by George A. Dorsey; "Another Ancient Source of Jasper Blade Material East of the Middle Alleghenies," by H. C. Mercer; "Remarks on the Mexican Calendar System," by Daniel G. Brinton; "Theory of Primal Shaping Arts," by William H. Holmes; "Indian Names for the Four Winds and Four Quarters," by J. Owen Dorsey; "Notes for an Archaeological Study of La Plata Island, Ecuador" and "A Ceremony of the Quichua Indians of Peru," by George A. Dorsey; "The Sacrifice of the White Dog," by Charles A. Hirschfelder; "The Relation between Mythopoeia and Euhemerism," by Merwin M. Snell; and "Revision of Calendar," by Ada M. King.

I. Economic Science and Statistics.—This section was presided over by Prof. William H. Brewer, of the Sheffield Scientific School of Yale University, who chose "The Mutual Relations of Science and Stock Breeding" as the subject of his vice-presidential address. The production of crops and the production of animals are the two great branches of agriculture. The application of science to the production of crops have been more conspicuously before the public than have been similar applications to the productions of animals. There could be no comprehensive science of agriculture until there was a science of chemistry, and the modern revolution

in the art and practice of agriculture has come about as the science of chemistry advanced and mechanical invention progressed. The application of scientific methods to the economic breeding of farm animals came much later and followed the publication of Darwin's "Origin of Species." As an art, breeding attained a high standard long ago in the production of some fine examples of particular breeds; but, excepting Arabian horses and certain game fowl, crossing was the universal method practiced in European countries. The modern method of improvement within the breed, keeping the blood pure, has been the outcome of scientific study applied to the economic production of animals. Cases of this breeding within the breed were cited, and its application to such results as the English race horses and farm animals mentioned. These experiments were made prior to Darwin's time, but subsequent to his publications a better understanding of the subject began to prevail, and many of the facts contained in his works were derived from studying this subject. Darwin even joined various pigeon societies, put up his cotes, and became a practical and experimental fancier. The result of all this has been a better knowledge of the laws of heredity and of the causes that promote variation. A science of breeding now underlies the practical art. The gain to science has been correspondingly great, and numerous unsolved problems in biological science find here their material for use. Economical and social science also here find a field for experiment and deduction. Science will therefore be the gainer in the future as in the past.

The following-named papers were then read and discussed before the section:

"Surface Tension of Water and Evaporation with Experiments" and "Energy as a Factor in Nutrition," by Manly Miles; "The Utility of Practical Psychology" and "Geneo-Pathological Chart," by Laura O. Talbot; "Manual Labor at Agricultural Colleges," by William J. Beal; "The Maturing Pacific Railroad Debt," by Richard Colburn; "Relations of Production and Price of Silver and Gold," by Henry Farquhar; and "The Necessity for a Bureau of Record and Reference," by H. F. J. Porter.

Popular Features of the Proceedings.

Subsequent to the delivery of the presidential address on the evening of Aug. 17 the usual reception was tendered to the members of the association in the Senate Chamber by the citizens of Madison, and on the evening of Aug. 18 a public lecture complimentary to the citizens was delivered by Prof. Daniel G. Brinton, who spoke on "Early Men." Saturday, Aug. 19, as usual, was set aside for excursions, and the picturesque dells of Wisconsin River were visited by more than 200 of the attending scientists. On the evening of Aug. 21 a reception and lawn fête was given the visitors on the adjoining lawns of President Charles K. Adams, John M. Olin, and George Raymer, from 8 to 11. The scene was made brilliant by an artistic illumination with electric lights. Short trips were made by steamer on the lake, and residents generally along the Mendota shore illuminated their lawns for the occasion. Besides the foregoing, a reception was given to the ladies of the association, on Aug. 19, by Mrs. Charles K. Adams. Other excursions of

special interest were made by separate sections to points where characteristic natural features could be seen. These were usually made under the guidance of some scientist specially familiar with the locality.

Affiliated Organizations.—The American Microscopical Society held meetings on Aug. 14, 15, and 16. Its officers were John D. Cox, of Cincinnati, Ohio, president, and William H. Seaman, of Washington, D. C., secretary. The fifth summer meeting of the Geological Society of America was held on Aug. 15 and 16, and its president was Sir J. William Dawson, of Montreal, Canada, and its secretary Herman L. Fairchild, of Rochester, N. Y. On the same days met also the Society for the Promotion of Agricultural Science, with Isaac P. Roberts, of Ithaca, N. Y., as president, and Leland O. Howard, of Washington, D. C., as secretary; the Association of Economic Entomologists, with S. A. Forbes, of Champaign, Ill., as president, and Harrison Garman, of Lexington, Ky., as secretary; and the Association of State Weather Services, with Henry H. C. Dunwoody as president, and Robert E. Kerkham as secretary. Finally, subsequent to the meeting of the American Association for the Advancement of Science, there was held an International Botanical Congress during three days beginning Aug. 28, at which the International Standing Commission on Nomenclature reported, which was then discussed by the congress. Meetings of the Botanical Club of the association, of which William P. Wilson, of Philadelphia, Pa., was president, and Thomas H. McBride, of Iowa City, secretary, were announced daily from 9 to 10 A. M., from Aug. 18. Also, the Entomological Club announced meetings during the intervals of Section F. Its officers were C. J. S. Bethune, of Port Hope, Ontario, president, and Charles L. Marlatt, of Washington, D. C., secretary.

Final Sessions.—The meeting was an unusually small one, and it was found that the World's Fair, instead of attracting a large number of scientists to Madison, proved a detriment. Many had to arrange their visits to the exposition at other times, while others went as far as Chicago on their way to Madison and stayed there. Others reached Madison, but were in a hurry to return. This was particularly evident at the general session, Thursday. The duration of the meeting was therefore curtailed one day, the closing exercises occurring on Aug. 22, instead of Aug. 23 as originally announced. The nominating committee met on Aug. 18, and their selections were duly accepted at the general session on Aug. 21; when also \$100 was appropriated toward paying a year's expenses of some student, to be selected by a committee later, in the biological laboratory of the Wood's Holl (Mass.) Summer School. It was then determined to send a telegram of congratulation to Prof. H. Von Helmholtz, the great German physicist, who had just arrived at Chicago to attend the Electrical Congress. At the final session 37 members were advanced to the grade of fellow, in consideration of their contributions to science.

Next Meeting.—Considerable discussion took place concerning the place of meeting for 1894, but it remained undecided. Boston and Worcester, Mass., Providence, R. I., and Brooklyn,

N. Y., were referred to, but the decision was left with the president and the permanent secretary. San Francisco was spoken of as the place for meeting in 1895, and an invitation was received from Nashville for 1896. The following officers were chosen: President, Daniel G. Brinton, Media, Pa. Vice-presidents: A, George C. Comstock, Madison, Wis.; B, William A. Rogers, Waterville, Me.; C, Thomas H. Norton, Cincinnati, Ohio; D, Mansfield Merriman, South Bethlehem, Pa.; E, Samuel Calvin, Iowa City, Iowa; F, Samuel H. Scudder, Cambridge, Mass.; G, Lucien M. Underwood, Greencastle, Ind.; H, Franz Boas, Worcester, Mass.; I, Harry Farquhar, Washington, D. C. Permanent Secretary, Frederick W. Putnam, Cambridge, Mass. General Secretary, Herman L. Fairchild, Rochester, N. Y. Secretary of the Council, James L. Howe, Louisville, Ky. Secretaries: A, Wooster W. Beeman, Ann Arbor, Mich.; B, Benjamin W. Snow, Madison, Wis.; C, S. M. Babcock, Madison, Wis.; D, John H. Kinealy, St. Louis, Mo.; E, William H. Davis, Cambridge, Mass.; F, William Libbey, Princeton, N. J.; G, Charles R. Barnes, Madison, Wis.; H, Alexander F. Chamberlain, Worcester, Mass.; I, Manly Miles, Lansing, Mich. Treasurer, William Lilly, Mauch Chunk, Pa. (re-elected.)

British.—The sixty-third annual meeting of the British Association for the Advancement of Science was held in Nottingham during Sept. 13-19. The officers of the association were: President, J. S. Burdon Sanderson. Section Presidents: A, Mathematics and Physics, R. T. Glaze-

JOHN SCOTT BURDON SANDERSON.

brook; B, Chemistry, Prof. J. Emerson Reynolds; C, Geology, J. J. H. Teall; D, Biology, Rev. H. B. Tristram; E, Geography, Henry Seebohm; F, Economic Science and Statistics, Prof. Joseph S. Nicholson; G, Mechanical Science, Jeremiah Head; H, Anthropology, Dr. Robert Munro. General Secretaries, Sir Douglas Galton and Vernon Harcourt. Assistant Secretary, G. Griffith. General Treasurer, Dr. Arthur W. Hucker.

General Meeting.—The association began its proceedings with a preliminary meeting of the General Committee on Sept. 13, over which Sir Archibald Geikie, the retiring president, presided. The report of the council was presented.

It included a statement of the election as corresponding members of the following scientists, who were in attendance at the Edinburgh meeting: Dr. Svante Arrhenius, of Stockholm; Prof. Marcel Bertrand, of Paris; Prof. F. Elfving, of Helsingfors; Prof. Leo Errera, of Brussels; Prof. G. Fritsch, of Berlin; President Daniel C. Gilman, of Baltimore; Dr. C. E. Guillaume, of Sevrès; Prof. Rosenthal, of Erlangen; and Dr. Maurits Snellen, of Utrecht. The following resolutions were received during the year:

That the council be requested to draw the attention of the Local Government Board to the desirability of the publication of the "Report on the Examination into Deviations from the Normal among 50,000 Children in Various Schools," which has been presented to that board by the British Medical Association; and

That the council be requested to draw the attention of her Majesty's Government to the anthropometric method for the measurement of criminals, which is successfully in operation in France, Austria, and other Continental countries, and which has been found effective in the identification of habitual criminals, and consequently in the prevention and repression of crime.

Both resolutions were acted on favorably. The announcement that an index to the reports of the association for the years 1861 to 1890 had been completed by Mr. Griffith was made. The general treasurer reported that for the first time the association had £62 odd to the good, whereas in the last two years they had been £1,200 to the bad. There was still great need for economy. He could not refrain from a remonstrance on the cost of the printing, which was unnecessarily increased by the number of corrections made in proofs by the authors of papers. In one paper alone the amount thus spent was £25.

Besides other formal business a vote of thanks was passed, acknowledging the services of Sir Archibald Geikie. The first general gathering was held in the evening in Albert Hall, when the retiring president introduced his successor, who then addressed the association on "Biology and its Relations with Other Branches of Science."

The President's Address.—In opening his address Prof. Burdon-Sanderson said "that at the last meeting of the British Association in Nottingham Section D assumed for the first time the title which it has since held—that of the section of biology"; hence, taking the word biology as his starting point, he gave an account of its origin and first use, and of the relations which subsist between biology and other branches of natural science. The word biology, now so familiar, was unknown at the beginning of the century. It was first employed by Trevisanus, who proposed to himself as a life task the development of a new science, the aim of which should be to study the forms and phenomena of life, its origin, and the conditions and laws of its existence. He commended biology as a study which above all others "nourishes and maintains the taste for simplicity and nobleness; which affords to the intellect ever new material for reflection, and to the imagination an inexhaustible source of attractive images." He defined life as consisting in the reaction of the organism to external influences, and contrasted

the uniformity of vital reactions with the variety of their exciting causes. This definition can still be accepted as true. The first thing we observe about the activities of an organism is that they are of two kinds, according as we consider the action of the whole organism in its relation to the external world or to other organisms, or the action of the parts or organs in relation to each other. This distinction between the internal and external relations of plants and animals has always existed; hence, there have been two kinds of biologists—those who make it their aim to investigate the action of the organism by methods of physics and chemistry, and those who study the place that the organism occupies, and the part which it plays in the economy of nature (called "œcology"). This conception of biology Prof. Burdon-Sanderson then attempted to demonstrate, using illustrations which appealed to him most strongly, and especially such as were in the special division of biology to which he himself belonged.

The origin of life, the first transition from nonliving to living, is a riddle that lies outside of our scope. Organized nature, as it now presents itself, has become what it is by a process of gradual perfection or advancement brought about by the elimination of those organisms which failed to obey the fundamental principle of adaptation. Biology naturally falls into three divisions, and these are even more sharply distinguished by their methods than by their subjects, namely: *physiology*, of which the methods are entirely experimental; *morphology*, the science which deals with the forms and structure of plants and animals, and of which it may be said that the body is the anatomy, the soul, development; and *œcology*, which uses all the knowledge it can obtain from the other two, but chiefly rests on the exploration of the endless varied phenomena of animal and plant life as they manifest themselves under natural conditions. Then, taking up the first of these—physiology—he discussed its origin and scope. Physiology as a science began with Johannes Müller, who taught in Berlin from 1838 to 1857. The development is due to his successors, Brücke, Du Bois-Reymond, Helmholtz, who were his pupils, and Ludwig in Germany, and to Claude Bernard in France, who are "the founders of our science." The specific energies of the organism he discussed very fully, taking his many illustrations from special manifestations of energy in response to light, color, sound, etc., by the lower organisms. Concerning experimental psychology, a region between two methods of investigation of questions which are closely related, much work had recently been accomplished, which he described somewhat in detail. On this subject he said: "Between the two—that is, between sensation and the beginning of action—there is an intervening region which the physiologist has hitherto willingly resigned to psychology, feeling his incompetence to use the only instrument by which it can be explored—that of introspection." The results of experiment psychology tend to show that sensation and allied processes are as truly functions of organism as the contraction of a muscle or as the changes produced in the retinal pigment by light. The behavior of unicellular or-

ganisms with external influences was indicated by illustrations of phototaxis, or the influence of light in directing the movements of free-moving cells. Similarly the action of chemotaxis, or the movements of antherozoids of ferns and mosses guided by impressions derived from chemical sources, as by the allurements of certain chemical substances (sugar, etc.) in solution, was discussed. In conclusion he said:

"The purpose which I have had in view has been to show that there is one principle—that of adaptation—which separates biology from the exact sciences, and that in the vast field of biological inquiry the end we have is not merely, as in natural philosophy, to investigate the relation between a phenomenon and the antecedent and concomitant conditions on which it depends, but to possess this knowledge in constant reference to the interest of the organism. What I have desired to insist on is that organism is a fact which encounters the biologist at every step in his investigations; that in referring it to any general biological principle, such as adaptation, we are only referring it to itself, not explaining it; that no explanation will be attainable until the conditions of its coming into existence can be subjected to experimental investigation so as to correlate them with those of processes in the nonliving world."

A. Mathematics and Physics.—The presiding officer of this section was R. T. Glazebrook, F. R. S., who, in opening, expressed his regret at the inability of Prof. Clifton to fill the place of president of the section, which nomination he had accepted from the council. A brief retrospect of the prominent events in the sciences pertaining to the section that had occurred during the year followed, including mention of Barnard's discovery of the fifth satellite of Jupiter at the Lick Observatory. The electrical standards proposed at Edinburgh had been accepted by France, Germany, Austria, and Italy, and had been ratified by the congress held in Chicago. Griffith's redetermination of the mechanical equivalent of heat and Rowland's table of standard wave length were among the investigations completed. Lord Rayleigh's work on the intensity of light reflected from water and mercury at nearly perpendicular incidence, Dewar's experiments on the liquefaction of oxygen and nitrogen on a large scale, were referred to.

Mr. Glazebrook then took up the more special subject of his address and discussed the various optical theories. Starting with the statement that "light is propagated by an undulatory motion through a medium which we call the ether is now an established fact," he discussed the emission theory advanced by Descartes, and the undulatory theory of Hooke; then, passing to the treatment of the subject by Newton, he led the way down through the researches and opinions of Huygens, Young, and Fresnel to the more recent writings of Navier, Poisson, and Cauchy. Finally he took up the views of Lord Kelvin, and spoke of the application of electricity to explain the theory.

"Still such a theory is not mechanical, as we have no satisfactory mechanical theory of the electro-magnetic field. But the theory of the quasi labile ether may be applied, and gives two analogies according as we regard the density of

the medium to be analogous to electrostatic inductive capacity or to magnetic permeability. The former gives results consistent with Maxwell's equations for the electric stresses, but is more difficult to grasp. According to these analogies an electrified conducting sphere is not a body charged with a quantity of something we call electricity, but a surface at which there is a discontinuity in the rotation impressed upon the medium or in the flow across the surface, for in the conductor a viscous resistance to the motion takes the place of rigidity. No permanent strain can be set up. From this standpoint we consider electrical force as one of the manifestations of some action between ether and matter. There are certain means by which we can strain the ether; the friction of two dissimilar materials, the chemical action in a cell are two; and when, adopting this second analogy, this straining is of such a nature as to produce a rotational twist in the ether, the bodies round are said to be electrified; the energy of the system is that which would arise from the presence over their surfaces of attracting and repelling matter, attracting or repelling according to the inverse square law. We falsely assign this energy to such attractions instead of to the strains and stresses in the ether."

Among the important papers presented before this section were: "The Period of Vibration of Disturbances of Electrification of the Earth," by J. F. Fitzgerald; "The Moon's Atmosphere and the Kinetic Theory of Gases," by G. H. Bryan; "Reflection from Corrugated Surfaces," and "Grinding and Polishing of Glass Surfaces," by Lord Rayleigh; "On the Piezo-Electric Property of Quartz" and "On a Piezo-Electric Pile," by Lord Kelvin; "Caustic Curves," by J. Larmor; "Sun Spots and the Solar Envelope," by Rev. F. Howlett; "On Electric Interference Phenomena," by E. H. Barton; "On the Passage of Electric Waves through Layers of Electrolyte," by G. H. Yule; "On the Magnetic Shielding of Two Concentric Spherical Shells," by Arthur W. Rücker; "The Construction of Specula for Reflecting Telescopes," by A. Schafarik; "Physics Teaching in Schools," by W. B. Croft; and "On Standards of Low Electrical Resistance," by J. Viriamu Jones. Besides the foregoing, reports of committees on special topics or of individuals were received and discussed as follows: Report of the Committee on Solar Radiation; report on our Present Knowledge of Electrolysis and Electro-Chemistry; report of the Committee on Earth Tremors; report of the Committee appointed to investigate the Earthquake and Volcanic Phenomena of Japan; and the report of the Electrical Standards Committee. Also the question of "Physics Teaching in Schools" formed the theme for discussion at one of the sessions of this section.

B. Chemistry.—This section was presided over by Prof. James Emerson Reynolds, M. D., Sc. D., F. R. S., of the University of Dublin. He called attention to the fact that at the Nottingham meeting of the association in 1866 the president of the chemical section had spoken on the place of "Chemical Science in Medical Education." There was still a need for a fuller chemical education in medicine—along the line of principles rather than knowledge of compounds. In the

review of the progress of chemistry mention was made of the artificial production of the diamond form of carbon; also of the researches of Perkins on electro-magnetic relation; of Rayleigh on the relative density of gases; of Dewar on chemical relations at extremely low temperatures; of Clowes on exact measurements of flame-cap indications afforded by miners' testing lamps; of Horace Brown and Morris on the chemistry and physiology of foliage leaves; but the work accomplished is too important to be lightly treated, hence, to paraphrase an ancient formula, "Are they not written in the books of the chronicles we term 'Jahresberichte,' 'Annales,' or 'Transactions and Abstracts,' according to our nationality?" The need of a means of getting at the vast store of facts laid up in records was discussed, and the statement made that the Chemical Society of London had in view the compilation of a subject-matter index. His own work on the derivatives of thiourea showed the existence of over 600 substances, the knowledge of many of which had been forgotten, testified to the value of such subject indexes. Various physico-chemical problems were referred to, notably the recent discussion between Armstrong and Hartley. The remainder of the address was devoted to "comparative chemistry." The many analogous compounds of the two tetral elements carbon and silicon were pointed out, and the researches of Friedel, Crafts, and Ladenburg discussed. Until recently no well-defined compounds of silicon were known to include nitrogen, but at present many of these have been discovered. The relation borne by silicon in minerals was discussed and the structure of the natural silicates referred to, in which mention was made of the work of Prof. F. W. Clarke, of the United States Geological Survey. In conclusion he indicated the relation existing between silicon, aluminum, and oxygen in mineral compounds as possibly foreshadowing the relation existing between carbon, nitrogen, and hydrogen in living organism at a later stage of the earth's history. "Thus while the sedimentary strata contain remains which come down to us from the very dawn of life on this globe, the rocks from whose partial disintegration the preserving strata resulted contain mineral records which carry us still further back, even to Nature's earliest efforts in building up compounds similar to those suited for the purpose of organic development."

The following papers were presented before the section: "On the Preparation and Properties of Nitride of Iron," by G. J. Fowler; "Specimens of Cyano-Nitride of Titanium obtained from Ferro-Manganese," by T. W. Hogg; "The Iodine Value of Sunlight in the High Alps," by S. Rideal; "The Expansion of Chlorine and Bromine under the Influence of Light," by A. Richardson; "The Present Position of Bacteriology, more especially in its Relation to Chemical Science," by Percy Frankland; "Remarks on the Chemistry of Bacteria," by R. Warington; "Fermentation in Connection with the Feather Industry," by J. T. Wood; "Explosions in Mines with Special Reference to the Dust Theory," by H. B. Dixon; "On the Red Coloration of Phenol," by C. A. Kohn; "On Ethylbutane Tetracarboxylate and its Derivatives," by Bevan Lean; and "Apparatus for Extraction of or

Analysis of Gases dissolved in Water," by Edgar B. Truman. Among the reports presented were the report of the Committee for obtaining an International Standard for the Analysis of Iron and Steel; report of the Committee for Investigating the Action of Light upon Dyed Colors; report of the Committee on the Action of Light on the Hydracids of the Halogens in the Presence of Oxygen; and report of the Committee on Isomeric Naphthalene Derivatives. An interesting feature of the meeting of this section was an exhibition of the complicated and expensive apparatus used by the French chemist Moissan in his successful effort in isolating the element fluorine. The exhibition was made by his chief assistant, M. Meslans.

C. *Geology*.—Mr. J. J. H. Teall, M. A., F. R. S., Secretary of the Geological Society, presided over this section, and his address dealt mainly with the theories relating to the origin of rocks with a leaning toward the uniformitarian view. He said although enormous progress has been made in petrographical sciences during the last hundred years, there has been comparatively little advance so far as broad, general theories relating to the origin of rocks is concerned. He referred to the views of Hutton published in 1785, claiming that igneous action was the cause of the formation of certain rocks, which held their own for many years against the views of the Wernerian school, who argued in favor of aqueous action, but with the lapse of time there has come a tendency "to hark back to a modified form of Wernerism. This tendency can be largely traced to the recognition of evolution as a factor in biology and physical science." There is no *a priori* reason why we should believe that any of the rocks we now see were formed during the earlier stages of planetary evolution. He then considered whether the present state of petrographical science renders uniformity untenable as a working hypothesis, and showed by numerous illustrations the feasibility of uniformity, notably by the statement of the recent discovery of *olenellus* high in the stratified rocks that unconformably overlie the Torridon sandstone has placed its pre-Cambrian age beyond all doubt. Concerning the igneous rocks, he referred to the work by Samuel Allport, who proved the essential identity of ancient and modern volcanic rocks by the application of precise petrographic methods. His conclusions have prevailed, although when presented there was a very general belief that the Tertiary and pre-Tertiary rocks were radically distinct. Mr. Teall also sketched in broad outline the theories of thermal and dynamic metamorphism which are attracting so much attention at the present day. He also indicated as the most promising lines of investigation in this department of geology, crystalline schists and gneisses. In studying the crystalline schists, nothing, perhaps, he said, strikes one more forcibly than the evidence of crystal-building in sold rocks. Chatolite, staurolite, andalusite, garnet, albite, cordierite, micas of various kinds, and many other minerals, have clearly been developed without anything like fusion having taken place. Besides other facts cited he said that it was highly probable that by studying the metamorphic action surrounding plutonic masses, we may gain an insight into

the causes which produced the crystalline schists of sedimentary origin, just as by studying the intrusive masses themselves and noting the tendency to petrographical differentiation, especially at the margins, we may gain an insight into the causes which have produced the gneisses of igneous origin.

Among the papers of special note presented before this section were the following: "On the Petrological Features of the Dissected Volcano of Crandall Basin, Wyoming," by Prof. Joseph P. Iddings, of the University of Chicago, and "On the Genetic Relations of the Basic Eruptive Rocks of Gran," by Prof. W. C. Brögger, of Christiania University, Sweden. Other papers were: "On Structures on Eruptive Bosses which resemble those of Ancient Gneisses," by Sir Archibald Geikie; "On Berthelot's Principle applied to Magmatic Concentration," by A. Harker; "The Igneous Rocks of Barnavave, Carlingford," by W. J. Sollas; "On the Derbyshire Toadstone," by Arnold Bemrose; "On the Geology of Central East Africa," by Walcot Gibson; "Inclosures of Quartz in Lavas of Stromboli and Stromboliccio," by Johnston Levis; "On the Glaciation of Asia," by Prince Krapotkin; and "On Some Assumptions in Glacial Geology," by Prof. Bonney. "The Place of Geology in Secondary and in Professional Education" was considered in the section and discussed by several distinguished authorities. During the meeting a joint gathering of Sections C and E, under the presidency of Sir Archibald Geikie, was held in order to discuss the limits between geology and physical geography, and a joint meeting of Sections C and D was held, under the presidency of J. J. H. Teall, to discuss fossil and recent coral reefs.

D. Biology.—This section was presided over by Rev. H. Baker Tristram, D. D., LL. D., F. R. S., Canon of Durham, who spoke as an Old World naturalist, whose researches had been not in the laboratory or with the microscope, but on the wide desert, the mountain side, and the isles of the sea. He referred to the fact that this year is the centenary of the death of Gilbert White, who is regarded as the father of field naturalists. Although others had preceded him, he was the first observer to recognize how much may be learned from the life habits of birds. A century and a half ago it had not come to be recognized that distribution is, with morphology and physiology, a most important factor in determining the facts of biology. Two typical examples of oceanic islands were contrasted. In the Sandwich Islands there is scarcely a passerine bird in its indigenous fauna which can be referred to any genus known elsewhere, while in the Canary Islands the process of differentiation is only partially accomplished. Concerning the migrations of birds, much less aid had been contributed by the observations of field geologists than might have been expected. Observation had answered the question, *Whither?* but a true answer to the *Why?* had not been obtained. We have arrived at a fair knowledge of the *When?* of migration; of the *How?* we have ascertained a little, but very little. Illustrations from Dr. Tristram's own observations were cited on these various points, and he also called attention to the exceptional migrations, not the mere wanderings

of waifs and strays, nor yet the uncertain travels of some species, but the colonizing parties of many gregarious species which generally travel from east to west or from southeast to northwest, after intervals sometimes of many years, or sometimes for two or three years in succession. These peculiarities still remained unexplained, although the sense of direction unconsciously exercised may be submitted as a working hypothesis. Another question which the field naturalist has failed to explain is whether the much-disputed topic of mimicry is protective or aggressive. Various illustrations were cited among birds, and then he referred to similarity, claiming that similarity without mimicry was possible. Cases of similarity in botany were mentioned, and the curious case of the fruit in Japan which absolutely mimics the alpine strawberry in the minutest particulars, in its runners, its blossoms, and fruit, save alone that the fruit is simply dry pith. In closing, he made reference to the severance of the last link with the pre-Darwinian naturalists in the death of Sir Richard Owen. He accumulated facts on the fossil remains that came to his hands till he won the fame of being the greatest comparative anatomist of the age. In his old age Sir Richard had said: "The known is very small compared with the knowable, and we may trust in the Author of All Truth, who, I think, will not let that truth remain forever hidden."

The following were among the more important papers presented before this section: "The Physico-Chemical and Vitalistic Theories of Life," by J. S. Haldane; "Malformation from Prenatal Influence," by Russel Wallace; "The Ætiology and Life History of some Vegetal Galls, and their Inhabitants," by G. B. Rothera; "Seals and Whales seen during a Voyage to the Antarctic," by W. S. Bruce; and "The Wings of the Archaeopteryx and other Birds," by C. Herbert Hurst. The physiological department of this section held a single meeting, which was presided over by Prof. J. N. Langley, and several papers read. Notably a "Report on the Physiological Action of the Inhalation of Oxygen in Asphyxia, more especially in Coal Mines." Also a report of the Committee on the Legislative Protection of Wild Birds was read and discussed.

E. Geography.—The presidential address in this section was delivered by Henry Seebohm, F. L. S., F. Z. S., Secretary of the Royal Geographical Society. He began by calling attention to the statement that the foundation of all geography is exploration, and that its scientific study requires a knowledge of cartography and of meteorology or climatology. These facts he elaborated by discussing them in special reference to the polar basin. There is only one polar basin, for the distribution of land and water round the south pole is almost the converse of that round the north pole. The history of the exploration of the polar basins is a long and tragic one. In recent years two visits to Greenland are worthy of note: that of Lieut. Peary, who reached 82° north latitude, and added material evidence to show that Greenland is an island, and that of Dr. Nansen, who crossed the continent of Greenland at about 64° north latitude, reaching an altitude of 9,000 feet. Both of these explorers

are already on their way in second attempts to reach the long-hoped-for pole.

Nansen expects to achieve his aim by following certain currents. One of the most important physical features of this polar basin is its gigantic river systems. The Yenisei drains an area of one half that drained by the Amazon. The Yukon and Mackenzie are also enormous rivers. The latter flows for more than 1,000 miles, with a width of one mile. The glaciers are likewise large, those of southern Alaska being among the greatest in the world. Along the shores of the Arctic Ocean is a fringe of bare country, sometimes steep and rocky, abruptly descending in more or less sharp cliffs and sites of precipices to the sea, but more often sloping gently down in mud banks and sand hills representing the accumulated spoils of countless ages of annual floods. In Norway this belt is called the Fjeld, in Russia the Tundra, and in America Barren Grounds. It gradually stretches back through bogs and swamp land until the forests are reached. Its flora consists chiefly of the lower orders of plants, and the fauna consists largely of birds. The geology of the polar basin needs more study, and students of the glacial epochs in the more temperate climates may acquire much information from the appearance of the arctic regions. The succession of seasons in these high latitudes deserves mention. The approach of winter is slow, the flowers fade and the birds migrate, but with the summer it is different. It comes quickly. The sun shines and the ice breaks; then of a sudden the birds are there and vegetation comes. There is no spring, but a hot summer that begins toward the end of May. The rapidity of the change is due to the melting of the snow under the frozen crust.

Twenty-seven papers were read and discussed before this section, among which were the following: "A Journey across Australia," by Guy Boothby; "The Islands of Chiloé," by Mrs. Lilly Grove; "The Native Tribes of the Congo Basin," by Herbert Ward; "The Physical Geography of the Sea between Scotland and the Faroe Islands," by H. N. Dickson; "The Physical Geography of the Clyde Sea Area" and "A Bathymetrical Survey of the English Lakes," by H. R. Mill; "Notes of an Antarctic Voyage," by W. S. Bruce; "On the Bengal Duars," by Edward Deawood; "On Recent Exploration in Tibet," by E. Delmar Morgan; and "Uganda and its People," by Captain Williams. Also reports of the Committee on Scottish Place-Names, and Committee on African Climatology, were read. An interesting feature of the meetings of this section was the discussion concerning the sending of a purely scientific expedition to antarctic waters. Mr. W. S. Bruce announced that he was prepared to spend a year with an assistant who had volunteered to accompany him on South Georgia or on Graham's Land, if he could be landed there, and to undertake systematic scientific work during that time if his passage money and maintenance were paid for. The proposition was received with enthusiasm, and a subscription list promptly started for that purpose.

F. Economic Science and Statistics.—The presiding officer of this section was Prof. Joseph S. Nicholson, D. Sc., who fills the chair of Political Economy in the University of Edinburgh.

He said: The so-called orthodox or classical political economy so far from being dead is in full vigor, and that there is every sign of a marked reaction in favor of its principles and methods. The method practically adopted by Adam Smith and Ricardo, and reduced to scientific form by Mill and Cairnes, and quite recently by Dr. Keynes, must still be regarded as fundamental. Facts are the fossils of the historian, and while impression may be good art, it is bad science; hence care must be taken to restrict political economy to its proper limits without wandering off into speculation. The method of the so-called orthodox English economists has only been modified and supplemented, not revolutionized and supplanted by the mathematical methods of recent writers. According to the traditional English view, it is not the business of the economist to decide all the disputes that may arise even regarding fundamental questions in ethics, religion, fine art, education, public law, administration—to decide, in a word, the first duty of man and the last duty of governments. His sphere is much more limited, and the limits have been indicated with tolerable precision by the classical English economists. In technical language, political economy is the economy of utility. From the old inquiry "How nations are made wealthy," to the new inquiry "How nations are made happy," it seems a natural and easy transition. For the essence of wealth is to possess utility, to satisfy desires, to create happiness. Accordingly it seems plausible to maintain that the economist ought to discover by his calculus of utility those principles of production and distribution that will lead to most happiness. In closing, he said: "Political economy has a vast literature, and students will not find all the good concentrated in the last marginal increment. The old must be mastered before the new can be appreciated. A portion of truth just rediscovered for the hundredth time is not of such value as a body of doctrines that have been developed for more than a century by economists of repute. Vaster than the literature of political economy is the economic experience of nations. The first duty of the legislator is to take account of the natural forces with which he must contend, and the classical economists have made a survey and estimate of these forces which, based as it is on the facts of human nature and the experience of nations, it would be willful folly to overlook."

The following-named papers were read and discussed before the section: "Poor Law and Old Age," by Rev. J. Frome Wilkinson; "Nottingham Lace and Fashion," by J. S. Nicholson; and "Progress of the Newspaper Press, and the Need of a Consolidation and Reform of the Laws affecting Newspapers," by J. A. Strahan. Discussion on the subjects of "Agricultural Depression" and the "Currency Problem" occupied much of the time at two sittings.

G. Mechanical Science.—This section was presided over by Jeremiah Head, F. C. S., past president of the Institute of Mechanical Engineers.

Mechanical science, he said, had been built up entirely upon observation and experiment, and the natural laws which had been induced therefrom by man. After illustrating this fact by citing instances from the animal kingdom, Mr.

Head proceeded to consider how far man was in his natural condition, and had become by aid of mechanical science able to compete successfully with other and specially endowed animals, each in his own sphere of action. Without mechanical aids a man could walk from 3 to 4 miles an hour, but with a cycle he could go 27.1 miles an hour. Many interesting illustrations contrasting the accomplishments of man with similar accomplishments by animals and birds were given. In bringing his address to a close he considered what man had done and what he might be able to do in aerial navigation by aid of contrivances which, as in the case of railway locomotives and ocean steamers, were propelled by a power other than his own body, and, in conclusion, referred to the consequences that might result from the eventual exhaustion of fuel supply. Mechanical appliances involving the consumption of fuel had for a century at least been multiplying with alarming rapidity. Terrible waste of these natural stores of fuel was daily going on in almost every department of work. Once exhausted, they could never be replaced. They had been drawn upon to some extent for 1,000 years, and largely for more than a century. Authorities say that another thousand years will exhaust all the more accessible supplies. However, assume that our sources of fuel are not exhausted in 5,000 years. What then? As far as we can foretell, our only motive powers will then be wind and water and animals, and our only motive mode of transit sailing and rowing, driving, cycling, riding, and walking. It has been estimated that in not less than 5,000,000 and not more than 10,000,000 years the sun will have become too cold to support life of any kind in this planet. Between the 5,000 years when fuel will certainly be exhausted and the 5,000,000 years when all life is probably to have been extinguished there is still 4,995,000 years. When, according to our present appearance, man will have to give up his hard-earned victories over matter and animals, and the latter will again surpass him each in his own element, because he has no fuel.

Among the papers read and discussed before this section were the following: "The Automatic Balance of Reciprocating Mechanism," by Worly Beaumont; "The Utilization of Waste-Water Power by Electricity," by Albion T. Snell; "An Automatic Gun Separator," by William S. Lockhart; "On Ventilating Fans," by Mr. Walker; "Relative Cost of Conductors with Different Systems of Electrical Power Transmission" by Gisbert Kapp; "Warming and Ventilating," by Frank Ashwell; "Watchmaking by Machinery," by T. P. Hewett; "Electrical Conductors," by E. Payne; and "Flashing Lights for Marine Purposes," by O. T. Olson. Likewise descriptions of various improved machinery were given, notably new forms for lace and hosiery manufacture. Reports of the Committees on Graphic Methods and on Dryness of Steam in Boiler Trials were read and discussed. Concerning the revival of watchmaking in England, "Nature" says: "A large factory has been built and the most improved appliances introduced. These, of course, are largely American in origin, but it is satisfactory to know that the beautiful machine tools, such as are used by the Waltham and Elgin Watch Companies, can now be made in England,

and are equal to the productions of the United States." Examples of these machines were exhibited by T. P. Hewett in his paper read before the section.

H. *Anthropology*.—The presiding officer of this section was Dr. Robert Munro, F.R.S.E., of Edinburgh.

Anthropology embraces all the materials bearing on the origin and history of man, but as the materials are so comprehensive and diversified, it is customary to separate anthropology into two divisions, according as the accumulated information relates to the structure and functions of a man's body—called anthropology—and according as the materials relate to the works he has produced—called archaeology. Then, taking up the special topics of the address, Dr. Munro proceeded to consider, first, the mechanical and physical advantages of the erect position; second, the differentiation of the limbs into hands and feet; and, third, the relation between the more perfect condition of these organs and the development of the brain. The human foot was admirably adapted to be both a pillar for supporting the weight of the body and a lever for mechanically impelling it forward. Concerning the hand, it was the most complete and perfect mechanical organ Nature had yet produced. The position of this perfect piece of mechanism gave to man a superiority in attack and defense over all other animals. Hence, there was in man a combination of structures and functions sufficiently unique in its entirety to place him in a category by himself. The brain, the undoubted organ of the mind, gave to man's life functions their most remarkable character. The act of unconscious sensation invariably took place through the instrumentality of a few nerve cells, whose functional activity required to be renovated in precisely the same way as the muscular force expended in walking. It had been shown that the homology that characterized the structural elements of the bodies of animals extended also to the component parts of their respective brains. We should therefore naturally expect an increase of brain substance in every case in which the functional activity of a specific organ was extended. Man's brain and his intelligence were certainly correlated to each other, but to maintain that the amount of intelligence was directly proportional to the size of the brain was to strain the laws of legitimate inference. In drawing any conclusion of such a nature from the bulk of the brain substance there were modifying influences which could not be disregarded, such as the amount of cranial circulation and the quality of the brain cells. The highest products of intellectuality were nothing more than the transformation of previously existing energy, and it was the power to utilize it that alone found its special organic equivalent in the brain. The development of the large brain of man corresponded with that of his characteristic attributes, more especially with those consequent on the attainment of his upright position.

The following-named papers were read and discussed by the section: "The Ethnographic Aspect of Dancing," by Mrs. Lilly Grove; "Anthropometric Work in Large Schools," by Bertram C. A. Windle; "On the Origin and Development of Early Christian Art in Great Britain

and Ireland," by Romilly Allen; "Ancient Metal Implements from Egypt, and the Discoveries of Dr. Flinders Petrie and Mr. Bliss at Tel-el-Heyi," by J. H. Gladstone; "Morphological Characters of the Abyssinians," by J. G. Garson; "Ethnographical Notes relating to the Congo Tribes," by Herbert Ward; "Head Form of the Dards and of the Siah Post Kafirs," by John Beddoe; "Manners and Customs of the Primitive Indians of America," by Miss J. M. Welch; "Australian Natives," by Miss J. A. Fowler; "On the Structure of Lake Dwellings," by Robert Munro; "The Prehistoric Evolution of Theories of Punishment, Revenge, and Atonement," by G. Hartwell Jones; and "The Mad Head," by Crochley Clapham. Besides the foregoing, reports of various section committees were received and acted on. These included report of the Anthropometric Laboratory Committee, report of the Physical Deviations Committee, report of the committee to make an ethnological survey of the United Kingdom, report of the Abyssinian Committee, report of the Uniformity in Spelling Committee, and report of the North-western Tribes of Canada Committee.

Popular Features of the Meeting.—On the evening of Sept. 15 a popular lecture on "Flame" was delivered by Prof. Arthur Smithells, of Leeds, and on the following evening one on "Spontaneous Combustion" was delivered by Prof. Vivian Lewes, while on the evening of Sept. 18 Prof. Victor Horsley lectured on "The Discovery of the Physiology of the Nervous System." Other entertainments included a reception by Sir John Turner at Mapperley, one by the Mayor in Castle Museum building, a garden party by Lord Middleton at Wollaton Hall, and on Saturday, Sept. 16, excursions were provided for to Sherwood Forest, Haddon Hall, Buxton, Burleigh, Southwell, Minster, Lincoln, Belvoir Castle, and Donnington Park. On Association Sunday many of the local pulpits were occupied by the distinguished scientists at the meeting, including the Bishop of Southwell, Rev. Robert Hartley, Rev. Dr. Bonney, and others. At the close of the meeting extended excursions were provided for those who cared to indulge in them. An innovation in the shape of a special performance of "Pharaoh," by Wilson Barrett and his company, to which the members of the association were invited by the local committee, was one of the events of the meeting. A novel but valuable feature of the meeting was the collection of apparatus and exhibits in the physical and chemical departments of the University College. Manufacturing firms sent their newest apparatus, and private owners lent many objects of scientific interest.

Attendance and Grants.—The attendance was considerably less than that reached at the Edinburgh meeting; only 1,661 members were enrolled as present, and the receipts were but £1,653. As the grants for research are dependent upon this collection, they were correspondingly less than those of last year, and as approved by the General Committee amounted to £705, distributed as follow: Electrical standards, £25; meteorological photographs, £10; mathematical tables, £15; solar radiation, £15; national physical laboratory, £5; wave-length tables, £10; iron and steel analysis, £15; action of light on

died colors, £5; erratic blocks, £15; fossil phyllopoda, £5; geological photographs, £10; shell-bearing deposits at Clara, etc., £20; eurypterids of the Pentland Hills, £5; sections of Honesfield slate, £25; earth tremors, £50; exploration of Calf Hole Cave, £5; Naples zoological station, £100; Plymouth zoological station, £15; zoology of Sandwich Islands, £100; zoology of Irish Sea, £40; structure of mammalian heart, £10; climatology of tropical Africa, £10; observations in South Georgia, £50; exploration in Arabia, £30; economic training, £10; anthropometric statistics, £5; ethnography of United Kingdom, £10; the Glastonbury village, £40; anthropometry in schools, £5; mental and physical condition of children, £30; and corresponding societies, £25.

Next Meeting.—As decided last year, the Association will meet in 1894 on Aug. 8, in Oxford. For 1895 invitations were received from Toronto, Canada, Bournemouth, and Ipswich, which were duly discussed, and a final decision was reached for Ipswich. The application from Toronto was favorably regarded, and its acceptance in the near future is extremely probable. The Marquis of Salisbury was nominated as president for the Oxford meeting, and among the claims mentioned in his favor for that place were the facts that he was "a true man of science, a member of the council of the Royal Society, and Chancellor of the University of Oxford." The General Committee reappointed Sir Douglas Galton and Vernon Harcourt general secretaries, G. Griffith assistant secretary, and Dr. A. W. Rücker general treasurer.

Australasian.—The fifth annual meeting of the Australasian Association for the Advancement of Science was held in Adelaide, South Australia, during the week beginning on Sept. 25, 1892. The officers were as follow: President, Ralph Tate. Section Presidents: A, Astronomy, Mathematics, Physics, H. C. Russell; B, Chemistry, C. N. Hake; Geology and Mineralogy, Sir James Hector; D, Biology, C. W. De Vis; E, Geography, A. C. Macdonald; F, Ethnology and Anthropology, Rev. S. Ellis; G, Economic Science and Agriculture, H. C. L. Anderson; H, Engineering and Architecture, J. R. Scott; I, Sanitary Science and Hygiene, A. Mault; J, Mental Science and Education, Henry Laurie. Permanent Secretary, Archibald Liversidge. General Treasurer, H. C. Russell.

Opening Session.—The first business meeting was held on Sept. 26, at the University of Adelaide, when the arrangements effected by the local committee were accepted; also, new officers were elected and preliminary arrangements made for the next meeting, to be held in Brisbane. It was further agreed that in 1896 the meeting should be held in Sydney, New South Wales. Various other matters pertaining to the management of the association were discussed and acted on. The first general session was held in the town hall, on the evening of Sept. 26, when Sir James Hector, a past president (1891), called the meeting to order, and on behalf of Sir Robert Hamilton, president of the previous meeting, who was not present, inducted as his successor Prof. Ralph Tate. An address of welcome from the Mayor was then received and acknowledged, after which the inaugural address of the new president was delivered.

President's Address.—Choosing as his subject "A Century of Geological Progress," Prof. Tate observed that he had "read a hundred volumes" to produce the modest pamphlet of his address.

RALPH TATE.

The history of the progress of geology in Australia is intimately associated with that of its geographical discovery, and of its advancement in scientific culture; hence it followed that for the first three or four decades of this century the geological knowledge was almost entirely derived from maritime surveys. In more recent years this information had been supplemented by inland exploration, followed in time by the systematic geological surveys in New South Wales and Victoria. Having thus outlined his address, Prof. Tate then began the treatment of the subject more in detail, referring at the outset to the geological and other scientific researches of Vancouver, who in 1791 discovered King George's sound; then, carrying his hearers step by step past the discovery of gold, in 1851, in New South Wales, followed by that of richer deposits in Victoria during the same year, down to the foundations of the universities in Melbourne and Sydney, and describing the various surveys of the colonies, he culminated with mention of the publication of the geological map of Australia in 1887. The glacial periods were discussed, and the information—most of which is quite recent—bearing on this interesting topic presented in detail. The imperfection of the geological record, and the utter impossibility of reconciling the order of succession in the Australian stratified deposits with those of other countries, were clearly pointed out by the speaker. The various circumstances tending to retard the progress of geological science in Australia were mentioned, and the pernicious practice of sending palaeontological data abroad for study, in lieu of keeping them at home, deplored. As to the antiquity of continental Australia, the speaker contended that much of the evidence on which the views of this subject de-

pended was illogical. The physical characters of the interior of the continent were rehearsed, and he closed with a plea for chemical geology and microscopic petrology. Geologists had been too much occupied with the golden harvests of palaeontology and stratigraphy, and consequently had ignored the less attractive studies.

A. Astronomy, Mathematics, and Physics.—This section was presided over by H. C. Russell, Government Astronomer of New South Wales, who delivered an address on "Astronomical Photography," in which he paid pleasant compliments to the work of the elder Draper and to the more recent labors of the American astronomers, Bond, Pickering, and Hale. Among the papers presented before this section were the following: "Meteorological Work in Australia," by Sir Charles Todd; "The Construction of Pendulum Apparatus for Differential Observations of Gravity," by E. F. J. Love; "Tides of South Australia," by R. W. Chapman and Capt. Inglis; "On the Earthquake Intensity in Australia" and "The Origin of the Earthquake of Jan. 27, 1892," by G. Hogben; "The Application of Mathematics to Actuarial Science," by J. J. Stuckey; "Some Difficulties in making Exact Observations in Astronomy," by W. E. Cooke; "Construction and Use of an Azimuth Diagram," by Capt. Weir; "The Effect of the Length of a Solenoid on the Form of its Equipotential Surfaces," by C. C. Farr; "On the Thermo-Electric Diagram," by W. H. Steele; "Stokes Theorem" and "From Numbers to Quaternions," by G. Fleuri; also the report of the Seismological Committee was read, and finally a resolution passed "that this section desires to express a hope that the Government of Tasmania may be able at an early date to establish the proposed Leake Observatory at Hobart."

B. Chemistry.—The presiding officer of this section was C. N. Hake, Inspector of Explosives to the Government of Victoria, who spoke on "Recent Progress in Manufacture of Explosives." He reviewed the recent high explosives, and especially the English "cordite." Among the papers read before this section were the following: "The Production of Gold Nuggets and the Mode of Occurrence of Gold in Veins," by A. Liversidge; "Hyponitrites," by D. H. Jackson; "The Use of Ethyl Nitrite for the Preparation of the Hyponitrites," by D. Avery; "On the Reduction of Nitric Oxide by Sodium Amalgam in the Presence of Alcohol," by G. W. Macdonald; "Osmotic Pressure," by Orme Masson; "On the Experimental Investigations of Osmotic Pressure," by Orme Masson and J. B. Kirkland; "Notes on Determinations of Sugar in Samples of Musts of Victorian Wines," by W. Percy Wilkinson; "Wet Treatment for Copper and Gold in Australia," by G. Sutherland; "The Determination of Nitrates in Certain Waters," by E. H. Rennie; and "Certain Modifications in the Electrolytic Method of determining Copper in its Ores," by T. C. Cloud.

C. Geology and Mineralogy.—Sir James Hector, Director of the Geological Survey of New Zealand, was the presiding officer of this section, who delivered a lecture on "The Progress of Geology in the Southern Hemisphere during the Past Year," confining himself, however, chiefly

to the recent discoveries and revelations in New Zealand. Among the papers presented before this section were the following: "Notes on the MacDonnell Range," by H. Y. L. Brown; "Certain Plant Bearing-Beds of Victoria," by G. B. Pritchard and T. S. Hall; "On Certain Foraminiferal Rock" and "A Complete List of the Fossil Foraminifera of Australia," by Walter Howchin; "The Distribution of the Graphitolitidæ in the Rocks of Castlemaine," by T. S. Hall; "The Application of Photography to Geological Surveys," by J. H. Harvey; "Glacial Deposits of Bacchus Marsh, Victoria," by George Sweet and Charles Brittlebank; "The Evidences of Recent Glaciation in New South Wales," by G. J. Statnam; "Notes on the Volcanic Action in Eastern Australia," by T. W. E. David; "The Igneous Rocks of Southwestern Australia," by J. Dennant; "Systematic Application of Photographs as an Aid for making Geological Surveys," by E. P. Bishop; also reports from the investigation committee on evidence of glacial action in Australia during the Tertiary and post-Tertiary eras were presented.

D. Biology.—This section was presided over by C. W. De Vis, Curator of the Brisbane Museum, who spoke on the subject of "Life." His address was full, and treated of heredity, the study of biology, and biological laboratories. The following papers were read and discussed before the section: "The Geographical Distribution of Queensland Lichens," by J. Shirley; "The Flora of the Lower Glenelg River," by E. P. Eckert; "Botanical Nomenclature with Special Reference to Fungi," by D. MacAlpine; "The Biological Results of the Elder Exploration," by Ralph Tate; "Further Notes on the Land Planarians of Tasmania and South Australia," by Arthur Dendy; "Eggs of the Australian Breeders of the Plovers, Snipes, etc.," by A. J. Campbell; "Photomicrography as a Means of Illustrating Natural Objects," by W. B. Poole; "Vernacular List of Birds," by Col. Legge and A. J. Campbell; "Plea for a Rational Popular Nomenclature of Australian Plants," by M. Holtze; "Fauna Regions of Australia," by C. J. Hedley; "Necessity of ascertaining the Distribution of Australian Fauna," by Thomas Blackburn; and report of the committee appointed to report on the protection of native fauna.

E. Geography.—The presiding officer of this section was A. C. Macdonald, Secretary of the Victorian Branch of the Royal Geographical Society of Australasia, who delivered an address on "The Advance in Geographical Research and the Geographical Distribution of Man in his Progress toward Civilization." Among the papers presented before this section were the following: "On the Physiography and the Geographical Divisions of the Islands of the Fijian Group," by J. P. Thompson; "On the Physiography of South Gippsland, Victoria," by J. Stirling; "South Australian Nomenclature," by C. H. Harris; "The Advocacy of another Attempt to Find Traces of Dr. Leichardt," by F. Von Mueller; "The Results of the Elder Exploring Expedition to Central Australia," by J. W. Jones; and "Notes and Reminiscences of the First Crossing of the Australian Continent," by W. P. Auld.

F. Ethnology and Anthropology.—The Rev. S. Ella, of New South Wales, was the presiding of-

ficer of this section, and addressed the section on "The Origin of the Polynesian Races. The following papers were read before the section: "On the Habits, Customs, Ceremonies, etc., of the Aborigines on the Diamantina, Herbert, and Eleanor Rivers in East Central Australia," by Francis H. Wells; "The Smoke Signals of the Australian Aborigines," by A. T. Margarey; "On the Survival of the Unfittest," by H. K. Rusden; "South Australian Physique and Mortality," by J. H. D. Davidson; "The So-called Wild Blacks at Poplitah," by A. F. Cudmore; "The Omeo and Monaro Aborigines, with a Description of the Stone Implements of the Latter Tribe," by R. Helms; and "The Stone Implements of the Aboriginal Tribes of the Seaboard of South Australia," by Walter Howchin.

G. Economic Science and Agriculture.—The presiding officer of this section was H. C. L. Anderson, formerly Director of Agriculture in New South Wales, who presented as his address a discourse on "The State of Agriculture and Agricultural Education in New South Wales." Among the papers read before this section were the following: "Experiments on Wind Pressure," by W. C. Kernot; "Practice of Road Making in South Australia," by C. T. Hargrave; "A Standard Pressure Gauge," by C. W. Smith; "The Laying Out of Towns," by J. H. Packard; "The Punishment of Criminals," by Justice Bunday; "The Physical Properties of the Ingredients of the Soil in Relation to Productivity," by J. G. O. Tepper; "Agricultural Wealth," by W. Smithers-Gadd; "Current Popular Fallacies on Taxation," by R. M. Johnson; "The Proper Method of Levying a Land Tax," by C. W. Adams; and "Deforestation in South Australia: Its Causes and Probable Results," by Walter Gill.

H. Engineering and Architecture.—This section was presided over by J. R. Scott, Lecturer in Charge of the School of Engineering, Canterbury College, Christchurch, New Zealand, whose address dealt with "The Direction of Engineering Progress." The following papers were presented before the section: "Transition Curves for Railways and Tramways," by S. Smeaton; "The Camera as an Accessory Instrument to the Surveyor," by C. Hope Harris; "End-Loading of Sheep Trucks," by J. C. B. Moncrieff; "Turbines," by Bernhard A. Smith; "An Architecture Racy of the Soil," by M. F. Cavanagh; "A Means of Distributing Oil on the Surface of the Sea," by T. Turnbull; "Water-Tube Boilers," by J. T. Noble Anderson; and "A New Form of Telemeter," by G. Knibbs.

I. Sanitary Science and Hygiene.—The meetings of this section were presided over by A. Mault, Secretary of the Central Board of Health, Tasmania, who chose "Urban Sanitation" as the subject of his presidential address. Among the papers presented were the following: "Artisan Dwellings," by Dr. Gault; "Construction of Hospital Wards" and "On the Axial Lines of Hospital Wards," by John Sulman; "Hospitals as a Means of teaching and spreading Sanitary Laws and Hygiene," by Miss Noble; "The Construction of Hospitals," by C. G. Owen Smith; "The Character of the South Australian Water Supply, embracing Analyses of Characteristic Potable Waters and their Bacteriological

Examination," by G. A. Goyder; "Reasons for connecting the High Death Rate of Adelaide and the Increasing Unhealthfulness of the Suburbs with Sewers and Sewer Gases, with Some Suggestions for further Investigation of the Subject," by Miss Martin; "The Disposal of Town Refuse," by J. Hardy; and "Spiroptera associated with Tuberculosis in Cattle," by Dr. Barnard and A. Park.

J. Mental Science and Education.—The presiding officer of this section was Henry Laurie, who holds the chair of Mental and Moral Philosophy at the University of Melbourne. His address was on "The Recent Progress and Present Position of Mental Science." The following papers were read before this section: "The Australasian Home-Reading Union," by Mrs. Wolstenholme; "The Federation of Australian Universities," by Rev. Canon Poole; "The Value of Technical Education to Artisans in the Building Trades," by Hillson Beasley; "The Education of Australian Girls," by Mrs. Kelsey; "Public Instruction and Public Defense," by John Shirley; "Some Predilections in Decorative and Pictorial," by Harry P. Gill; "Psychophysical Experiments," by E. F. J. Love; "The Training of Secondary Teachers," by P. Ansell Robin; "Ocular Education in Public Schools and its Bearing in Society," by A. E. Mueller; "Methods of Teaching in Use in the Primary Public Schools, South Australia," by M. M. Maughan; "A Plea for Practical Education," by W. Catton Grasby; and "The Simplification of Difficulties in the Relations between the Tonic Sol Fa, and Old Notations," by W. A. Jones.

Entertainments.—During the meeting the following evening lectures were given: On Sept. 25, "Prehistoric Man," by Dr. E. C. Stirling, of the University of Adelaide; and on Sept. 27, "Diprotodon and its Times," by C. W. De Vis, of the Brisbane Museum. Other entertainments included a garden party, given on the afternoon of Sept. 26 by the Earl of Kintore, the governor of the colony; a *conversazione*, given on Friday evening, Sept. 29, by the chief justice of the colony; a picnic, given on Sept. 30 by C. Willcox, Mayor of Adelaide in the National Park, which was then for the first time opened to the public; and an excursion, also on Sept. 30, to Hallett's Cove, especially interesting as exhibiting evidences of glacial action, thereby demonstrating the existence formerly of glaciers in Australia. At the close of the meeting a special trip, lasting several days, was made to the river Murray, in order to examine the gorge of that river and its fossiliferous cliffs; also to study the remarkable inliers of the archæan rocks near Manam.

Next Meeting.—The sixth meeting of the association will be held in Brisbane, Queensland, during January, 1895, for which, session

the Hon. A. C. Gregory was elected president; also, as local secretaries, J. Shirley and C. W. De Vis, and as local treasurer, A. Norton, were chosen.

ASTRONOMY, PROGRESS OF, IN 1893. The astronomical discoveries of 1893, while on a par with those of former years in general, fail to equal those that distinguished 1892, which for a decade at least have not been surpassed.

The Sun.—Much information regarding the physical constitution of the sun has recently been obtained by Prof. George E. Hale, at Kenwood Observatory, Chicago, by means of the spectroheliograph. He has succeeded in photographing the ultra-violet spectrum of both the chromo-

PROMINENCES AND FACULE ON THE SUN, APRIL 16, 1893.

sphere and the prominences. With a tangential slit placed at varying distances from the limb, the negative plate shows the reversal of many lines in the chromospheric spectrum. The instrument, as briefly as can be stated, consists of a powerful diffraction spectroscopic, the collimator and viewing telescopes having object glasses of $8\frac{1}{4}$ inches in diameter, the grating being ruled to 14,438 lines to the inch. In front of the photographic plate a second slit is so placed that the light of one line only in the spectrum, that of the fourth order, is allowed to fall on the plate. The plate and slit are moved simultaneously, and as the slit of the collimator passes across the image of the sun, the plate moves behind the second slit at the same rate, so that a complete image of the sun is seen on the particular line selected, the H and K lines being those most generally employed. By the use of a diaphragm to shut off the image of the sun, and by giving the plate and slit a slower motion, he photographs the whole of the prominences around the sun's limb, which process, by Prof. Hale's method, requires only two

minutes of time, while formerly an hour was necessary. He has also photographed the faculae over the entire disk of the sun, instead of, as previously, near its limb.

The K line, which is dark in the solar spectrum, is always bright in the faculae, so that a photograph of the entire sun may be taken by the K light alone; he having secured such a one with spots, faculae, chromosphere, and prominences all beautifully shown on one plate, and this not a composite photograph, but a monochromatic picture of the sun given by K light only.

Prof. Hale's achievement in this direction has excited unusual interest among astronomers, and is certainly a great advance in solar physics.

We are now nearing the middle of the maximum period of sun spots. For scarcely a day during months past has the sun presented a spotless disk. The rare phenomenon of an equatorial sun spot has been observed, indicative, so considered, of the near approach to maximum of solar activity. See illustration on preceding page, from "Astronomy and Astro-Physics."

The Moon.—The moon will never cease to be an object of telescopic study. Evidence of change long entertained by some astronomers, and strenuously disputed by others, seems to be gradually strengthening, and that the moon is not an absolutely dead world may yet become an article of faith with lunar observers. Photography is constantly bringing to light features hitherto unmapped. Enlargement of the negatives of the Lick Observatory reveals the before unknown existence of a crater in the Mare Nubium between the southern end of the great "fault," known as the straight wall, and the northwestern side of Pilatus, in size twice as large as any other crater in its vicinity. Still its detection in this manner is not conclusive of change, as, being in a very unattractive neighborhood, it might easily have been overlooked. About a half mile eastward the negative reveals a delicate cleft, in shape resembling the Greek letter Zeta (ζ). Prof. Weinck estimates its length to be 5 miles, and its breadth $2\frac{1}{2}$ miles.

Prof. W. H. Pickering, who from his mountain observatory at Arequipa, Peru, has made careful study of the moon, has discovered in the region of Plato reasonably good evidence of actual physical change having taken place within recent times. On the floor of Plato, the spot numbered 2, which heretofore has constantly attained in the scale of visibility no higher than 14, now ranks as 5; and No. 25 (No. 40 of Pickering's map), formerly considered as a bright point, is now a crater. He says: "It is perhaps only a coincidence, but it may be noted that the 3 craters which seem to have notably increased in size—viz., 2, 40, and 47—are all situated very near the edge of the floor, while the 3 which now seem less prominent than formerly—4, 31, and 7—are situated far apart and near the center."

Prof. Pickering says that No. 4 has never been seen by him as a crater; but Mr. A. S. Williams saw it as a crater as late as October, 1888. Measurements by Prof. Pickering with a magnifying power of 700 on No. 1 gave its diameter as 5,000 feet, and of Nos. 17 and 3 as 4,000 feet. The depth of No. 1, as determined by the length of the shadow cast inside the crater, was found to be 530 feet, assuming the bottom to be flat.

In the same manner the depths of Nos. 17 and 3 were ascertained to be 400 feet each.

Jupiter.—From his mountain observatory, with its unequaled atmosphere, Prof. Pickering has with great thoroughness studied the planet Jupiter and his satellites. The best results were secured with a magnifying power of 450 diameters on the 18-inch refractor. Under the most favorable atmospheric conditions for seeing, it appeared that the surface of the planet consisted of a uniform white mass of cloud, and that over this, stretched from pole to pole, lay a thin, gauzy veil of unequal density of a brown material not unlike our cirrus clouds. Where it accumulated in dense masses the belts are seen, while the thinner portions formed the spaces between them. Occasionally a round or elliptical hole of 1" to 2" in diameter was seen in this layer. These holes are the well-known white spots observed even with small telescopes.

The great red spot which, like a floating island having a motion of its own, for a dozen or more years has been, next to the belts, the most striking feature of the planet, was extremely faint, and seen only with great difficulty.

Jupiter's Satellites.—In October, 1892, Prof. Pickering, at Arequipa, Peru, began a series of rigid observations of the four principal satellites of Jupiter, and found the disk of the first satellite not circular but egg-shaped. It was unmistakably thus with powers of 700, 1,000, and 2,000. Numerous experiments were tried to discover whether the elongation was not an optical illusion. The next evening he was surprised to view it perfectly round, but later it again assumed an oval form. His assistant, Mr. Douglas, also saw it thus, and several other persons confirmed the observations, which indicated that the satellite, instead of being an oblate spheroid like Jupiter and the other primary planets, was a prolate spheroid whose rotation is accomplished in thirteen hours and three minutes, and which every six hours and thirty minutes became perfectly circular, remaining thus for half an hour, and the remainder of the time appearing more or less elliptical. Its direction of rotation, Prof. Pickering thinks, is retrograde.

The other satellites also, though not found spherical, yet instead of revolving end over end, as does the first satellite, were lengthened at right angles to their orbits, like the revolution of a watch if whirling suspended by its chain.

The third satellite presented an elliptical phase twice during each orbital revolution, at an interval of thirty-four hours after each conjunction with the planet. When this satellite is on the eastern side of its orbit, and presents an elliptical disk, the inclination of the major axis to the orbital plane is clearly shown. On this satellite a peculiar marking has been seen, which at first was thought to be a belt, but further observation indicated for it a more complicated structure, it usually appearing forked, with the prongs at an angle of 30° to 60°. The fork turned sometimes to the right and sometimes to the left, and sometimes a double fork was observed like the letter X turned sidewise. To determine the genuineness of this phenomenon of the belt, the eyepiece was changed, the micrometer and telescope turned, the head of the observer held at different angles, and the two

eyes alternately used, but it was seen the same under all these conditions. On seven nights when the satellite was between them and Jupiter a whitish spot was seen near the south pole, and on two nights when the satellite was beyond the planet, and shortly after passing superior conjunction, the north pole appeared slightly the brighter. From these and other circumstances he infers that it rotates on its axis synchronously with its revolution around the planet, as does our own moon.

Phenomena similar though far less conspicuous were observed on the other satellites, but the dark color of the fourth failed to show tracings so delicate. Several times a white spot was seen near the north pole, and once near the south pole. On fourteen different dates its disk was seen shortened, and it was found to be circular on eleven nights.

For full details of these remarkable observations and their discussion the reader is referred to the March, May, and June numbers of "Astronomy and Astro-Physics," published at Northfield, Minn.

Jupiter's fifth satellite, which is a minute body accompanying the giant planet, has been seen at several observatories, and its existence confirmed beyond doubt. At the publication of our last annual volume but few observations had been made, and, not strangely, some of the data as there given are slightly erroneous. From observations of eastern elongations made by Dr. Barnard, the discoverer, and continued to Oct. 21, 1892, the corrected periodic time is $11^h 57^m 20.5^s$. Hourly motion in its orbit, $30'' 11'$. The distance of the satellite from the center of Jupiter at eastern elongation is $48.094''$, which corresponds to a distance of 112,510 miles. Western elongations give a distance about $1''$ less than the eastern, showing that its orbit is elliptical. It is assumed to be of the thirteenth magnitude. As under the most favorable conditions the mammoth telescope of the Lick Observatory fails to reveal its shadow while it is crossing the planet's disk, it is inferred that the satellite is not over 100 miles in diameter.

Comets.—Since Sept. 20, 1892, five comets have been discovered, and one, an expected periodic, has returned to perihelion, as follows:

Comet f, 1892 (Holmes).—Taking into consideration the sudden apparition of this comet, its many fluctuations in brightness, and its subsequent change from a comet to a nebulous star, it ranks as the most extraordinary one mentioned in history. So suddenly did it appear, that many astronomers thought it not a comet but the resultant *débris* from the collision of two asteroids. When first discovered its limbs were as sharply defined as those of the planet Jupiter, and as the size rapidly expanded it was for a while supposed to be approaching the earth, when in reality it was rapidly receding from both the sun and the earth. On Nov. 6 the discoverer made its diameter $5''$; on the 14th, $9''$; on the 17th, $13''$; and on the 26th its diameter had increased to $20''$, a gain in volume equal to sixty-four times. Such increase of volume in a comet receding from the earth is entirely unaccountable. By about the middle of December it had grown too faint to be seen save with large telescopes, and it continued to decrease until it ap-

peared as a small, faint planetary nebula. On Jan. 16 it had changed to a nebulous star of the 8.5 magnitude, surrounded with nebulosity about $10''$ in diameter. This marvelous transformation from a diffused nebula to a nebulous star must have occurred at some unknown time between Jan. 14 and 16. Dr. Barnard says he saw the change progress from hour to hour. In a $3\frac{1}{2}$ -inch telescope the comet could not be distinguished from a bright eighth-magnitude star. As the Biela star shower (occurring once in seven years) was soon expected, and as the comet at discovery was near its radiant, it was, with much reason, supposed to be the long-lost comet of Biela, which since 1852 had escaped observation.

The elements of Holmes's comet, as computed by M. Schulhof, are: Time of perihelion passage, 1892, June 13-2379, Paris mean time; longitude of perihelion, $845^\circ 53' 12.2''$; longitude of node, $331^\circ 42' 12.1''$; inclination, $20^\circ 47' 22.9''$; perihelion distance, 2,139; daily motion, $513.548''$; period, 6.906 years. These elements bear a close resemblance to those of La Hire of 1678, and also to those of De Vico of 1844.

Comet g, 1892 (Brooks).—On the morning of Nov. 19 Mr. W. R. Brooks discovered a comet in right ascension $12^h 56^m 40^s$; declination north $12^\circ 59'$. This comet possessed no marked characteristics and has been quite easy to observe. Its orbit is a parabola, and consequently this was its first and last visit to our system. The following parabolic elements have been computed for it:

Time of perihelion passage, 1893, Jan. 6-5355, Paris mean time; node to perihelion, $85^\circ 15' 05.4''$; longitude of node, $185^\circ 39' 05.6''$; inclination, $143^\circ 52' 16.4''$; log. perihelion distance, 0.077328.

Comet α , 1893 (Finlay).—This is a periodic comet of short period, discovered in 1886, at the Cape of Good Hope, by Mr. Finlay, whose name it bears. On this its first predicted return it was detected by Finlay himself on May 17 from a finding ephemeris calculated from its elements in 1886. It was found almost exactly in the computed place for that day.

The present elements, which differ but little from those of 1886, which latter are inserted for comparison, are as follow: Longitude of perihelion, in 1886, $7^\circ 84' 29.23''$; in 1893, $7^\circ 41' 84.1''$. Longitude of node, in 1886, $52^\circ 28' 54.06''$; in 1893, $52^\circ 27' 42.7''$. Inclination, in 1886, $3^\circ 1' 41.18''$; in 1893, $3^\circ 2' 2.1''$. Mean daily motion in 1886, $533.6901''$; in 1893, $535.8046''$.

Comet δ , 1893 (Rordame).—This was discovered with the naked eye by Mr. Alfred Rordame, of Salt Lake City, Utah, on the evening of July 8. It had when first detected a tail 10° or 15° in length, and was nearing both perihelion and perigee. The appended parabolic elements have been computed for it by Prof. Boss, but as further observations extending over a longer orbital arc were necessary, they may need slight revision:

Time of perihelion passage, 1893, July 7-2830, Greenwich mean time; node to perihelion, $47^\circ 8' 1''$; longitude of node, $337^\circ 19' 35''$; inclination, $159^\circ 57' 50''$; log. perihelion distance, 9.82905.

On July 19 the comet was photographed by M. F. Quénisset, of France, an independent discoverer, with an exposure of forty minutes.

The negative shows a double tail, one, about a degree in length, pointing east, the other, of half a degree, turned toward the north.

Comet c, 1893 (Brooks).—On the morning of Oct. 17, Prof. W. R. Brooks, Director of Smith Observatory, Geneva, N. Y., discovered a fairly bright comet in right ascension $12^h 21^m$; declination north $12^\circ 55'$; having a short tail and moving slowly northeasterly. Its discovery position is quite close to that of his comet (g) of 1892.

Time of perihelion passage, 1893, Sept. 20-552; Berlin mean time; longitude of node, $175^\circ 19'3''$; node to perihelion, $350^\circ 40'2''$; inclination, $130^\circ 13'7''$; log. perihelion distance, 9.91968.

These elements resemble those of comet 1864 I. *Barnard's Photographic Comet*.—The hastily calculated elements of this body, as published last year from observations of three one-day intervals, are, as might be expected, slightly in error. The following are by Prof. Krueger, of Kiel, Germany, who, from observations of Oct. 16, 20, and 25, has obtained elliptic elements that indicate a period of 10.4 years:

Perihelion passage, Oct. 20.5, Berlin mean time; mean anomaly, $355^\circ 27'9''$; node to perihelion, $167^\circ 41'9''$; longitude of node, $204^\circ 38'9''$; inclination, $82^\circ 11'9''$; angle of eccentricity, $43^\circ 38'6''$; perihelion distance, 1.9904; daily motion, $341.680''$.

These elements bear too strong a resemblance to those of Wolf's comet of 1891 to be regarded as accidental.

New Star in Auriga.—No pains have been spared to make the spectroscopic study of this new star, discovered on Feb. 1, 1892, by Rev. F. D. Anderson, of Edinburgh, Scotland, as complete as possible. Almost every spectroscopist in the world has busied himself with its spectrum, and from all came the same story of a brilliant array of bright lines. While this feature of its spectrum was not unexpected, one altogether unique was simultaneously observed at several observatories, viz., the bright lines were attended by dark companion lines on their more refrangible sides. Three of these lines attracted much attention everywhere because of their intimate connection with the suspected physical constitution of the star, and are, first, the bright line near *b*, the less refrangible edge of the hydrocarbon band; second, the line near the chief nebular line wave length 5,006; and, third, that one near the pair of chromospheric lines wave lengths 4,923 and 4,921.

On Feb. 22 Dr. Huggins discovered a complete series of bright lines in the ultra-violet identical with those found by Prof. Hale in the solar chromosphere, but each with its dark companion line, as if the outburst of the light of the star were caused by a vast chromospheric disturbance. Then arose the question whether the wideness of the lines was attributable to a single or multiple origin. The two strong lines at F and G were certainly divided by a faint, dark line near the center of each. Measurements of the separation of the F line of hydrogen gave, with reference to the earth, a velocity of recession of 230 miles a second and a velocity of approach of 320 miles a second to the dark lines.

The star has exhibited several fluctuations of brightness, having declined on April 22 to the sixteenth magnitude, while on Aug. 19 it had

attained to the tenth magnitude, its spectrum then being that of a planetary nebula. From March 13, when it was of the eighth magnitude, to April 26, when it had faded to the sixteenth magnitude, its decrease was perfectly uniform, and it was assumed that it would thus gradually decline into invisibility even with the Lick telescope, when suddenly it brightened, as above stated, to a nebula with a nucleus of about the tenth magnitude, as observed by Barnard. The catalogue name of the star is T Auriga, but it is generally mentioned as the *nova* in Auriga. Strictly speaking, it ought not to be classed as a variable but rather as a temporary star. Interest attaches to the statement that on Dec. 10, 1892, the *nova* was photographically three magnitudes fainter than visually.

Nova Auriga is the sixth temporary star that has appeared during the past forty-four years. The list follows:

On April 28, 1848, near Eta Ophiuchi; May 21, 1860, between Alpha and Beta Scorpionis; May 12, 1866, near Epsilon Corona Borealis; Nov. 24, 1876, near Rho Cygni; Aug. 31 (9), 1885, in center of the great Andromeda nebula; Jan. 31, 1892, near Chi Auriga.

The Auriga *nova* will always be memorable as the first temporary star to be subjected to thorough spectroscopic examination. The doubling of the spectral lines was a fact of vast significance, showing conclusively that two bodies moving in opposite directions were concerned in the production of the compound spectrum. The velocities above mentioned are unprecedentedly great, but their real motions may have been, and probably were, greater, inasmuch as the spectroscopist takes no cognizance of lateral motion, and it is highly improbable that they were moving exactly in the line of sight.

Though we are greatly indebted to the spectroscopist for its revealings regarding this "new star," yet it has failed to make known whether all temporary stars attain their sudden brilliance from the same cause—a question which the next one will doubtless settle.

Algol System.—By means of the elaborate discussion of nearly 700 observed minima of Algol (Beta Persei), Dr. Chandler has propounded a highly interesting theory, explanatory of some of the inequalities observed in this variable star. From these discussions he has resolved these inequalities into two principal components, one with a period of about 141 years and a co-efficient of 173.3 minutes, the other with a period of 37.7 years and a co-efficient of 18 minutes. He ascribes these effects to differences in the times of light transmissions from the various parts of a large orbit described by Algol and its close dark companion around another dark and more distant star. This orbit, which is sensibly circular, lies in a plane inclined about twenty degrees to our line of sight, completing a revolution in 131 years, at a distance equal to that of the planet Uranus from the sun, or nearly 1,800,000,000 miles. To the extent of 149 minutes (the time required for light to pass across its foreshortened radius) are the eclipses of Algol alternately accelerated or retarded, as the star approaches toward or recedes from the earth. The star is timed to reach that point of its orbit nearest the earth within 6 or 7 years, when a maxi-

mum of acceleration should occur, after which the intervals between the eclipses should begin to lengthen until the passage of the ascending node in about 1934.

Though only the principal star has ever been seen, Algol is supposed to be a triple star. Dr. Chandler has hope of the actual telescopic discovery of the distant component, even if it is only slightly luminous. Its position angle is about 32° , and its distance about $2''$.

Position of Solar Apex.—A new determination of the direction of the sun's motion has been made by Prof. J. G. Porter, Director of the Cincinnati Observatory, who has availed himself of the proper motions of 1,840 stars, published in No. 12 of the "Transactions" of that observatory. He divided the stars into four groups, according to the amount of their annual proper motion, and secured four determinations, based on the following data:

Group I, 576 stars with proper motion less than $0.3''$; Group II, 563 stars with proper motion between $0.3''$ and $0.6''$; Group III, 142 stars with proper motion between $0.6''$ and $1.2''$; Group IV, 70 stars with proper motion greater than $1.2''$.

He finds the direction of the sun's motion, and, of course, that of all the circumsolar bodies, to be toward:

	Right ascension.	Declination.	Annual motion.
Group I.....	281.9°	$+53.7'$	0.16
Group II.....	280.7°	$+40.1'$	0.80
Group III.....	285.9°	$+84.0'$	0.55
Group IV.....	277.0°	$+84.9'$	1.66

Prof. Vogel has published results based on the measured velocities of 51 stars in the line of sight, but the deduced position of the point toward which the sun is moving is not in very satisfactory accord with other investigations. He makes the co-ordinates of the apex in right ascension 206.1° ; declination north 45.9° ; and a velocity of 10.9 English miles a second. Prof. Porter's position is about 8° northeast of Alpha Lyra, while that of Prof. Vogel is in Bootes, about 4° southeast of Eta Ursæ Majoris. The place assigned to it by Sir William Herschel is in Hercules, about midway between those of the preceding observers. Prof. Boss, of the Dudley Observatory, at Albany, has computed its position, using a different set of stars, and locates it in Cygnus, longitude 289° ; declination north 51° . If, however, the neighboring stars, such as the bright stars of Ursa Major and of Orion, be combined into groups, the position of the apex is still farther from that generally assigned to it, viz.: Right ascension 159.7° ; declination north 50° , or in Ursa Major; velocity per second, 8.11 miles. L. Struve places the apex in 266.7° ; declination $+31^\circ$, or in Hercules; velocity, 7.69 miles.

Where results are so discordant we can not be certain regarding that point of the heavens toward which the sun is moving. But, discrepant as the computed positions of the solar apex may be, there is remarkable agreement as to the sun's velocity.

Light Comparisons.—Mr. Henry Parkhurst, of Brooklyn, who for the past ten years has made observations of the brightness of 36 aster-

oids with a wedge photometer, says that when the observations are corrected for phase and reduced to unity of distance from both the sun and the earth, the results are remarkably accordant, and he infers that the brightness of the sun has not varied 1 per cent. during the ten years. From these careful studies he thinks the asteroids are better standards for light comparisons than the stars, as most of the latter are subject to variation, while the former are exempt from this uncertainty.

Variation of Latitude.—It has long been suspected by astronomers when accurate observations for latitude have been undertaken that this co-ordinate was subject to a slight variation, but even its advocates little dreamed of the periodicity of such change. In 1884-'85, Dr. Seth C. Chandler, of Cambridge, Mass., after more than a year's observations with his almucantar, felt that not only was there possibility of variation of latitude, but also of some law governing it. In following up his thought and the investigations of 1885, he later obtained observations for latitude from Berlin, Prague, Potsdam, Pulkowa, and the Sandwich Islands, which confirmed his supposition of the change and its law. He has shown positive evidence of a periodic variation of the latitude caused by the rotation of the geographical pole around the astronomical pole in four hundred and twenty-seven days. The deviation is very slight, the two polar centers being only about 27 feet apart.

Dr. Chandler finds that a four hundred and twenty-seven days' period accounts for the contradictory results obtained from the above-named observatories and from those from the Washington and Harvard College observatories.

To make this abstruse subject as plain as possible, suppose at a given time all the observatories of Europe should simultaneously show an increase of latitude, which fact would indicate that the equator had receded from Europe and that the north pole had approached it. If at the same time with this observed increase of latitude in Europe the latitude of observatories on the opposite side of the earth should lessen, then it would be presumably certain that the pole had receded. This is just what Dr. Chandler tried to ascertain. After exhaustive analysis of the reliable observations from all parts of the world he has sufficient evidence to justify the announcement that the pole of the earth does actually revolve around the pole of the heavens.

This fact may result in discrediting the correctness of the assumed values of stellar parallax. Dr. Chandler's papers on the subject may be found in Vols. XI and XII of Gould's "Astronomical Journal," Cambridge, Mass.

Planetoids.—Since the discovery of the last asteroid given in the "Annual Cyclopædia" for 1892 the finding of these troublesome bodies has progressed rapidly, 44 having been found. With a few exceptions these were first detected on photographic plates in the form of a short trail caused by their orbital motions during the time of exposure, after which they were observed visually for identification and for position for the computation of the elements of their orbits. This, for various reasons, is attended with so many uncertainties that, until all doubts are removed, they are provisionally named by the

letters of the alphabet before the assignment to them of their catalogue numbers. In consequence of this there must for a time be some uncertainty about the actual number known, which is now 890. The accompanying list is presumably about correct :

Discoverer.	Discoverer.
1893..K..Wolf = 849.	1893..O...Charlois.
1893..L..Wolf = 854.	1893..P...Charlois.

	1893..AN...Charlois.
	Planetoid No. 890, named Irmater, is found to be identical with (398) Baptistina.

Since the last report names have been given to the following numbers :

806. Unitas.	827. Columbia.
809. Fraternalitas.	828. Gudrun.
812. Chalcides.	829. Svea.
814. Rosalia.	832. Siri.
816. Goberta.	A, 1892. Badenia.
817. Rozana.	C, 1892. Roberta.
820. Katharina.	G, 1892. Dorothea.
824. Tamara.	T, 1892. Desbouswaka.

The name Columbia given to No. 832 in last year's list was erroneous. It should have been as above, Siri. To keep watchful care over so numerous a family has become an onerous duty, and the outlook for the future is gloomy. During the month of March, 1893, as many planetoids were found as were discovered in the first fifty years of the present century.

Eclipse of April 16.—Comparatively meager reports have been received of the solar eclipse of April 16, 1893. Stations were occupied by astronomers in Chili, the Argentine Republic, Brazil, and Africa, and at most of them the observers were favored with a clear sky, and valuable observations (telescopic, photographic, and spectroscopic) were secured in large numbers. The United States sent out no expedition, but a private one from the Lick Observatory, in charge of J. M. Schaeberle, went to the west coast of Chili, making in a cloudless sky numerous and important observations. During the eclipse many photographs were secured, several being taken during the four and a half minutes of totality. Prof. Schaeberle is the originator of the mechanical theory of the corona which has attracted considerable attention. At departure he left a drawing showing how the corona should appear during totality, but Profs. Pickering, Fowler, and Taylor, who observed the corona, assert that they could not trace the slightest resemblance to the sketch. A comparison of the different photographs taken by Prof. W. H. Pickering, who observed the eclipse from

South America, revealed many interesting and valuable details of the inner corona not brought out when rapid plates were used.

Prof. Fenji gives a list of 9 prominences whose heights were over 30", one amounting to 103".

Prof. Deslandres discovered 15 new coronal and chromospherical lines.

Mr. Taylor, in Brazil, where totality lasted four minutes forty-two seconds, had during this critical period a clear sky, though for ten minutes both before and after totality the sky was overcast. He secured several photographs of the sun's surroundings which reveal a great amount of detail especially in the lower part of the corona. Some of the streamers extended two diameters at least from the sun's limb, the longest being at the sun's north pole. The longest exposure was of one hundred and fifty seconds, but it failed to reveal any greater extension of the streamers than did those of fifty seconds. The sky-fogging of the plate in long exposures prevents any gain over those of shorter exposures.

Meteoric Showers.—In various parts of America a star shower of unusual brilliancy was observed on Nov. 23, 1892. Such a shower was expected, though not until the evening of the 27th, that being the date of the meteoric shower connected with the lost comet of Biela, which shower occurs once in six or seven years, having been first seen in 1872, and again in 1885. When, therefore, it took place four days earlier than the predicted time, the question arose whether those seen were really Biela meteors.

Says Prof. Charles A. Young: "The heliocentric longitude of the descending node of Biela's comet at its last visible appearance in 1852 was about 62°, and was also the longitude of the earth, and was also the same at the times of the meteoric showers of 1872 and 1885. This fact suggests the inquiry whether perturbations since will fairly account for such a recession of the node. It is obvious that if the meteoric swarms encountered by the earth in 1872 and 1885 were really moving in the orbit of Biela's comet, then the swarm encountered on Nov. 23 last, seven years later, must have been an entirely different one, unless, indeed, the perturbations since 1885 can account for a retardation of nearly five months."

On the other hand, Prof. Newton does not think the five months alluded to are at all significant, as he believes the length of the swarm to be 500,000,000 miles along the comet's path, and that the passage of the earth through it in a different place at each encounter, sometimes through its central portion and then again near its ends, will account for the irregularity of its appearance.

The display, while not comparable to that of 1885 as witnessed on the eastern continent, was fine. One observer in New York counted over 200 meteors in forty minutes, the radiant being near Gamma Andromeda. At Princeton, at 8.30 o'clock, an observer counted 6 a minute; at 10 p. m. two observers, standing back to back, saw 104 in five minutes; and at 11 o'clock the same observers, in like manner, counted 100 in four minutes and a half.

Geminid Shower, 1892, Dec. 12.—The radiant of this shower is about 41° east of Castor and Pollux, and appears to be double, the two

showers being quite distinct. The radiant of one is in $119^{\circ} + 29'$, that of the other in $109^{\circ} + 34'$. In five hours and a half one observer counted 66 shooting stars, and 12 belonging to a secondary shower in $117^{\circ} + 30'$. On each of the nights of Dec. 9, 11, and 12 a fine slow-moving Geminid leaving a bright train was observed at three different places, furnishing data for computing their height, with the following result for that of Dec. 9: Height at beginning and ending was 91 and 57 miles respectively. Length of visible path, 75 miles. Velocity per second, 80 miles.

Of bright bolides the usual number has been observed, two of which were photographed, both showing brilliant knots or condensations in their trains.

Astronomical Prizes.—The gold medal of the Royal Astronomical Society of England was awarded to Prof. H. C. Vogel for spectroscopic and other astronomical achievements.

The Lalande prize (doubled) was bestowed on Dr. E. E. Barnard for the discovery of the fifth satellite to Jupiter, and on Prof. Max Wolf for his astronomical discoveries.

The Damoiseau prize has been given to M. Radau for his work on lunar inequalities of long period caused by the planets.

The Valz prize was awarded to M. Puiseux for his equatorial "coudé" and other instruments.

M. Tachini has secured the Janssen prize for his solar records.

Two Donohoe bronze comet medals have been received by W. R. Brooks for the discovery of two comets—comet *d* on Aug. 28, 1892, and comet *g* on Nov. 19 of the same year.

Dr. Barnard was given the Donohoe medal for the photographic discovery of comet *e* on Oct. 12, 1892.

Mr. Edwin Holmes, of London, England, was awarded the Donohoe medal for the discovery on Nov. 6, 1892, of comet *f*.

The Donohoe medal will probably be presented to Mr. Alfred Rordame for the discovery of, and for first announcing the naked-eye comet *b* on July 8, 1893.

The rule governing the award of the Donohoe comet medal is, that he who first discovers the comet and immediately announces such discovery to some observatory shall be its recipient. Rordame, as above, found comet *b* on July 8, and at once telegraphed the fact to the Warner Observatory, and was therefore for some time supposed to be entitled to the medal; but late advices indicate that M. Roso de Luna, of Logrosan, Estremadura, Spain, saw the comet on July 4, and on July 6 announced it to the Director of the Madrid Observatory as a new star, so that probably the medal will be bestowed on him.

The Yerkes Telescope.—This giant refractor, the object glass of which is 40 inches in diameter, or 4 inches larger than any yet made, is approaching completion, and makes an era in the science of optics. The objective is being ground, figured, and mounted in cell by Alvan G. Clark, of Cambridgeport, Mass. The mounting of the instrument is the work of Warner & Swasey, of Cleveland, Ohio. The appended figures will assist to form a correct idea of the enormous dimensions of some of its parts: The tube of the instrument, made of steel, is 62½ feet in length exclusive of the eye end. It is divided

into three sections, viz., the eye, the middle, and the object sections. Its object end is 43 inches in diameter, its eye end 38 inches, and the middle 53 inches. The steel of the middle section is one quarter of an inch in thickness, and the entire tube weighs 6 tons. Its polar axis is a rod of hardened steel 15 inches in diameter and 18 feet long, weighing about 8½ tons. The declination axis, also of hardened steel, is 12 inches in diameter and weighs 1½ ton.

The pier of cast iron is made in five sections strongly bolted together, each section being 7 feet in height. The bottom section weighs 18 tons, and each of the others 5½ tons. The weight of the entire pier, which rests on solid masonry, is about 45 tons. From the base of the iron pier to the center of motion is 43½ feet. When the telescope is pointed to the zenith the object glass will be 72 feet above its base. To avoid the use of an observing chair of such an immense height, the floor will be raised and lowered in a manner similar to that of the Lick Observatory, at Mount Hamilton, Cal. The driving clock to move the telescope westerly, at a rate equal to the apparent motion of the celestial sphere caused by the earth's rotation, will weigh 1½ ton, and will be controlled magnetically. The observatory that is to receive this telescope will surpass all others in size, and is now in course of erection at Lake Geneva, Wisconsin, 75 miles north of Chicago. It is to be elaborately equipped with the best modern instruments for telescopic, photographic, and spectroscopic investigations. The steel dome, 85 feet in diameter, will be revolved, the shutter opened and closed, and the floor raised and depressed by an electric motor, and hence but little manual labor will be required for their manipulation.

Catalogues.—Dr. John M. Thome, Director of the Argentine National Observatory, at Cordoba, has published Vol. XVI of the "Results," in which are given the positions and magnitudes of 179,800 stars, and Vol. XVII, now in a forward state, will contain 160,580. The arrangement of the publication is the same as that of Argelander's *Durchmusterung* of the Northern hemisphere, with the exception that, instead of being referred to the mean equinox of 1830, the positions are brought forward to that of 1875.0. The probable errors of the positions are given as $0.42'' \pm$ and $0.23'' \pm$. The average number of stars observed in a square degree is 56.1, while the corresponding number in the Northern catalogue of Argelander is but 15.2. A long list of stars supposed to be variable is appended.

The publication is very valuable, especially for Southern observers.

Dr. S. C. Chandler has issued a second catalogue of variable stars, which, from the painstaking labor involved in its preparation, may be regarded as a complete *résumé* of our present knowledge of variables. The positions are given with great accuracy, and are for A. D. 1900.0. Numbers are prefixed to indicate their colors, very red, red, and reddish. The catalogue is supplemented by a list of 90 stars, the variability of which the author considers plausible. It is published in Vol. XIV, No. 12, of the "Astronomical Journal," to which the reader is referred, where full data accompanied by notes may be found. The catalogue proper is com-

prised of 260 stars, 10 of which are of the Algal type. So far as known, S. Antlia has the shortest period, its light-oscillations being confined within three and a half hours. It was discovered by M. Paul, in 1888.

Prof. S. W. Burnham's nineteenth catalogue of double stars, given out in Nos. 8141 and 8142 of *Astronomische Nachrichten* for Jan. 5, 1893, is, he says, "the result of my micrometrical measures of double stars at Mount Hamilton from January, 1892, to June, when my connection with the Lick Observatory was permanently ended." These measures were made with the 36-inch telescope, and the list embraces 182 stars, the first 8 of which are new. Though not extensive, it is a valuable publication, since it decides many doubtful points.

His micrometrical observations of the new star in Auriga, connecting it with the various companion stars in the field, can be found in "Monthly Notices, of the Royal Astronomical Society" for April, 1892.

His eighteenth catalogue of double stars was sent out in the latter part of the year 1892. The grand total of those discovered by this indefatigable observer, as given in all his catalogues, is 1,274. The lists have been so numerous as to be very inconvenient for reference, and he has therefore brought them all together in one volume, now in press, arranged in the order of right ascension, with a brief history of each pair.

Draper Catalogue of Stellar Spectra.—In Vol. XXVIII of the "Annals of the Astronomical Observatory of Harvard College," Prof. E. C. Pickering gives a catalogue of 3,800 photographic plates taken with the Bache telescope. The attempt was made to determine the photographic magnitude of stars by a comparison of the intensity of the photographic images for one particular wave length, but an unexpected difficulty was met, for many stars of the Secchi second type change their photographic intensity at that very point of the spectrum chosen as the standard wave length. A point of great importance developed is the predominance of first-type stars in the Milky Way. Prof. Pickering has arrived at the conclusion that the Milky Way is a distinct cluster of stars to which our sun does not belong. No fewer than 19 stars giving bright-line spectra were discovered in the photographs, all within the Galaxy, and close to the equator. He finds that, as a rule, the photographs lend no support to the idea of variation of stellar spectra, save in those of spectroscopic doubles and of certain variables.

In the "Astronomical Journal," No. 296, Mr. Reed publishes a list of 6 stars proved by photography to be variable; and in No. 299 Mr. Paul S. Yendell gives the maxima and minima of 10 variable stars.

A photometric catalogue has just been issued by Mr. Edwin F. Sawyer, of Cambridge, Mass., which gives the magnitudes of 3,415 stars situated between the equator and 80° south. The average number of observations to each star is 4. During the progress of the work 8 new variables were discovered, nearly all of which were of short period.

The "Astronomical Journal," No. 291, contains a list of 47 variables by N. S. Duner, of Upsala. It is a continuation and conclusion of

the series begun in No. 254. A brief description of each star is given, which adds to its value for those who make variables a specialty.

No. 278 of the "Astronomical Journal" has a record of 91 double stars remeasured by F. P. Leavenworth at the suggestion of Mr. Burnham, who furnished the list, the majority of which were originally discovered by himself. They are mostly interesting pairs.

Prof. Porter, Director of the Cincinnati Observatory, has completed a valuable catalogue of 1,340 stars reduced to the epoch 1900, with the details of the determination of the proper motion of them all.

The Observatory of Glasgow has issued a second catalogue of 2,156 stars, the result of the labors of the late Prof. Robert Grant, for the epoch of 1890. Of 122 of these the proper motion has been determined.

AUSTRALASIA, one of the divisions of the globe, containing the principal possessions of Great Britain in the Pacific. The colonies of New South Wales, Victoria, Queensland, South Australia, and Western Australia occupy the entire Australian Continent. Tasmania is an island, 210 miles in length, with an extreme width of 200 miles, lying southwest of Victoria and separated from it by Bass's straits, 160 miles in width. New Zealand, lying about 25° east of Australia, comprises two large islands, known as the North island and the Middle island, and a number of outlying islands of various sizes, of which the largest and most important is Stewart island, sometimes called the South island. In all these colonies the Executive is a Governor appointed by and representing the Crown; and the Governor is assisted in administration by an Executive Council of responsible ministers. Legislation is accomplished by means of an elective Parliament, consisting of two Houses, usually called the Legislative Council and the Legislative Assembly. Fiji consists of a group of over 200 small islands, situated about 30° east of the Australian Continent, between 15° and 20° south latitude. It is a Crown colony.

Area and Population.—The area of the British Australasian colonies and the population according to the final returns of the census of 1891 are given in the following table:

COLONIES.	Square miles.	Population.
New South Wales	810,700	1,182,284
Victoria	67,884	1,140,405
Queensland	668,497	898,718
South Australia	908,690	830,481
Western Australia	1,060,000	49,783
Tasmania	26,215	146,067
New Zealand	104,471	628,653
Fiji	7,740	121,180
Total	3,109,197	3,981,076

* Exclusive of aborigines.

The Fiji Islands are peopled by colored races, the Europeans numbering only 2,091, while there are 1,092 half-castes, 8,069 East Indians, 2,461 Polynesians, 2,219 natives of Rotuma island, 108,971 Fijians, and 479 others. New South Wales, in 1891, had 5,097 aborigines, besides 3,183 half-castes, making together 0.73 per cent. of the total population, of which 64.03 per cent. consisted of colonials native in New South Wales, 7.53 per cent. of persons born in the

other colonies, 19-18 of English, 8-63 of Irish, 3-35 of Scotch, 0-44 of Welsh immigrants, and 0-59 of other British subjects, while 8-63 per cent. were foreigners, 1-16 per cent. being Chinese. In Victoria, 97 per cent. of the population were British subjects by birth, 63 per cent. having been born in the colony. Of the aborigines only 565 remained, while there were 9,877 Chinese. In South Australia, in 1891, there were 2,134 aborigines living in the settled parts, and 3,848 Chinamen. The aborigines of Queensland are estimated to number 12,000, and there are 8,574 Chinese, mainly employed in the gold mines, and 9,426 Polynesians, besides 1,944 other colored persons included in the total population. The number of the aborigines of Western Australia can not be estimated except in the settled districts, where there were 5,670 in 1891 working for the whites. The native race of Tasmania has died out altogether. The population of New Zealand includes 4,444 Chinese. The Maoria, who are excluded from the total given above, numbered 41,993, of whom 22,861 were males and 19,132 females. Of the rest of the population, 96-72 per cent. were British subjects by birth, of whom 58-61 per cent. were born in New Zealand.

The movement of population in 1891 for the several colonies was as follows:

COLONIES.	Immigrants.	Births.	Deaths.	Natural Increase.	Immigrants.
New South Wales	5,471	99,456	18,448	81,008	17,846
Victoria	8,700	88,945	18,081	70,864	9,274
Queensland	2,503	14,715	3,179	11,536	1,578
South Australia	2,015	19,785	4,211	15,574	9,577
Western Australia	948	1,746	800	946	1,371
Tasmania	4,971	9,274	2,787	6,487	6,092
New Zealand	2,865	18,278	6,514	11,764	8,198
Fiji	6,191	5,748			

* Net emigration.

Finances.—The budgets of revenue and expenditure for each colony, and the public debt of each for the fiscal year 1891 ending June 30 in Victoria, South Australia, and Queensland; Dec. 31 in New Zealand and Fiji; and March 31 in New South Wales, Tasmania, and Western Australia, are shown in the following table:

COLONIES.	Revenue.	Expenditure.	Debt.
New South Wales	\$10,086,183	\$10,675,678	\$58,498,288
Victoria	\$7,735,979	\$8,089,900	\$4,711,387
Queensland	\$8,478,714	\$8,395,361	\$9,457,184
South Australia	\$2,499,200	\$2,697,180	\$1,188,800
Western Australia	\$97,970	\$45,083	\$1,618,084
Tasmania	\$98,198	\$61,559	\$1,110,390
New Zealand	\$4,144,321	\$4,189,543	\$7,677,519
Fiji	71,300	67,380	\$44,000

* For 1892.

Commerce.—The following table shows the foreign and intercolonial trade of the several colonies for 1891:

COLONIES.	Imports.	Exports.
New South Wales	\$23,228,397	\$20,344,070
Victoria	\$1,711,000	\$1,604,748
Queensland	\$678,084	\$804,387
South Australia	\$954,545	\$1,612,049
Western Australia	\$1,208,000	\$79,498
Tasmania	\$651,864	\$444,416
New Zealand	\$508,549	\$954,397
Fiji	\$89,048	\$74,884

VOL. XXXI.—4 A

The domestic exports of New South Wales were valued at \$21,100,816. The export of wool was 840,601,843 pounds, valued at \$11,812,860. There were in the colony on Jan. 1, 1892, 61,881,416 sheep, 2,040,847 horned cattle, 459,755 horses, and 358,189 hogs; and there were 117,288 persons engaged in pastoral and agricultural work. The value of minerals mined during the year was: Gold, \$550,606; silver, \$184,850; silver-lead ore and metal together, \$3,619,589; copper, \$119,196; tin, \$188,963; coal, \$1,742,796. It is estimated that 82,508 persons were employed in mining and smelting in 1891. For the year ending March 31, 1892, there was an area of 1,179,031 acres of land under cultivation, and the amounts, in bushels, of the principal crops were as follow: Wheat, 3,963,668; maize, 5,721,706; barley, 93,446; oats, 276,259. The principal fruit grown in the colony is the orange, and the estimated production for the year was 10,417,500 dozen, from 11,870 acres. The duties collected upon imports in 1891 amounted to \$2,168,365, which was 8-64 per cent. of their total value.

Victoria's chief exports for 1891 were: Wool, 164,806,907 pounds, valued at \$7,163,003; live stock, \$457,394; wheat, \$909,636; and gold, mostly specie, \$3,641,448. The principal imports were: Wool, \$3,872,154; live stock, \$1,532,737; sugar and molasses, \$1,051,638; and iron and steel, \$1,048,708. The total customs revenue was \$3,508,438, or about 13 per cent. of the total value of imports. The imports were derived from the following sources: United Kingdom, \$3,953,599; Australasian colonies, \$3,781,080; India, \$457,484; Ceylon, \$99,200; Canada, \$84,068; other British possessions, \$445,094; United States, \$785,003; other countries, \$2,155,403. The exports were divided as follows: To the United Kingdom, \$7,993,489; Australasian colonies, \$4,926,325; India, \$472,663; Ceylon, \$58,074; other British possessions, \$114,200; United States, \$385,901; other countries, \$2,056,193. The total number of manufactories, etc., in the colony in March, 1891, was 8,296, employing 58,175 persons. The manufactures are almost entirely for home consumption. The grain yield for 1892 was, in bushels, as follows: Wheat, 18,328,000; oats, 4,563,000; barley, 956,000. The total product of gold for 1891 was 576,400 ounces, valued at \$2,305,800.

The chief exports of Queensland in 1891 were: Wool, \$3,458,046; gold, \$1,965,656; sugar, \$633,207; hides and skins, \$145,923; tin, \$120,705; and preserved meats, \$222,761. The leading imports were: Textiles and apparel, \$772,084; metal goods, \$648,216; liquors, \$330,481; provisions, flour, and grain, \$1,107,445. The customs receipts in 1891 were \$1,301,685, almost one quarter of the total value of the imports. The live stock in 1891 numbered 20,289,623 sheep, 6,193,759 cattle, 399,864 horses, and 122,672 hogs. The leading grain crop is maize, the yield of which in 1891 was 8,077,915 bushels. The output of gold was 576,450 ounces, valued at \$2,017,586. Other products are coal, tin, copper, silver, lead, bismuth, antimony, and opals.

South Australia, in 1891, exported wool to the value of \$3,166,135; wheat, \$1,350,397; flour, \$647,075; and copper ore, \$53,175. Her principal imports were textiles and drapery goods.

The wheat crop in 1892 amounted to 6,486,488 bushels, and the live stock numbered 7,646,289 sheep, 899,077 cattle, and 188,587 horses. The total value of minerals produced in 1891 was £267,796. In the same year there were 994 manufacturing establishments, employing 15,427 persons.

Western Australia exported, in 1891, wool to the value of £329,365; pearls and pearl shells, £140,527; sandalwood, £37,000; timber, £89,170; skins, £39,248; and gold, £115,182. There are mines of gold, silver, copper, lead, tin, and coal in the colony. Only about 132,000 acres of the land were under cultivation in 1891. In March, 1892, there were 1,962,212 sheep, 133,960 cattle, and 40,812 horses in the colony.

The more important exports of Tasmania for 1891 were as follow: Wool, £418,460; gold, £133,013; tin, £293,170; fruit, green and preserved, £125,886; timber and bark, £107,184; silver and silver ore, £62,138; hops, £19,386. The principal imports were: Textiles, £549,413; art and mechanical productions, £432,293; food stuffs and liquors, £399,020. The duties amounted to £376,130, or over 18 per cent. of the total value of imports. On March 31, 1892, there were in the colony 1,662,801 sheep, 167,666 cattle, 81,262 horses, and 77,375 hogs. There were 47,217 acres of land under wheat, which yielded 980,841 bushels, and 28,242 acres under oats, which yielded 873,113 bushels. The output of silver ore was 4,810 tons, valued at £52,284; of coal, 45,524 tons, valued at £21,123.

New Zealand exported in 1891 colonial produce to the value of £9,400,094, of which the more important articles were: Wool, £4,129,686; frozen meat, £1,194,724; gold, £1,007,172; grain and flour, £715,966; Kauri gum, £437,056; skins, hides, and leather, £259,141; butter and cheese, £236,933; timber, £182,481; tallow, £173,257; preserved meats, £111,138. The leading imports were: Cloths and clothing, £1,673,571; iron and steel goods and machinery, £855,599; sugar, £381,029; paper, printed books, and stationery, £300,613; liquors, £290,159; tea, £159,893; tobacco and cigars, £128,500; bags and sacks, £165,289; fruit, £126,537; oils, £147,064; coal, £120,422. Of the total imports, £4,369,633 came from Great Britain, £1,013,549 from Australian colonies, and £361,795 from the United States. Of the exports, £7,140,381 went to Great Britain, and £515,208 to the United States. In April, 1891, the live stock in the colony numbered 18,227,186 sheep, 831,831 cattle, 211,040 horses, 308,812 hogs, and 1,790,070 head of poultry. There were 68,607 persons engaged in agricultural and pastoral pursuits. In 1890 there were 2,570 manufactories of various kinds. The quantity of wool used by the mills of the colony in 1891 was 2,918,073 pounds.

The chief exports of Fiji in 1891 were: Sugar, 20,470 tons, valued at £227,526; copra, 6,669 tons, valued at £63,039; and bananas, £61,537. There had been a disease among bananas which prevented their bearing as well as usual. The imports increased 22 per cent. over those of the previous year.

Navigation.—The number of vessels and the tonnage entered and cleared at the ports of the several colonies in 1891 are shown by the following table:

COLONIES.	ENTERED.		CLEARED.	
	Number.	Tonnage.	Number.	Tonnage.
New South Wales....	3,031	2,821,896	3,100	2,872,388
Victoria.....	2,531	2,238,864	2,560	2,276,245
Queensland.....	607	502,794	468	494,394
South Australia....	1,140	1,287,649	1,180	1,288,902
Western Australia...	510	533,438	288	512,128
Tasmania.....	765	514,766	793	529,900
New Zealand.....	787	613,515	744	625,907
Fiji.....	101	69,364

The number of vessels and the amount of tonnage registered as belonging to the colonies at the end of 1891 were as follow: Victoria, 143 steamers, of 42,710 tons, and 269 sailing vessels, of 44,383 tons; Queensland, 28 ocean steamers, of 19,257 tons, 37 harbor steamers, of 3,102 tons, and 59 river steamers, of 1,856 tons; South Australia, 810 vessels, of 39,739 tons; Tasmania, 232 vessels, of 19,536 tons; New Zealand, 742 vessels, of 71,290 tons; Fiji, 238 vessels, of 3,908 tons. Direct steamship service between Australia and Canada was inaugurated May 18, by the sailing of the steamship "Miwera" from Sydney for Vancouver. The Government of New South Wales voted a subsidy of £10,000 per annum to the line.

Communications.—In New South Wales, on June 30, 1892, there were 2,185 miles of Government railroads open for traffic, upon the construction and equipment of which £38,312,608 had been expended. The gross earnings for the year ending at that date were £3,107,266, working expenses, £1,914,252; making the ratio of expenses to receipts 61·6 per cent. At the close of 1891 there were 81 miles of private railroads, costing £424,967. In December, 1891, the telegraphs of the colony had in operation 24,780 miles of wire and 674 stations, costing £767,872. The number of telegrams transmitted during the year was 4,046,251, and the net earnings, including the telephone service, were £198,531. The post-office receipts were £463,076, and the expenditures £445,821. There were 1,385 post-offices, and the amount of matter carried was: Letters, 63,344,900; postal cards, 806,700; newspapers, 42,517,300; packets, etc., 11,068,500. There were issued 488,326 money orders, covering £1,577,744.

On June 30, 1891, Victoria had 2,764 miles of railroad in operation and 143 miles under construction. The total cost was £36,341,626. Receipts for the year amounted to £3,298,567; and expenses £2,310,645, or 70·05 per cent. of the receipts. The number of passengers carried during the year was 72,000,000, and the freight carried amounted to 4,426,000 tons. Including railway telegraphs, the colony had at the end of 1891 about 7,100 miles of telegraph lines, with 13,900 miles of wire. The number of messages during the year was over 3,100,000, and the revenue was £138,969. The post-office carried during the year 62,526,448 letters, 22,729,005 newspapers, and 7,491,316 packets. The receipts, including those of the telegraph service, were £499,327, and the expenditures £674,227.

In Queensland at the end of 1891 there were 2,304 miles of railroads open for traffic and 120 miles under construction. The total cost of the lines in operation was £15,943,019. The receipts during the year were £974,703, and the

working expenses £640,494. There were 9,973 miles of telegraph, with 17,622 miles of wire. The total number of messages was 1,198,842. The receipts were £95,147, and the expenses £116,405. The post-office carried during the year 15,345,842 letters, 12,074,912 newspapers, and 2,491,957 packets. Receipts were £127,443, and expenditures £210,476.

South Australia, at the end of 1891, had 1,812 miles of railroad open for traffic, the cost of construction and equipment of which, up to June 30, 1891, was £11,398,839, being at the rate of £6.842 per mile. The receipts for the year were £1,223,999; working expenses, £617,179, being 50.42 per cent. of the gross earnings. The net earnings yielded 5.332 per cent. on the capital cost. There were 5,640 miles of telegraph and telephone lines, with 12,707 miles of wire. This is inclusive of the line of 2,000 miles from Adelaide to Port Darwin connected with the British Australian cable. The receipts of the department exceed the working expenses and fixed charges. The post-office handled 17,836,092 letters, 8,883,103 newspapers, and 1,314,724 packets.

In Western Australia, at the end of 1891, there were 651 miles of completed railroad, of which about 200 miles belonged to the Government. There were 287 miles under construction and 258 miles under survey. There were in operation 2,921 miles of telegraph, with 3,546 miles of wire, and 680 miles were under construction. The number of messages sent was 224,890, on which the net revenue was £12,643. The post-office handled 4,425,669 letters and postal cards, 2,976,895 newspapers, and 548,453 packets.

Tasmania had 425 miles of railroad in operation at the end of 1891, and 47 miles under construction. The sums expended on the Government railroads up to the end of 1890 amounted to £3,068,882, or £7.746 per mile for the 399 miles then open. The main line now pays working expenses. At the end of 1891 there were 2,082 miles of telegraph lines. The number of overland messages was 593,583, in addition to which the submarine cable connecting with the continent of Australia transmitted 137,187. The revenue of the telegraph and telephone system was £25,946, and the expenditure £24,144. The post-office handled during the year 5,688,634 letters, 5,376,124 newspapers, and 1,305,589 packets. The revenue amounted to £56,464, and the expenditure to £50,277.

The total length of railroads in New Zealand on March 31, 1892, was 2,011 miles, embracing 699 miles of Government railways on the North Island, 1,170 on the Middle Island, and 142 miles of private lines. The total expenditures on the Government lines had then reached £45,497,783. For the year the revenue was £1,115,431, and the working expenses were £706,517. At the end of 1891 there were 5,349 miles of telegraph, with 13,194 miles of wire. The number of messages was 1,968,264, and the total receipts were £117,633. The post-office handled, in 1891, 47,612,864 letters, 2,278,929 postal cards, 18,501,912 newspapers, and 7,170,761 parcels. The revenue was £209,894. The expenditures of the post and telegraph department were £268,343.

Federation.—The movement for the federation of the Australasian colonies made little progress during the year. At the session of the

Federal Council, which opened at Hobart on Jan. 26, the colonies of Victoria, Queensland, Western Australia, and Tasmania were represented, and Sir Samuel Griffith was elected president. The discussion turned largely upon the federation of the colonies, as embodied in the Commonwealth bill adopted by the National Australasian Convention held at Sydney in 1891. A resolution was passed to the effect that the council observed with satisfaction the proceedings of the convention of 1891, and trusted that the federal unity of the colonies upon the general basis recommended by that convention would be accomplished. The resolution further declared that in the event of serious delay in the acceptance by the colonies of those recommendations the number of members of the council should be increased. Sir John Forrest, Premier of Western Australia, said the colony he represented was not opposed to federation, although it did not agree with the bill passed by the National Convention. He thought the Council would be more useful if the number of members was increased. Under the leadership of Attorney-General Barton, of New South Wales, one of the most pronounced advocates of federation in Australia, the Legislative Assembly early in the year reaffirmed its adhesion to the general plan of federation laid down by the convention of 1891; but, on account of failing health, Mr. Barton decided to postpone taking up the question in a practical form until the next session. Sir George Dibbs, Premier of New South Wales, expressed himself in favor of federation, although upon different lines from the Intercolonial Convention. On Feb. 7 the Chamber of Commerce of Melbourne adopted a resolution declaring Australasian federation both difficult of realization and remote, and that a customs union would be more easily established and more helpful. On June 22, pursuant to a call issued by Attorney-General Barton, a well-attended meeting was held in Sydney, at which steps were taken for the formation of a central federation league, entirely independent of political influences, with a view of promoting the common aim of Australasian patriotism. It was announced, however, that Sir Henry Parkes and G. H. Reid, the leader of the Opposition, would not join in the scheme, and Sir Thomas Mellraith, Premier of Queensland, declined to assist, on the ground that it would be best to pursue the course already begun. A federation conference was held in Sydney on July 31, at which many distinguished residents of New South Wales and Victoria were present. Resolutions were adopted favoring federation and the establishment throughout both colonies of branches of the new federation league. On Aug. 1 the New Zealand Government definitely announced its declination to participate in the proposed federation of the Australasian colonies. The assemblies of Victoria and Tasmania agreed to a proposal to petition the Queen to increase from 2 to 5 the number of representatives of each colony in the Australasian Federal Council.

Banking Crisis.—Until near the close of 1891 the business of banking in the Australasian colonies had enjoyed a steady and almost uninterrupted prosperity. The growth of population and rapid development of the country had created a large demand for money and for bank-

ing facilities, and the profits of the business had been in the highest degree satisfactory. To meet the large and constantly increasing demands for loans the colonial banks readily secured, by the offer of 4½ to 5 per cent. interest, vast amounts of English and Scottish capital in the form of fixed deposits, which were really loans that at the option of the depositor might be withdrawn after a certain date. The aggregate of British capital which thus found its way to the Australian banks reached nearly \$200,000,000. These funds the banks lent at handsome rates of interest upon lands, mines, and fixed properties all over the colonies, and most of them did not hesitate to loan up to, or even above, the full amount of their deposits from all sources. In some of the cities, notably in Melbourne, Victoria, a great boom in real estate took place, and houses were built far in excess of the needs of the population, with money which the banks were at all times ready to lend. Meantime the colonial governments had been indulging in very heavy borrowing; extensive public works were being made at high rates of wages; imports, especially of luxuries, greatly increased, yielding liberal revenues through the customhouses; and the country was enjoying an era of prosperity that was largely fictitious. While this state of things continued values were constantly appreciating, leaving an apparently ample margin in the securities upon which the banks made their most liberal loans. But they were not quick enough in noting the turning of the tide. The Baring crisis in the autumn of 1890, and the distrust which followed it, served to check to some extent the depositing of English money in Australian banks, but those banks took no heed of this note of warning. They continued to loan their borrowed capital, which they were liable to repay at a certain time, against securities upon which they could not possibly realize quickly in a declining market. It had been so easy to get money from England, and the profits of the business were so inviting, that curtailment or retrenchment was in the majority of cases unthought of. These conditions continued until late in 1891, when the failure of the Standard Bank and the Metropolitan Bank in Melbourne, and several other institutions, awoke a feeling of insecurity and distrust which could not be quieted, and failure followed quickly upon failure. These early failures were confined for the most part to those institutions which had fostered the land and house-building speculations, at this time in a state of collapse: but a far more widespread disaster was only averted by a combination of the more solid banks for mutual aid. This action of the banks in March, 1892, marked the end of the first phase of the banking crisis. During the remainder of the year there were but few suspensions, and many of the banks did a profitable business, though it was becoming evident from the sharp competition for business that there were more banks in the colonies than the business of the people required, and this competition led to the running of risks that judicious and conservative bank management would have avoided. In the beginning of 1892 there were 28 banks, with upward of 1,700 branches, doing business in the Australasian colonies. The following table shows the banks doing business at

the end of the year, and, so far as the figures are obtainable, their paid-in capital, and the volume of business of each during the quarter ending Dec. 31, 1892:

BANKS.	Paid-up capital.	Volume of business.
Bank of New South Wales, Sydney...	\$1,250,000	\$296,576,048
Bank of Australasia.....	1,600,000	28,182,990
Union Bank of Australia, Limited...	1,500,000	28,124,660
Commercial Banking Co., Sydney...	600,000	23,142,098
Australian Joint Stock Bank, Sydney	704,894	17,769,494
Commercial Bank of Australia, Limited, Melbourne.....	1,300,000	18,225,365
National Bank of Australasia, Melbourne.....	1,000,000	16,897,955
Bank of New Zealand.....	900,000	12,121,915
Queensland National Bank, Limited, Brisbane.....	800,000	12,251,256
Bank of Victoria, Limited, Melbourne	600,000	11,758,109
English, Scottish, and Australian Chartered Bank.....	900,000	10,586,350
London Chartered Bank of Australia	1,000,000	9,842,126
Colonial Bank of Australasia.....	406,250	7,122,983
City of Melbourne Bank, Limited.....	500,000	6,495,921
Federal Bank of Australia, Limited, Melbourne.....	400,000	3,825,569
Commercial Bank of Tasmania.....	3,870,738
Colonial Bank of New Zealand, Dunedin.....	400,000	4,087,170
City Bank, Sydney.....	290,000	3,668,837
National Bank of New Zealand, Ltd	250,000	2,701,261
Bank of Adelaide, South Australia...	500,000	2,294,059
Royal Bank of Queensland, Limited, Brisbane.....	375,000	1,804,651
Bank of North Queensland.....	250,000	693,715
Royal Bank of Australia, Limited, Melbourne.....	800,000	788,497
National Bank of Tasmania.....	125,040	793,723
Western Australian Bank.....	80,000	1,028,594
Standard Bank of Australia.....	275,000

The volume of banking business in each of the colonies, the figures representing the aggregate of advances, deposits, and bills and notes in circulation, was as follows: Victoria, £94,002,196; New South Wales, £81,244,015; Queensland, £28,539,193; New Zealand, £29,861,047; South Australia, £15,405,257; Tasmania, £6,965,818; Western Australia, £3,638,336. This was a large volume of business in proportion to the population of the colonies, and was a considerable increase over the business done during the quarter ending June 30 of the same year. There was also an increase in the total deposits received by the banks during 1892 of about £5,000,000 over the previous year; but the increase was confined almost entirely to banks regarded as strictly first-class, the Bank of New South Wales leading with an increase of £1,760,000. But the deterioration in the quality of the business transacted is shown by the decrease in the total profits. For six months in 1892 these amounted to £880,082, as against £1,049,627 for the same period in 1891. This decrease affords striking evidence of the fierce competition for business, and also indicates a lack of careful discrimination as to the character of the business taken.

The second phase of the crisis began early in 1893 with the failure on Jan. 28 of the Federal Bank of Australia, Limited, at Melbourne. This bank was established in 1881, opened an office in London in 1887, and obtained there a large sum of money on deposit. It had never been rated as first-class and had not been able to secure the best class of business, and when at its half-yearly meeting in October, 1892, no dividend was declared, a withdrawal of confidence was shown by the immediate falling off in de-

posits. Still, as it had been given a share of the Victoria Government deposits and business, and was within the association of banks that had agreed to assist and support each other, its failure disturbed public confidence in the other banking institutions of the colony, and there was a cessation in the supplies of money from Great Britain. The nominal capital of the Federal Bank was £2,000,000, of which £800,000 had been subscribed and £400,000 paid up. Its liabilities at the time of suspension were estimated at £2,000,000, about half of which was due to British depositors. Depositors are likely to lose fully half of their principal. The bank had no branches, except at Sydney and Adelaide, and these were not immediately affected by the failure. The failure of the Federal Bank was followed by the collapse of a number of land and investment companies and other similar financial institutions in Victoria and New South Wales, and the revelations of bad management and positive dishonesty following closely thereupon had a tendency to still further increase the popular distrust in all financial institutions. In order to allay this distrust and to restore confidence in the banks, the Victorian associated banks held a meeting on March 18, and passed a resolution "to render financial assistance to each other as occasion may require, on such terms and to such extent as may seem justifiable to each and all of them," and a few days later it was announced that this agreement pledged the associated banks, "in case any of their number should require assistance, to advance any necessary amount against its securities." The next bank to succumb was the Commercial Bank of Australia, Limited, at Melbourne, one of the associated banks, which closed its doors on April 4 on account of a continued drain on its resources. The Commercial Bank was founded in 1866 with a nominal capital of £500,000, but only half of the shares were originally issued. The capital was afterward increased to £3,000,000, of which £1,200,000 were paid in. The volume of business done by the bank was very large. The balance sheet for Dec. 31, 1892, showed that out of a total liability to the public of £14,694,956, \$12,044,596 was for deposits; while the assets included £12,111,235 for bills receivable and other advances. At its last half-yearly meeting the bank had declared an annual dividend of 12½ per cent., and carried forward £39,181 of profits; but it had also transferred £300,000 from its reserve to a contingent account, to meet prospective losses on business based upon Melbourne real-estate securities. This left a reserve fund of £750,000. On the day of suspension the management asked the associated banks to sign an agreement to give the Commercial whatever financial support it required. The associated banks declined to do this, but offered to advance £1,750,000 against approved securities. The Treasurer of Victoria, who was present at the meeting, said the Government would assist without conditions. Upon the advice of the solicitors of the Commercial Bank the proposition of the associated banks was declined, as it entailed the surrender of the most valuable securities of the Commercial Bank. The bank had 109 branches in the different colonies, and about one half of its deposits belonged to British in-

vestors. The English, Scottish, and Australian Chartered Bank suspended on April 12 on account of the heavy drain following the suspension of the Commercial Bank of Australia, and which had amounted to £200,000 since the beginning of the month. The capital of this bank was £900,000 paid up, and its deposits amounted to upward of £5,000,000, of which £900,000 belonged to British depositors. It had 91 branches in the different colonies, but the bulk of its business was in Victoria. The head office was in London, but the branch at Melbourne was the head office in Australian colonies. At its last half-yearly meeting £200,000 had been placed to a contingent account to provide for possible losses. This bank did not apply for assistance to the associated banks or to the Government. On April 20 the Australian Joint Stock Bank (Sydney) was compelled to suspend payment on account of the persistent withdrawal of deposits. This bank stood third as to the amount of business transacted in New South Wales. Its authorized capital was £1,000,000, of which £704,394 were paid in, and the balance sheet for Dec. 31, 1892, showed £10,840,840 deposits, of which upward of £4,000,000 were English. The reserve fund amounted to £510,000. The bank had 200 branches, and while most of its business was in New South Wales, there were 20 branches in Queensland, and a considerable business was done in that colony. In the period of distrust which followed the failure of this bank, and which all efforts were powerless to allay, there began a general withdrawal of deposits in Australia, and numerous notices of withdrawal were sent from England and Scotland. The London Chartered Bank of Australia, at Melbourne, announced its suspension on April 25. This bank was established in 1852, and its paid-up capital was £1,000,000, with a reserve liability of the same amount.

At the close of 1892 the deposits in the colonies amounted to £3,315,242—£2,295,878 in Victoria, £869,555 in New South Wales, and £149,809 in Queensland—and the total of British deposits was about the same as that of the colonies. The advances at the same date were £6,312,966—£3,554,635 in Victoria, £2,271,898 in New South Wales, and £486,433 in Queensland. The coin and bullion on hand amounted to £696,456. At the time of suspension the total liabilities were upward of £9,000,000. The head office of the bank was in London, and it had 58 branches in Australia. The Standard Bank of Australia suspended on April 28. Its authorized capital was £1,000,000; subscribed capital, £588,450, of which £278,000 were paid in. The amount of London was £273,000, and Australian £600,000. On Dec. 3, 1891, the bank suspended payment, but resumed business May 30, 1892. Its head office was in London, and its Australian office in Melbourne. It had but one branch. After business hours on Saturday, April 29, the directors of the National Bank of Australasia (Melbourne) decided that, in view of the heavy and continuous withdrawal of its deposits and in justice to the general body of its creditors, the bank would be compelled to temporarily suspend payment. During the month, £650,000 had been withdrawn, and receipts of deposits had declined greatly. The National Bank of Austral-

asia was established in 1858. Its subscribed capital was £1,250,000, of which £1,000,000 were paid in. The deposits held by the bank amounted to about £9,000,000, of which only £1,400,000 were British. On Dec. 31, 1892, the total of advances was £8,432,016, and the reserve of coin and bullion in Australia was £1,427,396. According to the directors' report for March 31, the reserve fund stood at £670,000, and a dividend of 10 per cent. was recommended, as against 12½ per cent. for the preceding year and 15 per cent. in previous years. The head office of the bank was at Melbourne, and it had an office in London, and 143 branches in the colonies. Anticipating that the publication on Monday of the news of the suspension of the bank would cause a panic among the depositors in other banks, the Victorian Government, in the hope of averting universal disaster, resolved at a special meeting of the Cabinet on Sunday to proclaim a five-days' bank holiday, beginning Monday, May 1. This action of the Government, under authority conferred by the Banks and Currency act of 1892, was taken without any general consultation with the managers of the banks, and was regarded by some of them, as well as by a large proportion of the business public, as unwise. The holiday was observed by several of the banks and by the clearing-house, but the Bank of Australasia, the Union Bank of Australia, and the Bank of New Zealand, in Melbourne, kept open for business as usual, and their action did much to quiet the general alarm. The suspension of the National Bank of Australasia and the proclaimed holidays following it marked the beginning of the third and final stage of the crisis. It was the stage of panic. The scarcity of currency for business purposes caused a run upon banks whose soundness was beyond question. People provided themselves with cash entirely beyond their needs; large amounts were withdrawn from the banks and put in the vaults of a safe-deposit company; some withdrew gold that was on deposit, and, after putting it in strong boxes, left it in charge of the very banks from which they had withdrawn it. All discrimination ceased, and the raid became general. The Colonial Bank of Australasia suspended on May 5. It was one of the banks in Melbourne that remained closed during the first three of the proclaimed holidays, and when it opened its doors on the 4th there was an immediate run upon it. This bank was established in 1856 as a purely colonial bank—a character it has always maintained, never having opened an office in London or taken British deposits. Its business was confined exclusively to Victoria, wherein it had 70 branches. The nominal capital was £1,000,000, of which £406,250 had been paid in. On Dec. 31 the aggregate of advances, deposits, and bills and notes in circulation was £7,128,932; the total of deposits at that date was £3,324,754, and the total of advances £3,686,462. The coin and bullion reserve amounted to £352,246. At the last meeting, Oct. 20, 1892, a 12-per-cent. dividend was declared. The Bank of Victoria, Limited (Melbourne), announced its suspension on May 9. A run upon it commenced as soon as it reopened after the proclaimed holidays. The bank was founded in 1852, and was a purely Victorian institution, having 67 branches in that colony and

none elsewhere in Australia. Its authorized capital was £2,000,000, £1,200,000 having been subscribed, and £600,000 paid in. The deposits on Dec. 31, 1892, amounted to £7,000,000. At the time of suspension they stood at about £6,700,000, of which £5,500,000 were due in Victoria and £1,200,000 in the United Kingdom. The local deposits were all for twelve months, but those taken in England were for longer periods up to a maximum of four years. By a return made a short time before suspension the advances of the bank were shown to be £6,147,966, and the coin and bullion £943,355. At the half-yearly meeting, Feb. 2, a 10-per-cent. dividend was declared, and £15,000 added to the reserve, making it £250,000. The bank had always held a leading position, and the management had been regarded as conservative. On May 15 the Commercial Banking Company of Sydney suspended payment, owing to persistent withdrawals by panic-stricken depositors, over £1,000,000 gold having been withdrawn since the failure of the Joint Stock Bank. This institution was started in 1834, and had for many years past led all Australian banks as a dividend-paying concern. Since 1876 the dividend has been uniformly 25 per cent. The capital of the company was £600,000, paid up, and the reserve stood at £840,000. According to the return for Dec. 31, 1892, the deposits amounted to £10,959,598, and the advances amounted to £10,907,020. The bank then had coin and bullion to the amount of £1,702,511, and Government securities valued at £885,800. The balance sheet thus showed an excess of assets over liabilities of over £2,500,000. The bank had 137 branches in New South Wales, and 13 in Queensland. On the same day the Queensland National Bank, Limited (Brisbane), and the Bank of North Queensland (Townsville), also announced their suspension. The Queensland National, which alone transacted the Government business of the colony, suspended mainly on account of heavy withdrawals of British deposits. The bank was started in 1872. Its subscribed capital stood at £1,600,000, £800,000 paid in. The balance sheet for Dec. 31 showed £3,526,962 deposits and other liabilities, of which £3,959,683 were due in Queensland, and £128,943 in New South Wales, while the British deposits amounted to about 55 per cent. of the total amount. The cash and bullion, cash balances, money in London, and Government securities amounted to £2,599,808, and the bills receivable, and other debts due the bank, to £8,133,387. At the half-yearly meeting, Jan. 25, a 10-per-cent. per annum dividend was declared, and £16,810 of profits carried forward. The bank had 64 branches. The Bank of North Queensland had a nominal capital of £1,000,000, of which £500,000 were subscribed and £250,000 paid in. On Dec. 31, 1892, it held deposits amounting to £350,000, and its notes in circulation amounted to £25,659, while bills discounted and other debts due the bank amounted to £494,407. A dividend of 5 per cent. was declared for the half year. The bank had a branch in Sydney and 11 branches in Queensland. The City of Melbourne Bank, Limited, suspended on May 16. This bank was an offshoot of the National Bank of Australasia, and was founded in 1873. Its authorized capital was £2,000,000, of

which £1,000,000 had been subscribed and £500,000 paid in. Deposits amounted to about £5,000,000, of which £3,261,000 belonged to Scottish investors. The failure was due to advices cabled from London that none of the Scotch deposits, the larger part of which matured at an early date, would be renewed. The local depositors had stood loyally by the bank, and there had been no run upon it. The bank had but 5 branches, all in Victoria. The Royal Bank of Queensland, Limited, with the head office at Brisbane, suspended on May 17. Its authorized capital was £1,000,000, of which £750,000 had been subscribed and £375,000 paid in. On Dec. 31, 1892, the total liabilities of the bank were £1,359,605, of which sum £434,049 were due to the shareholders and £927,556 to the public, the deposits being £798,949. A half-year dividend of 5 per cent. was declared. The bank had 21 branches. On the same day there was a run on the Savings Bank at Brisbane, but all demands were promptly met, and it soon subsided.

New Banking Laws.—At a conference between the ministry of New South Wales and the managers of the banks doing business in Sydney the Government pledged itself to use its power to maintain the credit of the solvent institutions of the colony. A bill was introduced in the Legislative Assembly providing as a permanent enactment that all demand notes of any bank in the colony shall be a first charge on all assets and property of such bank; and as a temporary enactment, to have force for twelve months only, that the Governor in Council may at any time, by proclamation duly published, make the notes of all banks designated in such proclamation legal tender throughout the colony for a limited period not exceeding the tenure of the act. Before making such proclamation the Governor must be satisfied that the assets of each bank to be included therein exceed its liabilities to creditors by at least the sum of the paid-up capital and the reserve profits, and he may require from each such bank adequate security for the payment of all its notes in gold upon presentation after the expiration of the period named in the proclamation. The bill further provides that if any note of any bank covered by the proclamation shall not be paid upon due presentation at the bank's head office in the colony, the Government shall be liable to any *bona fide* holder (not being a bank) at any time within six months after the expiration of the period limited in the proclamation, and the colonial Treasurer shall pay such note in gold upon presentation. The bill was promptly passed, and became law by the Governor's assent on May 3. Immediately after the suspension of the Commercial Banking Company, May 15, a proclamation was issued under the act making the notes of the Bank of New South Wales, the City Bank of Sydney, the Union Bank of Australia, and the Bank of Australasia legal tender within the colony for six months. The Bank of Australasia and the Union Bank of Australia received instructions from their head offices in London instructing them that, while not hostile to the Government plan, they would continue to pay gold to their customers if required. The Government of New Zealand decided to introduce a similar bill for that colony.

On May 23 the Prime Minister of New South Wales introduced a bill which provides that any holder of a current account with any suspended bank in the colony may obtain from the provisional liquidator thereof a certificate of the amount of his current balance, and on presentation of the same at the treasury receive an advance of one half of the amount in treasury notes. The certificate, which forms the security for the advance, is to be indorsed over to the Treasurer, who will be entitled to stand in the place of the original holder of the account; but this does not give the claim the priority of a Crown debt. The Treasurer is to be reimbursed out of the moneys payable to the holder of the current account. The original account holder has the right of redemption at any time within five years, and the currency of the treasury notes is limited to five years. The Treasurer is to withdraw from circulation at the close of every month notes equal to the sums received during the previous month in reimbursement of any advances, and the issue of these notes is not to exceed the £2,000,000 authorized. The Treasurer is also required to publish a monthly statement of the amount of notes outstanding, and of the moneys received in liquidation of the notes in the preceding month. The bill passed the Legislative Assembly on May 25, and the Legislative Council on the following day, and became law by the assent of the Governor. This measure was severely criticised in the United Kingdom, but it gave great satisfaction and much relief in the colony, where there were 57,000 people having current accounts to the amount of about £4,000,000 locked up, some of them offering to sell their claims at 50 per cent. discount.

In Queensland a similar measure for the relief of the holders of current accounts was passed, and a law was likewise enacted authorizing the issue of treasury notes of £5 or any multiple thereof, payable on demand in gold. The issue of such notes must not at any time exceed the amount of cash and treasury notes then held by the Government, and coin must be held to at least one third of the value of the notes so issued. The act also provides that the Governor in Council may upon emergency proclaim such notes full legal tender throughout the colony for a specified time. A further enactment provides for the issue of 4-per-cent. treasury bills having a currency of four years, to the amount of £1,000,000. These are to be vested in trustees, and to be negotiable only to meet demands upon the treasury under the act authorizing the issue of demand notes. A further enactment provides for an increase of the tax on the notes issued by banks from 3 to 10 per cent., the object being to cause the withdrawal of such notes from circulation; but as to notes already issued, the new tax will not be imposed until the expiration of two years. A fourth enactment deals with the notes of the banks that have suspended payment. It requires that every such bank in the colony shall pay its notes in the same manner as if it had not suspended, and the colonial Treasurer is authorized to advance to the said banks treasury notes in exchange for their own retired notes, which are to be held by the treasurer at 4 per cent. interest, and be a Crown debt against the assets of the banks.

On May 27 a conference was held at Melbourne between the Premiers of Victoria, New South Wales, and South Australia, with the object of determining upon a basis of common action in regard to banking legislation. The Premiers of Queensland and Western Australia were to have participated, but both were unavoidably absent. All those present deemed it advisable to place the banks of issue doing business in the Australian colonies upon a footing similar to those of the United States; that deposits not bearing interest should be a first charge upon assets, and that current accounts should rank next, Government accounts in each case having priority; that it would be inadvisable for the colonies to establish national banks in the popular signification of the term, and that the savings banks in each colony should be controlled by the state. It was agreed that Sir John Downer, Premier of South Australia, should draught a bill embodying the conclusions reached, and that the measure should be submitted for the approval and legislative action of all the colonies.

Reconstruction.—Following immediately upon the suspension of the various banks, schemes were in most cases presented for their reconstruction for the purpose of resuming business, and these were for the most part promptly accepted by the shareholders and depositors. While differing in minor details these schemes bore a strong resemblance in their general features, and the following, upon which the reorganization of the Commercial Bank of Australia was based, will serve as a fair sample of all of them:

1. The present company shall be placed in voluntary liquidation.

2. A new company shall be formed with a capital of £6,000,000, represented by 600,000 shares fully paid up to £10, composed of preference and ordinary shares as follows: 300,000 preference shares to the creditors in respect of their deposits, or to the old shareholders paid for in cash, thus representing a total of £3,000,000; 300,000 ordinary shares of £10, each paid up to £4, to be allotted to old shareholders in exchange for their present shares paid up to £1,200,000, the uncalled £6 per share to be paid by quarterly installments of 6s. per share extending over six years, totaling £1,800,000.

5. Preference shares shall be preferential as to dividend, so as to be entitled to a dividend of 5 per cent. before ordinary shares shall be entitled to any; thereafter ordinary shares shall be entitled to a dividend of 5 per cent., after which both classes of shares shall be entitled to equal dividends.

6. In order to insure the taking of the requisite number of preference shares, all the depositors shall be bound by resolution sanctioned by the court to apply for them *pro rata*.

7. The liability of the shareholders in the old company for its uncalled capital shall be extinguished.

8. The new company shall take over all the assets and liabilities of the old company.

9. Creditors of the old company shall accept deposit receipts of the new company for the balance of the amounts not absorbed in the payment of the preference shares for five years from their due dates of payment, carrying interest at 4½ per cent. payable half yearly; the new company to have the option to pay off any such deposits before maturity, on giving three months' notice.

10. The assets *in globo* of the old company shall be constituted an assets and realization account in the books of the new company, and be credited with such items as are taken over by the new company, and debited with interest half yearly at the rate of 4½ per cent. per annum.

11. If the assets of the old company when realized do not produce sufficient to pay the liabilities of the old company paid by the new company as purchase money, and to provide capital for the shares issued to the creditors of the old company, the dividends of the ordinary shareholders, or such portion thereof as the directors of the new company may from time to time decide, shall be retained and applied until the deficiency is made up; and the directors may exercise this power before the realization, if a deficiency is anticipated by them. Should the realization result in a surplus, it shall go to a new reserve fund in the new company.

12. The bank premises shall be treated as if realized and taken over at the actual amount standing in the books of the old company.

This scheme, with a few minor modifications, relating chiefly to trustee depositors precluded from taking preference shares, was sanctioned by the court, and the reconstructed bank opened its doors for general business. The following table compares the scheme of reconstruction with that of seven other prominent banks that had suspended:

BANK.	Deposits (about)	CONVERTED INTO—				Period of debentures, etc.
		Fixed capital.		Debentures, or deposits receipts.		
		Amount.	Interest.	Amount.	Interest.	
Commercial, of Australia.....	£2,000,000	£2,000,000	Per cent. 5 and ad't'l	£2,000,000	Per cent. 4½	5 yrs.
Australian Joint Stock.....	1,055,000	1,485,000	5 to 7	8,600,000	4½	4 to 9 yrs.
Bank of Victoria.....	6,000,000	One fifth.	5 to 7	Four fifths.	4½	12 yrs., or 5 to 7 yrs.
Commercial Banking Co., Sydney.....	10,000,000	Current ac't	4	1 to 5 yrs.
City of Melbourne.....	4,000,000	Deposit ac't.	4½	5 to 8 yrs.
English, Scottish, and Australian Chartered.	5,000,000	One fifth.	5 to 7	Four fifths.	4 to 4½	10 yrs. or less.
National, of Australasia.....	4,500,000	2,500,000	4½	2,500,000	4	Indefinite.
Standard, of Australia.....	820,000	1,500,000	5 to 7	8,000,000	4½	5 to 7 yrs.
		460,000	5 and ad't'l	860,000	4½	5 yrs.

3. The formation of the new company shall not depend upon obtaining the whole of the above capital of £6,000,000.

4. The preference shares shall be preferential to the ordinary capital until the new company shall have paid 10 half-yearly dividends of 8 per cent. per annum, when the preference as to capital shall cease.

The scheme of the Commercial Company of Sydney differed from all the others tabulated in that it did not provide for any preference shares for depositors. It provided for registration under the Limited Liability act, with a capital of £2,000,000, in shares of £25, half paid in. Cur-

rent account holders receive 10 per cent. in one month, 5 per cent. six months later, and 5 per cent. quarterly thereafter until they are paid in full with 3½ per cent. interest; or they may take 4-per-cent. deposit receipts payable in one, two, three, four, and five years. Fixed deposit holders receive deposit receipts bearing 4½ per cent. interest, the receipts payable in five, six, seven, and eight years. The plan of the Australian Joint Stock Bank provided for the payment of all existing customers of the bank in cash to the extent of £100, and several other banks made a similar provision. The scheme of reconstruction of the Queensland National Bank was on entirely different lines. It provided for the calling up of £3 per share on the capital; the reduction of the nominal capital of the bank from £2,000,000 divided into 200,000 shares at £10 each to £1,600,000, divided into 200,000 shares of £8 each, the reduction to be effected by cancelling the paid-up capital to the extent of £2 per share upon each of 160,000 shares which had been issued, and by reducing the nominal amount of all shares in the bank's capital to £8 per share; and for the subsequent increase of the so-reduced capital to £3,000,000 by the creation of 175,000 new shares of £8 each, such new shares to be disposed of at such times and to such persons and on such terms as the directors of the bank may deem advisable. On June 29 the Commercial Bank of Australia, the Bank of Victoria, the National Bank of Australasia, the City of Melbourne Bank, the Commercial Banking Company of Sydney, and the Australian Joint Stock Bank had resumed business; the Colonial Bank of Australasia resumed July 10, and the Queensland National Bank reopened its doors for general business; while several other banks were in an advanced stage of reconstruction. To the shareholders of the suspended banks reconstruction was undoubtedly favorable, as it saved the greater expense of liquidation, and relieved them from paying in at once the amounts for which they were liable on their shares, and distributed these amounts over a long period of time. To the depositors who were forced by the plan to become shareholders it was not so favorable. The banks as a rule kept as much as possible of the deposits in the form of proprietary capital, and retained large options as to the repayment of the remainder. The depositors, however, accepted reconstruction as the only alternative for eventually getting back their money. Most of the banks which were forced to suspend are once more doing business, but as a result of the stupendous financial calamity in which they have participated, banking capital to the extent of nearly £20,000 has, by the depreciation of shares, been wiped out, while deposits to the amount of of about £70,000,000 have been locked up for a period of years.

New South Wales.—The Earl of Jersey, who was appointed Governor of the colony in October, 1890, resigned in January, 1893, and Sir R. W. Duff was appointed to the governorship, and entered upon his office on May 29. The new Governor is a Scotsman, who has had upward of thirty years' experience in the British Parliament. The ministry in office at the beginning of 1893 was as follows: Premier and Colonial Secretary, Sir George R. Dibbs; Colonial Treas-

urer, John See; Attorney-General, E. Barton; Secretary for Lands, H. Copeland; Secretary for Public Works, W. J. Lyne; Minister of Public Instruction, F. B. Suttor; Minister of Justice, R. E. O'Connor; Postmaster-General, John Kidd; Secretary for Mines and Agriculture, T. M. Slattery; Vice-President of the Executive Council and Representative of the Government in the Legislative Council, Sir J. E. Salomons. Mr. Salomons resigned Jan. 25, on account of a difference with his colleagues, and was succeeded by Dr. J. N. MacLaurin. An attack was made upon the ministry, on account of the financial statement made by the Treasurer, but the motion of want of confidence was not carried. The statement showed an existing deficit of £1,150,000. The Premier formulated a scheme for the equalization of income and expenditure which included an increase of taxation and a reduction of expenses. The expenditure of 1893 was to be less by £795,000 than that of 1892, and a new source of income to be found in the imposition of an income tax on a graduated scale. On incomes from £200 to £500 it was proposed to lay a tax of 4d. in the pound; from £500 to £1,500, 6d.; from £1,500 to £5,000, 8d.; and on all above the latter amount, 10d. It was also proposed to reduce by 5 per cent. the salaries of all public servants receiving over £200 per annum, and also to lay a tax upon the property of absentees.

Victoria.—The Governor is the Earl of Hopetoun, who entered on his office in November, 1889. The Shiels ministry was defeated on a direct vote of want of confidence moved by Mr. J. B. Patterson, who was invited to form a new ministry. The Executive Council was reconstituted as follows: Premier, Chief Secretary, and Minister of Railways, J. B. Patterson; Attorney-General, Sir Bryan O'Loughlin; Solicitor-General, Mr. Isaacs; Treasurer, Godfrey Downes Carter; Minister of Customs and Education, John Campbell; Minister of Defense and Health, Robert Reid; Minister of Mines and Water Supply, J. H. McColl; Postmaster-General, Agar Wynne; Minister of Agriculture and Public Works, W. T. Webb; ministers without portfolios, Messrs. Baker, Richardson, Abbott, and Cooke. The new Premier has for many years represented Castlemaine in the Legislative Assembly. He has been twice Minister of Public Works, and was Minister of Railways in 1880-'81, and Minister of Customs in 1889-'90.

In this colony, as in New South Wales, the condition of the public finances engaged at the beginning of the year the most serious attention. The specific charge on which the Shiels Government was overthrown was that it had failed to carry into effect any scheme of consistent retrenchment. Mr. Patterson announced that the policy of the new Government would be rigid retrenchment which would bring the expenses of the colony within the revenue. He anticipated that the deficit would amount in June to £1,800,000. He promised large reductions in the civil service and reform in the land administration by encouraging co-operative settlement. For increasing the revenue the Government proposed either an income tax or the temporary expedient of laying a small duty on imports now admitted free. In pursuance of this programme the Legislative Assembly voted to reduce the

salaries of future colonial governors from £10,000 to £7,500, which is the same as in New South Wales, and also passed measures for reducing the salaries of ministers, members of Parliament, and all officers receiving salaries under special appropriations of revenue. A resolution was carried by a majority of four for the imposition of an income tax. A very strong opposition was developed to the measure among the commercial class, and an amendment was offered, Aug. 29, substituting for it a tax on unimproved lands. But the Government had resolved to stand or fall by this proposal, as the only means of meeting maturing obligations without recourse to London for a new loan, and the amendment was defeated. On Sept. 13, however, it was announced that, in consequence of the rejection by the Assembly of the Treasurer's proposal to reduce subsidies to the municipalities to £260,000, and of the narrow majority obtained for the income tax, the Government had decided to adopt the substitute plan of doubling sugar duties. This, it was estimated, would bring in during the remainder of the year £100,000.

Queensland.—The Governor of the colony is Sir Henry Wylie Norman, appointed in December, 1888. Sir Samuel Griffith, head of the ministry in office at the beginning of 1893, having accepted the position of Chief Justice of the colony, the ministry resigned, March 12, with the view of being reconstructed under the leadership of Hugh Muir Nelson, late leader of the Opposition, who had acted as Premier during the absence of Mr. Griffith from the colony. Mr. Nelson, however, was unable to form a satisfactory Cabinet, and Sir Thomas Mcllwraith, the late Treasurer, was requested by the Governor to form a ministry. The new ministry is constituted as follows: Premier, Chief Secretary, and Secretary for Railways, Sir Thomas Mcllwraith; Colonial Treasurer, Hugh Muir Nelson; Secretary for Public Lands and Agriculture, Andrew H. Barlow; Postmaster-General and Secretary for Education, Walter H. Wilson; Secretary for Mines and for Public Works, I. Lissner; Attorney-General, Thomas J. Byrnes; Colonial Secretary, Horace Tozer. The new Premier was born in Ayr, Scotland, in 1835. He had held the position of Premier of Queensland from 1879 to 1883, and from June to November, 1888. Messrs. Tozer, Byrnes, and Wilson, had, like Sir Thomas Mcllwraith, been members of the Griffith ministry. The elections began April 28. Mr. Lissner being defeated by the Labor candidate, Robert Philp was appointed Minister of Mines and Works. The Government announced that its policy would be one of retrenchment and economy, and that every item of public expenditure should be revised, and salaries of civil officers, from the highest to the lowest, cut down. It was decided also to dispense with the services of some 600 officials, and it was hoped that a saving of £300,000 would be effected. In presenting the annual budget statement to the Assembly, the Premier said that every effort had been made to cut down expenses, but the deficit on the year amounted to £111,000, making a total deficiency of £1,500,000, the greater part of which had been covered by the issue of treasury bills. The revenue had fallen off during the year £220,000, owing

to decreased returns from taxation, unprecedented floods in one portion of the colony and disastrous droughts in another, and partially also to the monetary crisis. He estimated the revenue for the coming year at £3,375,000.

Land Settlement.—The Government introduced a bill into the Legislative Assembly, Aug. 8, to authorize the establishment of self-governing communities on the unalienated lands, intended for the benefit of persons who may be willing to co-operate in tilling the soil. The bill also authorizes the Government to give facilities for the establishment of labor colonies for the relief of the indigent and unemployed.

South Australia.—The Governor is the Earl of Kintore, who was appointed in December, 1888, and entered upon office April 11, 1889. The heads of departments at the opening of 1893 were: Premier and Chief Secretary, J. W. Downer; Attorney-General, R. Homberg; Treasurer, W. T. Rounsevell; Commissioner of Public Works, L. Grayson; Minister of Agriculture and Education, W. Copley; Commissioner of Crown Lands, J. H. Howe. The general elections took place throughout the colony on April 15, and the Labor candidates were generally successful. In consequence of a hostile motion in the Assembly, June 13, the resignation of the ministry was tendered to the Governor, who requested C. C. Kingston, who made the hostile motion, to form a new ministry. The new ministry, which assumed office on June 15, was constituted as follows: Premier and Attorney-General, C. C. Kingston; Treasurer, T. Playford; Commissioner of Public Works, Mr. Holder; Minister of Agriculture and Education, Dr. Cockburn; Commissioner of Crown Lands, P. P. Gillen; Representative of the Government in the Upper House, J. H. Gordon. The new Premier announced that the Government programme would include a reduction of 5 to 10 per cent. in all civil-service salaries. The gunboat "Protector" would be laid up, and the military expenditures reduced. The land tax and the tax on the property of absentees, as well as the tax on incomes of £1,000 and upward, would be increased, but no change would be made in the customs duties. The savings banks would be taken over by the Government, and a note issue was contemplated. In presenting the annual budget statement to the Assembly, the Treasurer said the deficit for the year amounted to £164,000, which, added to the deficit at the beginning of the year, would make the total deficiency £844,000.

Western Australia.—The Governor is Sir William C. F. Robinson, who held the office before in 1874, and was again transferred to Western Australia in 1889. Responsible government was organized under the Western Australia Constitution act, passed by the British Parliament in 1890. The Cabinet, as first constituted, and as it remained at the beginning of 1892, was composed as follows: Premier and Treasurer, Sir John Forrest; Chief Secretary, Mr. Shenton; Attorney-General, Mr. Burt; Commissioner of Lands, Mr. Marmion; Minister of Public Works, Mr. Venn. At the reopening of Parliament, early in July, the Governor in his speech said that the general prospects were most encouraging, and the development of the resources of the

colony gave great promise for the future. Good progress had been made with the construction of the southern and the Yelgaru railways, and with the work upon Freemantle and Albany harbors, which, when completed, would permit the largest ships to enter either of them by day or night. The Premier and Treasurer in his financial statement informed the Assembly that there was a credit balance on June 30 of £63,000, while the revenue showed an increase of 10 per cent. over the previous year. The Legislative Assembly, Aug. 16, passed the Constitution bill, which virtually establishes manhood suffrage. During the summer rich auriferous quartz reefs were discovered near Coolgardie, 44 tons of ore from which were said to have yielded 9,000 ounces of gold.

Tasmania.—Sir Robert G. C. Hamilton was appointed Governor of the colony in January, 1897. The ministers at the beginning of 1898 were the following: Premier, H. Dobson; Chief Secretary, Ayle Douglas; Treasurer, John Henry; Attorney-General, N. E. Lewis; Minister of Lands and Works, W. Hartwell; Minister without portfolio, C. H. Grant. Ministers must have a seat in one of the two legislative houses.

New Zealand.—The Governor is the Earl of Glasgow, who received the appointment in June, 1892. The ministry at the beginning of 1898 was constituted as follows: Premier, Colonial Treasurer, and Commissioner of Trade and Customs, J. Ballance; Attorney-General and Colonial Secretary, P. A. Buckley; Minister of Agriculture, Lands, and Immigration, J. Mackenzie; Minister of Mines, Marine and Defense, and Public Works, R. J. Seddon; Minister of Education and Labor and Commissioner of Stamp Duties, W. P. Reeves; Minister of Justice and Native Affairs, A. J. Cadman; Postmaster-General, J. G. Ward; minister without portfolio, representing the native races, J. Carroll. Mr. Ballance died April 27, and Mr. Seddon, who had acted as Premier during the illness of his chief on May 1, accepted the post of Premier. Mr. Ward was made Colonial Treasurer, in succession to Mr. Ballance, the ministry remaining otherwise unchanged. Sir Robert Stout was offered the portfolio of Education, but declined, as he considered himself entitled to the premiership. Mr. Seddon, the new Premier, was born in Lancashire, England, and had been Minister of Mines since 1891. The third session of the present Parliament was opened on June 22 with a speech by the Governor. He congratulated the colony on the buoyancy of the finances and the general prosperity, saying that the surplus for the past financial year was unparalleled. The exports were increasing, and the efflux of population, which had been an alarming feature in former years, had now ceased. The fact that New Zealand had been unaffected by the financial panic was convincing evidence of the prudence with which public and private finance had been conducted. The Treasurer made his budget statement July 4. He estimated that the expenditures for the year would be £4,400,000, and the receipts £4,539,000. The surplus of £130,000, added to last year's surplus, would make a total of £418,000. He said the Government intended to devote a quarter of a million to the construction of public works. It was also

proposed to exempt from taxation all improvements on properties of whatever size, while building societies and mining companies would be relieved from taxation. Customs duties would remain unaltered.

In September, 1892, a bill conferring the franchise upon women was passed by one of the Houses of Parliament, but made no further progress during that session. The Ballance Government was, however, fully committed to the measure, and when Mr. Seddon became Premier he reiterated the intention of the Government to press the measure. It was introduced early in the third session, and passed the House of Representatives on Aug. 11, and the Legislative Council on Sept. 8. On Sept. 19 the bill came before the Governor and received the royal assent. The act confers the parliamentary franchise on both European and Maori women.

AUSTRIA-HUNGARY, a dual monarchy in central Europe. The provinces of the monarchy have been in political union as two states under the same dynasty since 1867, having a common head in the Emperor of Austria and King of Hungary. The crown is hereditary in the Hapsburg-Lothringen dynasty, passing by right of primogeniture and lineal succession to males and (on failure of males) to females. The monarch must be a member of the Roman Catholic Church. The reigning sovereign is Franz Josef I, born in 1858, the son of Archduke Franz Karl, second son of the Emperor Franz I of Austria. The heir presumptive is the Archduke Franz, born in 1863, son of the Emperor's brother, Archduke Karl Ludwig. The foreign, financial, and military and naval affairs of the two monarchies are managed in common, except that each legislates independently concerning the army. They also have in principle common management of coinage, indirect taxation, commerce, and interstate railroad affairs. The monarch exercises legislative authority only with the co-operation and consent of the Parliaments. Legislation in affairs common to both Parliaments is accomplished by means of Delegations consisting of 60 members from each Parliament, of whom 20 are from each of the upper houses, and 40 from each of the lower houses, all appointed for one year. The Parliamentary Delegations are summoned annually by the Emperor, alternately at Vienna and Budapest. They deliberate apart, and their decisions are communicated reciprocally in writing. If after three such interchanges they fail to agree, the two Delegations come together and settle the question by vote and without discussion. The Emperor, with the approval of the Delegations, appoints the common ministry, and the Delegations have control over the three executive departments, with power to impeach ministers. At the beginning of the year the common ministry was constituted as follows: Minister of Foreign Affairs and of the Imperial House, Graf G. Kalnoky de Köröspatak, born in Moravia, 1832, and appointed Nov. 21, 1881; Minister of War for the Whole Monarchy, Field-Marshal Baron Ferdinand Bauer, appointed March 16, 1888; Minister of Finance, Benjamin de Kallay, appointed June 4, 1882. Baron Bauer died in July, and early in August Lieut.-Field-Marshal Baron Rudolf Merkl was an-

nounced as his temporary successor. On Sept. 25 the Emperor relieved Baron von Merkl by appointing Lieut.-Field-Marshal von Kriegshammer Minister of War for the Whole Monarchy. Gen. Kriegshammer was born in Moravia in 1832, entered the Neustadt Military Academy in 1843, became a lieutenant in 1849, was promoted to a captaincy and received the cross for distinguished military service in the battle of Solferino in 1859. He also served in the Prussian campaign, was appointed aide to the Emperor in 1869, and was promoted to the rank of general and commander of the cavalry corps of Cracow in 1891.

The Common Budget.—The common expenditures are covered by the net proceeds of the common customs, the deficit being made up by proportionate payments of each country, Hungary paying 2 per cent. of the total deficit, and 30 per cent. of the remaining 98 per cent., of which Austria pays 70 per cent. The expenditures for 1893 were estimated at 143,821,887 florins (1 florin = 41 cents). The estimated receipts from customs were 42,283,400 florins; receipts of the administration, 2,677,493 florins; leaving 67,818,642 florins to be made up by Austria, and 31,041,353 florins to be paid by Hungary. The ordinary expenditures amounted to 125,359,123 florins, of which 3,603,600 florins were for the diplomatic service, 109,829,840 florins for the army, 9,788,290 florins for the navy, 2,010,900 florins for the financial department, and 126,602 florins for the Board of Control. The extraordinary expenses amounted to 18,462,765 florins, of which 46,400 florins were for the diplomatic service, 16,126,965 florins for the army, and 2,289,400 florins for the navy. The extraordinary expenditures for Bosnia and Herzegovina amounted to 3,712,000 florins.

The general debt of the monarchy on July 1, 1892, amounted to 2,790,594,891 florins. Austria's special debt in 1891 amounted to 1,055,491,000 florins, and that of Hungary to 1,380,115,000 florins, making a total of 5,776,200,891 florins. The floating debt in 1892 amounted to 411,994,925 florins.

Area and Population.—The area of the Austrian provinces is 115,903 square miles, with a population on Dec. 31, 1890, of 23,895,418; that of Hungary, 125,039 square miles, with a population of 17,463,473. The number of marriages in Austria in 1891 was 186,418; births, 947,017, of which 139,512 were illegitimate and 27,514 stillborn; deaths, 673,315; surplus births, 246,188. The figures for Hungary in 1889 are: Total births, 767,884, of which 12,904 were stillborn and 61,468 illegitimate; marriages, 140,524; deaths, 512,852; surplus of births, 242,128.

In 1890 74,002 persons emigrated from the whole monarchy, of whom 63,119 were bound for North America and 1,918 for the Argentine Republic. According to United States statistics, there arrived in that year 38,125 Austrians and 24,994 Hungarians.

The principal cities and their population on Dec. 31, 1890, were: Vienna, the capital of Austria, 1,364,548; Prague, 310,483; Trieste, 158,344; Lemberg, 128,419; Buda-Pesth, the Hungarian capital, 506,384; Szegedin, 87,210.

The population, according to language, was as follows in 1890: Germans in Austria, 8,461,-

580, in Hungary, 1,972,115; Bohemians, Moravians, and Slovaks in Austria, 5,472,871, in Hungary, 1,892,806; Polish in Austria, 3,719,232; Ruthenians in Austria, 1,176,672, in Hungary, 360,051; Slovenes in Austria, 1,176,672; in Hungary, 86,401; Servians and Croats in Austria, 644,926, in Hungary, 2,359,708; Italians in Austria, 675,305; Roumanians in Austria, 209,110, in Hungary, 2,423,387; Magyars in Austria, 8,189, in Hungary, 6,478,711. Besides these there are 82,256 gypsies and 83,940 persons speaking various other languages in Hungary.

The Army.—Military service is compulsory, and has a duration of twelve years, of which three years are spent in active service, seven years in the reserve, and two years in the Landwehr. Besides this the army and the Landwehr have a so-called Ersatz reserve, into which those are drafted who are either exempt from active service or are disqualified by personal defects, but are otherwise capable of carrying arms. Those immediately drafted into the Ersatz reserve of the army have to serve ten years, and those in the Ersatz reserve of the Landwehr twelve years. Those discharged after twelve years of service form for another ten years part of the Landsturm, to which every male citizen between the ages of nineteen and forty-two not serving in any of the other categories belongs. The Landwehr is organized independently of the common army and separately in the two monarchies. It is called out in time of peace for drill and instruction only, and in case of war the Emperor's command is required to mobilize it. The Landsturm can only be called out in time of war, by order of the Emperor, and can not be utilized outside of its own territory unless a special statute provides for it. The contingent of recruits for the army in 1893 was 103,100, of which Austria furnished 60,389, and Hungary 42,711. There were besides a contingent of recruits for the Ersatz reserve, numbering 27,400, a contingent of 10,000 recruits for the Austrian Landwehr, and a contingent of 12,500 recruits for the Honved or Hungarian Landwehr. The peace effective for 1893 was as follows: Infantry, 210,780, of which 187,846 belonged to the army and 22,934 to the Landwehr; cavalry, 49,459, of which 45,360 belonged to the army and 4,099 to the Landwehr; field artillery, 27,267; fortress artillery, 8,130; technical troops, 9,623; train, 3,146; sanitary troops, 2,712; general and field officers, etc., 5,932; military establishments, 8,962; making a total of 326,031. The war footing is fixed at 1,753,563, of which the regular army furnishes 939,192, the Landwehr 355,127, and the Landsturm 459,264.

The annual manoeuvres of the Austro-Hungarian army began at Güns, Sept. 16, and continued six days. The scheme of operations covered an unusually wide territory, and by order of the Emperor all movements were directed in the Hungarian language. On the first day the Army of the South, consisting of two army corps, commanded by Field-Marshal Reinlander, began its march upon Güns, that town being occupied and defended by the Army of the North, consisting of three army corps, under command of Field-Marshal von Schönfeld. On the third day an attack was made on Güns, great masses of cavalry being precipitated upon

the town. The Emperor of Germany rode at the head of the Hungarian Hussars in the attacking party. The Army of the North was driven out, the Austrian Emperor and the princes retreating with it, and Gen. von Reinlander occupied Güns and the adjacent villages. On the fourth day the entire forces of both armies, amounting to upward of 130,000 men, were engaged. The Army of the South had crossed the river Stob by means of pontoons, and sought to defend the position. A fierce artillery battle raged for several hours. Under cover of their guns the Army of the South threw pontoons across the river and effected a landing on the opposite bank, forcing the enemy again to retire. On the fifth day the Army of the North, having been re-enforced by the Vienna Corps, assumed the offensive. The line of battle was five miles long. The flank of Gen. von Reinlander's army was turned and he was compelled to retreat. On the sixth day the victorious army attempted to dislodge Gen. von Reinlander from the new position he had taken up, but failed. The victory was awarded to the Army of the North for having turned the enemy's flank. Men and horses suffered severely from exhaustion, and many accidents occurred during the fighting. The plain and inconspicuous Austrian uniform seemed well adapted for use in a battle where smokeless powder is used. Bicycle riders and dogs were utilized for the carrying of dispatches, and the new waterproof silk tents proved their superiority in every way to any tent heretofore used. The army commissariat proved inefficient, the men having to wait sometimes till midnight before rations were served. In an order of the day the Emperor expressed his satisfaction with the manoeuvres and with the discipline of the troops, and declared that he had entire confidence in the army.

The Navy.—The Austrian navy consists of 2 turret ships, of 21 guns, 23 machine guns, and 13,000 indicated horse power; 8 plated casemate ships, of 142 guns, 88 machine guns, and 28,500 indicated horse power; 1 plated frigate, of 20 guns, 9 machine guns, and 3,500 indicated horse power; 2 ram cruisers, 7 torpedo ships, 6 torpedo vessels, 62 torpedo boats, 3 avisos, 6 training ships, 3 river monitors, 17 station and service ships, 10 vessels for harbor and coast service, 9 school and barrack ships, and 4 stationary vessels. The navy is manned in time of peace by 676 officers, 424 engineers, mechanics, etc., 7,500 sailors, and 4,500 marines.

Commerce.—The general commerce of the Austro-Hungarian customs union, including Bosnia and Herzegovina, amounted in 1891 to 618,300,000 florins of imports and 787,600,000 florins of exports. The values of the principal imports were as follow: Cotton, 45,500,000 florins; coffee, 88,900,000 florins; wool, 37,100,000 florins; coal and coke, 24,400,000 florins; silk, 20,900,000 florins; woolen yarn, 17,700,000 florins; machinery, 17,600,000 florins; furs and hides, 17,500,000 florins; leaf tobacco, 16,700,000 florins; cattle, 16,700,000 florins; leather, 15,300,000 florins; cotton yarn, 13,900,000 florins; books and newspapers, 13,000,000 florins; hardware and clocks, 12,700,000 florins; silk goods, 12,100,000 florins; woolen goods, 12,000,000 florins; colors and tanning material, 10,900,000 florins; grain,

7,200,000 florins; manufactured tobacco, 4,900,000 florins. The following are, the values of the principal exports: Sugar, 88,000,000 florins; grain, 80,400,000 florins; timber, 63,500,000 florins; cattle, 37,100,000 florins; coal and coke, 34,300,000 florins; hardware, 21,600,000 florins; glass and glassware, 19,000,000 florins; wooden ware, 18,200,000 florins; gloves, 17,900,000 florins; iron and ironware, 17,500,000 florins; woolen goods, 16,000,000 florins; paper and paper ware, 16,000,000 florins; eggs, 16,000,000 florins; flour, 15,200,000 florins; feathers, 13,700,000 florins; wool, 11,900,000 florins; leather ware, 11,800,000 florins; minerals, 11,700,000 florins; wine, 9,300,000 florins; silk ware, 7,700,000 florins; linen yarn, 7,000,000 florins.

Navigation.—During the year 1890 there were 26,856 sailing vessels, of 894,388 tons, and 41,817 steamers, of 7,622,540 tons, entered, and 26,794 sailing vessels, of 893,160 tons, and 41,832 steamers, of 7,552,114 tons, cleared at Austro-Hungarian ports. In 1891 there were entered at the port of Trieste 3,506 sailing vessels, of 119,396 tons, with cargoes, and 766 sailing vessels, of 49,682 tons, without cargoes; 2,516 steamers, of 1,171,642 tons, with cargoes, and 1,047 steamers, of 134,145 tons, without cargoes. There were cleared 2,893 sailing vessels, of 143,012 tons, with cargoes, and 1,350 sailing vessels, of 28,439 tons, without cargoes; 3,058 steamers, of 1,197,255 tons, with cargoes, and 484 steamers, of 109,474 tons, without cargoes. The commercial navy, in the beginning of 1892, was composed of 10,380 vessels, of 250,568 tons, of which 261, of 186,810 tons, were seagoing; 1,734, of 43,526 tons, coasting vessels, and 8,385, of 20,232 tons, were vessels of all kinds. The crews of the commercial navy numbered 29,772.

Railroads.—On Jan. 1, 1892, there were 15,650 kilometres of railroads in operation in Austria, and 12,045 kilometres in Hungary. Of the Austrian roads, 6,337 kilometres were owned by the Government, 1,645 kilometres were worked by the Government but belonged to companies, and 7,668 kilometres were operated by companies. Of the Hungarian roads, 7,443 kilometres were owned by the Government, 2,459 kilometres leased and operated by the Government, and 2,143 kilometres owned and operated by companies. The length of railroads in Bosnia and Herzegovina in 1892 was 384 miles.

Posts and Telegraphs.—In 1891 there were expedited by the Austrian post-offices 493,188,850 letters and postal cards, 74,433,500 samples and printed inclosures, and 68,985,020 newspapers. The Hungarian post-offices forwarded 141,089,240 letters and postal cards, and 22,140,880 samples and printed inclosures. There were in the same year 17,609 miles of telegraph lines with 50,154 miles of wire in Austria, 12,473 miles of lines with 46,700 miles of wire in Hungary, and 1,765 miles of lines with 3,814 miles of wire in Bosnia and Herzegovina. There were transmitted a total of 14,293,336 messages, of which 9,661,297 were over Austrian lines, 4,310,120 over Hungarian lines, and 321,919 over the lines of Bosnia and Herzegovina. Receipts of posts and telegraphs in Austria in 1891 amounted to 32,500,919 florins, and expenditures to 29,174,954 florins. The receipts in Hungary were 13,723,856 florins, and the expenses 9,561,836 florins.

Agriculture.—The cultivation of the soil is the chief industry of the monarchy, more than half the population (if family and house servants be included) being engaged therein. Wheat, barley, rye, and oats are the principal cereal crops, and potatoes and beets the principal root crops. In Austria, in 1890, the area and yield of these in hectares (1 hectare=2·47 acres) and hectolitres (1 hectolitre=2·75 bushels) was as follows:

CROPS.	Hectares.	Hectolitres.	Yield per hectare.
Wheat.....	1,147,000	15,528,000	13·5
Barley.....	1,116,000	19,188,000	17·2
Rye.....	2,000,000	28,418,000	14·2
Oats.....	1,874,000	26,781,000	19·6
Potatoes.....	1,079,000	* 82,844,000	* 76·8
Sugar beets.....	245,000	* 55,239,000	* 225·6

The production in Hungary in 1889 was as follows:

CROPS.	Hectares.	Hectolitres.	Yield per hectare.
Wheat.....	1,901,000	32,950,000	11·8
Barley.....	1,004,000	12,168,000	12·0
Rye.....	1,082,000	12,998,000	11·9
Oats.....	1,018,000	15,878,000	15·1
Potatoes.....	489,000	40,101,000	91·2
Sugar beets.....	55,000	* 11,091,000	* 202·8

* Metric-centners.

For 1892 the figures from official sources show that the total wheat crop in Austria-Hungary was 196,279,000 bushels. During the spring months of 1893 much apprehension was expressed regarding the condition of the crops in a very large area of the monarchy on account of drought. The report of the Minister of Agriculture, issued June 12, was, however, somewhat reassuring. It stated that the crops, with the exception of rye, had been materially benefited, and that good yield of wheat and at least a medium crop of oats and barley might be expected, while the rye crop promised fair outside of Galicia, Bukowina, and northwest Bohemia. The sugar beet suffered from drought and insects in Bohemia and Moravia. Careful estimates by the department after the crops were secured indicated an approximate shortage, as compared with 1892, of wheat, 13,750,000 bushels; rye, 13,000,000 bushels; and barley, 975,000 bushels. The quality, however, especially in Hungary, was reported much above the average.

Owing to the prevailing drought in neighboring countries and in England, exports of hay and straw increased enormously during June and the first half of July. These large exports, together with a strong probability of scarcity of fodder in Bohemia during the coming fall and winter, led to negotiations between the Austrian and Hungarian governments for the prohibition of the export of all kinds of fodder. Such a prohibition was speedily determined upon, and the order was promulgated July 20. The prohibition covers hay, fresh and dried clover, straw, and chaff, which are not to be conveyed beyond the Austro-Hungarian boundaries. No time is fixed for the revocation of the order, which is left to the discretion of the administration; but it is understood that it will continue in force until next spring or summer. Such an interdiction has never before been made by the

Austrian Government. The export of wheat was prohibited in 1859, and again in 1866, but on both occasions as a war measure.

Session of the Parliamentary Delegations.—The session of the Parliamentary Delegations was opened in Vienna on May 25, and the common budget was submitted to each Delegation. The Austrian Delegation elected Prince Alfred Windischgrätz president, and Herr Jaworsky vice-president. The young Czech Delegates complained that the budget committee did not contain a single representative of the Bohemian nation. Dr. von Plener replied that all parties were resolved to have no further dealings with the Young Czechs, who had in the last sitting of the Bohemian Diet disregarded the ordinary usages of Parliament.

The Hungarian Delegation unanimously elected Count Aladar Andrássy president, and Koloman Szell vice-president. At the sitting of June 3 the report of the special committee on the Foreign Office budget was submitted by Dr. Max Falk, and during the discussion which followed Count Kalnoky made a statement concerning the relations of the monarchy with foreign powers. He said that the speech from the throne had made no allusion to the triple alliance, because the time had at last come when it was no longer necessary to dwell every year upon the strength and durability of that alliance. He was able to positively assure the Delegations that the relations between Austria-Hungary and Italy had undergone no modifications; that they were, and would remain, as intimate and sound as they ever had been. He declared that the relations of the monarchy with all the powers were of the most friendly nature; that the feeling of security and confidence in the maintenance of peace had been gradually and surely growing stronger. His Majesty had said that nothing had occurred to render indispensable the development of Austria's military organization and readiness for action. There was a certain danger, not in the political disposition of any particular power, but in the whole military situation; but that danger was diminished by the cultivation of friendly relations between monarchs and governments, and would eventually altogether disappear. Of Serbia and the recent revolution there, he said that Austria had no active policy in Serbia, but simply desired that intercourse between the populations of the two countries might be mutually satisfactory, and that the best assurances of this had been received from the new régime. Regarding Russia, he said that the Emperor Alexander III and his Government were favorably disposed toward the monarchy. Austria's relations with Russia, previously good, had now improved, and the improvement would in time have great influence in putting an end to the existing military tension in Europe. Meantime it would be the duty of the Government to provide for the military efficiency of the monarchy, with due regard to its financial resources, and the War Department would endeavor to meet all requirements out of the sums already granted for that purpose. At the conclusion of this statement a resolution, proposed by Dr. Falk, expressing full confidence in Count Kalnoky's policy, was unanimously adopted.

In the Austrian Delegation, June 5, Count Kalnoky made a further statement concerning foreign affairs. Reiterating in substance what had been spoken by him in the Hungarian Delegation, he said it would be an illusion to suppose that general disarmament was at hand, or that it would be possible under existing circumstances; and that he would consider it a material gain if a truce to the increase of the armaments could be brought about. So long as other powers continued their military preparations, Austria-Hungary and her allies must reckon with a similar necessity.

In the same place, June 9, Count Kalnoky said that attacks based upon a false interpretation of his language had been made upon him by certain German papers, who charged him with lack of fidelity to the triple alliance. Germany, he said, proposed to increase her military strength in order to increase her own feeling of security. Austria had no need to follow her example, as she was fully conscious of her strength. The allied powers had always held that the triple alliance did not exclude any member from sustaining friendly relations with other powers. The relations of Austria-Hungary with Russia were amicable, and he desired that they should remain so. In conclusion, he said that Austria-Hungary continued to adhere to her treaty obligations with the same steadfastness and loyalty as hitherto; that she had made no political evolutions, and would make none.

Commercial Treaties.—Early in the year negotiations were opened for commercial treaties with Roumania and with Russia. The negotiations with Roumania did not contemplate any fixed duties, but simply a provision for the mutual application of the most-favored-nation clause for an indefinite period, both parties being at liberty to terminate the agreement upon one year's notice. Negotiations with Russia were also based upon the reciprocal application of the most-favored-nation clause. Pending the negotiations it was agreed that the Russian maximum tariff should not be imposed on imports from Austria-Hungary until further notice, and that the negotiations should be with a view of giving to Austria-Hungary the same commercial advantages as those enjoyed by France under the Franco-Russian treaty.

Austria.—The different provinces composing the Empire of Austria, the Cisleithan monarchy, are represented in a central parliament called the Reichsrath, which is convened annually. This body comprises an upper and a lower house, either of which may initiate legislation. The Herrenhaus, or House of Lords, consisted in 1892 of 19 princes of the imperial family, 68 hereditary lords, 10 archbishops, 7 bishops of princely title, and 125 life members nominated by the Emperor. The Abgeordnetenhaus, or House of Deputies, has 353 elected members, of whom 85 represent the landed proprietors, 118 the towns, 21 the chambers of commerce and industry, and 129 the rural districts. The term of the House of Deputies is six years. In case of dissolution new elections must be held within six months. The number of deputies apportioned to each province is as follows: Bohemia, 92; Galicia, 63; Lower Austria, 37; Moravia, 36; Styria, 23; Tyrol, 18; Upper Austria, 17;

Coastland, 12; Carniola, 10; Silesia, 10; Carinthia, 9; Bukowina, 9; Dalmatia, 9; Salzburg, 5; Vorarlberg, 3. Each province has also its own Parliament, or Landtag, which legislates upon all matters not reserved to the Reichsrath or to the Crown.

The Austrian Ministry in 1893 was composed as follows: President of the Council and Minister of the Interior, Graf Eduard Taaffe, appointed Aug. 19, 1879; Minister of Finance, Dr. E. Steinbach; Minister of Public Instruction and Ecclesiastical Affairs, Dr. Paul Gautsch, Baron von Frankenthurn; Minister of Agriculture, Graf Julius Falkenhayn; Minister of Commerce and National Economy, Marquis von Bacquehem; Minister of National Defense, Field-Marshal Graf Zeno von Welsersheimb; Minister of Justice, Graf Friedrich von Schönborn; without portfolios, Baron von Prazak, Ritter von Zaleski, and Graf Gandolf von Khünberg.

Finance.—The budget for 1893 estimates the total revenue at 609,572,085 florins, of which 742,500 florins are derived from the Council of State; 1,057,518 florins from the Ministry of the Interior; 327,593 florins from the Ministry of Defense; 6,064,124 florins from the Ministry of Public Worship and Instruction; 8,306,691 florins from the Ministry of Finance; 36,110,000 florins from the land tax; 32,349,000 florins from the house tax; 27,787,000 florins from the income tax; 11,508,000 florins from the industry tax; 39,584,000 florins from customs; 104,227,080 florins from excise; 85,227,450 florins from the tobacco tax; 36,067,000 florins from judicial fees; 20,000,000 florins from stamps; 21,395,581 florins from the salt tax; 16,771,000 florins from the state lottery; 2,653,100 florins from various indirect taxes; 4,833,189 florins represent the receipts from the state property; 79,837,600 florins the income from the railroads; 34,701,000 florins that from the post-office and telegraphs; 3,119,920 florins that from various enterprises; 5,025,580 florins are the yield of the forests and domains; 8,236,657 florins that of the mines; and 640,166 florins that of other real property; 1,010,000 florins are the receipts of the Ministry of Justice; and 584,297 florins are derived from various sources. These receipts, making a total of 583,113,246 florins, form the ordinary revenue, to which must be added the extraordinary revenue, amounting to 26,458,839 florins. The total expenditure is estimated at 608,684,794 florins, including 48,500,528 florins of extraordinary expenditure. Of the ordinary expenditure, amounting to 560,184,266 florins, 4,650,000 florins are for the imperial household, 72,723 florins for the Cabinet Chancery, 710,223 florins for the Reichsrath, 21,900 florins for the Supreme Court, 1,091,329 florins for the Council of Ministers, 17,829,936 florins for the Ministry of the Interior, 16,576,488 florins for the Ministry of Defense, 1,694,235 florins for the support of the Ministry of Instruction, 7,064,970 florins for Public Worship, 13,722,159 florins for Education, 14,020,816 florins for the Ministry of Agriculture, 83,904,512 florins for the Ministry of Finance, 20,812,100 florins for the Ministry of Justice, 99,520,293 florins for the Ministry of Commerce, 173,300 florins for the Board of Control, 147,167,093 florins for interest and the sinking fund of the public debt, 887,097 florins

for the administration of the public debt, 18,434,750 florins for pensions and grants, 6,911,400 florins for subventions, and 104,918,942 florins for the common expenditure of the whole monarchy, being the Cisleithan quota.

Disorder in Bohemia.—The political situation in Bohemia has been throughout the year unsettled and at times critical. The feeling between the Czechs and the Germans continues very bitter. The Germans inhabit chiefly the northwestern part of the country, where the famous health resorts, such as Carlsbad, Marienbad, and Franzenbad are situated, and the language spoken in this section is chiefly German. The enmity of the Czechs is based largely upon the belief that the Germans have been unduly favored by the Austrian ministry. For a time the feudal party, or party of the nobility, and the Czech party worked together upon a programme which included the maintenance of both German and Bohemian as official languages. But when by the compromise of 1890 the nobles and the Old Czechs surrendered their ideal of a dual official language in favor of the German demand for an administrative recognition of each language adjusted to local requirements, the Young Czechs seized the opportunity to take their stand as the sole national party of Bohemia. They declared for absolute Bohemian autonomy and for emancipation from Germanization within and the triple alliance without. Under their programme, Moravia and Silesia are to be absorbed, thus increasing the Czechish majority in the state. With their power thus augmented the Young Czechs believe that the German element may be completely Czechized, and its language excluded from official correspondence and reduced to a minimum in school instruction. The Young Czechs have succeeded in carrying with them the great body of the Old Czech party and the Czechish people, leaving no course open to the nobles but to fall in with them or seek an alliance with the Germans. For putting in force in detail the provisions of the compromise of 1890 the assent of the Bohemian Diet was required, and it was there that the Young Czechs made their fight. On May 17, a bill authorizing the establishment of a judicial circuit in the German district of Trautenau was being reported to the Diet by Herr Funke. The Czechs at first tried to count out the Assembly, but upon a quorum being declared they rushed into the chamber, vociferously attempting to obstruct the proceedings. Count Lobkowitz, President of the Diet, directed Herr Funke to dictate his speech to the stenographers, and upon attempting to carry out this order Funke was forcibly ejected from the tribune while the stenographers were maltreated and their notes seized and torn up. The President of the Diet, who is appointed by the Emperor, was also threatened with personal violence, and abruptly closed the sitting. The disturbance in the Diet caused great excitement in the Bohemian capital, and was followed by rioting by the university students, who demolished the windows of club houses and of the mansions of people obnoxious to them. During the night a rope was tied around the neck of the statue of the Emperor at Prague. On the following day the session of the Diet was permanently closed by

order of the Emperor. The Young Czechs were much disturbed by this order, and meetings were held at which it was resolved to send a large deputation to the Emperor, requesting him to continue the Assembly. On the anniversary of the Emperor's birthday, Aug. 18, a riot occurred in Prague during which revolutionary and antidynastic handbills were distributed among the crowd, and in a number of the larger provincial towns of Bohemia placards of similar character were posted in the streets. The authorities ascertained that all this was the outcome of a preconcerted arrangement, and arrested 69 persons, all of whom were charged with high treason. On Sept. 13, the Austrian ministry issued a decree suspending the twelfth and thirteenth sections of the Constitution in the city of Prague. These sections refer to the holding of public meetings and the freedom of the press. A further decree suspended also in that city the right of political offenders to trial by jury.

Session of the Reichsrath.—At the sitting of the Reichsrath, Dec. 2, 1892, the vote on the secret-service fund resulted in a defeat of the Government by a majority of 21 in a total of 313 votes, the Czechs and Germans of Bohemia having for the first time in many years voted together. The Prime Minister had previously announced that he did not consider the question of confidence involved in the vote, and the Cabinet did not resign. During the Christmas holidays Graf Taaffe took the opportunity to negotiate with the three principal parties in the House to secure a Government majority. The three groups thus approached were the German Liberals, under the leadership of Dr. von Plener, the Poles, of whom Jaworsky is chief, and the German Conservatives and Clericals, led by Graf Hohenwart. The programme upon which these elements were invited to unite was in the main that indicated in the last speech from the throne. The material interests of the country were to receive the first attention, and all irritating questions specially concerning either of the three groups were to be for the time being completely set aside; the Austro-Hungarian dual system was to be maintained against all attacks, and the fundamental laws of the Constitution to be guaranteed. The Poles found no difficulty in accepting this programme, but the German Liberals hesitated through fear that the education laws might be disturbed, while the Conservatives objected that the programme was too liberal. The programme was drawn up by Baron Gautsch and Dr. Steinbach, both of whom took part in the negotiations. At the sitting of Feb. 25, Dr. Gregr, the leader of the Young Czechs, who is recognized as one of the ablest and most eloquent parliamentarians in Austria, made a vehement appeal in favor of Bohemian home rule. On March 20 Herr von Chlumceky, who had hitherto acted as vice-president, was elected president, and Dr. Kathrein and Herr Medeyski were elected vice-presidents. The Czechs had a bill introduced fixing the number of Deputies at 400, of whom 145 should be Germans and 255 should belong to the other nationalities, every male citizen twenty-four years of age to have the right to vote. Beyond merely routine work but little was accomplished in the Reichsrath during the session of 1892-93.

At the opening sitting of the Reichsrath, Oct. 10, the Prime Minister, Graf Taaffe, introduced an electoral reform bill practically granting universal manhood suffrage. The measure provides that all who now have the franchise shall continue to possess it, and the right is to be extended to all men of legal age who have gone through the elementary schools or passed an equivalent examination; to all time-expired noncommissioned officers and all those who have served in the ranks in time of war and have the war medal; to all those who can read and write and have done their duty as citizens in accordance with the law; and to all those having a sufficient knowledge of one of the national languages, and who can prove a residence of six months in the place in which they are employed. The bill was a complete surprise to all parties, and created a sensation in Vienna. The German Liberals, the Poles, and the Conservatives announced their opposition to the bill. At the first reading of the bill, on Oct. 23, Graf Taaffe declared the measure a necessity for the state, inasmuch as it was only by a timely and far-reaching extension of the suffrage that it would be possible to avert those grave perils with which society and the whole order of the state were threatened by the popular elements which had hitherto been deprived of political rights. The opposition to the measure among the Deputies was so determined that its success seemed impossible, and a dissolution of the Reichsrath was quite generally expected, but on Oct. 29 Graf Taaffe tendered his resignation to the Emperor as the best means of ending the deadlock. Prince Alfred Windischgrätz, President of the Upper House, was sent for by the Emperor on the following day and intrusted with the formation of a coalition Cabinet.

The New Ministry.—The prince met with much difficulty in the execution of his trust, but after many conferences, in which Graf Taaffe was freely consulted, the new Cabinet was announced, Nov. 5, as follows: President of the Council, Prince Alfred Windischgrätz; Minister of the Interior, Baron Bohuslaw von Widmann; Minister of Public Instruction and Ecclesiastical Affairs, Stanislaus von Madeyski; Minister of Finance, Dr. Ernst von Plener; Minister of Agriculture, Graf Julius Falkenhayn; Minister of Commerce and National Economy, Graf Franz Cronini; Minister of Justice, Graf Karl Chorinski; minister without portfolio, Apollinar von Jaworski.

Universal Suffrage.—The movement in behalf of universal suffrage made considerable progress in the monarchy during the year. The Social Democracy agitated for it with great vigor and persistency and carried with them the great body of the working people, while many Liberals have given in their adherence to the cause. In Bohemia the demand for the franchise has been quite aggressive, though accompanied to some extent with a demand for Bohemian state rights.

At the general meeting of the Central Democratic Society of Vienna, the advanced wing of the Liberal party, on June 30, a resolution was unanimously adopted declaring it to be the duty of all Liberal citizens to support the workers in their effort to obtain the suffrage. At an open-air meeting near Reichenberg, June

12, at which about 15,000 German and Bohemian workmen were present, a resolution was adopted in favor of universal suffrage for every citizen, male and female, who has attained the age of twenty years. On July 9 a great gathering of the working classes of Vienna took place at the town hall. The various divisions, numbering in the aggregate 30,000, displaying mottoes in favor of universal suffrage, marched in an orderly manner to the hall, where speeches were made and resolutions demanding universal suffrage adopted. This was the first demonstration of the kind in Vienna that has taken place with the permission of the authorities. The agitation has not been confined to the cities and large towns, but has been carried with considerable apparent success into the rural districts, among the peasants and small farmers.

Labor Difficulties.—A large meeting of the unemployed was held in Vienna on the night of Dec. 1, 1892. The language used by the speakers was of such a threatening character that the police put an abrupt end to the proceedings. On Dec. 4, labor demonstrations were held at Neu Larchenfeld and Währing, at both of which work was vehemently demanded. A strike occurred among the Vienna joiners in the latter part of April, and several strikes among the Bohemian coal miners. These last led to a collision with the police, in the course of which several miners were shot down and a large number of arrests made. In August a strike occurred among the workmen, some 1,500 in number, employed in a soap and candle factory in a suburb of Vienna. This strike called together a large mob from the rabble of the city and resulted in a series of riots lasting for three days. The police were attacked with stones and repeatedly dispersed the mob. The police used their swords, and many on both sides were seriously injured. An announcement was made early in July that the Austrian Government proposed to introduce a bill for the establishment of labor chambers, by means of which the working classes would be accorded a certain measure of representation in Parliament. The present Chamber of Deputies is composed of four groups representing respectively the great landed proprietors, the towns, the rural districts, and the chambers of commerce and industry. To these four classes the proposed bill would add a fifth, composed of representatives of the labor chambers. Such a measure has been advocated by the Liberal party in Austria for the past seven years. While it is a fact that the measure would give to the millions of Austrian working people only about as many deputies as now represent 189 landowners of Moravia, the workers seem inclined to accept the new chambers as a central controlling body, at the same time adhering to their demand for suffrage.

Hungary.—The Kingdom of Hungary, the Transleithan monarchy, includes Hungary proper, Croatia-Slavonia, and Transylvania. The Hungarian Parliament, or Országgyűlés, has legislative authority for Hungary and Transylvania, and also for Croatia and Slavonia in matters of common concern. The Parliament consists of the Magnatentafel, or House of Magnates, and the Representantentafel, or House of Representatives, having equal and concurrent powers. The Upper House is composed of the hereditary

peers, who pay an annual land tax of 3,000 florins, life peers, 40 dignitaries of the Roman and Greek Churches, 11 representatives of Protestant confessions, such archdukes as have attained their majority, 3 delegates of Croatia-Slavonia, and 17 judges and state officials, who are members *ex officio*. The Lower House has 453 members, of whom 418 are Deputies elected by the vote of male citizens of the age of twenty years who pay a small direct tax and others who are entitled to vote without the property qualification, and 40 are delegates of Croatia-Slavonia. Members are elected for five years. The Parliament is summoned annually by the King at Buda-Pesth. The language of the *Országgyűlés* is Hungarian, but the representatives of Croatia and Slavonia may speak their own language. Croatia and Slavonia possess autonomy concerning religion, instruction, justice, and police, and their provincial Diet meets annually at Agram. The Hungarian ministry in the beginning of 1893 was composed of the following members: President of the Council and Minister of Finance, Dr. Alexander Wekerle; Minister of the Honved or National Defense, Baron Géza Fejervary; Minister *ad latus* or at the King's side, Graf Louis Tisza; Minister of the Interior, C. de Hieronymi; Minister of Education and Public Worship, Graf Albin Czaiky; Minister of Justice, Desiderius de Szilagyi; Minister of Industry and Commerce, Béla de Lukacs; Minister of Agriculture, Graf Andreas Bethlen; Minister for Croatia and Slavonia, Emerich de Josipovitch.

Finance.—The budget for 1893 estimates the ordinary revenue at 402,278,985 florins, and the transitory revenue at 88,000,658 florins, making a total revenue of 485,279,643 florins. Of the ordinary revenue, 3,690,232 florins are derived from state debts, 1,900 florins from the Accountant-General's office, 800 florins from the Ministry *ad latus*, 1,189,329 florins from the Ministry of the Interior, 282,921,258 florins from the Ministry of Finance, 97,878,292 florins from the Ministry of Commerce, 14,240,913 florins from the Ministry of Agriculture, 1,284,461 florins from the Ministry of Public Worship and Instruction, 729,761 florins from the Ministry of Justice, and 358,983 florins from the Ministry of National Defense. The total expenditure was estimated at 485,265,596 florins, of which 378,005,231 florins represents the ordinary expenditure, 85,083,384 florins the transitory expenditure, 15,248,994 florins the investments, and 6,928,023 florins the extraordinary common expenditures of the whole monarchy, being the Transleithan quota. Of the ordinary expenditures, 4,650,000 florins are for the civil list, 72,723 florins for the Cabinet Chancery, 1,299,600 florins for the Diet, 25,247,160 florins for the common expenses of the whole monarchy, 41,985 florins for the common pension list, 7,440,461 florins for the Hungarian pensions, 118,770,507 florins for the national debt, 21,319,298 florins for debts of guaranteed railroads acquired by the Government, 753,408 florins for other guaranteed railroad debts, 7,106,947 florins for the administration of Croatia, 110,900 florins for the Accountant-General's office, 337,580 florins for the President of the Council, 58,540 florins for the Ministry *ad latus*, 36,080 florins for the Ministry of Croatia, 12,283,460 florins for

the Ministry of the Interior, 64,785,248 florins for the Ministry of Finance, 65,526,635 florins for the Ministry of Commerce, 14,470,165 florins for the Ministry of Agriculture, 7,888,381 florins for the Ministry of Public Worship and Instruction, 13,585,907 florins for the Ministry of Justice, and 12,220,246 florins for the Ministry of National Defense.

The Hungarian Culturkampf.—The conflict between the state and the Church, which originated with the decree of the Minister of Public Worship of Feb. 26, 1890, regarding the *Weglaufungen*, has led the country into a religious struggle, in dealing with which the Government found the greatest difficulty. The Liberal party, having obtained the majority in the last elections, demanded a settlement of the politico-religious questions. The Szapary ministry attempted to arrange a programme which should receive the support of the Liberals as well as the approval of the Crown. There were three points on which the ministry agreed. The first was the registration by the state of the births of the children of mixed marriages. The Hungarian law prescribes that male children be baptized in the faith of the father and female children in that of the mother. If a child born of a mixed marriage be baptized by a Catholic priest, its birth must be registered in the Catholic Church register; if baptized by a Protestant pastor, the birth must be inscribed in the register of the church in which the child is baptized. Each case of baptism is to be communicated to the minister of the other faith. This law the Catholic Church refused to comply with; and, as no compromise could be made, registration by the state seemed to be the only available solution of the problem. The second question regarded the free practice of all religions, which the ministry favored unanimously. The third question was that of the recognition of the Jewish confession, which has heretofore been counted among the tolerated religions, but which the ministry proposed to put on a par with the recognized religions. Regarding the fourth question, that of civil marriage, the ministry could not agree.

At present the legislation affecting marriage does not rest with the state, but with the different confessions officially recognized in Hungary, each of which has its own special ordinances. In the matter of civil marriage the Catholic Church would make no concession, but opposed the contemplated reform with all the force that it could bring to bear. It had taken an active part in the elections the year before, and had supported members of any party who pledged themselves to forward its cause, the Hungarian bishops declaring that, as marriage is one of the sacraments of the Church, they could not regard civil marriage in any form as anything more than mere civil registration. The Liberal party, under the leadership of Tisza, the former Premier, insisted on obligatory civil marriage, pure and simple, and refused to entertain any compromise proposed by Count Szapary.

The Cabinet Crisis.—On Nov. 5, 1892, Count Szapary went to Vienna to submit his plans to the Emperor, and on Nov. 9 he announced at a sitting of the Hungarian Chamber of Deputies that the Cabinet had tendered its resignation

because it had not been able to come to any agreement regarding obligatory civil marriage, and that the resignation had been accepted by the King. Count Szapary, Baron Fejervary, Dr. Wekerle, M. Tisza, and M. Szell were summoned to Vienna to confer with the Emperor, and as a result of the conference, Dr. Wekerle, the Minister of Finance of the outgoing Cabinet, was called upon to form a new ministry.

The New Cabinet.—On Nov. 16 the new Cabinet was complete and received the sanction of the Emperor. It was composed of the following members: President of the Council and Minister of Finance, Dr. Wekerle; Minister of Justice, M. Szilagyi; Minister of Public Worship and Instruction, Count Czaky; Minister of the Interior, M. de Hieronymi; Minister of Commerce, M. de Lukacs; Minister *ad latum*, Count Louis Tisza; Minister of National Defense, Baron Fejervary; Minister of Agriculture, Count Bethlen. Alexander Wekerle, born in 1850, is the son of a German, who emigrated from Wurtemberg to Hungary and became the steward of a large estate. He entered the Department of Finance when only twenty-five years old, and his abilities in financial matters soon brought him promotion, his services being recognized by each successive ministry. In 1887 he was appointed Under Secretary of State in the Cabinet of Koloman Tisza, and in 1889, when the latter resigned his office as Minister of Finance, Dr. Wekerle was appointed to fill his place. His ability was demonstrated by the currency reform, passed in 1892. His appointment to the premiership met with general approval. His tendencies are strictly liberal, and, being a *bourgeois*, the first Premier not connected with the aristocracy Hungary ever had, his choice was hailed with delight by the masses.

On Nov. 21 Dr. Wekerle submitted the programme of the new Government to the Parliament. He declared that the new Cabinet approved of the line of foreign policy sanctioned at the last session of the Delegations, which had in view the safeguarding of the interests and power of the monarchy on the basis of existing treaties. Regarding the politico-religious questions, he remarked that the Government, while desiring to maintain the interests of the state, were at the same time anxious not to disturb the peace with the Church, and wished that all public institutions should be so organized as to offer a lasting guarantee for the continuance of that peace; that an arrangement in principle had been made, with the approval of the Crown, for the introduction of the state registration of births, the recognition of the Jewish faith, and the free exercise of all religions, and that the bills dealing with these questions would be put before the house in the course of the winter. Touching marriage legislation, he said that the Government had been able to arrive at an agreement concerning the fundamental principle of the marriage law and obligatory civil marriage, a bill in connection with which was being prepared. This bill would provide for general marriage legislation binding on all faiths.

Session of the Parliament.—The new ministry had by no means an easy task before them. Although the Liberals formed the majority in the Representantentafel, yet even in their own

ranks there were differences of opinion. The great majority, under their leader, Koloman Tisza, approved of the programme of the Government, while the minority believed in the ex-Premier's temporizing course. But as an offset the Government gained the support of the Nationalists under Count Apponyi, who declared that his party was in favor of obligatory civil marriage. On April 26 two of the politico-religious bills were introduced in the Lower House. The civil registration bill brought in by the Minister of the Interior divides the country into about 4,500 districts. The clergy are not competent to act as registrars. These officials, who are to be appointed and paid by the state, must be Hungarian citizens who have passed the sixth grade at school. Birth, marriage, and death registers are to be kept separate. Regarding the children of mixed marriages, the sons are to be brought up in the religion of their fathers and the daughters in that of their mothers, as provided by the law of 1868. The duty of reporting a birth devolves upon, first the father, second the midwife, third the medical attendant, fourth other witnesses, and fifth the mother. Until the enactment of an obligatory civil marriage law, registration of marriages is to be made upon evidence of the certificate of the clergyman performing the religious ceremony, which certificate he is required to furnish. The special bill for the reception of the Jewish faith, which was introduced by Count Czaky, contains three paragraphs. By the first the Jewish faith is officially recognized; by the second, conversions from the Jewish to the Christian faith, and from the Christian to the Jewish faith, are made lawful; the third gives the Jews, as a religious body, civil rights equal with those of any other religious body. On May 16 a bill was introduced providing that all persons shall be at liberty to choose their faith or religion, and to practice the same within the limits fixed by the law and public morality. Any confession desiring to be legally recognized by the state must submit to the Government a statement of its dogmatic and moral doctrines. Should these be contrary to the laws of the country or contain anything calculated to prevent members from fulfilling their duties toward the state, the Government is empowered to refuse its recognition. The authorities may also demand the removal of a clergyman guilty of any action prejudicial to the state, and failing such removal dissolve the religious body over which he presides. The position of head or patron of a religious community must not be held by a foreigner or under foreign authority. Any religious body may hold property for church and school purposes only. The exercise of political and municipal rights is made independent of religion. If an individual desires to sever his affiliation with any religious society he must first cancel all his indebtedness to such society. All persons have the right to meet for religious services. The bill does not apply to the Jewish faith or any religion already recognized.

The bill proposed by the Government for the regulation of marriage has three principal clauses, as follow: There shall be only one marriage law, which shall be applicable to all religious denominations; civil marriage shall be obligatory; marriage may be dissolved by the

civil authorities. During the discussion of the budget, which occupied the greater part of the session, the religious questions were frequently brought up and discussed, particularly when the items for the Ministry of Public Worship were before the House. Count Czaky took the earliest opportunity to defend the Government programme, and made it clear that the ministry would stand or fall with the obligatory civil marriage bill. As far as the Representantentafel was concerned, no doubt was felt as to the passage of such a bill, but the difficulty was with the Magnatentafel. That body consists mostly

of the Hungarian nobility, who adhere firmly to the Catholic faith, and who for that reason refused to make any concessions whatever. It even went so far as to pass a vote of want of confidence in the ministry on the Church question, May 10, 1893. The clergy held a meeting at which resolutions were presented and adopted strongly protesting against what they considered the Government's politico-religious programme, and especially against obligatory civil marriage; and in the early autumn the Pope addressed an encyclical on the subject to the Hungarian bishops and clergy.

B

BAPTISTS. The summaries of the statistics of the regular Baptist churches in the United States, as given in the "American Baptist Year-book" for 1893, are as follow: Number of associations, 1,458; of ordained ministers, 24,798; of churches, 36,793; of members, 3,883,160; of Sunday schools, 19,930, with 143,607 officers and teachers and 1,390,601 pupils; of additions during the year by baptism, 166,322. Amount of contributions: For missions, \$1,207,244; for education, \$236,776; for salaries and expenses, \$9,999,860; miscellaneous, \$2,463,538. Value of church property, \$71,080,945.

In British America are returned 810 churches, 585 ministers, 80,768 members, and 4,464 baptisms during the year; in Mexico, 49 churches, 25 ministers, 1,672 members, and 182 baptisms; in the West Indies and Central America, 201 churches, 76 ministers, 44,200 members, and 3,135 baptisms; total for North America, 37,853 churches, 25,504 ministers, 3,509,800 members, and 174,103 baptisms; in South America (Brazil), 10 churches, 10 ministers, 419 members, and 90 baptisms; in Europe (including the United Kingdom, Austria-Hungary, Denmark, Finland, France, Germany, Holland, Italy, Norway, Roumania and Bulgaria, Russia and Poland, Spain, Sweden, and Switzerland), 3,704 churches, 2,584 ministers, 422,066 members, and 23,254 baptisms; in Asia (Assam, Burmah, Ceylon, China, India, Japan, Orissa, and Palestine), 801 churches, 504 ministers, 97,672 members, and 11,999 baptisms; in Africa, 50 churches, 89 ministers, 3,357 members, and 570 baptisms; in Australasia, 199 churches, 129 ministers, 16,670 members, and 1,330 baptisms; total for all countries, 42,617 churches, 28,820 ministers, 4,049,984 members, and 211,346 baptisms.

Of the baptisms in the United States during 1892, Georgia reports the largest number, 20,176. After it follow Texas, 17,226; Alabama, 13,001; Virginia, 2,210; South Carolina, North Carolina, Tennessee, New York, etc., the baptisms in the South considerably outnumbering those in the North. In the amount of money contributed by the denomination—the total, excluding the gifts of Messrs. Rockefeller and Colgate to Chicago and College Universities, amounting to \$13,907,418—New York leads with \$1,713,761. Next come Massachusetts, with \$1,067,876; Pennsylvania, with \$962,125; Illinois, with \$660,117; New Jersey, with \$550,716; Missouri, with \$494,477; Ohio, Virginia, Texas, Michigan, Ken-

tucky, etc. The general average *per capita* was \$4 for the whole country.

In absolute number of members, Georgia leads with 344,158, and after it follow Virginia, Kentucky, Texas, South Carolina, Mississippi, Tennessee, Missouri, New York, etc., in order.

Educational Institutions in the United States.—Seven Baptist theological institutions in the United States return 58 instructors and 818 pupils preparing for the ministry; 35 universities and colleges, 602 instructors, and 8,542 pupils, 1,072 of whom were preparing for the ministry; 36 institutions for young women, 397 instructors, and 4,573 pupils; 51 institutions for young men and young women, 365 instructors, and 7,379 pupils, 314 of whom were preparing for the ministry; 24 institutions for the colored race and Indians, 235 instructors, and 5,240 pupils, of whom 247 were preparing for the ministry. Aggregate statistics of 153 Baptist educational institutions: Number of instructors, 1,657; of pupils, 26,552; preparing for the ministry, 2,451; value of grounds and buildings, \$13,493,355; amount of endowments, \$16,782,820; value of libraries and apparatus, \$1,485,047; amount of gifts made in 1892, \$4,844,053; number of volumes in libraries, 725,776; total value of property, \$31,761,222.

Baptist Education Society.—The fifth annual meeting of the Baptist Education Society was held, in connection with the meeting of the Southern Baptist Convention, at Nashville, Tenn., May 11. The treasurer reported that his receipts for the year had been \$75,310, all of which had been paid out to the institutions for which the different contributions were designed. The secretary's report made special mention of the gratitude and sympathy the society had received from various parts of the country. The co-operation of the pastors and people of the South had been specially remarkable, and the most fruitful results have been realized in that region. The institutions aided had been carefully selected, as likely to be most widely and permanently useful, and the funds had been used for endowment only. Of 67 Baptist schools and colleges in the South, only 11 had practically any endowment. American Baptists had now \$32,000,000 safely secured in college property. In the four years of its existence \$336,516 had been given to colleges and academies through this society, exclusive of the gifts to the University of Chicago, securing to those institutions \$1,618,816; and

since the society began active work \$12,000,000 had been added to the funds of Baptist institutions. Chicago University had now \$7,000,000, or nearly one fourth of the educational money of American Baptists. The institution had changed as it had enlarged, till college instruction had become only an appendage, and stress was laid upon graduate rather than undergraduate work.

The Southern Baptist Educational Society met in Nashville, Tenn., May 11, when papers were read on "Higher Education in Texas," by Prof. A. J. Emerson, and "Examinations and Degrees," by Dr. H. H. Harris.

Southern Baptist Convention.—The Southern Baptist Convention held its forty-eighth meeting in Nashville, Tenn., May 12. Judge Jonathan Haralson, of Alabama, was re-elected president. The opening of the sessions was made notable by the presence of Bishop O. P. Fitzgerald, of the Methodist Episcopal Church, South, who was invited to the platform and to address the convention—an innovation in the practices of this body, which has not been accustomed to receiving visiting delegates from other Churches. The Foreign Board (of Missions) reported that it had received \$154,686, of which \$21,346 were contributed as for "Permanent Centennial Work." A debt was reported of \$10,464. Reports were received from the missions in Italy—347 members, 75 additions by baptism during the year; Brazil, 15 missionaries and their wives, 453 members, and 96 baptisms, with a new mission begun in the capital of the State of Espirito Santo; Mexico, 1,014 members and 94 baptisms; Japan, 27 members and 26 baptisms; Africa, 144 members and 20 baptisms; and China, 938 members and 75 baptisms.

The receipts of the Home Board had been \$242,396, of which \$26,284 had been raised through the Woman's Missionary Union, and \$52,960 as centennial contributions. For the first time in several years the board was free from debt. Three hundred and sixty-eight missionaries had been employed, through whom 5,111 persons had been baptized, 9,604 members received into the churches, 155 churches constituted, and 92 houses of worship built. The Cuban mission returned 2,261 members, with 169 baptisms. Hitherto only native Cubans had been employed in this mission, but as the work had enlarged it had become necessary to appoint also a missionary from the United States. Missions were sustained among the Germans in Texas, Missouri, Kansas, and Maryland, and among the Mexicans in Texas. Labors among the colored people had been given mostly to the work of training their preachers. In the Indian Territory, in a total population of 130,000, the Southern Baptists had 15 associations, 189 ordained preachers, 267 churches, and 12,961 baptized believers.

The report of the Sunday-school Board for its second year showed its work to be prosperous in every department.

The Centennial Committee had raised \$133,000 during the year, besides which \$18,000 had been received by the Foreign Board in the previous year. As many of the collections had been taken too late to be included in the report, the time for closing the account was extended to November.

The Southern Baptist Missionary Union (Woman's) raised during the year for all purposes, including the centennial, \$62,336. Attention was directed, when the report of the society was presented in the convention, to the fact that it did not represent all that was done by the women for missions. The sisters who give money but do not raise it through a society, who contribute directly to the Church collections, it was insisted, should not be forgotten.

American Baptist Publication Society.—The sixty-ninth annual meeting of the American Baptist Publication Society was held in Denver, Col., May 23. The society had received during the year, in its book department, \$534,530; in the Bible department, \$21,336; and in the missionary department, \$127,217; making, in all, \$683,083. The assets of the society were \$984,384, and its invested funds amounted to \$493,372. Another branch house had been opened in Dallas, Texas, making the sixth belonging to the society. Instead of waiting for voluntary offers of manuscripts for publication, the publication committee had determined to secure the preparation of such works as were decided to be most needed for the denomination. Several commissions had been allotted. Prizes of \$500 each had been offered for the best stories on certain topics of Christian character and conduct. The preparation of an inductive series of Sunday-school lessons as alternative to the International series was promised. Seventy-four new publications had been issued. Final contracts had been awarded for the completion of the unfinished revision of the Old Testament. The Bible department had distributed 38,426 copies of the Scriptures. The missionary department had employed 140 agents in all, and aided several State conventions in the support of colporteurs. Under the labors of these agents 642 persons had been baptized, 49 churches constituted, 330 Sunday schools organized, 537 institutes held and addressed, 296 Sunday schools aided by gifts of Bibles, books, periodicals, etc., and 332 pastors and ministerial students aided with grants for their libraries. The chapel car Evangel had been in constant service, and with it 88 places had been visited, at which 8 churches had been organized and provided with pastors, 4 Sunday schools formed, 25 persons baptized, and 400 converts enrolled. Another car had been built and paid for by friends of the society, and a third had been offered provided the building of a fourth could be assured. The opening of the exposition at Chicago on Sunday was condemned by resolution, and the course of the Baptists of Chicago in withdrawing the denominational acceptance of the invitation to take part in the auxiliary religious congress was approved.

American Baptist Missionary Union.—The annual meeting of the American Baptist Missionary Union was held in Denver, Col., May 24, the Rev. A. H. Strong, D. D., presiding. The total receipts of the society for the year had been \$865,752, of which \$757,305, or \$396,915 more than in the previous year, were in the form of contributions from the churches, including those of the women's societies. In addition to this amount, \$37,950 had been received in conditional trust funds subject to annuities, and the women's societies had received \$74,139 available

for their work, making a grand total of \$977,846. The Centennial Committee reported a still further receipt of \$32,500 on a bequest to the union from an estate not yet settled, by which the amount of the centennial offering was swelled to \$1,010,341. The general statistical reports from the mission fields showed that there were in the European missions 1,099 preachers, 801 churches, 82,274 church members, and 67,059 pupils in Sunday schools; while 5,796 persons had been baptized there in 1892, and \$251,020 had been contributed by the mission stations. In the heathen fields were 971 preachers, 730 churches, with 87,455 members, 18,625 pupils in Sunday schools, and 7,060 persons had been baptized, and \$54,249 contributed. Fifty-two missionaries, including those of the women's societies, had gone to various stations in Asia and Africa; 38 new appointments had been made; 38 missionaries had returned home, 8 of them permanently, and 3 had died. Dr. Judson's Burman Bible had been issued, reduced in size by the photo-engraving process, at one fourth the cost of the regular edition, and the new Sgau-Karen Bible had been published at Rangoon. Recommendations were adopted that the anniversary meetings be made—so far as the business of the Union is concerned—strictly delegated or representative meetings; that, instead of uniformly having set reports by special committees of the work of the Union in the various foreign fields, time be given to listening to accounts by living missionaries home on furlough; and that a committee be appointed to consider the question of the relation of schools and higher education in general to the missionary operations, including the acceptance and use of Government grants-in-aid and Government inspection in the several missions where such grants obtain.

American Baptist Home Missionary Society.—The meeting of the American Baptist Home Missionary Society was held in Denver, Col., May 29, Mr. H. K. Porter, one of the vice-presidents, presiding. The receipts of the treasury for the year had been \$473,842, and the expenditures \$671,491. The work of the society had been conducted in 50 States and Territories, and in Manitoba, the Northwest Territory, British Columbia, Alaska, and six Mexican States. One thousand and eighty-two laborers had been employed, of whom 245 had been working among the foreign population, 236 among the colored people, 46 among Indians, 31 among Mexicans, and 524 among Americans. Seventy churches had become self-supporting, and 82 asked for reduced appropriations. One hundred and nine new mission stations had been undertaken; 2,035 stations and out stations, having 49,364 members, had been supplied; 5,743 members had been received by baptism; 136 churches had been organized; 1,177 Sunday schools, having an aggregate attendance of 73,954 members, were under the care of the missionaries; and contributions of \$13,257 to the benevolent funds were reported. The society aided in the maintenance of 34 established schools for the colored people, Indians, and Mexicans; 17 day schools for the Chinese; 4 day schools in Mexico; and 2 day schools in Utah.

Women's Missionary Societies.—The total receipts of the Woman's Baptist Home Mission Society (Chicago) for the year ending with April, 1893, were \$67,059, and the disbursements were \$63,335. Plans of co-operation had been effected with the American Baptist Home Mission Society and the State and Territorial conventions, under which \$7,323 were paid to the agents of the society. A missionary training school was sustained at Chicago, and a missionary training department in connection with Shaw University. Ninety-five missionaries had been under appointment during the year in Colored People's, Chinese, European Landing-Place, Frontier, Indian, Mexican, and Mormon Missions.

The Woman's Baptist Home Mission Society (Boston) received in all for the year \$38,099. For the Kadiak Orphanage, the accounts of which were kept separately, the receipts had been \$3,709, which, added to the cash in hand, made the total amount to its credit \$7,888. The society had \$10,746 of invested funds.

The total receipts of the Women's Foreign Missionary Society (Boston) for the year 1892-93 were \$150,552, and its expenditures \$116,066. Of the balance left in the treasury, \$34,000 had been reserved to make good the special obligations of the centenary year, making the real balance \$486.

Baptist Young People's Union of America.—The third annual meeting of the Baptist Young People's Union of America was held in Indianapolis, Ind., beginning July 13. About 2,500 delegates attended. The board of managers reported that, as far as had been ascertained, nearly 1,000 young people's societies had been organized during the year, making the whole present number about 4,500; there were also 300 associational unions, 50 city unions, and 30 State and provincial unions. The plans for the founding fund had been enlarged, to secure, if possible, \$50,000—instead of \$25,000, the amount first named; the present amount of the fund was \$13,846. The educational plans, involving examinations on scriptural and religious topics, under the three heads of Bible Reading, Study of the Life of Christ, and Conquest Missionary Observance, had been satisfactorily carried out. These were collectively called the Christian Culture Course. A pastor's lecture course was widely adopted. It included studies on the preparation of the world for the spread of the gospel; theological education among the Jews; the influence of Judaism on Christianity; the New Testament—how it grew and when it was completed; the teachings of Paul and their effect on Christian thought in all ages; and the testimony of art and archaeology to Christianity. One or two optional courses of study were contemplated. Many junior societies had been organized. It was decided to give these societies the name, Junior Baptist Union.

Organizations of Colored Baptists.—The Baptist Foreign Missionary Convention of the United States is the organization for foreign mission work of colored Baptists. It sustains two missionaries in Africa. Steps have been taken for the organization of the women in the collection of missionary funds.

The Baptist African Missionary Convention of the Western States and Territories sustains, with

the aid of friends in Great Britain, four missionaries in Africa.

The American National Baptist Convention labors to secure the general and educational development of the colored race, and has no special missionary work laid before it. The question of organizing a publishing house was discussed at the annual meeting in September, 1892. The year's receipts of the body were returned as having been \$275, and the expenditures \$288. During the same meeting another organization was formed, under the name of the National Baptist Educational Convention.

The New England Baptist Missionary Convention does a home mission and Church extension work. Reports were made at the annual meeting in June, 1892, of the work of 5 missionaries, of missions at 6 places in New Jersey, and of aid given to churches in New Jersey, Massachusetts, and New York. The society has a widow's fund, the receipts of which for 1891-'92 were \$391. Steps were taken at the annual meeting for the organization of a foreign mission board, for which an attempt was to be made to raise \$1,000.

"Antimission" Baptists.—At a general meeting of the Regular Baptists of America—commonly called Antimission Baptists—held with Lick Creek Church, near Connorsville, Ind., Nov. 22, 23, and 24, 1892, a resolution was adopted

That the churches be recommended, at their stated meetings, to make as the subject of special prayer the outpouring of the Spirit of God upon our ministry and membership, for our general prosperity, and for the sending forth of laborers into the Lord's harvest at home and abroad, as he in his wisdom may direct.

The education of ministers, missions, and Sunday schools were commended in an "Address to all True Regular Baptist Churches of America." The report of the Committee on Evangelistic work, which was adopted, recited that it could not be doubted that in no part of the service which the people of the churches owed to the Lord had they been so deficient as in the missionary spirit. "And in due proportion to this neglect," the report continues,

has been the spiritual dearth which has fallen upon them and well-nigh taken away their existence. If they would return to the favor of their Lord, it must be in the way of that commandment which has enjoined upon the ministry the preaching of the gospel to every creature in all the world, until the consummation of the age of grace. . . . As yet we have no missionary in a foreign field. Why should not our hearts long for the honor of seeing sent forth, in answer to our prayers, chosen men of God? And why should not the honor be ours of aiding them in their self-denying labors in behalf of fellow-mortals burdened with superstition and darkness? The way of God has been to cause the work of his servants at home and abroad to act and react upon each other. In return for the interest shown to the poor and benighted of other lands, God has abundantly revived the waning energies of his people at home. Others are already in the field: why stand we idle and indifferent to the misery of men and the glory of our precious Redeemer?

Mission boards, however, were not favored, but rather "messengers" appointed by the churches to manage missionary work. Another report recommended

The establishment of Sunday schools in all the churches for the benefit of the membership of both sexes and every age. This will not supersede the necessity of home instruction in the Bible, but rather stimulate and encourage it, besides providing for some who have not the blessing of home instruction.

Baptists in Great Britain and Ireland.—The following are the statistics of the British Baptist Churches:

	Churches.	Ministers.	Reported baptisms.	Members.
England.....	1,592	1,181	8,665	904,608
Ireland.....	35	22	199	1,946
Scotland.....	99	88	818	12,721
Wales and Monmouthshire.....	742	468	5,508	94,895
Channel Islands.....	5	4	4	244
Nonreporting churches.	840	100	22,000
Total.....	2,508	1,858	15,184	155,409

Baptist Union of Great Britain and Ireland.—The Baptist Union of Great Britain and Ireland met in London, April 24. The Rev. T. M. Morris presided. The report of the council showed that the number of members had increased from 334,763 to 387,409; that 15,187 members had been baptized during the year; that £58,070 had been expended on new chapels; £36,457 on improvements, new schoolrooms, etc.; and £64,302 toward the removal of debt. The triennial report of the statistics of the world showed, since 1889, an increase of 1,908 churches and 227,086 members. A special report, which grew out of a discussion of the subject at the autumnal assembly of 1892, was adopted on the subject of village churches. It alleged that the difficulties under which these churches were laboring arose from two sources: the depletion of rural populations, and the latent and active opposition of the state church organization, now specially manifest in a sectarian policy with regard to elementary education. It suggested as the necessary remedies for them: provision of trained local preachers able to supplement and support the work of the village pastors; fraternal oversight of the smaller churches by stronger churches in the adjacent larger centers of population; and for churches not in charge of pastors, the appointment as lay pastors, from among the staff of local preachers or otherwise, of men with weight of Christian experience.

The year's receipts of the Baptist Missionary Society had been £60,879, and the expenditure £74,958, while the indebtedness had risen to £30,514. The committee proposed to pay off the whole of the debt out of the Centenary fund. An increase of £15,000 in the annual receipts was needed to secure an equilibrium between present income and outgoings, and an effort was recommended by the treasurer to secure a permanent annual income of £100,000. The contributions to the Centenary fund up to March 31, with accrued interest on the sums that had been paid in, amounted to £113,500; of this sum £103,280 had actually been paid in cash. The missionary staff had been increased by 10 laborers, commissioned to the Congo, India, China, and Ceylon. Reports of steady progress were received from the foreign fields, India, China, Ceylon, Palestine, the Congo, and the European missions. The Congo Mission now

included 3 principal stations on the lower Congo and 6 on the upper Congo, with 30 missionaries. By virtue of their larger experience, the missionaries understood far better than they had ever done before how to guard themselves from the trying effects of the climate. A marked advance was reported in the independence of the native churches. There were now 10 self-supporting churches in India, and some even on the Congo.

The expenditures of the Zenana Missionary Society had been £8,700, while the income had been £8,400. The society was at work in 22 centers, with 58 zenana visitors, 176 Bible women and native teachers, and 72 schools; and Bible reading was conducted in 1,600 houses. Three new workers were to go out to India.

After sixty years of working on separate lines, an agreement had been reached between the Bible Translation Society and the Bible Society for the publication of the Congo version of the Bible, under which the Bible Society agreed to print the version with Congo equivalents for the words *immerse* and *immersion* in the text, on condition that the Greek term *baptize* or its cognates should follow them in brackets. A similar agreement was anticipated respecting the Oriya version. The Congo version, it was explained, would be of service in a territory covering some 58,000 or 60,000 square miles, or an area about as large as that of England and Wales.

The capital of the Baptist Building fund amounted to £51,368. During the past year loans free of interest and repayable by installments had been granted in the amount of £11,000 to 46 churches. Since the institution of the fund more than a thousand cases had been helped by grants amounting in the aggregate to £217,456.

The autumnal sessions of the Union were held at Reading, beginning with the missionary meetings, Oct. 2 and 3. The addresses at the latter meetings related to the necessity of missions, the claims of rural churches, mission work in London, the problem of Christian work in the cities, and the privilege of the young in relation to foreign missions. At the meeting of the Union proper, the president, Rev. T. M. Morris, spoke on the duty of Baptists to act as Christ's representatives, agents, and witnesses; and addresses were made on the equipment of Sunday-school teachers, socialism—which, it was maintained, should be a handmaid to Christianity, not a substitute for it—theosophy, and "the falsehoods of secularism." Resolutions were adopted sympathizing with the Stundists, or Russian Baptists, in their trials (from persecution); and demanding, in view of recent proposals to introduce denominational teaching into board schools, and to secure rate aid for schools under denominational management, that, in accordance with the provisions of the Education act, "no religious catechism or religious formulary which is distinctive of a particular denomination" shall be taught in board schools; that no rate aid shall be given to a school in which such catechism or formulary is taught, or to any school which is not under the control of a school board; expressing the opinion that in the event of the proposals referred to being pressed, "the time has come for the exclusion of denominational teaching from every

public elementary school which receives a grant from Government or from the local authorities; and for the placing of all such elementary schools under the management of boards elected by householders who pay rates and taxes." The Church extension scheme was commended, and the holding of meetings in behalf of it in the large towns was advised. A conference was held in the interest of "village churches."

German Baptist Union.—The German Baptist Union includes the Baptist churches in Germany and other countries of Europe. It returns, for 1892, 112 churches in Germany and 31 outside of Germany, with 302 pastors, 64 ministers and colporteurs, and 460 helpers; and these churches are owners of 158 chapels or places of worship. The whole number of members at the end of 1892 was 28,254, of whom 22,958 were in Germany; number of Sunday schools, 122, with 1,760 teachers and 20,732 pupils; of members of young men's societies, 2,040; of members of young women's societies, 2,425. Amount of contributions, 358,939 marks for the German churches, and 70,589 marks for the others.

BELGIUM, a constitutional monarchy in western Europe. The reigning sovereign is King Leopold II, born April 9, 1835, son of Leopold I, who, as Prince of Saxe-Coburg and Gotha, was elected the first King of the Belgians by the National Belgian Congress on June 4, 1831. His mother was Louise, daughter of Louis Philippe, King of the French. He ascended the throne on the death of his father, Dec. 10, 1835. The heir presumptive is Prince Albert, born April 8, 1875, only surviving son of Philippe, Count of Flanders, the King's brother. The succession is restricted to male descendants of the royal line in the order of primogeniture.

The ministry, constituted on Oct. 26, 1894, is composed of the following members: President of the Council and Minister of Finance, A. Beernaert; Minister of Justice, J. Lejeune; Minister of the Interior and of Instruction, J. de Burlet, who succeeded J. Devolder in 1892; Minister of Agriculture and Public Works, L. Debruyn; Minister of Railways, Posts, and Telegraphs, J. H. P. van den Peereboom; Minister of War, Lieut.-Gen. C. Pontus; Minister of Foreign Affairs, Count de Mérode, who succeeded Prince de Chimay in 1892.

Area and Population.—The area in square kilometres, and the population of the various provinces and of the total kingdom on Dec. 31, 1891, were as follow:

PROVINCES.	Area.	Males.	Females.	Total.
Antwerp	2,892	358,297	355,503	713,740
Brabant	3,233	545,729	575,247	1,120,976
East Flanders ..	3,000	476,823	478,693	955,520
West Flanders...	3,225	370,259	373,949	744,188
Hainault	3,722	593,763	522,974	1,083,737
Liège	2,995	114,143	109,833	223,981
Luxembourg	4,418	107,896	104,233	212,041
Namur	3,660	167,510	163,735	331,245
Total	29,457	3,060,576	3,075,568	6,136,444

The population of the principal cities were as follows: Antwerp, 232,723; Brussels, 180,147; Liège, 153,324; Ghent, 150,223; Schaerbeek, 53,127; Malines, 51,558.

Commerce.—The general commerce for 1891 amounted to 3,119,623,667 francs of imports,

and 2,847,005,898 francs of exports. The special imports for 1891 were valued at 1,799,800,000 francs, and the special exports at 1,519,000,000 francs. The values of the chief classes of special imports were as follow: Cereals, 450,960,000 francs; textile materials, 188,467,000 francs; vegetable substances, 121,277,000 francs; chemical products, 87,753,000 francs; minerals, 73,373,000 francs; timber, 67,961,000 francs; resinous substances, 66,057,000 francs; hides and skins, 64,862,000 francs; cloths, 55,703,000 francs; coffee, 54,995,000 francs; live animals, 51,207,000 francs; metals, 47,298,000 francs; animal substances, 38,084,000 francs; meat, 32,015,000 francs; yarns, 23,581,000 francs; wine, 28,327,000 francs; coal, 28,120,000 francs; fertilizing material, 24,163,000 francs; machinery, 18,800,000 francs; colors and dyes, 17,840,000 francs; vegetable oils, 17,364,000 francs; rice, 15,788,000 francs. The principal exports of domestic products were the following: Yarns, 165,435,000 francs; cereals, 165,369,000 francs; machinery, 108,110,000 francs; textile materials, 81,384,000 francs; vegetable substances, 63,176,000 francs; iron, 62,911,000 francs; hides and skins, 55,342,000 francs; cloth, 52,909,000 francs; sugar, 47,694,000 francs; glass, 45,103,000 francs; chemical products, 44,698,000 francs; meat, 43,273,000 francs; zinc, 38,775,000 francs; animal substances, 35,860,000 francs; mineral substances, 33,903,000 francs; fertilizers, 29,938,000 francs; live animals, 28,950,000 francs; steel, 22,624,000 francs; arms, 22,023,000 francs; stone, 21,823,000 francs; resinous substances, 19,901,000 francs.

The values of the special imports from and exports to the principal foreign countries in 1891 are given in the following table:

COUNTRIES.	Imports.	Exports.
France.....	326,774,740	378,671,821
Great Britain.....	199,477,549	265,687,609
Germany.....	179,567,626	312,772,818
Netherlands.....	196,617,388	225,681,123
United States.....	199,913,886	55,299,161
British India.....	121,691,222	9,042,515
Russia.....	116,210,282
Roumania.....	109,939,502
Argentine Republic.....	86,904,261	11,511,312
Sweden and Norway.....	46,469,927	18,662,550
Brazil.....	32,142,466	23,829,948
Italy.....	24,857,725	27,473,958
Spain.....	16,977,920	81,869,891
Switzerland.....	80,089,655
Peru.....	22,109,791
Egypt.....	12,666,568	10,865,627
Turkey.....	19,718,711
Australia.....	19,607,459
Chili.....	15,766,985
Austria.....	10,375,967

Navigation.—During 1891 there were 7,395 vessels, of 6,025,339 tons, entered, and 7,377, of 6,060,913 tons, cleared. Of the vessels entered, 3,954, of 2,257,348 tons, came from British ports, and the next largest number, 335, of 665,523 tons, from the United States; while 5,049, of 2,628,904 tons, cleared for England, and 268, of 588,706 tons, for the United States.

The mercantile marine in 1891 consisted of 8 sailing vessels, of 2,045 tons, and 47 steamers, of 70,860 tons.

Railroads, Posts, and Telegraphs.—The railroad network in 1892 comprised 4,517 kilometres of lines, of which 3,241 kilometres were operated by the Government, and 1,276 kilo-

metres by companies. During 1891 the state railroads carried 67,439,478 passengers, the other railroads 19,107,832. The receipts of the state lines were 142,815,489 francs, and the expenses 84,049,923 francs; the companies took in 40,771,032 francs, and had 20,826,302 francs of expenses. The capital cost of the state railroads up to 1891 was 1,341,245,043 francs.

The post-office in 1891 forwarded 97,802,555 private and 18,484,731 official letters, 37,226,241 postal cards, 81,978,680 printed inclosures, and 96,287,637 journals. The receipts were 17,021,805 francs, and the expenses 9,747,843 francs.

The number of telegraphic dispatches for the year was 8,445,593. The receipts were 3,965,008 francs and the expenses 4,349,752 francs. There were 7,225 kilometres of lines, with 34,397 kilometres of wires.

The Army.—Under the military laws of 1870 and 1873, modified by the act of Dec. 19, 1890, the regular army is recruited by voluntary enlistment and by conscription in such manner that about 18,300 men are called into the service annually. Substitution is allowed, but no greater price than 1,800 francs must be paid for a substitute. The peace effective is as follows: 118 officers of the general staff; 262 officers and 869 men employed in the administrative service; 222 surgeons; 1,745 officers and 28,810 men, composing 58 battalions, 415 cadres of battalions, and 2 sedentary companies; 61 officers and 2,447 men, forming 9 companies of gendarmerie, with 1,633 horses; 304 officers and 5,744 men, forming 40 squadrons of cavalry and 8 cadres, with 5,520 horses; 290 officers and 3,400 men, composing 34 field batteries and 14 cadres, with 204 guns and 2,542 horses; 146 officers and 4,518 men, including 108 artificers, composing 58 batteries and 4 companies of fortress artillery, besides 4 cadres; 29 officers and 402 men in the train; and 146 officers and 1,541 men in the engineers; making a total of 8,421 officers and 47,731 men.

The civic guard, a volunteer militia maintained in places of over 10,000 inhabitants, numbers 42,827 men. Inclusive of these the war effective is 8,846 officers and 134,881 men, with 25,369 horses, divided as follow: Field army, 2,190 officers and 74,333 men; fortress troops, 1,609 officers and 59,134 men; territorial gendarmerie, 47 officers and 1,414 men.

The behavior of the soldiers of the regular army during the strike for universal suffrage in April, 1893, led to an inquiry into the discipline and composition of the army and the revival of the old question of the introduction of universal obligatory service, which is regarded as a concomitant of universal suffrage on the Continent of Europe. Gen. Pontus, who had allowed the question to slumber during his nine years' tenure of the Ministry of War, resigned in May, and was succeeded by Gen. Brassine. The new minister went to work to devise a project for the reorganization of the army on the basis of universal liability to personal service. An increase of the war strength of the regular army to 300,000 men is contemplated, and also the conversion of the Civic Guard into a Landsturm capable of placing 100,000 men in the field in case of a hostile invasion.

Finances.—The revised budget for 1893 makes the total ordinary revenue 344,589,828 francs, of

which 138,000,000 francs come from railroads, 41,792,580 francs from excise duties, 24,647,700 francs from the direct property tax, 23,604,149 francs from customs, 20,000,000 francs from registration duties, 19,560,000 francs from succession duties, 19,180,000 francs from personal taxes, 12,915,100 francs from the sinking fund and other securities and the national bank, 10,919,800 francs from the post-office, 8,800,000 francs from trade licenses, 6,050,000 francs from stamps, 8,449,000 francs from other indirect taxes, 4,100,000 francs from telegraphs, 3,490,999 francs from repayments, 2,700,000 francs from navigation and pilotage dues, 1,880,000 francs from domains and forests, and 1,000,000 francs from mines. The total ordinary expenditure is estimated at 840,712,265 francs, of which 103,462,487 francs are for railways, posts, and telegraphs, 103,218,773 francs for the interest and sinking fund of the national debt, 46,801,152 francs are allotted to the Ministry of War, 23,142,570 francs to the Ministry of the Interior and Public Instruction, 18,484,427 francs to the Ministry of Justice, 17,077,668 francs to the Ministry of Public Works, 15,540,525 francs to the Ministry of Finance, 4,705,900 francs to the civil list and dotations, 4,254,400 francs to the gendarmerie, 2,495,363 francs to the Ministry of Foreign Affairs, and 1,529,000 francs represent repayments.

The capital of the public debt in 1892 was 2,314,854,124 francs, nearly the whole of which was raised for railroad construction and other useful works. Of the total debt, 1,290,935,757 francs bear interest at $3\frac{1}{2}$ per cent., 543,333,350 francs pay 3 per cent., 250,192,000 francs consist of railroad annuities paying $4\frac{1}{2}$ per cent., 219,959,632 francs represent the share of Belgium in the old debt of the Netherlands, on which $2\frac{1}{2}$ per cent. is paid and no sinking fund is provided, and 4,433,235 francs consist of various unfunded liabilities.

Electoral Reform.—In the Constituent Assembly, elected to revise several articles of the Constitution, and especially to extend the franchise, the Government majority was smaller than in the preceding Chamber. A two-third majority was necessary for any amendment to the Constitution, and this could only be obtained by a coalition of the Ministerial party either with the Moderate Liberals or with the Advanced Left. Under the existing law the right of suffrage was restricted to citizens twenty-one years of age paying at least 40 francs annually in direct taxes. The qualifications for Deputies, the number of which must not exceed 1 to every 40,000 inhabitants, were that they should be Belgians by birth or naturalization, residing in Belgium, and at least twenty-five years of age. The Deputies are elected for four years, elections taking place every two years to replace half the number, and those who do not reside in the capital receive an allowance of 423 francs a month. The Senators have been chosen by the same electors. There are half as many of them as of Deputies, and they serve for twice the period, and are chosen from a more restricted class, men forty years old or over who pay 2,116 francs of direct taxes, except that in districts where not 1 in 6,000 of the population has this qualification, those who pay the next highest taxes are added to make the list of eligible persons 1 to every 6,000 inhabitants. The franchise under this electoral system is prac-

tically confined to the middle and upper classes. The working people of the towns and mining districts, in anti-Clericalism standing by the Radicals, but generally devoted to an extreme type of socialism, while only a small proportion of the Radicals were but mildly socialistic, had no votes. The great mass of the agricultural population, loyal Catholics, and upholders of religious education, was likewise excluded from the franchise. The Belgian plutocracy, owning and directing all the resources of this wealthy and distinguished above similar classes elsewhere for its collective opulence, has under the Constitution possessed the right to elect the lawgivers and dictate the legislation of the country. The same Constitution grants unusual freedom of speech, printing, assemblage, and association, and the industrial laborers, proportionately more numerous than in the neighboring countries where they possess votes, more poorly paid than in most countries, but not less educated or intelligent, have not only imbibed socialistic theories without hindrance, but are filled with the conviction that their masters have deliberately excluded them from a voice and representation in the Legislature for the purpose of selfishly exploiting their labor and withholding the advantages and protection which the labor vote and working-class representatives have secured from the legislatures of other countries. This situation has been prolonged for years because the politicians of both parties feared that any extension of the franchise would be followed soon by universal suffrage, under which the prosperity of the country would be swamped by socialistic legislation. Before socialism was rife, when the Liberals were in power, they would not lower the property qualification, because that would admit agricultural voters who would elevate their opponents to office. The Clericals could promise any kind of an extension in this direction, for it would perpetuate their tenure of office and prevent the anticipated return of the Liberals, and the latter desired to qualify the plan so as to admit enough urban voters to counterbalance the enfranchised Catholics of the rural districts. When the question was once opened the agitation for universal suffrage attained such dimensions that the politicians foresaw the necessity of giving some degree of representation to the working class in order to avert a revolution. The Radical party adopted the principle of universal suffrage, pure and simple.

The first project submitted to the Constituent Assembly by the Government was purely a party measure, though it would have the effect of increasing the electorate from 135,000 to 600,000. It was denounced as such by the Liberals, and the Labor party replied with a threat to proclaim a universal strike as a protest in favor of manhood suffrage. On Jan. 2, 1893, the ministry laid before the special committee of Parliament a fresh set of proposals, providing for a less liberal extension of the franchise in order to effect a compromise with the Moderate Liberals and divide the new franchises with a show of fairness between the small landholders and those possessing intellectual qualifications. The franchise would be granted to owners of houses worth 2,000 francs and to tenants of houses worth 3,000 francs in towns of 20,000 and over, 2,700 francs in smaller towns, and 1,800 francs in places of less than

3,000 inhabitants; also to persons producing a university diploma or a certificate of college education, or who pass an examination in the elementary standards. The age for exercising the franchise would be raised to twenty-five, and voting would be compulsory and penalties enforced against citizens who neglected to fulfill their duty toward the state. The Moderate Liberals were not enticed by this specious concession to their ideas, because, on computing the effects of the scheme, they saw that it would insure Clerical predominance. In treating for the co-operation of the Moderate Liberals, Beernaert dropped the projects of minority representation and a referendum to which he had committed himself in the previous session, and in dealing with the Senate proposed only a sham reform which would leave it an Assembly of the very rich not less exclusively than before. The leaders of the various parties and subordinate groups brought in their plans for revision, some 16 in all. Frère-Orban, the former Minister-President and leader of the powerful united Liberals, now followed by less than 20 old-fashioned *doctrinaire* Liberals, adhered to a simple capacity qualification, suggesting the exclusion from the franchise of all who have not passed an elementary educational standard. Janson, the Radical chief, called for universal suffrage, with twenty-one as the electoral age and a year's residence. Nothomb suggested raising the age for voting to twenty-five, and requiring a domicile of two years as a conservative counterpoise to universal suffrage. Graux would exclude illiterates and persons in receipt of public or private assistance. Beernaert, despairing of an alliance with the Moderate Left, approached the Radicals with a suggestion that the lowest educational test—a knowledge of reading and writing—should confer the right of suffrage equally with the restricted household qualification demanded by the Clericals.

A Popular Referendum.—The King on various occasions had shown his sympathy with the popular demand for universal suffrage voiced by the Radical-Socialist combination. He also cherished a plan for placing the sovereign in peculiar direct relation with the enfranchised democracy by an adaptation of the Swiss referendum. He desired to have embodied in the revised Constitution a law granting him the liberty of consulting the people in regard to any bill that should come to him, by ordering of his own motion a popular vote on the advisability of signing or vetoing the measure. The Prime Minister had given his approval to this scheme, but he had omitted it from the programme on failing to secure for it the support of the Right. The people were pleased with the idea, and it occurred to the Labor leaders and Radicals to exhibit the workings of the machinery of the referendum in a *plébiscite* on the various projects of electoral reform that were before the Chamber. The communal councils of the suburban communes of Brussels were the first to vote at a joint meeting to hold an unofficial referendum on Feb. 26, in which all male citizens over twenty-one years of age should be invited to take part, those who were electors under the existing law being distinguished by ballots of a special form. The city of Brussels and all the chief towns and many rural communes took

up the idea. The advocates of universal suffrage carried on a lively propaganda, and went about everywhere explaining the project and urging the people to take part. The country was flooded with pamphlets and placards, and party orators even made the rounds of the cafés and eating-houses. The Clerical-Conservatives and the Moderate Liberals generally ridiculed the project, and advised their constituents to abstain from voting. The referendum was taken, in some places earlier, but generally throughout the kingdom on Sunday, Feb. 26. About 56 per cent. of the electors went to the polls, a larger proportion than is common in the Swiss referendum. An overwhelming majority of votes were given for universal suffrage, in Brussels; for instance, 78 per cent. for manhood suffrage at twenty-one years, 14 per cent. for manhood suffrage at twenty-five, and only 8 per cent. for the various schemes of Graux, the Prime Minister, and Frère-Orban.

A Political Strike.—The Chamber, which resumed its discussion of the franchise question on Feb. 28, was impressed by the results of the unofficial referendum, and the Prime Minister showed anxiety to effect a compromise that would not sacrifice the principle of household suffrage. The popular referendum was resorted to in Antwerp and other places which had not voted before as a protest against the apathy of the Chamber, which came to a deadlock and seemed inclined to evade a decision by adopting a compromise arranged between the Clerical leaders and the Moderate Liberals, and announced by Count Kerchove de Denterghem, one of the latter, on April 9. It was proposed to admit all communal voters to the franchise immediately, which would increase the number of electors from 135,000 to 500,000; and, in case no completer solution could be reached by the Constituent Assembly, to delegate to the ordinary Chamber the power to enact or amend electoral laws at any time by a two-thirds majority. These proposals roused so much opposition that the Prime Minister refused to give them his sanction. Beernaert's revised plan of occupation suffrage would increase the number of electors to 800,000, which he considered a prudent half-way stage on the road to universal suffrage, as Belgium could not safely conform to this ideal expression of political equality by at once increasing the electorate from 135,000 to nearly 1,500,000. Vanderkindere and others of the Moderate Left were disposed to accede to the principle of occupation, provided rent and not the value of houses should be made the criterion, and on condition that the rural and urban districts should be separated. Janson receded from his original proposition, and accepted twenty-five years as the age qualification. Others of the Radicals fell in with a proposal, which emanated originally from the Young Right or Clerical Democrats, to establish manhood suffrage at twenty-five years of age and give dual votes to heads of families. For this compromise Féron obtained the adhesion of half the members of the advanced Left.

The Chamber on April 11 and 12 rejected all the revision propositions that had been submitted. When Janson's proposal for universal suffrage at twenty-five years of age and twelve

months' residence in the district was negated by 115 votes to 26, with 3 abstentions, a tumult arose among the people who thronged the approaches of the National Palace, and the police drove away the crowd with the flats of their swords and made many arrests. The council-general of the Labor party held a meeting in the evening and decided to issue a manifesto proclaiming the necessity for an immediate general strike. The strike had been anticipated by several thousand miners in the Borinage district, who coupled with the political protest a demand for higher wages. On the following day excited citizens gathered about the Parliament building, which had been surrounded by unmounted police, and the crowd swelled until it filled the park and neighboring streets. A mob of workmen made a rush to break the police line and ascend the steps of the building. They would have succeeded had not the reserve of mounted police charged with drawn swords. The mob met them with volleys of stones, but was finally forced back, many being cut or trampled and several policemen hurt. Similar disturbances took place in the streets near by and in other parts of the city. On the same day riotous miners demolished the buildings and machinery of a coal pit at Cuesmes, near Mons, attacked the Catholic club building, and held possession of the town. A municipal counselor was arrested as one of the leaders. At Quaregnon striking miners began to fill with rubbish the shafts of the pits, for the purpose of imprisoning men who were working below, and were dispersed with difficulty by the gendarmes. The strike spread among the smiths, wood workers, printers, and other trades, especially in the Verviers and Louvain districts. In the district of Mons alone 15,000 men went on strike in two days, and in Ghent 20,000. In Brussels and elsewhere the Civic Guard was called out.

The vote on household suffrage as proposed by the Government was 91 against 65, thus falling short of a two-thirds majority. The amendment of De Smet, regulating suffrage according to the amount of rent paid, though accepted by the ministry, was likewise rejected. Frère-Orban was able to obtain only 18 votes in favor of his proposal to endow with the franchise only those who have an elementary education. After all the various schemes had been voted down, Woeste, the Clerical leader, submitted a proposal for a qualification of 10 francs of taxes, or a rental of 100 francs. The plan of dual voting was brought forward by Prof. Nyssens, of the Louvain University, a member of the Young Right, and in another form by another Clerical.

On April 13 the rioters at Quaregnon raised barricades, and in Paturages there was a savage encounter with the police. In Brussels several thousand rioters marched through the streets, smashing the windows of unpopular citizens. The Socialist leaders, Volders, Vanderveld, and Maes, were arrested, but were soon liberated. Ex-Minister Woeste was assaulted in the street. An attempt to storm the office of the Catholic journal "*Le Patriote*" was frustrated by a charge of the Civic Guards. On April 14 the police made a vain attempt to disperse an immense crowd in front of the People's Hall, which the burgomaster had ordered to be closed.

Shots were fired and people struck down and trampled. Attempts to carry out the burgomaster's prohibition against street parades led to fierce collisions. At night workmen of the Labor party proceeded to open a meeting, in spite of the interdict of the authorities, and when the police interfered and tried to clear the wine shops and coffee houses, barricades were thrown up, the street lamps were extinguished, and in the fighting a great number were injured on both sides. The authorities were unable to carry out the prohibition of public meetings in the capital, but the leaders of the Labor party discountenanced the turbulence of their followers and restored comparative tranquillity. A brutal assault was committed on Burgomaster Buis on April 16, and in the evening a desperate conflict took place between the mob and the police. The strike became general, and the newspapers could not appear for lack of compositors. In Mons a dynamite bomb was exploded beside a church on April 16. On the following day rioters took possession of the streets for a labor procession, and when a body of militia, exasperated by the missiles thrown at them, fired into the crowd, killing 4 miners, the strikers charged upon the soldiery. A desperate hand-to-hand conflict ensued, in which the Civic Guard was finally victorious after many had fallen on both sides.

In Antwerp a thousand dock laborers struck, attempted to stop all work on the wharves, and fired with revolvers upon the gendarmes, who returned the fire. The police made several vain attempts to clear the streets. A squadron of mounted police was put to flight, and before the reserves appeared the mob had thrown up barricades, which they held with rifles and revolvers against police and militia. After three charges the rioters retreated firing. Several soldiers were hit. On the following day the strikers continued their efforts to hold the wharves and interrupt trade, and several times the police charged among them, cutting many with their swords. In Grummont the gendarmerie were able to break up a meeting only after a long struggle, in which a large number of persons were seriously injured. A collision occurred also at Courtrai. In Bourgerhout striking candle-makers, assaulting those who remained at work, were charged by the soldiers with fixed bayonets, and 4 were killed and 15 dangerously wounded.

Adoption of Universal Suffrage.—The revolutionary demonstrations of the populace wrought a sudden change in the character of the deliberations of the Chamber. On April 16 Janson and Féron announced that they and 40 other members of the Left would agree to the scheme of universal suffrage complicated by plural voting proposed by Nyssens. A compromise accepted by the Radicals was sure to stay the revolutionary tide, and the ministers were confronted with the alternative of abandoning the principles for which they had contended and accepting a measure practically identical with universal suffrage, since the safeguard of plural voting could be abolished at any time in response to a popular demand, or dare the people to a revolution that they could not suppress. The Belgian troops had not been called upon to put down the riots. Their sympathies were with the people, and several instances of insubordination occurred dur-

ing the crisis. Socialism had spread among the army to an unsuspected extent. The Socialists had posted up placards calling on soldiers and recruits to refuse to obey or serve until universal suffrage was triumphant. Soldiers of the reserve had fought in uniform alongside of the strikers against the worthless, undisciplined militia. On April 17 the Government announced its acceptance of the Nyssens proposal. The bill was reported by the committee on the following day, and was passed by 119 votes against 12, with 14 abstentions. The minority was composed of a section of the Moderate Left, under the lead of Frère-Orban, while those who did not vote were members of the Right and followers of Woeste. The result was acclaimed with cheers by the crowds assembled round the building. The leaders of the Labor party sent out a manifesto advising abandonment of the general strike, but reaffirmed their demand for universal suffrage pure and simple in the following resolution:

The Labor party, through its general council, records the inscription of manhood suffrage in the Constitution. It declares that it is thanks to the pressure of the universal strike that the Labor party has won this first victory. It resolves to persist in the work of propaganda, and to continue the struggle until it obtains the suppression of the plural vote and the establishment of political equality has been won.

The Senate passed the Nyssens bill on April 27 by 52 votes to 1, with 14 neutrals.

The scheme of plural or cumulative voting provided for in the Nyssens bill confers a vote on every male citizen at the age of twenty-five who has resided at least one year in the same commune and has never been convicted of a breach of the law. The bill confers an additional vote (1) upon every male citizen aged thirty-five years, who is either married or a widower, paying a Government tax of at least 5 francs, unless exempted from the tax on account of his profession; (2) upon every male citizen aged twenty-five years who is an owner of real estate of the value of at least 2,000 francs, or who has been inscribed for at least two years on the ledger of the public debt as the possessor of at least 100 francs in Belgian rentes, or has an equal income from savings-bank deposits; (3) upon every male citizen aged twenty-five years who is the bearer of a diploma of superior education, or of a similar certificate showing that he has attended a complete course of higher instruction in a public or private seminary, or that he is filling or has filled a public office, or is holding or has held a place, or is exercising or has exercised a profession implying superior education, the question as to what positions and professions are to be regarded as qualifying under this clause to be decided by law; no person is to be entitled to more than three votes, even though he possesses all four qualifications. The Government had embodied in its scheme of revision the new principle of obligatory voting. Many objected to making an experiment of it in Belgium, but the Labor party favored the idea because it would help to protect the independence of the workingman's vote by rendering illegitimate influence and intimidation difficult of concealment and preventing official obstruction of the ballot. The extension of the franchise made it necessary to have a polling place in each commune. Previ-

ously voters have gone to the chief town of the arrondissement to cast their votes, the Liberals desiring to remove them from the influence of the parish priests and landlords. The Government secured a two-thirds majority in both the Chamber and the Senate for compulsory voting and communal polling. The readjustment of electoral divisions was left to be arranged after the new Constitution goes into force. The immediate result of the extended franchise is expected to be some increase of the Catholic plurality. The number of electors under universal suffrage exceed 1,200,000. The number of supplementary votes under dual or plural qualifications is estimated at 700,000, of which 640,000 belong to heads of families and owners of property, and 60,000 come under the capacity qualification. A proposition to dispense with the necessity of the re-election of a member of Parliament on his being appointed a minister of the Crown was rejected at first by the House, but was reintroduced in the Senate and became a part of the amended Constitution.

Other Constitutional Amendments.—The Constituent Assembly had four other matters to deal with besides the reform of the franchise. One was the introduction of proportional representation or the representation of minorities in some form. The ministry advocated this innovation for the reason that the outcome of the elections under the new electoral system was so uncertain that the method of voting collective tickets established in Belgium might result in the deprivation of an entire political party of representation in Parliament. Of still more importance was the reorganization of the Senate. A third question to be decided was whether the constitutional right to acquire colonies should be accorded to the Legislature. This question had already been settled in principle, and the Constituent Assembly had only to register the decision reached by the previous Parliament, and thus remove the constitutional restriction that stood in the way of the transfer of the rights and duties connected with the Congo State from King Leopold to the Belgian state, and the execution of the arrangement for making it a Belgian colony. The other subject to be dealt with, in which also the King had a deep concern and which was brought forward at his express request, was the alteration of the law of succession to the throne. Since the death of Prince Baldwin, the continuance of the dynasty depends on the chances of life of Prince Albert, a youth of eighteen years. If Leopold II or his successor should die without leaving a male heir, or without choosing a successor and obtaining the approval of both Chambers, then Parliament can dispose of the throne by its free vote, or can even proclaim a republican form of government. The Senate initiated an amendment by which a crown prince who is excluded from the succession by reason of amorganatic marriage, is enabled to recover his rights.

The first proposal of the Government for the reorganization of the Senate left the method of election the same as for the Chamber, and made only a formal change in the conditions of eligibility. Property owners would be eligible whose possessions were valued at 500,000 francs, or in default of such, those who paid the highest taxes

in the proportion of 1 to 6,000 of population. To these were added a class confined to ex-ministers and high state functionaries. This proposal was simply intended to open the discussion and elicit the views of the parties. In the course of the discussion the ministers advocated making the Senate representative of interests—an idea that the King was supposed to favor. The various projects, including representation of interests, election by 2 degrees, a combination of both, and the fixing of the age of eligibility at thirty-five or forty, were all rejected in the Chamber by a majority of more than two thirds, on June 22. Fresh proposals were rejected, and on July 7, by agreement of the party leaders, the matter was referred back to the committee. At the end of two weeks votes were taken on various revised proposals with no better success. On July 23, a combination of the ministers and the leaders of the Radical Left secured a two-thirds majority for some of the provisions of a compromise project. This makes the future Senate consist of 76 Senators elected by universal and plural suffrage, and 26 elected by the provincial councils apportioned to the population. The latter were exempted from all property qualifications, but for eligibility by universal suffrage the Government insisted on requiring a candidate to be a taxpayer to the amount of 1,500 francs a year. The Extreme Left, though willing to restrict the suffrage to men over thirty years of age, and to abandon their stipulation that Senators should receive pay, objected to the exclusion of all citizens except the wealthy. The age qualification for candidates was fixed at forty years by general consent. The Radicals suggested a taxpaying qualification of 1,000 francs, and the admission of candidates who had sat eight years in the Chamber or were professors of universities or officers of certain trade bodies. When this compromise was rejected they proposed adding to the persons paying 1,500 francs taxes others of the largest taxpayers enough to make the list of eligible candidates equal 1 in 3,000 of population, or 2,000 for the whole kingdom, whereas the Government project, to which the ministers clung obstinately, would give only 1,200 qualified candidates.

Congress of Miners.—An International Congress of Miners was opened at Brussels on May 22. Among the delegates were six members of the British Parliament, one of whom—Samuel Woods, President of the Lancaster Miners' Association—was chosen president of the congress for the English-speaking section. Two others, Benjamin Pickard and Thomas Burt, were elected secretary and treasurer, and Calvignac, the workingman mayor of Carmaux, whose grievance against his employers caused the great Carmaux strike, was made president for the French language. Two new presiding officers were chosen each day. Two French Socialist delegates, Basly and Lamendin, were expelled from Belgium by order of the Government, and the Prime Minister, on being questioned in the Chamber, was sustained on the ground that these men had attacked the rights of Belgian laborers in France. They had declaimed against the importation of Belgian miners to take the places of French strikers in January, 1893, and in the congress

they had been the most energetic advocates of the principle of state interference against the arguments of a large section of the strong English delegation, but in this they were supported by nearly all the Continental delegates. The authorities, when interceded with, adhered to their determination, though no one could give an intelligent explanation of their arbitrary act. The object of the order of expulsion seemed to the congress to be to bring its proceedings into disrepute, and the motion to accept the invitation of M. Calvignac to adjourn to Valenciennes and conclude the deliberations on French soil was only defeated by the argument of the British Labor members of Parliament, Fenwick and Abraham, that this would be a surrender to the enemy. A resolution was passed begging the French and other foreign delegates to overlook the insult and continue their attendance. The British contingent was numerous enough to dominate the proceedings, and it was divided in opinion in regard to the legal eight-hour day, the principal question before the congress. The representatives of the Miners' National Union, the great and wealthy trade union of the miners of Northumberland, derided the policy of cringing to Parliament and petitioning for the legislative regulation of hours of labor, when by self-help and independent effort workmen can obtain their demands, as they had before state interference was thought of. The Miners' Federation of Great Britain, on the other hand, was in favor of a legalized working day, and its representatives were desirous of obtaining the sanction of the congress for a universal strike to obtain the eight-hour day. There were 38 British delegates present to represent the 339,500 trade unionists among the 560,000 miners of Great Britain. The 92,000 miners of France were represented by 14 delegates. The delegates expected from Germany were either imprisoned by their Government to prevent their attendance, or were absorbed in the electoral struggle then going on in their country, except one who was present to speak for 183,000 miners of Westphalia. There was also a single Austrian delegate representing 100,000 miners of Bohemia. Delegate Bailly, of Nottingham, introduced the important question of the meeting in the following resolution:

That this congress affirms the principle of the legal eight-hour day from bank to bank.

Boyle, of Northumberland, moved as an amendment:

That this congress, recognizing the great diversity in the natural conditions existing in the several nations, is of opinion that it is undesirable to delegate to parliament or legislature the power or right to fix the hours that adults shall labor in the mines, but would strongly urge on every nation and district to embrace every opportunity afforded them to reduce their working hours as far as may be practicable, without injuring themselves.

Basly, who is a member of the French Chamber, warmly defended the original proposition before his expulsion, and Binger, the Austrian delegate, Callewaert, in behalf of the Belgian miners, and other delegates, took the same view. In registering the vote the number of miners represented were counted, not the number of delegates or of trade societies that had delegates pres-

ent. The Englishmen who favored the amendment objected to allowing the German and Bohemian members to vote because the miners who sent them were not organized in trade unions, and the matter was compromised by granting to the British delegates votes proportionate to the number of miners in their districts, irrespective of the strength of the unions that they represented. The congress, by this mode of reckoning, represented 1,094,000 miners, of whom 100,000, through the delegates of the Durham and Northumberland union, voted against making eight hours a working day by legal enactment, and 994,000 voted in favor of it. On the motion of Weir, a Scotch delegate, the congress voted in favor of organizing a general strike, if necessary, as a means of constraining reluctant legislatures to grant their demand. The Welsh delegates joined those of Durham and Northumberland in opposing this, reducing the majority to 854,000. A resolution that female labor should be prohibited in and about mines in all countries was carried unanimously, and during the discussion the fact was pointed out that in Belgium 3,500 women still work under ground twelve or fourteen hours a day. A proposition that workers above ground about mines should benefit in the reduction of hours was approved by a majority of 299,000. Another resolution declares

That it is the opinion of this congress that mines inspection is insufficient; that a larger number of inspectors is required in order that the work may be done satisfactorily, and that men who are working or who have worked in mines should be appointed as inspectors of mines.

The congress closed its sessions on May 26, after deciding to hold the next conference in Germany, or, if the German authorities should forbid the meeting in that country, to hold it in England.

BERING SEA TRIBUNAL OF ARBITRATION. After the cession of Alaska to the United States by the Russian Government was consummated, in pursuance of the treaty of March 30, 1867, laws were enacted, July 1, 1870, extending to the mainland, islands, and waters of the territory ceded the laws of the United States relating to customs, commerce, and navigation; forbidding the killing of any otter, mink, martin, sable, fur seal, or other fur-bearing animal within the limits of the territory or in the waters thereof; and giving power to the collector or other officers of the Treasury to arrest persons and seize vessels and merchandise for contravention of the laws extended over the territory. Although in 1872 Secretary Boutwell could not see that the United States had jurisdiction or power to prevent the capture of seals on their annual migration to the seal islands by sealers from Australia and Hawaii unless they carried on their operations within a marine league of the shore, the Treasury Department in 1881, when Canadian sealers had begun to make inroads on the herd, ruled that all the waters within the boundary defined in the Russian treaty of cession "to the western limit of the Aleutian Archipelago and chain of islands" are comprised within the waters of Alaska Territory. The western limit of the territories and dominion conveyed to the United

States is defined in the treaty as running from a point midway between the islands of Krusenstern and Ratmanoff, in Bering Strait, nearly southwest, so as to pass midway between the northwest point of the island of St. Lawrence and the southeast point of Cape Chukotski to 172° of west longitude, and thence in a southwesterly direction, so as to pass midway between the island of Attu and Copper island of the Kommandorski group, to 193° of west longitude, so as to include the whole of the Aleutian Islands east of that meridian. The right to exercise jurisdiction in these waters beyond the three-mile limit was not put in force, though poaching vessels were spoken to by revenue cutters, till 1886, when an unusually large fleet having been fitted out in British Columbia for the coming sealing season, Secretary Manning affirmed the previous ruling, and in August the "Corwin" seized the "Onward," 115 miles from land, the "Carolina," 75 miles out, and the "Thornton," 70 miles out. These schooners were taken into Sitka, confiscated, and condemned to be sold, Judge Dawson instructing the jury to find the defendants guilty if they were proved by the evidence to have killed seal or other fur-bearing animals on the shores of Alaska or in Bering Sea east of 193° of west longitude. The British minister at Washington, Sir L. S. Sackville West, protested against the seizures, and the President instructed the authorities at Sitka to discontinue proceedings and release the captured vessels, Secretary Bayard at the same time explaining that the action was taken without conclusion of the questions involved, and refusing to give any assurance that the seizures would be discontinued. In the summer of 1887 the "Richard Rush" seized the "W. P. Sayward," "Dolphin," "Grace," "Anna Beck," "Ada," and "Alfred Adams," which were condemned; but the sale was postponed at the request of the British Government pending an investigation of the legality of the proceedings, until in November, 1888, the "Grace" and "Dolphin" were ordered to be sold at the desire of their owners.

Meanwhile, Secretary Bayard, on Aug. 19, 1887, sent circular letters to the United States ministers in England, France, Germany, Japan, Russia, and Sweden, instructing them to draw the attention of the governments to which they were accredited to the necessity of taking steps for the better protection of the fur-seal fisheries in Bering Sea, and to the desirability of attaining this end by international co-operation, "without raising any question as to the exceptional measures which the peculiar character of the property in question might justify this Government in taking, and without reference to any marine jurisdiction that might properly be claimed for that end." The several governments were invited "to enter into such an arrangement with the Government of the United States as will prevent the citizens of either country from killing seal in Bering Sea at such times and places and by such methods as at present are pursued, and which threaten the speedy extermination of those animals and consequent serious loss to mankind." Great Britain, as well as France, Japan, Russia, and Sweden and Norway, returned favorable replies to the proposition, although the Swedish Government declined

to take part in the negotiations because it had no immediate interest in the fisheries. Mr. Bayard proposed a close season from April 15 to Nov. 1, in Bering Sea between 160° of east and 170° of west longitude. The Russian Government proposed to include her part of Bering Sea around the Commander Islands and the sea of Okhotsk. Lord Salisbury assented to both the American and the Russian proposals, and suggested that the regulated area should extend to the parts of the Pacific Ocean and the sea of Okhotsk that lie north of 47° north latitude. The negotiations were suspended in June, 1888, by Lord Salisbury at the request of the Canadian Government, which desired to submit to him a memorandum on the subject.

During 1888, while these negotiations were in progress, no seizures were made. In 1889 the "Richard Rush" captured the "Black Diamond," "Juanita," "Pathfinder," and "Lily," and warned off the "Triumph." The "Black Diamond," whose catch of sealskins had been transferred to the revenue cutter, was placed in charge of a special officer of the United States, who was ordered to take her to Sitka, but the master took his vessel to Victoria. Sir Julian Pauncefote, the British minister to the United States, protested against these seizures, and the diplomatic controversy between Secretary Blaine and the Marquis of Salisbury was renewed. No seizures were made in 1890—excepting that the "Pathfinder" was seized in Neah Bay, Washington, on the previous charge, but released two days afterward—and before the sealing season of 1891, on June 15, a *modus vivendi* was agreed to, in accordance with which the British Parliament prohibited the taking of seals by British subjects in the American part of Bering Sea. The United States Government prohibited seal-killing for the season in excess of 7,500 to be taken on the seal islands for the subsistence and care of the natives, and both governments undertook to patrol the sea. Any person or vessel offending against the prohibition taken by the naval or other proper authorities of either government was to be delivered up to be tried by the judicial authorities of his own government. This arrangement was made with a view to a settlement of the whole question by a joint commission. It was agreed that suitable persons designated by Great Britain should be allowed to visit the seal islands during the season, and Sir George Smyth Baden-Powell and Dr. George M. Dawson were sent to study the conditions of seal life on the spot. The United States Government commissioned Prof. T. C. Mendenhall and C. Hart Merriam to make a similar investigation, and by arrangement between the Secretary of State and the British minister a conference of these commissioners took place in February, 1892. The Canadian Government, with the approval of the imperial authorities, had taken proceedings to have the question of seizures outside of the limits of the ordinary territorial maritime jurisdiction passed upon by the United States Supreme Court by applying for a writ of prohibition restraining the District Judge for Alaska from further proceedings in the case of the "W. P. Sayward," on the ground of lack of jurisdiction by reason of the fact of the seizure having

taken place 59 miles from land. This mode of testing the question and the plan of formulating regulations by direct conference with the aid of commissioners both gave way to Secretary Blaine's proposal to refer the whole matter to the decision of an international court of arbitration. The terms of the agreement of arbitration as proposed by him, and modified to meet the objections of Lord Salisbury, were as follows:

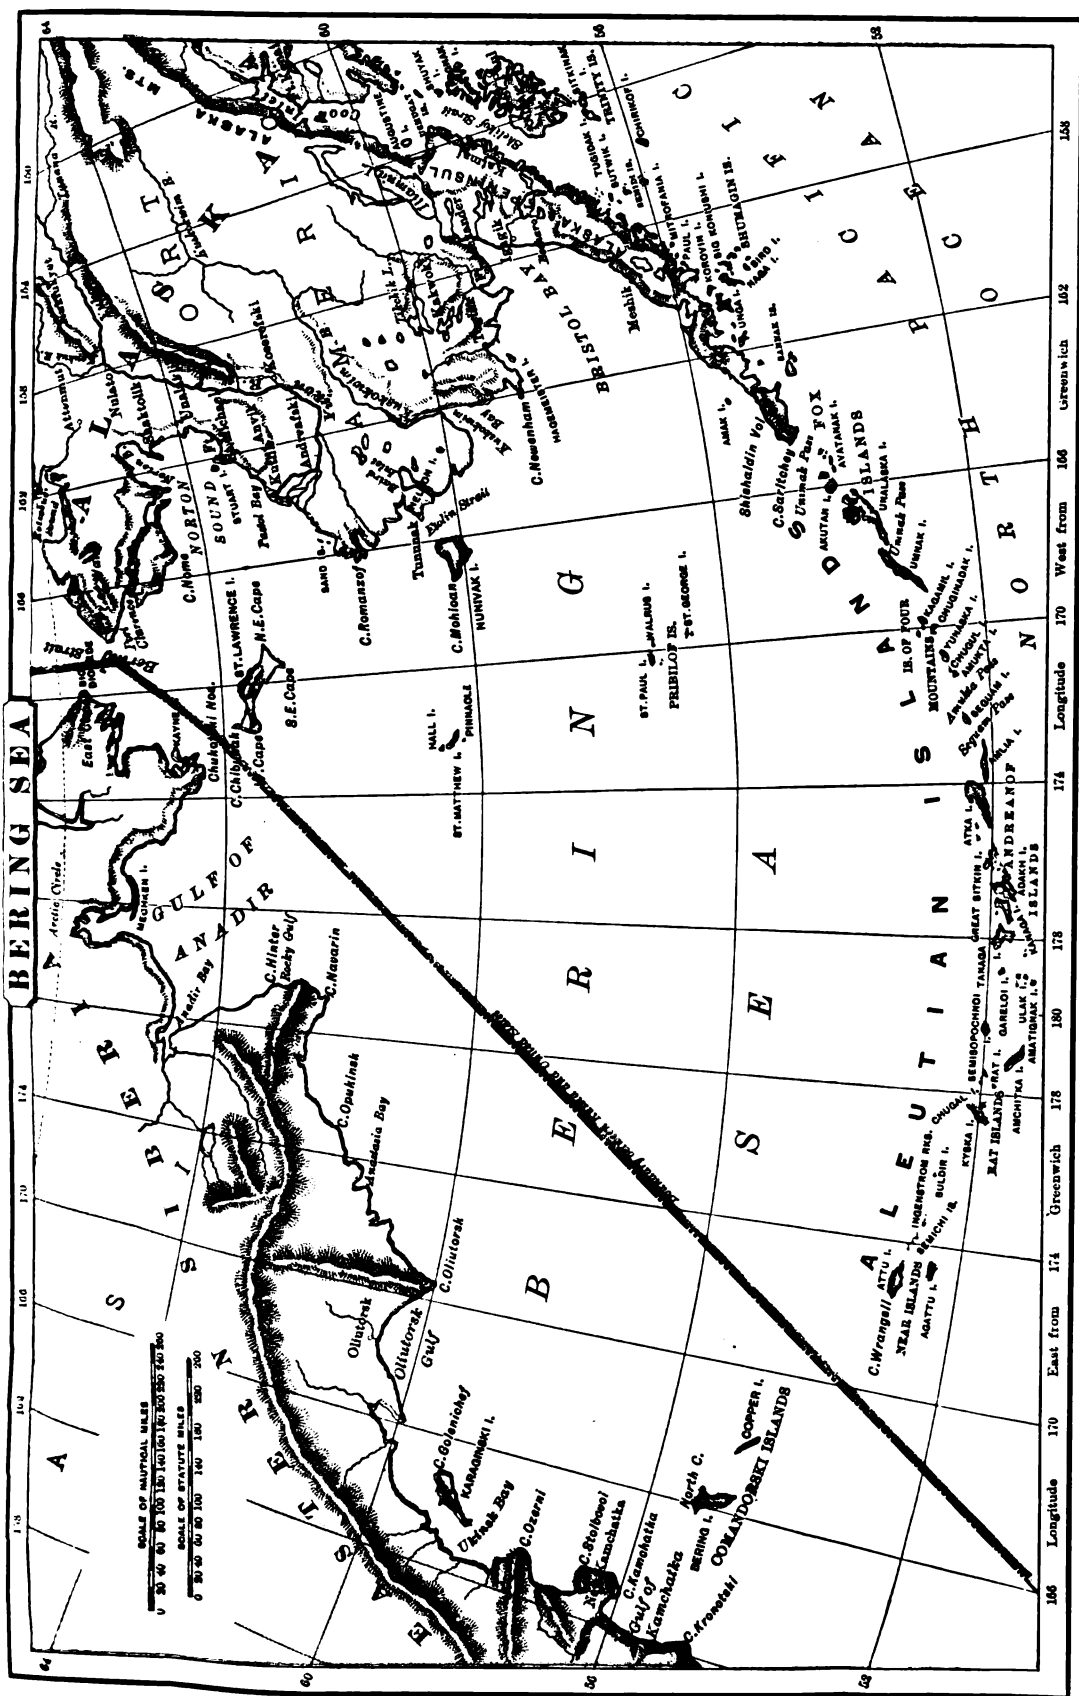

1. What exclusive jurisdiction in the sea now known as Bering Sea, and what exclusive rights in the seal fisheries therein, did Russia assert and exercise prior and up to the time of the cession of Alaska to the United States?
2. How far were these claims of jurisdiction as to seal fisheries recognized and conceded by Great Britain?
3. Was the body now known as Bering Sea included in the phrase "Pacific Ocean" as used in the treaty of 1825 between Great Britain and Russia, and what rights, if any, in Bering Sea were held and exclusively exercised by Russia after said treaty?
4. Did not all the rights of Russia as to jurisdiction and as to seal fisheries in Bering Sea east of the water boundary in the treaty between the United States and Russia of March 30, 1867, pass unimpaired to the United States under that treaty?
5. Has the United States any right, and, if so, what right of protection or property in the fur seals frequenting the islands of the United States in Bering Sea when such seals are found outside the ordinary three-mile limit?

The original draught of the treaty contained, besides the 5 points in which the United States Government contended for the rights of exclusive jurisdiction in Bering Sea and ownership in the seal herd of the Pribylov Islands, the following proposition, in which the regulation of the fisheries on the basis of mutual agreement is referred to the arbitrators:

If the determination of the foregoing questions shall leave the subject in such position that the concurrence of Great Britain is necessary in prescribing regulations for the killing of the fur seal in any part of the waters of Bering Sea, then it shall be further determined: (1) How far, if at all, outside the ordinary territorial limits it is necessary that the United States should exercise an exclusive jurisdiction in order to protect the seals for the time living upon the islands of the United States and feeding therefrom. (2) Whether a closed season, during which the killing of seals in the waters of Bering Sea outside the ordinary territorial limits shall be prohibited, is necessary to save the seal-fishing industry, so valuable and important to mankind, from deterioration or destruction. (3) And, if so, what months or parts of months should be included in such season and over what waters should it extend.

This question Lord Salisbury thought would more fitly form the substance of a separate reference. He did not object to the reference of the general question of a close time to arbitration, or to ascertaining by that means how far the enactment of such a provision is necessary for the preservation of the seal species; but thought that such reference ought not to contain words "appearing to attribute special and abnormal rights in the matter to the United States." The form of the question was altered after further correspondence, and it was embodied in the treaty in the following shape:

If the determination of the foregoing questions as to the exclusive jurisdiction of the United States shall

leave the subject in such position that the concurrence of Great Britain is necessary to the establishment of regulations for the proper protection and preservation of the fur seal in, or habitually resorting to, the Bering Sea, the arbitrators shall then determine what concurrent regulations outside the jurisdictional limits of the respective governments are necessary, and over what waters such regulations should extend.

To enable the arbitrators to deal with the alternative point, the treaty provided for the appointment of a joint commission to make an investigation, and report, if the arbitrators should call for it. Lord Salisbury proposed to add a clause for the determination and award of damages by the arbitrators to persons who have been injured, in case it should be decided that "the action of the United States in seizing British vessels has been without warrant in international law." The United States Government did not object to including the question of alleged damages to English ships, on condition that if, after the issues of the arbitration are joined, the United States should prevail, "all the seals taken by Canadian vessels during the period shall be paid for at the ordinary price for which skins are sold." No agreement was reached as to the reference of the question of damages, and the matter was left for future negotiation, a provision being introduced into the treaty which permitted either party to submit to the arbitrators any facts bearing upon the question.

Article I of the treaty, as finally arranged on Feb. 29, 1892, recited that the governments of the United States and Great Britain, being desirous to provide for an amicable settlement of the questions that had arisen between them concerning the jurisdictional rights of the United States in the waters of Bering Sea, and concerning also the preservation of the fur seal in, or habitually resorting to, the said sea, and the rights of the citizens and subjects of either country as regards the taking of fur seals, agree to submit the questions to a tribunal of arbitration, composed of seven arbitrators, to be nominated: 2 by the Queen of Great Britain, 2 by the President of the United States, 1 by the President of the French Republic, 1 by the King of Italy, and 1 by the King of Sweden and Norway. Articles II, III, IV, and V provided for the place and time of meeting and manner of procedure of the Tribunal of Arbitration. Article VI contained the questions as to existing rights of the United States submitted for arbitration. Article VII contained the reference regarding regulations for the protection of the seals. Article VIII provided that either of the contracting parties might ask for a finding on questions of fact involved in claims for damages, the question of liability on the facts found to be the subject of further negotiation. Article IX provided for the admission of the report of the joint commission of 2 American and 2 British commissioners who were sent to Bering Sea to study the habits of the seals and the condition of the herd. Articles X, XI, XII and XIII relate to payment of the expenses of the tribunal and to the time within which a decision should be rendered. Article XIV reads as follows:

The high contracting parties engage to consider the result of the proceedings of the Tribunal of Arbitration as a full, perfect, and final settlement of all the questions referred to the arbitrators.

Article XV related to the ratification of the treaty. The arbitrators appointed were: For the United States, Justice John M. Harlan, of the United States Supreme Court, and Senator John T. Morgan, chairman of the Senate Committee on Foreign Relations; for Great Britain, Lord Hennen, of the Judiciary Committee of the House of Lords, and Sir John S. D. Thompson, Prime Minister of the Dominion of Canada; for France, Baron de Courcel, former French ambassador at Berlin; for Italy, the Marquis Emilio Visconti-Venosta, a distinguished Italian diplomatist and former Foreign Minister; for Sweden and Norway, Judge Gregers W. W. Gram, a distinguished Norwegian jurist.

The islands of St. Paul and St. George, forming the Pribylov group, are the largest seal rookery in the world, and the only important one remaining in the north Pacific Ocean except the Commander Islands, belonging to Russia, on the opposite side of Bering Sea, which are inhabited by seals of an inferior variety which never mingle with the American herd. The seals inhabit the Pribylov Islands for eight months of the year, leaving them only for a day or two at a time to find food in the surrounding waters within a radius of 50 or 100 miles. The nursing dams seek the water oftenest, whereas the old bulls do not leave the rookery. The young are born during the summer, feed on nothing but their mothers' milk, which they take every two or three days for about four months, and at the end of that time have learned to swim well enough to seek their own food, though they are still poor swimmers, and for a long time afterward, for the seal is essentially a land animal. In the winter the entire herd leaves the islands, swimming southward into the Pacific Ocean, and then dispersing far and wide to the south and east. About May 5 the old bulls return to the rookery and seek their positions; they are followed by the rest of the herd, the cows, heavy with young, being the last to arrive. By the middle of July the entire herd has collected on the islands, the mature animals on the breeding-grounds, and the young males and yearling females on the hauling-grounds, which are remote from the rookeries. When a young bull has attained his growth, at the age of six or seven years, he can win a place in the rookeries by overcoming one of the decrepit old bulls in combat. For ninety years the seals have been preserved and bred on these islands under the supervision, first, of the Russian, and afterward of the American Government, which assumed by statute the control and management of the business soon after taking possession. Young male seals, known as bachelors, are selected for slaughter at the age and season when the fur is at its best. The slaughter takes place between June and October, with an intermission during a part of August and September, when the fur is not in good condition. The number that can be killed is fixed by law, and the regulations are carried out by officials of the Government in such wise that there shall be no diminution of the natural increase of the herd. No female is allowed to be killed, for that involves the cutting off of one young seal a year

from the natural increase during the natural term of the mother's life; whereas, if fourteen out of every fifteen young males are killed the product will not be diminished, for every bull serves as many as fifteen cows under the natural conditions of the herd, and can serve twenty or thirty. The annual slaughter on the hauling-grounds is conducted in such a way that the other seals are not frightened in the least.

Under the supervision and control of the United States Government the herd increased rapidly up to 1885, when it represented a capital value of about \$30,000,000. It was a source of revenue to the Government, which collected a royalty of about \$10 on each raw skin, amounting to over \$1,000,000 a year, and a duty on imported dressed skins amounting to about \$375,000 annually. The lessee company which farmed the business of obtaining and selling the skins made a large profit; and the manufacturers of London who dressed the skins and traders and retailers in various cities got their share; and the natives of the Pribylov Islands, the furbearers of London, and working furriers in the United States, France, England, and other countries were dependent on the industry for their livelihood. It was not till 1886 that this property and the industry depending upon it were seriously menaced. In that year a considerable fleet of vessels was fitted out in Victoria, British Columbia, by Canadian and American owners, to take seals on their return to the seal islands and in the adjacent waters where they sought their food outside of the three-mile limit. The field of this enterprise, as Mr. Blaine pointed out in a letter to Sir Julian Pauncefote, was "a sea which lies far beyond the line of trade, whose silent waters were never cloven by a commercial prow, whose uninhabited shores have no port of entry and could never be approached on a lawful errand under any other flag than that of the United States." The principle of self-preservation impelled the Government of the United States in that and subsequent years to check the invasion of "this peaceful and secluded field of labor, whose benefits were so equitably shared by the native Aleuts of the Pribylov Islands, by the United States, and by England," and to deny the right of Canadian vessels "to enter and by their ruthless course to destroy the fisheries, and with them to destroy also the resulting industries, which are so valuable." The measures taken to police Bering Sea, intermitted as they were in compliance with diplomatic protests and in the hope of securing an international arrangement of the dispute, did not prevent the serious depletion of the herd. The poachers improved their methods of destruction, fitted out steam vessels for the purpose, and increased their fleet until there were 49 vessels engaged in the work in 1892, and 67 were fitted out for the season of 1893. The number of seals killed by poachers reached 28,000 in 1891, and the depredations already committed had reduced the number allowed to be killed on the islands under the lease from 100,000 in 1886 soon to 60,000, and in 1890 to 21,000. The reason why pelagic sealing was so destructive was because the majority of the seals killed were females, and of those shot in the water only 1 in 5 or 6 was recovered.

The Bering Sea Arbitration Tribunal met in Paris on March 23. In accordance with precedents, Baron de Courcel was chosen president, and after organizing the court adjourned to examine the printed cases submitted by the United States and Great Britain, reassembling on April 4 to listen to the spoken arguments in their support. The agent representing the United States before the tribunal was ex-Secretary of State John W. Foster; the British agent was C. H. Tupper, Canadian Minister of Marine. The legal counsel for the United States Government were E. J. Phelps, ex-minister to England, Henry W. Blodgett, Frederic R. Coudert, and Robert Lansing. The counsel representing the British Government were Sir Charles Russell, Attorney-General, ex-Attorney-General Sir Richard Webster, the Hon. W. H. Cross, and C. Robinson, of the Canadian bar.

The arguments by which Secretaries Blaine and Bayard in the diplomatic controversy, and afterward the United States counsel before the Tribunal of Arbitration, supported the claim of the United States to prevent the destruction of the seals when they gather in the early summer in a vast body and return through the passes of the Aleutian Islands to their home, and while they leave the islands to hunt for food in the circumjacent waters, were of three kinds, based on territorial jurisdiction in Bering Sea, a right of private property in the seals, and the common interest of mankind in the preservation of the species and the prevention of its inhuman destruction for the temporary gain of sordid speculators. The United States claimed by virtue of the Russian cession exclusive maritime jurisdiction in their half of Bering Sea, based not on the old doctrine of *mare clausum*, but on a prescriptive right claimed and exercised by Russia with the acquiescence of Great Britain and other powers. In 1799 the Russian Czar had issued an ukase asserting exclusive dominion in Bering Sea, and on Sept. 4, 1821, Alexander I issued another, claiming for Russian subjects the exclusive right to pursue commerce, whaling, and fishing, or any other industry, "on all islands, posts, and gulfs, including the whole of the northwest coast of America, beginning from Bering strait to 51° of north latitude; also from the Aleutian Islands to the eastern coast of Siberia, as well as along the Kurile Islands from Bering strait to the south cape of the island of Urup, or to 45° 50' of north latitude." The foreign vessels were forbidden not only to land on the coasts and islands belonging to Russia but to approach them within less than 100 Italian miles, the transgressing vessel being subject to confiscation together with its whole cargo. Russia based its claim to sovereignty over Bering Sea and the part of the Pacific Ocean lying between its possessions on both shores on the ground of *mare clausum*. Both John Quincy Adams, then Secretary of State in Washington, and Mr. Canning, British Minister of Foreign Affairs, protested against the Russian pretensions. The outcome of the controversy was a treaty signed on April 17, 1824, between Russia and the United States and a similar treaty concluded with England on Feb. 28, 1825. In the American treaty Russia agreed that American citizens should not be restrained from fishing, navigat-

MOOSELOV PEAK, ALUTIAN ISLANDS.

ing, or resorting to the coasts, except at points occupied for the purpose of trading with the natives, in any part of "the great ocean commonly called the Pacific Ocean or South Sea." The treaty with Great Britain in like manner declares fishing, navigation, and trade to be free "in any part of the ocean commonly called the Pacific Ocean." The American diplomatists contended that the Sea of Kamchatka, or Bering Sea, was a distinct body of water not included in the phrase "Pacific Ocean" as used in these treaties, and supported this contention with documents and facts showing that Russia had always asserted and continued to assert and exercise jurisdiction over this sea. The translation of the ukase of 1799 granting a monopoly of trade and fisheries in Siberia and Alaska to the Russian-American company, submitted as evidence in the American case, was discovered by the British Government to be faulty, and the Department of State at Washington, having likewise discovered mistranslations and interpolations in this and other documents, withdrew them on Nov. 19, 1892. The case as presented to the tribunal was based less on positive rights in Bering Sea than on property rights in the seals, which, though *feræ naturæ*, were guided by a homing instinct, which brought them back unerringly to the seal islands. During the time and in the places where the United States authorities sought to protect them from destruction they were identified as members of the Pribylov herd. The *animus revertendi* induced them with the character of private property, as in the case of falcons, swans, bees, or other wild animals that have been reduced to possession. Moreover, it was opposed to natural justice, an immoral act, *contra bonos mores*, a violation of the law of nature, which is the same thing as international law, to ruin an industry useful to mankind that had been fostered and developed by the United States Government and kill off the female seals, usually destroying three lives, the cow shot in the water but not recovered once in five times, the calf on the island, which starves if the mother does not return to feed it, and the unborn calf, besides cutting off the future increase of the female killed. The American counsel before the Tribunal of Arbitration drew their principal argument from the law of nature, contending that the question must be adjudged in accordance with the principles and rules which are dictated by the "general standard of justice upon which civilized nations are agreed." They admitted that "there is no legislation in the ordinary sense of that word for the society of nations," but added, "nor in respect to by far the larger part of the affairs of life is there for municipal societies; and yet there is for the latter an always-existing law by which every controversy may be determined. The only difference exhibited by the former is that it has no regularly constituted body of experts called judges clothed with authority to declare the law. And this distinction is wiped away in the case of the present controversy by the constitution of this tribunal." Nor can there be any substantial difference of opinion concerning the sources to which we are to look for the international standard of justice. All law, whether it be that which governs the con-

duct of nations or of individuals, is but a part of the great domain of ethics. It is founded in each case upon the nature of man and the environment in which he is placed. There is a measure of uncertainty concerning the precepts of the law of Nature, an uncertainty in a greater or less degree found in all the moral sciences, but the actual practice and usages of nations, though not the only evidence, are the best evidence of what is agreed upon as the law of nations. These prove what nations have, in fact, agreed to as binding law, but in the absence of evidence to the contrary nations are to be presumed to agree upon what natural or universal justice dictates. The sources to which the arbitrators have to look in deciding the questions submitted to them therefore are: (1) The actual practices and usages of nations, which are to be learned from history and deduced from acts commonly done by one nation without objection from other nations, from treaties, and diplomatic correspondence; (2) judgments of courts which profess to administer the law of nations; (3) where the above-mentioned sources fail to furnish any rule, the dictates of right, reason, and natural justice; (4) the municipal law of states, so far as it speaks with a concurring voice; (5) the concurring authority of jurists of established reputation who have made the law of nature and nations a special study. The main contention was tersely presented by Mr. Phelps in the following paragraph:

Much learning has been expended upon the discussion of the abstract question of the right of *mare clausum*. I do not conceive it to be applicable to the present case. Here is a valuable fishery, and a large and, if properly managed, permanent industry, the property of the nations on whose shores it is carried on. It is proposed by the colony of a foreign nation, in defiance of the joint remonstrance of all the countries interested, to destroy this business by the indiscriminate slaughter and extermination of the animals in question, in the open neighboring sea, during the period of gestation, when the common dictates of humanity ought to protect them were there no interest at all involved. And it is suggested that we are prevented from defending ourselves against such depredations because the sea at a certain distance from the coast is free. The same line of argument would take under its protection piracy and the slave trade when prosecuted in the open sea, or would justify one nation in destroying the commerce of another by placing dangerous obstructions and derelicts in the open sea near its coasts. There are many things that can not be allowed to be done on the open sea with impunity, and against which every sea is *mare clausum*; and the right of self-defense as to person and property prevails there as fully as elsewhere. If the fish upon Canadian coasts could be destroyed by scattering poison in the open sea adjacent, with some small profit to those engaged in it, would Canada, upon the just principles of international law, be held defenseless in such a case? Yet that process would be no more destructive, inhuman, and wanton than this. If precedents are wanting for a defense so necessary and so proper, it is because precedents for such a course of conduct are likewise unknown. The best international law has arisen from precedents that have been established when the just occasion for them arose, undeterred by the discussion of abstract and inadequate rules.

In developing their argument the American counsel pointed out that there were precedents in the actual practice of nations for exercising legislative power on the high sea, not alone by

international agreement, as for the suppression of piracy or the slave trade, and not merely belligerent rights of self-defense, as in the capture of vessels for carrying contraband of war or running a blockade, but perfectly analogous rights of self-protection, as instanced by hovering acts permitting interference with vessels hovering about a coast under a different flag for the purpose of smuggling, or engaging in illicit trade with a colony, or rescuing convicts, and also by quarantine laws forbidding an infected ship from approaching within 4 miles of a port. If it should be determined that the United States has a property right in the Alaskan seal herd, or in the individual seals, or in the industry that it maintains on the Pribylov Islands, it follows as a necessary consequence that it has the right to prevent the invasion and destruction of its property interests by pelagic sealing by the employment of such force as may be reasonably necessary to that end.

The British case denied that Russia had asserted any jurisdiction in Bering Sea beyond territorial limits, except in the ukase of 1821, from which she had retreated; asserted that Bering Sea was a part of the Pacific Ocean defined in the treaties of 1824 and 1825; claimed that seals were wild animals, which were no more property than fish when found in the high seas; and assumed that the law of nations, instead of following abstract ethical principles of natural justice or dealing with the general interests of mankind or questions of humanity to animals, was restricted to positive international engagements and rights established by the consent of the nations.

The Tribunal of Arbitration rendered its decision on Aug. 15, as follows:

We decide and determine as to the five points mentioned in Article VI, as to which our award is to embrace a distinct decision upon each of them:

As to the first of said five points, we, Baron de Courcel, John M. Harlan, Lord Hannen, Sir John S. D. Thompson, Marquis Emilio Visconti-Venosta, and Gregers W. W. Gram, being a majority of said arbitrators, do decide as follows:

By the ukase of 1821 Russia claimed jurisdiction in the sea now known as Bering Sea to the extent of 100 Italian miles from the coasts and islands belonging to her, but in the course of the negotiations which led to the conclusion of the treaty of 1824 with the United States and the treaty of 1825 with Great Britain, Russia admitted that her jurisdiction in said sea should be restricted so as to reach a cannon shot from shore. It appears that from that time up to the time of the cession of Alaska to the United States Russia never asserted in fact or exercised any exclusive jurisdiction in Bering Sea, or any exclusive rights to the seal fisheries therein beyond the ordinary limit of territorial waters.

As to the second of the five points, we, Baron de Courcel, John M. Harlan, Lord Hannen, Sir John S. D. Thompson, Marquis Emilio Visconti-Venosta, and Gregers W. W. Gram, being a majority of said arbitrators, decide and determine that Great Britain did not recognize or concede any claim upon the part of Russia to exclusive jurisdiction as to the seal fisheries in Bering Sea outside the ordinary territorial waters.

As to the third point, as to so much thereof as requires us to decide whether the body of water now known as Bering Sea was included in the phrase "Pacific Ocean" as used in the treaty of 1825 between Great Britain and Russia, we unanimously decide and determine that the body of water now known as Be-

ring Sea was included in the phrase "Pacific Ocean" as used in said treaty.

On the fourth point we decide and determine that all the rights of Russia to jurisdiction and to the seal fisheries passed to the United States, limited by the cession.

On the fifth point we, Baron de Courcel, Lord Hannen, Sir John S. D. Thompson, Marquis Emilio Visconti-Venosta, and Gregers W. W. Gram, being the majority of said arbitrators, decide and determine that the United States have no right to the protection of or property in the seals frequenting the islands of the United States in Bering Sea when the same are found outside the ordinary 8-mile limit.

And whereas the aforesaid determination of the foregoing questions as to the exclusive jurisdiction of the United States leaves the subject in such a position that the concurrence of Great Britain is necessary to the establishment of regulations for the proper protection and preservation of fur seals habitually resorting to Bering Sea, we, Baron de Courcel, Lord Hannen, Marquis Emilio Visconti-Venosta, and Gregers W. W. Gram, being a majority of the arbitrators, assent to the whole of the nine articles of the following regulations as necessary outside of the jurisdiction limits of the respective governments, and that they should extend over the waters hereinafter mentioned:

1. The United States and Great Britain shall forbid their citizens and subjects respectively to kill, capture, or pursue at any time or in any manner whatever the animals commonly called fur seals within a zone of 60 miles around the Pribylov Islands, inclusive of the territorial water, the miles being geographical miles, 60 to a degree of latitude.

2. The two governments shall forbid their citizens or subjects to kill, capture, or pursue in any manner whatever, during a season extending in each year from May 1 to July 31 inclusive, fur seals on the high sea in that part of the Pacific Ocean inclusive of Bering Sea situated north of the thirty-fifth degree of north latitude or eastward of the one hundred and eightieth degree of longitude from Greenwich until it strikes the water boundary described in Article I of the treaty of 1867 between the United States and Russia, following that line up to Bering strait.

3. During the period of time in the waters in which fur sealing is allowed only sailing vessels shall be permitted to carry on or take part in fur-sealing operations. They will, however, be at liberty to avail themselves of the use of such canoes or undecked boats, propelled by paddles, oars, or sails, as are in common use as fishing boats.

4. Each sailing vessel authorized to carry on fur sealing must be provided with a special license issued for the purpose by its Government. Each vessel so employed shall be required to carry a distinguishing flag prescribed by its Government.

5. The masters of vessels engaged in fur sealing shall enter accurately in an official log book the date and place of each operation, the number and the sex of the seals captured daily. These entries shall be communicated by each of the two governments to each other at the end of each season.

6. The use of nets, firearms, or explosives is forbidden in fur sealing. This restriction shall not apply to shotguns when such are used in fishing outside of Bering Sea during the season when such may lawfully be carried on.

7. The two governments shall take measures to control the fitness of the men authorized to engage in sealing. These men shall have been proved fit to handle with sufficient skill the weapons by means of which seal fishing is carried on.

8. The preceding regulations shall not apply to Indians dwelling on the coast of the territories of the United States or Great Britain, carrying on fur sealing in canoes or undecked boats not transported by or used in connection with other vessels and propelled wholly by paddles, oars, or sails, and manned by not more than 5 persons, in the way hitherto practiced by the Indians, provided that such Indians are not

to take part in the negotiations because it had no immediate interest in the fisheries. Mr. Bayard proposed a close season from April 15 to Nov. 1, in Bering Sea between 160° of east and 170° of west longitude. The Russian Government proposed to include her part of Bering Sea around the Commander Islands and the sea of Okhotsk. Lord Salisbury assented to both the American and the Russian proposals, and suggested that the regulated area should extend to the parts of the Pacific Ocean and the sea of Okhotsk that lie north of 47° north latitude. The negotiations were suspended in June, 1888, by Lord Salisbury at the request of the Canadian Government, which desired to submit to him a memorandum on the subject.

During 1888, while these negotiations were in progress, no seizures were made. In 1889 the "Richard Rush" captured the "Black Diamond," "Juanita," "Pathfinder," and "Lily," and warned off the "Triumph." The "Black Diamond," whose catch of sealskins had been transferred to the revenue cutter, was placed in charge of a special officer of the United States, who was ordered to take her to Sitka, but the master took his vessel to Victoria. Sir Julian Pauncefote, the British minister to the United States, protested against these seizures, and the diplomatic controversy between Secretary Blaine and the Marquis of Salisbury was renewed. No seizures were made in 1890—excepting that the "Pathfinder" was seized in Neah Bay, Washington, on the previous charge, but released two days afterward—and before the sealing season of 1891, on June 15, a *modus vivendi* was agreed to, in accordance with which the British Parliament prohibited the taking of seals by British subjects in the American part of Bering Sea. The United States Government prohibited seal-killing for the season in excess of 7,500 to be taken on the seal islands for the subsistence and care of the natives, and both governments undertook to patrol the sea. Any person or vessel offending against the prohibition taken by the naval or other proper authorities of either government was to be delivered up to be tried by the judicial authorities of his own government. This arrangement was made with a view to a settlement of the whole question by a joint commission. It was agreed that suitable persons designated by Great Britain should be allowed to visit the seal islands during the season, and Sir George Smyth Baden-Powell and Dr. George M. Dawson were sent to study the conditions of seal life on the spot. The United States Government commissioned Prof. T. C. Mendenhall and C. Hart Merriman to make a similar investigation, and by arrangement between the Secretary of State and the British minister a conference of these commissioners took place in February, 1892. The Canadian Government, with the approval of the imperial authorities, had taken proceedings to have the question of seizures outside of the limits of the ordinary territorial maritime jurisdiction passed upon by the United States Supreme Court by applying for a writ of prohibition restraining the District Judge for Alaska from further proceedings in the case of the "W. P. Sayward," on the ground of lack of jurisdiction by reason of the fact of the seizure having

taken place 59 miles from land. This mode of testing the question and the plan of formulating regulations by direct conference with the aid of commissioners both gave way to Secretary Blaine's proposal to refer the whole matter to the decision of an international court of arbitration. The terms of the agreement of arbitration as proposed by him, and modified to meet the objections of Lord Salisbury, were as follows:

1. What exclusive jurisdiction in the sea now known as Bering Sea, and what exclusive rights in the seal fisheries therein, did Russia assert and exercise prior and up to the time of the cession of Alaska to the United States?

2. How far were these claims of jurisdiction as to seal fisheries recognized and conceded by Great Britain?

3. Was the body now known as Bering Sea included in the phrase "Pacific Ocean" as used in the treaty of 1825 between Great Britain and Russia, and what rights, if any, in Bering Sea were held and exclusively exercised by Russia after said treaty?

4. Did not all the rights of Russia as to jurisdiction and as to seal fisheries in Bering Sea east of the water boundary in the treaty between the United States and Russia of March 30, 1867, pass unimpaired to the United States under that treaty?

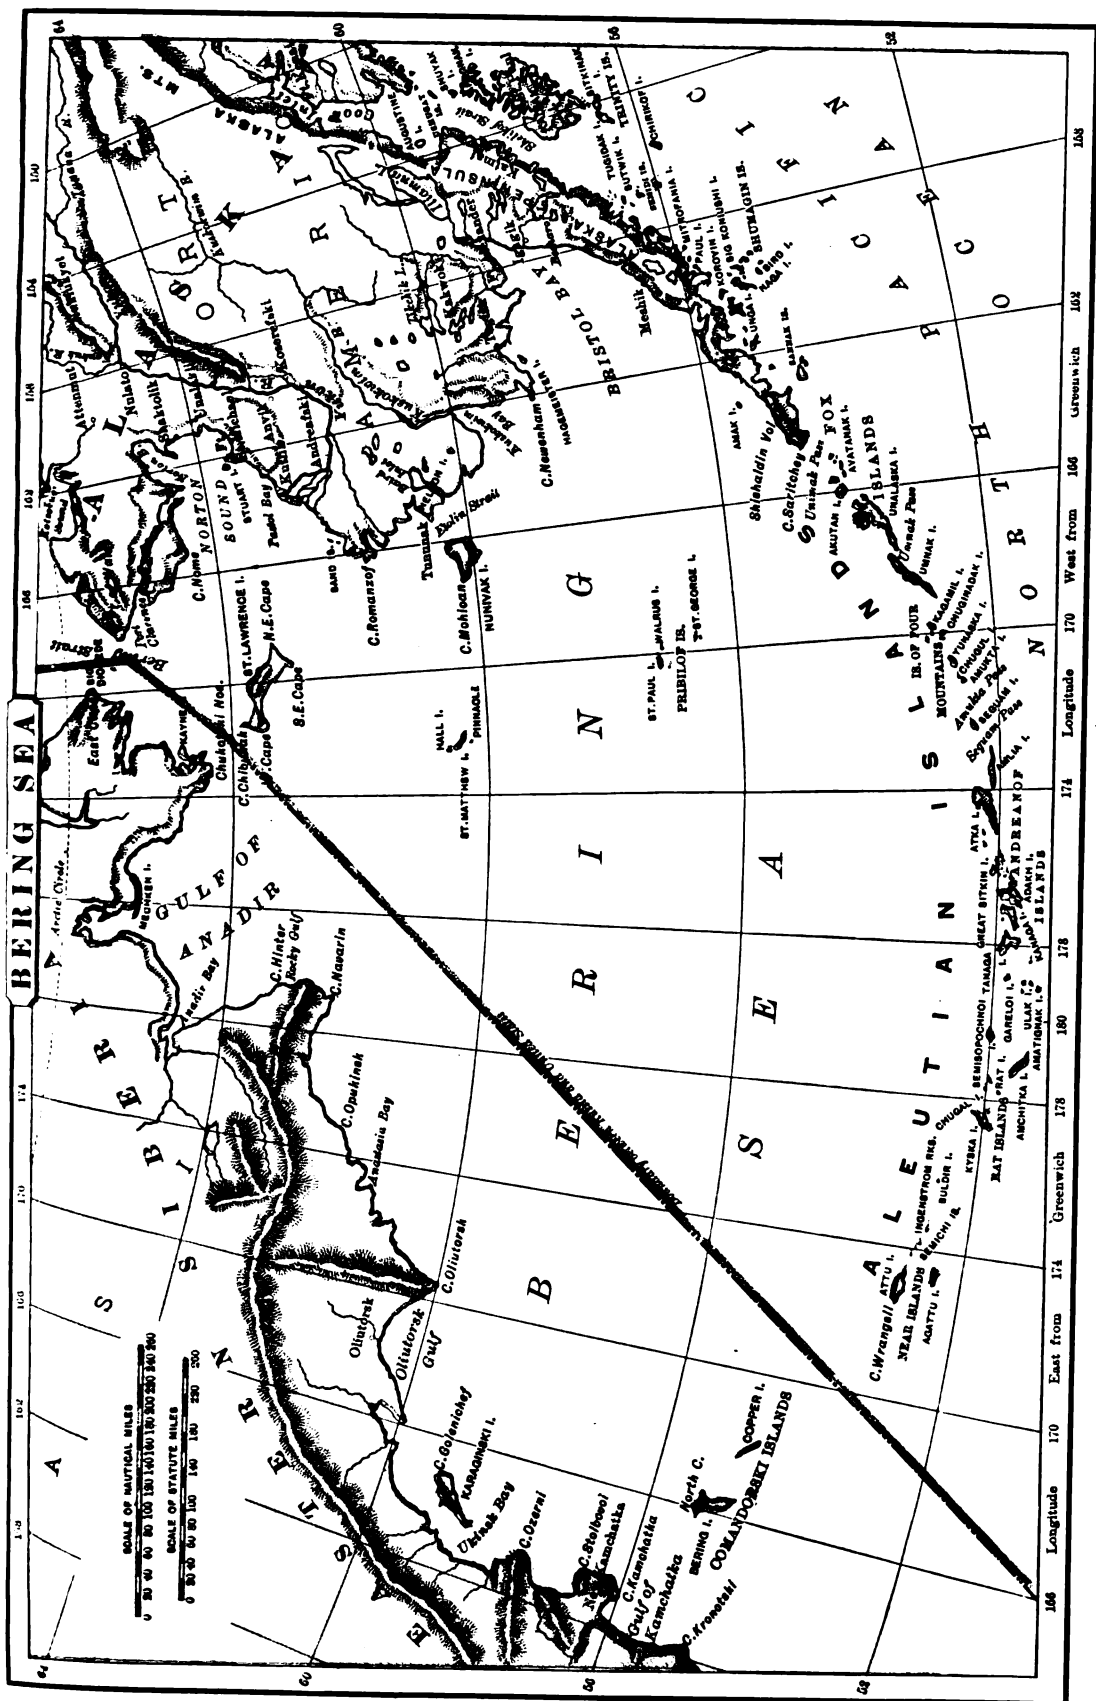

5. Has the United States any right, and, if so, what right of protection or property in the fur seals frequenting the islands of the United States in Bering Sea when such seals are found outside the ordinary three-mile limit?

The original draught of the treaty contained, besides the 5 points in which the United States Government contended for the rights of exclusive jurisdiction in Bering Sea and ownership in the seal herd of the Pribilof Islands, the following proposition, in which the regulation of the fisheries on the basis of mutual agreement is referred to the arbitrators:

If the determination of the foregoing questions shall leave the subject in such position that the concurrence of Great Britain is necessary in prescribing regulations for the killing of the fur seal in any part of the waters of Bering Sea, then it shall be further determined: (1) How far, if at all, outside the ordinary territorial limits it is necessary that the United States should exercise an exclusive jurisdiction in order to protect the seals for the time living upon the islands of the United States and feeding therefrom. (2) Whether a closed season, during which the killing of seals in the waters of Bering Sea outside the ordinary territorial limits shall be prohibited, is necessary to save the seal-fishing industry, so valuable and important to mankind, from deterioration or destruction. (3) And, if so, what months or parts of months should be included in such season and over what waters should it extend.

This question Lord Salisbury thought would more fitly form the substance of a separate reference. He did not object to the reference of the general question of a close time to arbitration, or to ascertaining by that means how far the enactment of such a provision is necessary for the preservation of the seal species; but thought that such reference ought not to contain words "appearing to attribute special and abnormal rights in the matter to the United States." The form of the question was altered after further correspondence, and it was embodied in the treaty in the following shape:

If the determination of the foregoing questions as to the exclusive jurisdiction of the United States shall

nounced the finding of private letters to Fisher and Mulligan, fully sustaining their fresh charges in regard to the Northern Pacific Railroad. The committee called upon Mr. Blaine for the letters, and in reply he produced the opinion of two lawyers—a Democrat and a Republican—to the effect that the manuscripts were personal property, and could not be required. This raised a cry of concealment, and once more the matter became too serious to pass unnoticed. Again, rising in his place, he announced that, with all due respect to the House, he denied their assumption of right to demand his private correspondence, but added: "Thank Almighty God, I am not *ashamed* to show them. There they are. There is the very original package. And with some sense of humiliation, with a mortification that I do not pretend to conceal, with a sense of outrage which I think any man in my position would feel, I invite the confidence of forty-four millions of my countrymen while I read those letters from this desk."

He then read the letters, which had been picked from a correspondence of over fifteen years. After he had laid bare the confidential details of business embarrassments, which not once, with their proper context, were of a nature to incriminate him, he said: "The man did his worst, the very worst, he could out of the most intimate business correspondence of my life. I ask, gentlemen, if any of you—and I ask it with some feeling—can stand a severer scrutiny of, or a more rigid investigation into, your private correspondence?" After the reading was finished he turned to Mr. Knott, chairman of the Judiciary Committee, and said:

"Has the gentleman from Kentucky received a dispatch from Caldwell?" [Mr. Caldwell, who was abroad, was the only person who had perfect knowledge of the matter, and both parties had been seeking his address.]

"I will explain that directly," said Mr. Knott.

"I want a categorical answer."

"I have received a dispatch purporting to be from Mr. Caldwell."

"You did?"

"How did you know I got it?" queried Mr. Knott.

"When did you get it?" was the response. "I want the gentleman from Kentucky to answer when he got it."

"Answer my question first."

"I never heard of it until yesterday."

"How did you hear it?"

"I heard you got a dispatch last Thursday morning at eight o'clock from Josiah Caldwell, completely and absolutely exonerating me from this charge. You have suppressed it!"

Then followed one of the most extraordinary scenes of excitement ever witnessed in the House. Mr. Blaine's accusers used every means known to parliamentarians to prevent the carrying of his motion that the dispatch be brought out and filed with the rest of the papers; but so often did Mr. Blaine sweep away their work that at last one member rose to inquire whether this was the American Congress or a school in which they were pupils of the schoolmaster from Maine. The final result was a negative acquittal of Mr. Blaine.

This took place in June, 1876, and a few days later the Republican Convention met in Cincinnati to nominate a candidate for President. On the 11th, the Sunday preceding the convention,

Mr. Blaine fell unconscious upon the steps of the church of which he and his family were regular attendants; for two days he lay apparently between life and death, and the convention was thrown into confusion by the conflict of feeling thereby created. The illness has been popularly attributed to sunstroke. How far that, or the Mulligan and other scandals had influence, it is impossible to say, but the record of the convention reads: First ballot, Blaine, 285; Morton, 124; Bristow, 118; Conkling, 99; Hayes, 61; Hartranft, 58; Jewell, 11; Wheeler, 3. Hartranft's was the solid vote of Pennsylvania; Hayes's that of Ohio; Conkling's that of New York, save one; Morton's vote was from the South and Indiana; Bristow's from nineteen States and one Territory; Blaine's from twenty-eight States and seven Territories. On the second ballot Blaine had made a gain of 11. On the fifth ballot Michigan's vote was cast for Hayes. On the sixth it stood: Blaine, 308; Hayes, 118. The other candidates retired, and on the seventh the ballot stood: Hayes, 384; Blaine, 351; Bristow, 21. These were turned over to Hayes, and his nomination was then declared unanimous.

On the resignation of Senator Morrill, in order to accept the Secretaryship of the Treasury under President Hayes, Mr. Blaine was chosen to fill out his unexpired term in the Senate, and he was re-elected for the following term. In common with a majority of Republicans, Mr. Blaine had opposed the formation of the electoral commission for the settlement of the Hayes and Tilden dispute, on the ground that Congress did not possess the power that it proposed to confer on the commission. Later, after that commission had resulted in the inauguration of Mr. Hayes, Mr. Blaine opposed his Southern policy because, as he claimed, the title of the governors whom Mr. Hayes removed rested upon the same returns as his own.

While still in the House, Mr. Blaine had made an exhaustive argument against an irredeemable paper currency, and in the Senate he took strong ground against the deterioration of the silver coinage. In the opening of a speech he said:

If there was any one principle that was rooted and grounded in the minds of our earlier statesmen, it was the evil of paper money; and no candid man of any party can read the Constitution of the United States and not be convinced that its framers intended to protect and defend our people from the manifold perils of an irredeemable currency. Nathaniel Macon, one of the purest and best of American statesmen, himself a soldier of the Revolution and a member of Congress continuously during the administration of our first six Presidents, embracing in all a period of nearly forty years, expressed the whole truth when he declared in the Senate that "this was a hard-money government, founded by hard-money men, who had themselves seen and felt the evil of paper money, and meant to save their posterity from it."

In 1878, Mr. Blaine advocated the establishment of a line of mail steamers to Brazil. The whole subject of American shipbuilding and commerce was one to which he devoted special energy, and he introduced two amendments favoring naval retrenchment in the interests of a merchant marine. He said in part:

From 1846-'71 the Congress of the United States passed 91 acts for promoting the building of railroads. There has not been much legislation since 1871.

There has been a reaction against the policy; but from 1846-'71, I repeat, a period of twenty-five years, the Congress of the United States passed 91 different acts, and endowed the railroad system of this country with \$500,000,000 of money, and that \$500,000,000 of money produced more than \$5,000,000,000 of money in this country. My judgment is that the Congress of the United States in everything they did in that respect did wisely. They cheapened freights. Clinton's ditch, as it used to be called, was enereed at when it was an experiment; but the minute the water was let into it it reduced the freights that had been \$100 from Buffalo to New York down to \$7 a ton; and it is not an exaggeration to say that at that day, before railroads were among us, the water that was let in from Lake Erie to that canal added \$100,000,000 to the value of the farms west of it.

As individuals, cities, towns, counties, States, a nation, we have exerted ourselves to the utmost point of enterprise and vigor to build up railroads. We have a system that outruns all the world, and with great trunk lines threading the continent—north, south, east, and west—in every direction. The very moment we reach the ocean limit we seem to think we have done our duty, and that when we have got transportation to that point it no longer interests us, and we can safely give that over to the foreigner. Why, from Chicago to Liverpool is one direct line. I wonder how it would sound if Mr. Vanderbilt—who is running a line of steamships manned by foreign men, commanded by foreign officers, built in foreign yards, whose money earnings go entirely outside of this country—were to apply that to the New York Central Railroad, and select all the brakemen, and switchmen, and conductors, and tenders, and officers on the Central Railroad from foreigners, to put on it locomotives that are all made in England, to let all its earnings be exported. Such a policy would not be one particle more detrimental and destructive to the interests of this country than for us, when that Central Railroad had touched salt water with all the countless products of the fertile West, to give up all the profits of participation in the transportation of them beyond. From Chicago to Liverpool is a route of 4,000 miles. We operate 1,000 miles of it, and give 3,000 miles to the foreigner.

Two years later, in urging the granting of subsidies in support of shipbuilding and American commerce on the high seas, he said, in one of his most elaborate speeches:

Mr. President, *fas est ab hoste doceri*; it is always lawful to be taught by an enemy. Great Britain has been our great commercial rival, and since the first Cunard steamship came into Boston—just about forty years ago, when Great Britain, seeing that steam was to play so great and commanding a part in the navigation of the world, first made her venture—from that time down to the close of 1878 she had paid from her treasury, to aid great steamship lines all over the world, a sum exceeding £40,000,000, more than 200,000,000 American dollars. I know it is a favorite argument with those who occupy the position of the honorable Senator from Kentucky, that Great Britain started upon this plan and followed it for a long period of years, and afterward abandoned it. Sir, she has never abandoned it. She has only abandoned its extension to those lines that were strong enough to go alone, and the British post-office report for the year 1879 shows that under the despised and ridiculed head of postal aid, to which the honorable Senator from Kentucky was pleased to refer with such sneers, Great Britain paid last year £783,000, well-nigh \$4,000,000 in coin.

France gets her steamships from England. France has adopted the commercial policy which the honorable Senator from Kentucky thinks would be the revival of the American shipping interest; but does France, by the mere fact of getting her ships built at Birkenhead or on the Clyde, abandon the plan, which

has been for thirty years in operation under her Government, of aiding her ships? Why, sir, last year France paid 23,000,000 francs—more than \$4,500,000—to aid her steamship lines. And when the celebrated line of France, the company known as Messageries Imperiales, competed too sharply in the Mediterranean waters after the opening of the Suez Canal, when that great French company competed with the Peninsular and Oriental Company of England, and was likely to endanger its supremacy by a sharp rivalry, Great Britain promptly stepped forward and added £100,000 to the Peninsular and Oriental subsidy. That is the way Great Britain has abandoned the idea of aiding her great commercial interests!

The United States can not succeed in this great international struggle without adopting exactly the same mode that has achieved victory for France. What is it? It is not to help A B, or C D, or E F, or anybody else by name—neither Mr. John Roach, nor Mr. John Doe, nor Mr. Richard Roe—but to make a great and comprehensive policy that shall give to every company a pledge of aid from the Government of so much per mile for such a term of years. Let the American merchants feel that the Government of the United States is behind them. Let the United States take from her Treasury per annum the \$4,000,000 that Great Britain is paying as a postscript to her \$200,000,000 of investment; let the United States but take \$400,000 per annum—and that is not a great sum for this opulent country—let that be used as a fund to stimulate any company from any port of the United States to any foreign port, and, without being a prophet or the son of one, I venture to predict that you will see that long-deferred, much-desired event—the revival of the American merchant marine.

It is idle to fight against the inventions of the world; it is idle for us to fold our arms and suppose that wooden vessels are to maintain anything like the importance they have hitherto had in the commerce of the world. I think I understand something of that subject. I have the honor to be from the State that has built more wooden vessels than all the rest of this Union beside, I believe. Within thirty miles of my own residence is a town of only 10,000 people, which is the largest wooden shipbuilding place on the globe to-day. I know some little of that subject; and while the days of wooden ships are by no means over, while they will be a great and needful auxiliary in the commerce of the world, yet it is manifest and is proven that the great highways of international commerce—such as the North Atlantic, the West India seas, the route from San Francisco to Asia, that from San Francisco to Melbourne, and in various, and sundry, and divers other directions—will be occupied, and occupied almost to the exclusion of sailing vessels, by the ocean steamers. The United States can take a great part in that race; they can take a great part in it just whenever they make up their mind that the instrumentality by which England conquered is the one which we must use; they can take it whenever they make up their minds that a mercantile marine and naval establishment must grow and go together hand in hand, and that the Congress of the United States is derelict in its duty if it passes another naval appropriation bill without accompanying it, in some form, with some wise and forecasting provision looking also to the upbuilding of the American merchant marine.

On Dec. 11, 1878, Mr. Blaine made a memorable speech in defense of the purity of the ballot. He had introduced a resolution providing for inquiry into certain alleged frauds in elections recently held in Southern States. In sustaining his resolution, he said:

The issue thus raised before the country, Mr. President, is not one of mere sentiment for the rights of the negro—though far distant be the day when the rights of any American citizen, however black or however poor, shall form the mere dust of the balance in any controversy; nor is the issue one that involves the

waving of the "bloody shirt," to quote the elegant vernacular of Democratic vituperation; nor, still further, is the issue as now presented only a question of the equality of the black voter of the South with the white voter of the South. The issue, Mr. President, has taken a far wider range, one of portentous magnitude; and that is, whether the white voter of the North shall be equal to the white voter of the South in shaping the policy and fixing the destiny of this country; or whether, to put it still more baldly, the white man who fought in the ranks of the Union army shall have as weighty and influential a vote in the government of the republic as the white man who fought in the ranks of the rebel army. The one fought to uphold, the other to destroy, the Union of the States; and to-day he who fought to destroy is a far more important factor in the Government of the nation than he who fought to uphold it.

Let me illustrate my meaning by comparing groups of States of the same representative strength North and South. Take the States of South Carolina, Mississippi, and Louisiana. They send 17 Representatives to Congress. Their aggregate population is composed of 1,035,000 whites and 1,224,000 colored, the colored being nearly 200,000 in excess of the whites. Of the 17 Representatives, then, it is evident that 9 were apportioned to these States by reason of their colored population, and only 8 by reason of their white population; and yet in the choice of the entire 17 Representatives the colored voters had no more voice or power than their remote kindred on the shores of Senegambia or on the Gold Coast. The 1,035,000 white people had the sole and absolute choice of the entire 17 Representatives. In contrast, take 2 States in the North, Iowa and Wisconsin, with 17 Representatives. They have a white population of 2,247,000—considerably more than double the entire white population of the 3 Southern States I have named. In Iowa and Wisconsin, therefore, it takes 132,000 white population to send a Representative to Congress, but in South Carolina, Mississippi, and Louisiana every 60,000 white people send a representative. In other words, 60,000 white people in those Southern States have precisely the same political power in the government of the country that 132,000 white people have in Iowa and Wisconsin.

The patent, undeniable intent of the fourteenth amendment was that if any class of voters were denied or in any way abridged in their right of suffrage, then the class so denied or abridged should not be counted in the basis of representation; or, in other words, that no State or States should gain a large increase of representation in Congress by reason of counting any class of population not permitted to take part in electing such Representatives. But the construction given to this provision is that before any forfeiture of representation can be enforced the denial or abridgment of suffrage must be the result of a law specifically enacted by the State. Under this construction every negro voter may have his suffrage absolutely denied or fatally abridged by the violence, actual or threatened, of irresponsible mobs, or by frauds and deceptions of State officers from the governor down to the last election clerk, and then, unless some State law can be shown that authorizes the denial or abridgment, the State escapes all penalty or peril of reduced representation. This construction may be upheld by the courts, ruling on the letter of the law, "which killeth," but the spirit of justice cries aloud against the evasive and atrocious conclusion that deals out oppression to the innocent and shields the guilty from the legitimate consequences of willful transgression.

The political power thus appropriated by Southern Democrats by reason of the negro population amounts to 35 Representatives in Congress. It is massed almost solidly and offsets the great State of New York; or Pennsylvania and New Jersey together; or the whole of New England; or Ohio and Indiana united; or the combined strength of Illinois, Minnesota, Kansas, California, Nevada, Nebraska, Colorado, and Oregon.

The seizure of this power is wanton usurpation; it is flagrant outrage; it is violent perversion of the whole theory of republican government. It inures solely to the present advantage, and yet, I believe, to the permanent dishonor of the Democratic party. It is by reason of this trampling down of human rights, this ruthless seizure of unlawful power, that the Democratic party holds the popular branch of Congress to-day, and will, in less than ninety days, have control of this body also, thus grasping the entire legislative department of the Government through the unlawful capture of the Southern States.

In May, 1879, when the debate on the Appropriation bill ran into a discussion of the question of national and State sovereignty, Mr. Blaine made a speech, in the course of which he said:

I do not think the evil that has been done to the Southern country by the schoolbooks in the hands of their children has been measured. Many of the books put into the hands of the rising generation of the South are tinctured all through with prejudice and misrepresentation and with a spirit of hatred. We are accused by our friends on the opposite side of the Chamber of stirring up strife and generating hatred. I do not believe it would be possible to find, in all the literature of the North for the schools and for the young, a solitary paragraph intended or calculated to arouse hatred or suggest unpatriotic feelings toward any portion of the Union. A large portion of the South has been furnished with special schoolbooks calculated for the meridian, with the facts appended to suit that particular locality. It was said that for two generations a large portion of the English people believed that the American colonies had never achieved their independence, but had been kicked off as a useless appendage to the British Empire, and that they were glad to be rid of us. There is a large number of the school children in the South who are educated with radically wrong notions and radically erroneous facts. I saw an arithmetic that was filled with examples—think of putting politics into an arithmetic!—such as this: If 10 cowardly Yankees had so many miles the start, and 5 brave Confederates were following them, the first going at so many miles an hour, and the others following at so many miles an hour, how long before the Yankees would be overtaken? Now, think of putting that deliberately in a schoolbook, and having school histories made up on that basis for children! . . . Throughout the length and breadth of the South the one evil omen of to-day is the literature that is given to the children and the intellectual food that is offered to all the young and rising men in the institutions of learning, in their academies, their colleges, their universities. . . . Every step has been taken since the Democratic party got into power in the House and in the Senate in one direction, and that direction has been to the striking down of the Federal power and the exaltation of the State power. This measure is but one. Others have gone before it; others are to follow it. What may be their fate I do not know. We on this side will resist by every constitutional means, and you on that side, despite the threats of the Senator from Connecticut, will be obliged to submit in the end, and the power of this Government will not be put down by a threat; it will not be put down by a combination; it will not be put down by a political party. It was not put down by a rebellion. It can meet another, either in the form of organized resistance in withholding supplies, or in the more serious form which the language of the Senator from South Carolina seemed to foreshadow.

Mr. Blaine supported the bill favoring the exclusion of Chinese immigrants, and some of his reasons are given in a memorable speech. After declaring that Chinese immigration was not, in the proper sense of the word, immigration at all—that it was a congregating in our towns of masses

of low and vile men and women who did not and could not assimilate with our people—he said:

Is it not inevitable that a class of men living in this degraded and filthy condition, and on the poorest of food, can work for less than the American laborer is entitled to receive for his daily toil? Put the two classes of laborers side by side, and the cheap servile labor pulls down the more manly toil to its level. The free white labor never could compete with the slave labor of the South. In the Chinaman the white laborer finds only another form of servile competition—in some aspects more revolting and corrupting than African slavery. Whoever contends for the unrestricted immigration of Chinese coolies contends for that system of toil which blights the prospects of the white laborer—dooming him to starvation wages, killing his ambition by rendering his struggles hopeless, and ending in a plodding and pitiable poverty. Nor is it a truthful answer to say that this danger is remote. Remote it may be for Mr. Garrison, for Boston, and for New England, but it is instant and pressing on the Pacific slope. Already the Chinese male adults on that coast are well-nigh as numerous as the white voters of California, and it is conceded that a Chinese emigrant can be placed in San Francisco for one half the amount required to transport a man from the Mississippi valley to the Pacific coast, and for one third what it requires for a New Yorker or New Englander to reach California or Oregon. The late Caleb Cushing, who had carefully studied the Chinese question ever since his mission to Peking in 1842, maintained that unless resisted by the United States the first general famine in China would be followed by an emigration to California that would swamp the white race.

A great deal has been said about the danger to our trade if China should resort to some form of retaliation. The natural and permanent retaliation is to restrict American immigration to China. Against that we will enter no protest, and should have no right to do so. The talk about China closing her ports to our trade is made only by those who do not understand the question. Last year the total amount of our exports to all Chinese ports, outside of Hong-Kong, was but \$692,000. I have called Hong-Kong a Chinese port, but every child knows that it is under British control, and if we were at war with China to-day Hong-Kong would be as open to us as Liverpool. To speak of China punishing us by suspending trade is only the suggestion of dense ignorance. We pay China an immense balance in coin, and probably we always shall do it. But if the trade question had the importance which some have erroneously attributed to it, I would not seek its continuance by permitting a vicious immigration of Chinese coolies. The Bristol merchants cried out that commerce would be ruined if England persisted in destroying the slave trade; but history does not record that England sacrificed her honor by yielding to the cry. There is not a laboring man from the Penobscot to the Sacramento who would not feel aggrieved, outraged, burdened, crushed, by being forced into competition with the labor and the wages of the Chinese coolie. For one, I will never consent by my vote or my voice to drive the intelligent workmen of America to that competition and that degradation.

In 1880 Mr. Blaine was again a candidate for the Republican presidential nomination. In the convention he had 284 votes on the first ballot, against 304 for Gen. U. S. Grant and 93 for Senator John Sherman. He held nearly this number until on the thirty-sixth ballot, when the opponents of Gen. Grant united on James A. Garfield, who was nominated.

Mr. Blaine was chosen by President Garfield for Secretary of State, and in accepting sent the following letter:

Your generous invitation to enter your Cabinet as Secretary of State has been under consideration for more than three weeks. The thought had really never occurred to my mind, until at our last conference you presented it with such cogent arguments in its favor, and with such warmth of personal friendship in aid of your offer. I know that an early answer is desirable, and I have waited only long enough to consider the subject in all its bearings, and to make up my mind definitely and conclusively. I

MR. BLAINE'S RESIDENCE, AUGUSTA, MAINE.

now say to you, in the same cordial spirit in which you have invited me, that I accept the position. It is no affectation for me to add that I make this decision not for the honor of promotion it gives me in public, but because I think I can be useful to the country and to the party—useful to you as the responsible leader of the party and the great head of the Government.

I am influenced somewhat, perhaps, by the shower of letters I have received urging me to accept, written to me in consequence of the mere unauthorized newspaper report that you had been pleased to offer me the place. While I have received these letters from all sections of the Union, I have been especially pleased, and even surprised, at the cordial and widely extended feeling in my favor throughout New England, where I had expected to encounter local jealousy, and, perhaps, rival aspirations. In our new relation, I shall give all that I am, and all that I can hope to be, freely and joyfully to your service. You need no pledges of my loyalty in heart and act. I should be false to myself did I not prove true both to the great trust you confide to me and to your own personal and political fortunes in the present and the future.

Your administration must be made brilliantly successful, and strong in the confidence and pride of the people, not at all directing its energies for re-election, and yet compelling that result by the logic of events.

and by the imperious necessities of the situation to that most desirable consummation. I feel, next to yourself, I can possibly contribute as much influence as any other man. I say this not from egotism or vainglory, but merely as a deduction from a plain analysis of the political forces which have been at work in the country for two years past, and which have been significantly shown in two great conventions. I accept it as one of the happiest circumstances connected with this affair, that in allaying my political fortunes with yours—or, rather, for the time, merging mine in yours—my heart goes with my head, and that I carry to you not only political support, but personal and devoted friendship. I can but regard it as somewhat remarkable, that two men of the same age, entering Congress at the same time, influenced by the same aims, and cherishing the same principles, should never for a single moment in our eighteen years of close intimacy have had a word of coolness, and that our friendship has steadily grown with our growth and strengthened with our strength. It is this fact that has led me to the conclusion embodied in this letter, for however much, my dear Garfield, I might admire you as a statesman, I would not enter your Cabinet if I did not believe in you as a man and love you as a friend.

One of the earliest acts of the new Secretary was to favor the calling in Washington of a congress of delegates from the nations dwelling on this continent, with a view to advancing the interests of all. War was then raging between Chili and Peru, and one object was to suggest some method by which a peaceful adjustment could be made. The official call, dated Nov. 29, 1881, contained this passage, the gist of the whole matter:

The President extends to all the independent countries of North and South America an earnest invitation to participate in a general congress, to be held in the city of Washington on the 24th day of November, 1882, for the purpose of considering and discussing the methods of preventing war between the nations of America. He desires that the attention of the congress shall be strictly confined to this one great object; that its sole aim shall be to seek a way of permanently averting the horrors of cruel and bloody combat between countries oftenest of one blood and speech, or the even worse calamity of internal commotion and civil strife; and that it shall regard the burdensome and far-reaching consequences of such struggles, the legacies of exhausted finances, of oppressive debt, of onerous taxation, of ruined cities, of paralyzed industries, of devastated fields, of ruthless conscription, of the slaughter of men, of the grief of the widow and the orphan, of embittered resentments that long survive those who provoked them, and heavily afflict the innocent generations that come after.

The President is especially desirous to have it understood that, in putting forth this invitation, the United States does not assume the position of counseling, or attempting, through the voice of the congress, to counsel, any determinate solution of existing questions which may now divide any of the countries of America. Such questions can not properly come before the congress. Its mission is higher. It is to provide for the interests of all in the future, not to settle the individual differences of the present.

The invitation to this congress had been accepted by all but two of the recognized powers in North and South America, when Mr. Blaine's retirement from the Secretaryship, consequent upon the death of President Garfield and the reversal of his policy by his successor, caused it to be abandoned.

Besides the attempt to help peaceful relations in general, and to assist in commercial communications, Mr. Blaine, for the Government, dis-

patched William Henry Trescott on a special mission to Peru, to offer the friendly services of the United States in restoring peace and helping Peru in her prostrating defeat by Chili. These negotiations also were broken up. Another important move was an attempt to bring about a modification of the Clayton-Bulwer treaty with England. The Colombian republic had proposed to England that they should unite in guaranteeing the neutrality of the Panama Canal. Mr. Blaine, in a circular letter, declared the opposition of this Government to any such concerted action, and asserted prior and paramount rights. He showed that the United States had a treaty, made in 1846, with New Granada (now Colombia); that we had a supreme interest in watching over any highway between the two Americas; and that any disputing of that right by Great Britain would be deemed unfriendly. He proposed the abrogation of certain clauses of the Clayton-Bulwer treaty, as not in harmony with the more recent rights bestowed upon the United States by the agreements with the Colombian republic. When the British Government replied that the treaty should be maintained and respected, Mr. Blaine showed that it could not be considered as a final decision because it had been repeatedly the subject of negotiation between the two countries; that the British Government had itself proposed to refer its doubtful clauses to arbitration; and that its unsettled condition had previously been a source of embarrassment. Mr. Blaine contended that "it is the fixed purpose of the United States to consider the Isthmus-Canal question as an American question, to be dealt with and decided by the American governments."

Four months after entering upon office, President Garfield was mortally wounded by an assassin, and during the two months which he lingered Mr. Blaine was practically at the head of the Government. One of his notable efforts in public speaking was his eulogy upon President Garfield, pronounced before Congress, Feb. 27, 1882.

On his retirement from the Cabinet, Mr. Blaine returned to his home in Augusta, Me., and occupied himself with writing a history of the American Congress, from Lincoln to Garfield. To a proper understanding of matters much retrospect was required, and the two large volumes, entitled "Twenty Years of Congress," contain an epitome of the acts of that body since its formation.

In 1884 Mr. Blaine was the choice of the Republican convention as its candidate for President, Gen. John A. Logan being on the ticket with him. It was a memorable convention, one of its dramatic incidents being a telegram from Gen. William T. Sherman, whose name was so prominently mentioned at first that there was little doubt that he would have been the choice. It read: "I would not accept the nomination if tendered me. I would not serve if I was elected." The first ballot gave Mr. Blaine 334; the second, 349; the third, 375; the fourth, 541—necessary to a choice, 411. The wild enthusiasm which through the later part of Mr. Blaine's public life greeted every mention of his name outdid itself on the occasion of this announcement. Whatever may be said of any other great American leader, from Washington to the present time, no one will deny that, for some reason, no other

American has been able to awaken the expression of personal popularity to the extent to which it was called forth by Mr. Blaine.

The Democratic party nominated Grover Cleveland. The campaign was one of great bitterness, full of personalities and strong recriminations. Mr. Blaine made a remarkable series of addresses, speaking continuously for forty-three days. He discussed only the industrial question, and in an array of arguments favoring protection produced a profound impression as to his intellectual power. The result turned upon the vote in New York State, which gave Mr. Cleveland 1,047 more votes than Mr. Blaine. When the news of his defeat reached Mr. Blaine he made a speech to his fellow-citizens that rang through the country, though it was but a repetition of his utterances in Congress in previous years. The gist of it lay in the declaration that in the solid South there had been no real election.

Mr. Blaine spent the next winter in Washington. He was not in public life, but devoted his leisure to his historical work, "Twenty Years of Congress," the first volume of which was published at that time.

In 1886 Mr. Blaine took an active interest in the political canvass in his own State of Maine, giving especial attention to the fisheries controversy, which had been renewed by the seizure of American fishing vessels on the coast of Canada. Meantime his health had become somewhat impaired, and he went abroad.

When the National Republican Convention met, in 1888, at Chicago, Mr. Blaine's name was so prominently used, and he was personally so strongly urged to allow it to be used, that only an authoritative message from Italy caused his supporters to desist. Benjamin Harrison was nominated and elected, and on his inauguration he called Mr. Blaine to the Cabinet as Secretary of State.

The first matters that occupied the State Department were connected with a conference held in Washington by representatives of all the independent governments of North and South America, and a conference of 26 nations concerning rules and regulations governing vessels at sea, and the adoption of a uniform system of marine signals. (See "Annual Cyclopædia" for 1889, page 440.) As a result largely of Mr. Blaine's suggestions, the McKinley tariff measure, passed by Congress, was supplemented by treaties of reciprocity in trade with the following nations: Costa Rica, Brazil, Spain for Cuba, Germany, Austro-Hungary, France, Santo Domingo, the 5 coffee republics of Central America, British Guiana, and all the British West Indies except the Bahamas. In regard to these measures Mr. Harrison said in his message, Dec. 1, 1890:

Experience has shown that some treaties looking to reciprocal trade have failed to secure a two-thirds vote in the Senate for ratification, and others, having passed that stage, have for years awaited the concurrence of the House and Senate, in such modifications of our revenue laws as were necessary to give effect to their provisions. We now have the concurrence of both Houses in advance, in a distinct and definite offer of free entry to our ports of specific articles. The Executive is not required to deal in conjecture as to what Congress will accept. Indeed, this reciprocity provision is more than an offer. Our part of the bargain is complete; delivery has been made; and when the

countries from which we receive sugar, coffee, tea, and hides have placed on their free lists such of our products as shall be agreed upon as an equivalent for our concession a proclamation of that fact completes the transaction.

The other important matters in which Mr. Blaine was prominent were concerning the seal-fisheries dispute; the recognition of a republic in Brazil; the lynching of Italians, American citizens, in New Orleans, for which the Italian Government demanded reparation; the civil war with Chili; and a question raised by Spain concerning the rights of American citizens in the Caroline Islands.

In March, 1891, Mr. Blaine proposed, as a *modus vivendi* that would prevent the destruction of the fur seals of the Pribylov Islands by Canadian poachers before an agreement could be reached regarding the United States' claims, that a closed season should be declared for the summer of 1891. In April he put into form the demand of the United States before the arbitration committee agreed upon between the nations. A summary of the correspondence will be found in the "Annual Cyclopædia" for 1891, page 884. In his annual message, Dec. 9, 1892, the President said: "The work of the State Department during the last year has been characterized by an unusual number of important negotiations and by diplomatic results of a notable and highly beneficial character."

On June 4, 1892, Mr. Blaine suddenly resigned his portfolio of Secretary of State. Three days later the National Republican Convention met at Minneapolis, and once again Mr. Blaine's name was prominent among the candidates. There was much speculation as to the cause of his sudden withdrawal from the Cabinet, the reason assigned by himself being that there was no important pending legislation and he desired to rest.

Mr. Blaine's health failed rapidly. Most bitter domestic sorrows had come upon him, including the death of two sons. Though he was but a private citizen at the time of his death, President Harrison called upon Congress and all in official life at Washington to do him special honor. For months the columns of the newspapers and magazines were filled with tributes, anecdotes, personal notices, pictures, and other evidences of the greatness of the man and the patriot who had passed away. See "Life of James G. Blaine," by H. J. Ramsdell.

BOLIVIA, a republic in South America. The legislative authority is vested in a Congress composed of the Senate and the Chamber of Deputies, the former consisting of 16 and the latter of 64 members. The executive power rests in the hands of a President, elected for four years by universal suffrage. The present incumbent of the chair is Mariano Baptista, elected for the term ending Aug. 6, 1896.

Area and Population.—The area of Bolivia is 567,360 square miles. The population in 1889 was estimated at 1,180,800.

Finances.—The revenue for 1892-'93 was estimated at 5,737,200 bolivianos or silver dollars, and the expenditure at 5,937,200 bolivianos. The internal debt in 1891 amounted to 4,484,916 bolivianos, and the external debt to 3,763,273 bolivianos.

Commerce and Production.—The leading industry is silver-mining. The produce of the mines in 1890 was about \$11,000,000 in value. Copper, tin, and bismuth are also mined for export. Other exports are coca, India rubber, cinchona, and coffee. The annual value of the imports is estimated at \$6,000,000, and that of the exports at \$9,000,000.

Political Disturbance.—In the early part of 1893 Gen. Camacho and exiled Bolivian Deputies were in Valparaiso, plotting an uprising for the overthrow of the Baptista Government. An attempted revolt was promptly suppressed, and the Government, after proclaiming a state of siege for the whole republic, stopped the publication of independent newspapers, and imprisoned their editors and all prominent members of the Opposition. Financial difficulties had placed the Government in a desperate strait, and it was only able to maintain itself by means of \$2,500,000 obtained from Chili in time to meet its pressing engagements, and 10,000 rifles sent by the Chilean Government to arm the Bolivian militia. When Baptista's position was thus made secure, the state of siege was raised, though it was continued longer in the State of Beni than elsewhere, and conditional amnesty was granted, the Government reserving the right to prosecute all who were implicated in the revolt.

Treaty with Chili.—Ex-President Aniceto Arce was sent to Santiago as a special ambassador to arrange a treaty of peace and alliance with the Chilean Government. He returned in the beginning of February with a treaty, which was ratified by the Bolivian Congress. By this, Bolivia, cutting the historical ties that bound her to Peru, becomes dependent upon Chili. Connected with this treaty were treaties of alliance also with Brazil and Paraguay. Chili agreed to cede to Bolivia a port on the Pacific, either Arica or Mollendo, and to equip, arm, and instruct the Bolivian national militia.

BOOTH, EDWIN THOMAS, American actor, born near Belair, Md., Nov. 13, 1833; died in New York city, June 7, 1893. He was the fourth son of the celebrated actor Junius Brutus Booth. From the elder Booth's custom of taking his son Edwin as a traveling companion and attendant, the youth acquired an early knowledge of the details of theatrical life and work and evinced a desire to become an actor. His father for a while disapproved of this purpose, but eventually allowed him to play some small parts. Edwin Booth's first appearance on the stage took place at the Boston Museum, Sept. 10, 1849, in the character of Tressel in "Richard III," his father playing Richard. His second appearance occurred later in the same month, when he played with his father, in Providence, R. I., the parts of Cassio in "Othello" and Willford in "The Iron Chest." The desire to see father and son on the stage together afforded an opportunity for Edwin to make his first appearance before a New York audience, Sept. 27, 1850, when he played the same part of Willford at the National Theater in Chatham Street. His second part before a New York audience was Hemey to his father's Pescara in "The Apostate." His first performance of the character of Richard III, undertaken suddenly

to fill his father's place at the latter's benefit, was in the same theater in 1851. His next engagement was in a Baltimore stock company at a salary of \$6 a week, where he went through some of the drudgery of his calling. For a short time thereafter he attended school in Baltimore, with which exception his education was acquired solely by undirected study of books and men. He went with his father to California in July, 1852. By this time he had fully determined to adopt the calling of an actor, and by the advice of his father he associated himself in a subordinate capacity with the stock companies managed by his elder brother Junius in the cities of San Francisco and Sacramento. When in the following October his father returned to the East he remained on the Pacific coast. There he endured the varying fortunes of a stock actor, diversified by an unprofitable trip to Australia and the Sandwich Islands, from which he returned in 1854. He was persuaded to undertake some of the leading Shakespearean rôles in San Francisco, and by the autumn of 1856 he had succeeded so well in gaining the favor of the public that he took the advice of some earnest friends and came East with the purpose of trying to assume the position left vacant by his father's death. Beginning in Baltimore in "Richard III," he played through the Southern cities, and was everywhere welcomed and honored as a worthy successor of his famous father. He appeared as Sir Giles Overreach at the Boston Theater, April 20, 1857, and the great success of that engagement established him firmly in reputation as one of the best tragic actors of his time. He went from Boston to New York and began an engagement at the Metropolitan Theater, May 4, 1857, in "Richard III." He played Richelieu, Sir Giles Overreach, Shylock, Lear, Romeo, Hamlet, Claude Melnotte, Sir Edward Mortimer, Petruchio, Iago, Othello, St. Pierre, Pescara, Lucius Junius Brutus, Don Caesar de Bazan, and The Stranger, to the applause and delight of crowded audiences. With little variation this series of parts continued to be his repertory to the end of his life. After a second engagement at the Metropolitan, in New York, beginning Aug. 31, 1857, he made a tour through the South and West, where the triumphs of his metropolitan engagements were confirmed by the most generous appreciation. It is characteristic of Mr. Booth's gentle modesty of nature that it was only after he had been for several months firmly established in popular regard that he could be persuaded of his great success.

In 1858 he met, in the company of the Richmond Theater, the lady who became his first wife, Miss Mary Devlin. She was born in Troy, N. Y., in 1840, made her first appearance on the stage in that city in 1854, and was married to Mr. Booth in New York, July 7, 1860. In the autumn of 1861 Mr. Booth played at the Haymarket Theater, London, but the shadow of the impending civil war in the United States impeded his success there. His daughter Edwina was born at Fulham, near London, Dec. 9, 1861. He next played a very successful season at the Winter Garden Theater, New York, beginning Sept. 29, 1862. His wife died on Feb. 21, 1863, at their home in Dorchester,

Appleton & Co

Mass., after a brief illness, and this blow caused Mr. Booth's retirement from the stage until the autumn. He returned to the Winter Garden Theater, of which he had become part owner, in "Hamlet," Sept. 21, 1863. During this season he played Bertuccio in "The Fool's Revenge" for the first time in New York. A notable event of the following year was the production of "Julius Cæsar," Nov. 25, 1864, with Edwin Booth as Brutus, and his brothers as Cassius and Marc Antony. The fact that the aged mother of the three brothers was present added a tender interest to the enthusiasm with which the performance was greeted. Edwin Booth next accomplished the memorable hundred nights' run of "Hamlet" at the Winter Garden Theater, Nov. 26, 1864, to March 22, 1865, after which he took the same play to the Boston Theater, where he was playing when the awful news of April 14 closed his public career at once and prostrated him with grief and shame. He left Boston, April 15, and for nearly a year lived in absolute seclusion at his home in New York city. Finally, however, he yielded to the persuasion of his friends that the American people wished him to resume his pre-eminent position upon the stage, and on Jan. 8, 1866, he came before them once more at the Winter Garden in "Hamlet." He was greeted with the warmest demonstrations of affection by a large and distinguished audience. On Feb. 1, 1866, a magnificent revival of "Richelieu" was inaugurated, and this was followed early in 1867 by a similarly wonderful production of "The Merchant of Venice." On Jan. 22, 1867, a gold medal, struck in commemoration of the great production of "Hamlet" in 1864, was presented to Mr. Booth on the stage of his theater, by a committee of distinguished citizens of New York. During the last week of this season, on the morning of March 23, the Winter Garden Theater with all its contents was destroyed by fire. There was no insurance, and Mr. Booth lost all his valuable wardrobe except one shoe, which happened to have been taken away to be mended. After the fire the blackened remains of a shoe buckle and the star of the order of the Elephant and Castle, which had been worn by John Philip Kemble in "Hamlet," were all that he recovered of a number of greatly prized mementoes of his father and of the older actors. This loss fell entirely upon Mr. Booth, as just before the fire he had bought the share of his partner, J. S. Clarke. But with undaunted energy he began immediately to effect arrangements for the building of a new and more perfect theater. The result was the structure known as Booth's Theater, at the corner of Twenty-third Street and Sixth Avenue, New York, the corner stone of which was laid April 8, 1868. After the destruction of his former theater the actor worked with the utmost vigor, playing his repertory in all the principal cities of the Union, and devoting his great earnings to the accomplishment of his intention to make the new theater a complete and permanent institution for the lasting glory of the American stage. During this period of hard work, in Chicago, in the autumn of 1867, Mr. Booth became engaged to Miss Mary Runnion, a stepdaughter of the well-known actor and manager, J. H. McVicker, known upon

the stage by the latter's name. They were married June 7, 1869, at Long Branch. Mrs. Booth had permanently retired from the stage before their marriage.

The new theater was opened with great public enthusiasm Feb. 3, 1869, presenting a grand production of "Romeo and Juliet," Edwin Booth playing Romeo, Edwin Adams Mercutio, and Miss McVicker Juliet. The stock company engaged by Mr. Booth for his theater comprised the ablest actors and actresses of their time. "Othello" was the next great production, April 12 to May 29, when Mr. Booth ceased to play, and the company continued with Edwin Adams at its head until July 31. Joseph Jefferson played "Rip Van Winkle" from Sept. 2 to Sept. 18, and other stars followed, supported by the stock company until Mr. Booth's return. On Jan. 5, 1870, he began his second and most magnificent revival of "Hamlet," which continued until March 19. A grand revival of "Richelieu" was given on Jan. 9, 1871, followed by "Much Ado about Nothing," in which Mr. Booth played Benedick for the first time in New York, March 6; "Othello" on the 20th of the same month, and "The Fool's Revenge" from April 8 to April 24, when Mr. Booth ceased playing, but directed the sumptuous production of "A Winter's Tale" by the company. The season closed July 4, and opened again Aug. 14, the company supporting a succession of the most famous stars, until Mr. Booth's reappearance in a revival of "Julius Cæsar," Dec. 25, 1871, which held the stage until March 16, 1872. During these productions Mr. Booth gave his personal attention to every detail of both artistic and mechanical work. He became sole owner of the theater in 1871, but the panic of 1873-'74 swept him into bankruptcy. He retired from management in June, 1873, and made an assignment in November following. Booth's Theater passed from his control, and after various changes of management it was closed, April 30, 1883, with a performance by Madame Modjeska of the same play with which it had been opened, "Romeo and Juliet." Soon afterward it was torn down, and a large business building was erected in its stead.

Mr. Booth at once set out to free himself from his embarrassments, and entered upon a series of engagements throughout the country, beginning at the Fifth Avenue Theater, New York, Oct. 25, 1875. During the early months of 1876 he made a tour of the Southern States and was greeted everywhere by crowds of delighted people. He went to California in August, 1876, arriving in San Francisco Sept. 5, exactly twenty years since he had left that city. There he played for eight weeks, during which the receipts amounted to \$96,000; and from Nov. 20, 1876, to Jan. 26, 1877, he played at the Lyceum (now the Fourteenth Street Theater) in New York. The profits of the work done by him from October, 1875, to May, 1877, enabled him to pay off all obligations entailed by the failure of Booth's Theater. The season of 1877-'78 saw him again at work as a strolling player. In January, 1878, he rented Booth's Theater and played there again, under his own management. In Chicago, where he began an engagement on April 14, 1879, he was shot at three times, while

alone on the stage in the last act of "Richard II." by a stage-struck lunatic. After a summer vacation he resumed work Oct. 6, 1879, at Ford's Opera House, Baltimore, and played two extremely profitable engagements in New York, closing there with a four weeks' season at Booth's Theater. He then arranged for another professional tour in Europe, and on the occasion of his departure was given a public breakfast at Delmonico's, New York, at which were assembled some of the most famous men of the country. He sailed June 30, 1880, accompanied by his wife and daughter. After a short period of pleasure-seeking travel he appeared in London, at the Princess's Theater, as Hamlet. His series of one hundred and nineteen nights at this theater was not as spontaneously patronized as were the plays of Henry Irving, who was then in the full tide of popularity. A very successful series of performances of "Othello" was given at the Lyceum Theater, then, as now, under the management of Mr. Irving, with Mr. Booth and the great English actor alternating Othello and Iago, May 2 to June 19. The illness of Mrs. Booth prevented the carrying out of a design to visit other cities in England, and Mr. Booth returned to New York about the end of June.

The season of 1881-'82 began at Booth's Theater, New York, Oct. 3, and was interrupted by the death of Mrs. Booth, Nov. 13, 1881. On May 31, 1882, he sailed again for England and fulfilled several engagements in the English provinces, beginning at Sheffield, Sept. 11, and closing at Birmingham, Dec. 16. On Dec. 27 he left London for Berlin, where he played at the Residenz Theater for four weeks to very enthusiastic and appreciative audiences. From Berlin he went to Hamburg, Hanover, and Bremen, and met with equally generous receptions. He appeared at the Stadt Theater, Vienna, March 30, and played to crowded audiences until April 7. At the close of each of his German engagements Mr. Booth was presented with a silver crown, wreath, or other tokens of regard, by the artists of the companies with which he played. His German engagement was one of the most successful and pleasant of his life. He returned to his home, which he had now established in Boston, and resumed work as a traveling star at the Globe Theater in that city, Nov. 5, 1883. The following season began at the Boston Museum Nov. 17, 1884. On May 7, 1885, he played "Macbeth" with Madame Ristori at the Academy of Music, New York.

In 1885-'86 he played only a short time. His daughter Edwina was married, May 16, 1885, to Mr. Ignatius Grossman, and his mother died in New York, Oct. 22, 1885, in her eighty-fourth year. Four performances were given at the Academy of Music, New York, April 26, 28, 30, and May 1, 1886, in which Booth and Salvini played together, the first as Hamlet and Iago and the second as Othello and the Ghost. During the summer of this year Mr. Booth entered into a business association with Lawrence Barrett, which continued without interruption until the latter's death. At Buffalo, N. Y., Sept. 13, 1886, Mr. Booth, supported by a company especially engaged by Mr. Barrett, who continued playing with his own company, began what proved to be his most profitable and extensive engagement.

The tour embraced the principal cities of the Union, from Boston to San Francisco, and from Minneapolis to San Antonio. During this tour he played Sir Giles Overreach and Richard III for the last time. The profits of the season, which closed May 15, 1887, were \$450,000. At Buffalo, Sept. 12, 1887, began the well-known association of Lawrence Barrett with Mr. Booth in the latter's repertory. They continued to play together throughout the country, with the usual vacation during the summer months, until Sept. 30, 1889, when Mr. Barrett resumed his place at the head of a separate company, and Madame Modjeska was associated with Mr. Booth's support during the season of 1889-'90, which closed on May 10, 1890, in Buffalo.

In January, 1888, Mr. Booth procured the incorporation of The Players, a club organized with the object of promoting social relations between actors and patrons of the drama. He endowed the club with the gift of a completely fitted clubhouse, No. 16 Gramercy Park, New York, in the purchase and furnishing of which he expended \$175,000. While he was playing an engagement at the Fifth Avenue Theater, New York, the house of The Players was opened by Mr. Booth and an assemblage of the ablest men of American dramatic, literary, artistic, and social life. It is notable that on this occasion the three then oldest living American actors were present—E. S. Connor (1809-'91), John Gilbert (1810-'89), and James E. Murdoch (1813-'93).

While about to go upon the stage as Iago on the evening of April 3, 1889, at Rochester, N. Y., Mr. Booth was visited by a slight stroke of paralysis, which so impeded his articulation that he could not play. With a short rest his ailment yielded to treatment, and he rejoined his company at Cleveland, Ohio, April 15, and acted continuously for the remainder of the tour, which took him again to the Pacific coast, where the season ended at Portland, Ore., June 24, 1889.

Booth and Barrett were again seen together for seven weeks, beginning Nov. 3, 1890, in Baltimore, Philadelphia, Boston, and Providence, and after an interval of rest Mr. Booth resumed with Mr. Barrett at the Broadway Theater, New York, March 2, 1891. Mr. Barrett died suddenly on March 20, and Mr. Booth, whose health had grown very precarious, ceased acting—as if proved, forever—with a performance of "Hamlet" at the Academy of Music, Brooklyn, April 4, 1891. For two years he lived quietly in his home at The Players. On the morning of April 19, 1893, he was found unconscious in his bed, and thereafter he lingered with but brief periods of relief from pain until the early morning of June 7, when he passed away. A quiet funeral service, conducted by Right Rev. Henry C. Potter, took place at the Church of the Transfiguration, New York, on the morning of the 9th, and at sunset on the same day his remains were placed by the side of his first wife's, in Mount Auburn Cemetery, Boston. On Nov. 13, 1893, a memorial of his birthday was held, under the direction of the Board of Directors of The Players, in the Madison Square Garden Concert-hall, New York. Addresses in his honor were given by Joseph Jefferson, his successor in the presidency of the club, Parke Godwin, Henry Irving, and Tommaso Salvini; an elegy, composed for

the occasion, was read by its writer, Prof. George E. Woodberry, and the Symphony orchestra played the funeral music used by Booth in "Hamlet."

Edwin Booth's work was like his personal character—true, strong, and sincere. He hated all shams and pretenses with a gentle but firm and persistent intolerance. Nature endowed him with perfect physical qualities for the portrayal of elevated and inspiring emotions. His eyes were large, dark, and liquid, his face strong and mobile; his hair soft, black, and waving, and he wore it habitually long until age made it thin and gray. His form, erect and dignified in repose, was extremely graceful in movement. In the action of the various characters that he from time to time portrayed it is hard to say what quality contributed most to the gratification of the public—the perfect propriety of his art in "suiting the action to the word," or the melody and sweetness of voice with which he conveyed to the ear the words of passion or of affection. His power of voice was not greater than that bestowed upon the generality of men, but the judgment with which he used it made him easily the superior of actors to whom nature gave uncommon physical qualities. In his early stage life he excelled in the representation of strong and energetic passion as displayed in such parts as Othello, Iago, Richard III, Pescara, and Bertuccio; but the gentler and melancholy Hamlet gave his genius its fullest scope. He was never greatly attracted by love-making characters, and was therefore not often prevailed upon to play Romeo or Claude Melnotte. He was not fully confident of his powers in comedy, although he created much delight by his performances of Don César de Bazan and Petruchio. From the beginning of his career he was a careful student of pure diction, and to the last a peerless model of that inalienable attribute of acting. By his careful observance of the integrity of his mother tongue, and by his genius for riveting attention by appropriate and thought-compelling action, he owned and swayed that greatest of human gifts, the faculty of thrilling the heart to sympathy and admiration. Even when age, care, and illness had weakened his body and wearied his mind, he was always and truly great. If the fire and vigor of youth were missed in the acting of his latest years, it should not be forgotten that a tender and holy desire to help his fellow-players moved him to put aside his own inclination and so continue before the public after Nature and Fortune had beckoned him to rest.

BRAZIL, a republic in South America, formerly an empire. The Imperial Government was overthrown by a revolution on Nov. 15, 1889, and on the expulsion of the Emperor Dom Pedro II a Provisional Government was instituted by Marshal da Fonseca, which convened a national Congress elected by universal suffrage for the purpose of framing a Constitution. This met on Nov. 15, 1890, and the Constitution was proclaimed on Feb. 24, 1891. This established a federal republic in which each of the old provinces was constituted a State having power to administer its affairs at its own expense, without interference from the Federal Government except for the maintenance of order or the execu-

tion of the Federal laws. The Federal Senate is composed of 63 members, 3 from each State and 3 from the Federal District, elected for nine years, one third retiring every three years. The Chamber of Deputies has 205 members, 1 to every 70,000 of population, serving three years. The President and Vice-President of the republic are elected for four years; if both offices fall vacant within two years of the beginning of the term fresh elections must take place; but if the vacancy occurs later, the presidents of the two houses of Congress and of the Supreme Court succeed in their order to the office. The election of the President and Vice-President and of the members of both branches of Congress must be by the direct suffrage of all Brazilian male citizens of the age of twenty-one years who are registered voters and not paupers or illiterate, nor soldiers in active service, nor members of a monastic order subject to vows of obedience. On the enforced resignation of President Deodoro da Fonseca, Nov. 23, 1891, Floriano Peixoto, the Vice-President, became acting President for the remaining part of the term ending Nov. 15, 1894.

The Cabinet in the beginning of 1898 was composed of the following members: Minister of Commerce, Agriculture, and Public Works, Serzedello Correa; Minister of Finance, Dr. Rodrigues Alves; Minister of the Interior, Dr. Fernando Lobo; Minister of Foreign Affairs, Dr. Victorino Monteiro; Minister of War, Gen. Francisco de Moura; Minister of Marine, Rear-Admiral Custodio José de Mello. In January, 1898, Serzedello Correa became Minister of Finance, the portfolio of Commerce and Agriculture being conferred on Antonio Paulino Limpo de Abreu. At the same time Monteiro was succeeded as Minister of Foreign Affairs by Dr. Antonio Francisco de Paula Souza.

Area and Population.—The area of Brazil is 3,209,878 square miles, and the population is estimated at 14,000,000. About four elevenths of the population are whites, living mainly in the seaports. The mixed races are about as numerous. Of pure negroes, who preponderate in the States of Pernambuco, Bahia, Rio de Janeiro, and Minas Geraes, there are half that proportion; and one eleventh of the population are pure Indians, of whom two thirds still live in a savage tribal state. The immigration at the ports of Rio and Santos for the twenty years ending with 1890 was 587,524. Immigration has largely increased. In 1887 the number of immigrants was 54,990; in 1888, 131,785; in 1889, 65,187; in 1890, 107,100; in 1891, 218,958. In 1891 the immigrants of Italian nationality numbered 134,391, the Portuguese 32,349, the Spaniards 22,166, and there were 11,817 Russians, 5,285 Germans, and 4,246 Austrians. In August, 1892, the Government made a contract with the Companhia Metropolitana for the introduction of 1,000,000 immigrants from European countries and Spanish and Portuguese colonies in ten years, the majority of whom must be agricultural laborers and the rest skilled in useful trades, and not more than 60 per cent. of the whole may be taken from a single country. A law permitting the importation of Chinese and Japanese laborers was signed by the President on Sept. 26, 1892. A fund of \$30,000,000 has been created by Congress for the encouragement of European

immigration. The population of Rio de Janeiro is about 800,000; of San Salvador, Bahia, 200,000; of Recife, Pernambuco, 190,000; of San Paulo, 100,000; of Belem, Para, 65,000; of Porto Alegre, 55,000.

Commerce and Production.—The annual production of coffee in Brazil is about 1,000,000,000 pounds, or 56 per cent. of the total production of the globe. The bulk of the world's supply of raw rubber comes from this country, which is also a large producer of sugar, tobacco, and cotton. Many valuable forest products enter into commerce, and gold mines are worked by English and French companies which yield over \$375,000 a year. Great deposits of iron and other mineral resources lie unworked. There are 17,000,000 head of cattle. The value of the total exports rose from 317,822,000 milreis in 1886 to 317,822,000 milreis in 1890, and of imports from 197,501,500 to 260,100,000 milreis. Besides imposing heavy import duties, the Government levies an export duty on the principal national products. The crops of 1891 and 1892 were abundant, and the receipts of the custom-house increased nearly 50 per cent. In 1892 the coffee exported from Rio Janeiro amounted to 3,701,845 bags of about 60 kilos each, while 3,588,007 bags were exported from Santos, and 105,270 bags from Victoria. In the same year were exported 51,935 tons of sugar from Pernambuco, 688,930 hides from Rio Grande do Sul, and from Para India rubber of the value of 44,637,004 milreis, cacao for 3,501,658 milreis, and Brazil nuts for 1,144,380 milreis.

Navigation.—In the two years 1889 and 1890 there were entered at Brazilian ports 5,926 foreign and 897 Brazilian ocean vessels, of 4,954,928 and 355,115 tons aggregate capacity respectively, and cleared 4,650 foreign vessels, of 4,706,483 tons, and 269 Brazilian vessels, of 140,307 tons. The coasting vessels entered were 1,997, of 2,923,296 tons, under foreign flags, and 5,258, of 2,649,195 tons, under the national flag, and cleared 1,825 foreign vessels, of 2,525,150 tons, and 6,987 Brazilian vessels, of 2,905,873 tons. Congress has made a law that will have the effect of excluding foreign vessels from the coasting trade. A German line of steamers has been established for direct trade between Hamburg and Rio Grande do Sul. The merchant marine of Brazil in 1890 comprised 149 sailing vessels and 115 steamers.

Railroads, Posts, and Telegraphs.—In 1892 the total length of the completed railroads was 4,788 miles. There were 2,832 miles in course of construction, and 3,345 miles more were projected. Of the roads in operation the State owned 1,533 miles and subsidized companies 3,018 miles. The Government guarantees 6 or 7 per cent. interest on the capital of the latter. The capital invested in the state lines up to the end of 1888 was 195,636,000 milreis, and in all the railroads 488,148,327 milreis.

The post-office in 1890 carried 18,246,739 private letters and 19,280,135 newspapers and printed inclosures. The receipts were 3,243,421 milreis; while the expenses amounted to 9,323,108 milreis.

The telegraph lines in 1892 had a total length of 17,530 miles. The number of messages sent in 1891 was 1,130,229.

Finances.—The receipts of the Federal Government for 1891 amounted to 227,921,227 milreis, and the expenditures to 205,948,000 milreis. The revenue in 1892 exceeded 215,000,000 milreis, being 7,000,000 milreis more than the estimate; but the expenditure amounted to 256,000,000 milreis, exceeding the estimate by 50,000,000 milreis, and leaving a deficit of 41,000,000 milreis. The estimated receipts for 1893 were 218,000,000 milreis, derived from the following sources: Import duties and surtax, 150,000,000 milreis; railroads, 20,840,000 milreis; stamps, 10,500,000 milreis; new tobacco stamps, 6,000,000 milreis; post-office and telegraphs, 6,600,000 milreis; fines, etc., 4,770,000 milreis; port charges, etc., 3,786,000 milreis; transfer taxes, 3,200,000 milreis; deposits, 3,500,000 milreis; various, 3,804,000 milreis. The estimated expenditures were 211,649,922 milreis, not including a deficit of 110,240,715 milreis not yet provided for. They were distributed as follows among the Departments of the Government: Finance, 71,854,786 milreis; Industry and Public Works, 66,784,902 milreis; War, 30,555,383 milreis; Marine, 15,676,230 milreis; Public Instruction, 14,847,487 milreis; Interior, 5,387,062 milreis; Justice, 5,885,367 milreis; Foreign Affairs, 1,658,725 milreis.

The foreign debt in 1892 amounted to £29,759,500 sterling, paying interest mainly at the rate of 4 per cent., not including a loan of £1,000,000 subsequently raised in London and bearing 5 per cent. interest. The internal funded debt, paying mostly 5 per cent., amounted to 391,956,700 milreis. Besides this there was a floating debt of 118,000,000 milreis, and 167,611,397 milreis of paper money was in circulation. For the payment of the foreign debt a sinking fund of 1 per cent. has been provided, to be applied to the purchase of the bonds when they are below par in the market, and to the redemption of them in the order in which they are drawn by lot otherwise.

The Army.—Service is obligatory, no substitution being allowed, and liability to conscription by lot is universal. The period of service is three years for recruits who present themselves promptly for the drawing, but such as delay or seek to evade conscription are held for four or six years. The organization and distribution of the army are subject to the control of Congress. By the law of December, 1891, the active strength of the army is limited to 20,000 officers and men besides 600 cadets in the military school and 400 in the artillery school. The whole force of the standing army, which can be doubled in case of mobilization, was 1,600 officers and 28,877 men in 1891. There is besides a gendarmerie of 15,000 men. The active army is organized in 36 battalions of infantry, besides 1 transportation company and 1 depot company for instruction; 12 regiments of cavalry of 4 squadrons each, besides 2 corps of 4 companies, 5 companies of picked cavalry for garrison service, and 1 garrison squadron; 5 regiments of field artillery and 5 batteries of fortress artillery; and 2 battalions of engineers. Of the gendarmerie, 2,000 are at Rio de Janeiro. A National Guard is maintained in the States, and a plan for its reorganization has been adopted and partly carried out.

The Navy.—The Brazilian navy consists of 3 seagoing armor-clads, 3 first-class and 3 second-class cruisers, 5 school ships, 2 paddle-wheel transports, and for coast defense 9 screw and 8 paddle-wheel gunboats, 4 monitors, and 9 first-class torpedo boats, besides 4 tenders and 6 steamboats for harbor service. The "Riachuelo," having a displacement of 5,700 tons and engines of 7,300 horse power, giving a nominal speed of 16½ knots, was built in England in 1883. The "Aquidaban," of 4,950 tons and a speed of 15 knots, was built there in 1885, and is of more modern type. Both have steel hulls, sheathed with wood, and covered with copper on the bottom. They are fitted with twin screws, and have a draught of 19½ and 18 feet respectively. Each has a belt of steel-faced armor which is 11 inches thick at the water line, and 2 turrets protected by 10-inch armor. Each turret contains 2 9-inch or 20-ton breechloading rifled cannon, throwing 300-pound shells. The "Riachuelo" carries 6 5½-inch breechloading rifles and 15 rapid-firing and machine guns, and has 5 tubes for Whitehead torpedoes. The secondary battery of the "Aquidaban" consists of 4 70-pounders and 2 rapid-fire and 13 machine guns. The "Javari," built in France in 1875, is an iron ship of light enough draught for coast defense or river service, with a displacement of 3,700 tons, protected with from 12 to 18 inches of wrought-iron armor, having twin screws and engines of 2,500 horse power, giving a nominal speed of 11½ knots. She is a double-turreted ship, carrying 4 10-inch muzzle-loading Whitworth guns in her turrets and 6 5-inch guns on the main deck. The 6 cruisers are all effective modern ships. The deck-armored twin-screw "Almirante Tamandare," of 4,735 tons, has, with 7,500 indicated horse power, a speed of 17 knots, and is armed with 10 5½-inch and 2 4½-inch rapid-fire guns and 8 machine guns. The "Benjamin Constant," of 2,750 tons, with 2,800 horse power and twin screws, has a speed of 14 knots and carries 4 6-inch and 8 4½-inch rapid-fire guns, besides 10 small rapid-fire and machine guns, and is fitted with 4 tubes for launching Whitehead torpedoes. The twin-screw "Republica," with 3,300 horse power, can steam 17 knots. Her protective deck is 2 inches thick, and her armament consists of 6 4½-inch and 4 6-pounder rapid-firing guns, besides 4 torpedo tubes. The "Trajano," of 1,400 tons, is able to make 18 knots with her single screw, with 2,400 indicated horse power, and is armed with 7 4½-inch breechloading rifles. The "Tiradentes," of 800 tons, has engines of 1,200 horse power and twin screws, giving her a speed of 14½ knots, and is armed with 4 4½-inch and 3 6-pounder rapid-firing guns and 2 torpedo tubes. The "Brazil," of 1,518 tons, and the "Lima-Barros," of 1,350 tons, cruising vessels of antiquated type now only useful as floating batteries, carry 4 7-inch and 4 68-pounder Whitworth rifle guns each. The "Sete de Setembro," an old wooden ship of 2,145 tons, capable of making 12 knots with twin screws, driven by 2,000 horse power, has 4 9-inch Whitworth guns mounted on a bar-bette, which is protected by 4½-inch plates. The "Marriz-e-Barros," of 1,440 tons, and the "Bahia," of 1,000 tons, are ancient ironclads with 4½ to 5½-inch armor, carrying 1 4-inch and the other

2 7-inch muzzle loaders. The "Rio Grande" and the "Piauihy," river monitors plated with 4½-inch armor, carry each a single 70-pounder.

There are naval arsenals at Rio, Ladarío de Matto Grosso, Para, Pernambuco, and Bahia. The policy of the republican Government has been to manufacture vessels and all materials of war in the country. The "Almirante Tamandare" was built at Rio, and in 1893 there were under construction 2 cruisers of 7,250 tons and 2 river monitors. The navy is officered by 1 admiral, 2 vice-admirals, 8 rear-admirals, 17 captains, 29 commanders, 60 first lieutenants, and 250 second lieutenants, with 79 surgeons and 80 paymasters. There are 650 mechanics, 3,500 sailors, and 1,500 apprentices. The marine corps consists of 8,021 men, besides a naval battalion of 990.

Revolt in Rio Grande do Sul.—A revolutionary attempt of the Federalists to overthrow the State government was defeated in June, 1892, and the victorious Castilhistas hunted their opponents down, committed horrible deeds of massacre and rapine, and compelled thousands to take refuge in Uruguay and the Argentine Republic. Some of the chiefs took advantage of the amnesty that was subsequently proclaimed. Silveira Martins, the head of the party, with Joco Tavares and other fighting leaders, remained abroad and set to work secretly to collect arms and organize their followers, who were thirsting for revenge. Toward the close of 1892 they were ready to cross the Uruguayan frontier and again raise the partisan standard in Rio Grande do Sul. The State authorities, anticipating invasion, reverted to the policy of terrorism in the hope of crushing the incipient revolution. Their official organ, the "Federação" of Porto Alegre, on Oct. 29, 1892, published an astounding account of a widely ramified revolutionary conspiracy that had been found out through the interception of letters in the post-office of Santa Maria. This story, which was regarded as a fiction, afforded a pretext for violating the amnesty. On Oct. 31 the police entered the house of Friedrich Hänsel, a leader of the German community, and in pretending to arrest him treacherously shot him from behind. Col. José Fagundo da Silva Taveres defended his house with the aid of his half-grown sons and daughter till all were shot down, when he was carried away wounded. More than 50 persons were arrested in Porto Alegre, and large numbers in other places, but most of the prominent Federalists succeeded in making their escape. When the elections were held on Nov. 20 less than one sixth of the electors went to the polls. Already the Federalists had begun to make raids across the border in guerilla bands. Gen. Saraiva was recruiting an army for an invasion, and the Federals of Bage, Yaguaron, and other towns organized and armed themselves. When Saraiva crossed the frontier, and was successful in his first encounter with the State troops, and when Tavares, at the head of a considerable force, laid siege to Santa Anna, the Federal Government suggested the appointment of interventors to settle the dispute of the warring factions in the State. Silveira Martins gave it to be understood that no intervention would be acceptable, and that nothing would satisfy the Federalists except the removal of Gov. Castilho. When the in-

insurrection had spread through the southern part of the State and most of the towns were in the hands of the rebels, the Central Government decided to send forces to defend the established authorities. Arms and ammunition destined for the rebels fell into the hands of the Government. The Uruguayan authorities, anxious to avoid the imputation of a breach of the neutrality laws, disarmed some of the Federal revoltors who were driven over the border, and seized a cargo of arms. Gen. Tavares was compelled to retreat from his intrenchments before Santa Anna do Livramento by a large force that came to the relief of the garrison just as it was about to yield. Gen. Tellos, commander of the State troops, pursued the rebel general, who took up a favorable position, and on March 17 routed the attacking army of 3,000 men. Tavares occupied the town of Santa Anna, and had scarcely dispatched a large detachment toward Uruguayana, when he was attacked by 800 Government troops under Gen. Portugal. Notwithstanding a vast superiority in numbers the Federals were driven from their position and put to utter rout. They were pursued across the frontier, and found no safety on Uruguayan soil till the commander of the Uruguayan forces that guarded the frontier intervened and demanded the withdrawal of the Brazilian troops. Instead of complying, the Brazilian commander ordered an attack on the Uruguayans, whom he charged with giving shelter to the rebels. The Uruguayans returned the fire, and being re-enforced drove the Brazilians back over the line. Saraiva appeared soon afterward at Alegrete, and after a desperate battle drove the State forces from their intrenchments and took possession of the city on March 27. The place was afterward recaptured by a small force of regular soldiers. Tavares also was beaten when he appeared near Bage. Wherever the insurgents showed themselves in numbers they were met by Government troops, which were strengthened until 3,000, supplied with repeating rifles, mitrailleuses, and field guns, and including 500 cavalry, were stationed near the frontier. The raids were not effectually checked, and the population suffered from depredations committed by the partisans on both sides, while the barbarities incidental to guerilla warfare intensified the bitterness of the parties. The insurgents in all cases evaded a conflict with the national army, and, lacking arms and money, were only able to keep up the struggle by exacting ransom from *haciendas* and villages adhering to the Castilhistas cause. Nevertheless the insurrection spread. San Juan, Tuarahy, and Ibicuy rose against the Government, and bodies of the State militia went over to the rebels with their commanders. A battle was fought near San Luis between the forces of Tellos and Tavares, in which there was much loss of life, though neither achieved a decided victory. Gen. de Moura went to Rio Grande do Sul to assume the direction of the Government troops and make an inquiry into the demands of the two parties, with the view of finding a way to terminate the conflict and pacify the State with the co-operation of the Governor. His failure to come to an agreement with Gov. Castilho had a depressing effect. The President had to consider whether he should insist on mediation or even remove the Governor, or on the other

hand continue to support Castilho. His choice of the latter alternative was condemned by some who were prominent in the State councils. One of the Government regiments deserted to the insurgents. A fight between Castilhistas partisans, who entered Uruguay to steal horses, and the Uruguayan frontier guard increased the existing tension between the two republics. The Uruguayan minister to Brazil entered a firm protest against the violation of Uruguayan territory. Gen. Lima, while pursuing a body of revolutionaries, was drawn into an ambush near Inhanduhy, and about 200 of his men were killed or wounded. But the Government forces were strong enough to hedge in the Federals in the frontier districts. By the end of May the forces led by Silva Tavares and other commanders of the rebellion had been driven into Uruguay, and only the bands of Gumersindo Saraiva remained in the field. The Government was prevented by its own dissensions and dangers from proceeding to the most extreme measures. Vice-President Peixoto had a submissive majority in the House of Representatives, but in the Senate the Opposition was strong. The weight of opinion in this body was in favor of mediation between the parties in Rio Grande do Sul and the conciliation of the Federals. Admiral Eduardo Wandenkolk, the representative of the navy in the Provisional Government that established the Government, who was compelled to leave the Cabinet and has since been in the Opposition in the Senate, was sent to Rio Grande do Sul to report on the situation to the Senate. After his arrival he entered into correspondence with Martins, and soon he openly espoused the cause of the rebels, obtained the merchant steamers "Jupiter" and "Italia," was joined by the gunboat "Camocin," and, relying on support from the land forces, attempted on July 11 to capture the city of Rio Grande. Gen. Saraiva and Gen. Salgado were expected to co-operate with him on land at the head of 3,000 revolutionists. Swollen streams delayed the march of the land forces, and when Admiral Wandenkolk arrived there were only a few bands of insurgents on the spot, though from their appearance he supposed them to be a large body ready for battle. In the mean time the Government steamers that had been sent from Rio appeared outside of the bar, and when Wandenkolk retired, after a futile attack, the "Jupiter" was pursued by the gunboats "Republica" and "Cananea," and was captured at Santa Catharina on July 16 with Wandenkolk and all on board. The "Italia" was seized by the Uruguayan authorities, and the vessel was delivered up to Brazil, but the demand for the surrender of the officers and crew was refused. The Uruguayan Government had a new cause of complaint, more serious than the previous ones, on account of the acts of Gen. Isidoro, one of the commanders of State troops, who had chased insurgents across the frontier, and killed not only fugitive Brazilians but Uruguayan citizens who gave them shelter.

Cabinet Crisis.—When, in May, the administration decided to continue to support the legal authorities in Rio Grande do Sul with the military forces of the republic, Rear-Admiral Custodio de Mello, Minister of the Navy, and Serzedello Correa, Minister of Finance, handed in

their resignations and published their reasons. The former accused the Vice-President of embarking in the civil war in a frivolous manner, declared that the operations had been badly planned and conducted, and that no reasons existed for their continuation, and said that he was unwilling to share any longer the responsibility for the acts of the Government. The Finance Minister stated that Vice-President Peixoto had ignored his warning to use the utmost frugality in expenditures, and had issued a decree so narrowing the functions of the court of accounts as to make it worthless as an organ for the control of the financial administration. Rear-Admiral Chaves was induced to take charge of the Ministry of Marine, and Minister Freire, who had recently entered the Cabinet, took the portfolio of Finance, while continuing to direct the Foreign Office. He was relieved of the duties of the latter post on July 1, when João Pereira was appointed Minister of Foreign Affairs.

Revolt of the Navy.—Though the rebellion was kept down in Rio Grande do Sul by the military power of the Government, it was not crushed out. In July similar uprisings broke out and gained headway in Entre Rios, Santa Catharina, Corrientes, and other such movements were on foot in other States. The approaching presidential election in October set in motion the plots and schemes of ambitious politicians, revived the burning questions of State rights or parliamentarism and the limits of executive power, fanned the smoldering jealousy between the army and the navy, inspired extravagant rumors of dictatorial purposes and tales of the despotic abuse of his office by the President and of monarchical or separatist designs of the Opposition, and generally wrought political passions up to a fever heat. Admiral Mello's dramatic withdrawal from the Cabinet, and the manifesto in which he attacked Peixoto, were ascribed to his ambition to become the next President. The animosity of the navy against Peixoto was intensified by his treatment of Wandenkolk, whom he was determined to have tried by court-martial. The officers of the navy had shown their sympathy with the Federals in the southern province by electing Wandenkolk, when the object of his mission became known, president of their club. A large section of Historic Republicans, led by Ruy Barbosa, and including other members of the old Provisional Government, were strongly opposed to the President's policy of interfering in the internal affairs of the States. When the President and his advisers were on the point of hauling ex-Admiral Wandenkolk before a military tribunal, Ruy Barbosa sued for a *habeas corpus* in his behalf, and in the proceedings the executive officials incensed the navy by treating Wandenkolk with indignity. The President was charged publicly with having intimidated the Supreme Court and preventing his release on bail. The Senate took action in the matter, and by vote of a small majority decided that Wandenkolk should be tried by the regular courts. In Brazil, as generally in the South American republics, a President is not eligible for re-election for the next succeeding term. Peixoto was not an elected President, but as Vice-President succeeded to

the duties of the office on the resignation of Deodoro da Fonseca, in November, 1891. Therefore he did not come under the rule, and he and his friends used the influence and power of the Government to secure his election as regular President. His opponents carried through a bill prohibiting a Vice-President who acts as President from being a candidate. This he vetoed. Many of the old Republicans stood on the side of the President, who was also supported by a large part of the former Conservative party, was especially popular in the central and southern States, and had the army and the whole power of the Government under his control. Others of the Republicans considered that the civil war and disorder in various States was caused by the unconstitutional policy and revolutionary acts of the Government. The clericals and secret foes of the republic naturally opposed the Government. As the time of the election approached, hostility to Peixoto and his acts increased, but the dangerous revolutionary spirit that prevailed caused a great many who condemned his policy to rally to his support. The naval forces had taken the initiative in the deposition of Fonseca, and the navy was more exasperated against the acting President than it had been against his predecessor. In the Navy Club a number of officers conspired together, laid plans for a stroke of the same character as that by which the Fonseca dictatorship was overthrown, and took into their confidence others of like mind and spirit.

On the evening of Sept. 5, while the officers of the fleet anchored in the harbor at Rio were at the opera, Admiral Mello, with several of his friends, went on board the "Aquidaban" first, and then to the other war ships, and completed arrangements by which his flag was raised on the "Aquidaban," and every Government vessel in the port was under his orders. The fleet consisted of the "Aquidaban," "Republica," "Trajano," "Marajo," "Javari," "Orion," "Madeira," "Marcilio Diaz," "Sete de Setembro," "Almirante Tamandare," "Amazonas," and 6 torpedo boats, besides towboats, 4 merchant steamers, and several steam launches. In the following morning he sent a message to President Peixoto demanding his resignation and the surrender of the Government offices within six hours. Instead of yielding, as Mello expected, Peixoto defied the naval squadron, and took vigorous measures to frustrate the revolution, for which the Congress gave him legal authority and voted supplies. The flower of the Brazilian army had been kept in Rio in anticipation of such an emergency. There were about 6,000 troops, which were distributed in the fortifications and strategic points of the bay to prevent a landing. The infantry were armed with Mauser and Mannlicher rifles. A considerable force of infantry and artillery was sent by a detour to occupy Nietheroy, or Praia Grande, the capital of the State of Rio Janeiro, on the opposite side of the bay, in order to keep open communications with the fortress of Santa Cruz, which guards the entrance to the harbor. The garrison of this fort remained stanchly true to the Government, and was prepared to execute its orders to sink any of the ships that came within range of the guns. The garrison of Fort

Villegagnon, within the harbor and in the city, when invited to join the rebellion, declared for the Government, but promised not to fire upon the fleet. The insurgents on the night of Sept. 5 landed on the island of Cobras, which is fortified to protect the city, and spiked all the guns. By authority of Congress, Rio and Nictheroy were declared in a state of siege, and the President was empowered to extend it to any part of the country. The press was placed under rigorous censorship, and telegraphic communication between Rio and the rest of the world was shut off entirely. The insurgents attempted to land in small parties on Sept. 6 and 7, with the intention of cutting off telegraphic communication with the forts, and everywhere they were repelled. The soldiers fired by mistake on the boat of the Italian man-of-war, killing the coxswain, for which the Government apologized at once, paying an indemnity of \$50,000 to the man's family. On Sept. 7 they captured the Armação, the ammunition laboratory of the Government at Nictheroy, and supplied themselves with abundant munitions. They were dislodged with considerable loss on the 11th, and on the 12th they bombarded the place.

The entire *personnel* on board the fleet, including officers, marines, sailors, stokers, and machinists, did not exceed 1,200 men. There were not enough to attempt to gain a foothold on land after Gen. Peixoto had taken measures for guarding all the shore of the bay. The ships could not venture out to sea past the forts and torpedoes at the mouth of the harbor. The leader of the rebellion could do nothing but manœuvre his ships in the bay, watching for chances and awaiting developments. The gunboat "Alagoas" fell into his hands, surrendering without firing a shot. The forts fired on the ships. Mello had threatened that if this was done he would bombard the city. On Sept. 13 he opened fire, first on the forts near Nictheroy, and afterward on the arsenal and the Government buildings that face the water front in Rio. The bombardment lasted six hours, and was renewed the next morning, but caused little damage, because the guns were badly handled. The port was blockaded to all Brazilian vessels, while foreign vessels were allowed to enter and depart, the warships of their respective nationalities looking after them during their stay. Except Santa Cruz, the forts either were silenced by the bombardment or their commanders decided to remain neutral, so that it was possible for the revolted vessels to leave the harbor. The stone works and antiquated cannon of Santa Cruz were useless against the large guns of the fleet, but earthen batteries had been constructed behind the fort and mounted with rifled cannon of large caliber. The marine infantry on the island of Cobras joined the insurrection. The military were in many places partly won for the revolutionary cause, but the suspected characters were closely watched, and no opportunity for an outbreak was allowed. In the garrison at Santos, the capital of São Paulo, a large proportion of the junior officers and men plotted to rise and deliver the place to Mello. They were in communication with the crew of the Government gunboat in the harbor, and conveyed the knowledge of their purpose to Mello, who sent the

"Republica" from Rio to aid in the capture of Santos. The military plot was revealed by a female spy, and the chief conspirators were seized and sent to be dealt with by Peixoto. The sailors, finding that the expected meeting came to naught, and having no coal for their vessel, concluded that they had been betrayed, and seized some propellers, in which they attempted to escape after scuttling their ship, but they were obliged for lack of coal to put in at the next port, where they were made prisoners. When the "Republica" and her companions arrived the alertness of the military indicated that the plot had miscarried, yet they remained and blockaded the port for several days. An attempt was made by an American in Peixoto's pay, named Boynton, to destroy the "Aquidaban" with torpedoes, but the tugboat in which he attempted to reach the vessel's side, flying the British flag, was intercepted by a British gunboat, and the head conspirator was arrested and handed over to the United States naval authorities. On Sept. 22 the fleet again bombarded Rio. Less care was taken to spare the business and residential quarters, and consequently many persons were killed and much damage done, causing a panic in the city and an exodus of the inhabitants. Admiral Mello issued a proclamation, in which he charged that Vice-President Peixoto had, with the aid of corrupt Senators and venal Deputies, overridden the constitutional limitations placed upon his powers, and introduced a *régime* of arbitrary tyranny. He promised that if he succeeded in his stand for liberty he would hand over the Government to the same honorable men who had given liberty to the nation before. Four members of Congress who were on board the "Aquidaban" constituted themselves into a provisional government, and issued a proclamation giving the command of the forces to Admiral Mello for the purpose of restoring peace and re-establishing law and republican principles. The rebels captured Desterro and the island of Santa Catharina, and cut off communication between Rio and Santa Cruz. The garrison at Desterro joined the rebels, and some were put on board the ships, while the rest were left to man the works. Peixoto held his ground with as much determination as ever, though in Pernambuco, Bahia, and other parts of Brazil the movement against him gained headway. He obtained \$4,000,000 of advances to meet the expenses of the war, and arranged to fit out a naval squadron in the north, under the command of Admiral Gonçalves Duarte, to fight the rebels on the sea. The foreign naval authorities induced Mello to promise to be careful not to throw shells into the defenseless parts of the capital. The diplomatic corps interceded with Peixoto, hoping to persuade him to remove the batteries that he had planted on the hills among the residences on the water front, and to refrain from firing upon the ships and thus provoking a new bombardment. If he would transfer his warlike operations to other localities, the diplomatists expected to impress Mello with the doctrine that Rio, being no longer a fortified garrison town, was exempt from bombardment under the laws of war. The President declined to follow this advice, and declared that he would soon bring the rebels to terms. The brutal and

lawless acts of Peixoto's soldiery furnished the foreign representatives with a ground of complaint. The military, in searching houses and arresting suspected sympathizers with the rebellion, spared neither life nor property. The European diplomatists threatened to land men from the war ships for the protection of their countrymen. The representatives of South American countries protested against European armed intervention on American soil in any form, and in this view they were backed up by the Minister of the United States. In the last engagement between the shore batteries and the fleet Admiral Mello fired 196 shells, and the forts twice as many, but none of the latter reached the vessels. Several shells from the ships fell in the forts, killing many of the troops and doing great damage. Two or three crashed into buildings in the center of the city, and several persons, including an English bank clerk, were killed. When coal was short on the ships, the insurgents obtained a fresh supply from barges and sheds after a brief fight, in which the land forces were easily worsted by the aid of the guns of the ships. Stores of flour and provisions were captured in the same way. The garrison of Fort Villegagnon, about 700 men, finally declared for the revolution, and the fortifications were strengthened with a view of covering a landing in the city. The guns of this fort gave effective assistance to the fleet in an engagement with Santa Cruz and the other forts of the Government. The shelling of Rio was resumed on Oct. 10, because Peixoto had not dismounted his shore batteries and ceased firing on the fleet. At the same time Mello issued a new proclamation, in which he declared that in the event of his success he would adhere to republican institutions, and said that none of the leaders of the revolt aspired to power for their own benefit, but had for their only object the restoration of peace to the oppressed country, and the liberation of a people who had been sacrificed by the inconceivable want of patriotism and reckless ambition of the head of the Government.

The insurgents met with a succession of mis-haps. One of their ships, the "Sete de Setembro," ran aground near Praia Grande. A powder magazine exploded on the island of Macangue, and deprived them of a large part of their ammunition stores, and subsequently another magazine, on Governadores island, blew up while powder was being transferred to the ships. The movement gained ground in Rio Grande do Sul, where one town after another fell into their hands, and the Castilhistas were beaten repeatedly in battle. The State of Santa Catharina revolted and cast its fortunes with Mello. On Oct. 10 the bombardment of Rio was begun again by the rebel ships and Fort Villegagnon. When the Provisional Government was established on land at Desterro, Frederico Guilherme de Lorena, a captain of the navy, was proclaimed Provisional President. On Nov. 3 they mounted guns on the island of Macangue, and on Nov. 7 Admiral Mello began another vigorous bombardment of Rio with the "Aquidaban," supported by his land batteries, especially Fort Villegagnon.

Meanwhile President Peixoto, who had the resources of the customhouse of Rio de Janeiro,

which ordinarily yields \$5,000,000 revenue a month, provided himself with a fleet, with which he could give battle to his enemies on the sea. He purchased a number of merchant vessels in the United States and converted them into war ships, and also secured the torpedo gunboat "Destroyer." The total cost was about \$1,500,000. Besides these, he is said to have secured 9 torpedo boats in Europe. The "Nictheoy," previously known as "El Cid," was armed with a pneumatic gun for dynamite bombs, invented by Capt. Zalinski, of the United States army. The "Britania" was rechristened the "America" when fitted out with a formidable armament of heavy guns. The torpedo boats "Yarrow," "Feisen," "Nada," and "Javelin" were also fitted out, and the fleet was abundantly equipped with Hotchkiss guns. In Montevideo, the "Tiradentes," from which the machinery had been removed when the rebellion broke out for fear that the crew would deliver her up to the rebels, was now refitted and placed in commission, and manned with a loyal crew brought by Rear-Admiral Goncalves. The "Bahia," which had remained loyal to the Government, was to join her there; but she ran aground, and it was some time before she was got afloat and repaired. The "Desterro" and "Santos," merchant steamers converted into gunboats, were added to this division. In the north, Rear-Admiral Duarte took command of a division consisting of the corvette "Parahyba" and the gunboats "Braconnot," "Guarany," and "Capedello," which were assembled at Bahia. The "Riachuelo" and the "Benjamin Constant" were at Toulon, France. The rebel cruiser "Republica" lay outside Montevideo for some time to intercept the "Tiradentes," but steamed away on finding that she would not leave port and accept the combat.

On Nov. 22 the "Javari" was either struck by a shot from Fort São João or sprung leak, owing to rivets being loosened by the concussion of her heavy guns, and went down. A few days after this loss Admiral Mello ran out of the harbor of Rio de Janeiro with the "Aquidaban" and the armed transport "Esperança," under the fire of the forts and partly protected by the darkness of night. The "Aquidaban" delivered shots from her heavy guns fore and aft at the forts on either side, doing great damage, and kept up the fire until she was out of range. The Government troops suffered severely from the effects of her rapid-firing guns. Commodore Elisar Tavares, who was left in charge of the naval forces in the harbor, was placed under the command of Gen. Saldanha da Gama.

The officers of the foreign warships had intervened to prevent further operations that would endanger foreign property in Rio or interfere with commerce. Having induced Peixoto to stop firing from the batteries on either side of the commercial quarter, and also the landing of military supplies or munitions, to which Peixoto agreed because he could receive them by rail, they declared that the city was no longer open to naval bombardment, and obtained a promise from Mello that he would not shell the town so long as Peixoto kept his part of the compact. They also insisted that the lighters of the harbor should be treated as neutral when landing goods or loading merchant vessels, and declared

that they would protect them when flying their flags. The insurgents accepted this decision with bad grace, and ventured to seize no more lighters except one flying the Argentinian flag, as there was no Argentinian warship in the harbor. The fort at Villegagnon continued to engage the other forts and the shore batteries. The squadron frequently bombarded Nictheroy, and almost destroyed the town, but were unable to effect a landing there. The loss of the "Javari," whose heavy guns had done most of the damage in the previous bombardments, was partly repaired by putting in good order the "Almirante Tamandare."

Rebellion broke out in the State of Pernambuco in the middle of November. The insurgents, led by José Mariano, seized two vessels that were destined for Peixoto, whereupon martial law was proclaimed. The movement was checked by the arrest of Mariano and some of his followers. The general elections for Congress had been postponed by order of Vice-President Peixoto, under the state of siege from Oct. 30 to Dec. 30, and the state of siege was prolonged by Congress till Dec. 25. While Admiral Mello had not retracted his public declaration of adherence to republican institutions, though he was accused by the Government party of intriguing with the Imperialists for the restoration of the dynasty, probably in the person of Prince Pierre de Alcantara, eldest son of the Princess Isabel and the Comte d'Eu, Admiral da Gama issued an ambiguous proclamation that could be interpreted as imperialistic.

The insurgents in Rio Grande do Sul who besieged Bage, which was still held by the Government, gained a decisive victory at last, on Nov. 23, over Gen. Isidoro Fernandez, who surrendered with 700 men after losing 300 killed, while the Federals lost 80. Gen. Tavares had surrounded the Castilhistas, judging, after capturing an ammunition train, that they must be short of ammunition. The fighting lasted two days, and the Federal general only surrendered when his men had no bullets left. When the first of Peixoto's new vessels reached Brazil Mello's ships were guarding the entrances to the harbors of Rio and Santos, and inside the bay of Rio de Janeiro Admiral da Gama was planting heavy guns on the isle of Cobras, and Peixoto was strengthening the batteries back of Rio.

Commodore Oscar F. Stanton, commanding the South Atlantic squadron, arrived in Rio harbor with United States men-of-war in the latter part of October. Having been ordered to maintain an impartial attitude toward the contending forces, he not only saluted the Brazilian flag on land, but gave the customary naval salute to the Brazilian flag flying over Admiral Mello's ship. The Brazilian minister at Washington complained of this ceremony as involving a recognition of belligerent rights, and Admiral Stanton, after acknowledging his act by telegraph, was recalled, and Rear-Admiral A. E. K. Benham was sent later to take command of the squadron. The rebels kept up their intermittent bombardments, notifying foreign vessels to remain outside of the line of danger, even when there was no firing for weeks. The result was that vessels carrying American goods remained month after month in the bay without being able to discharge

their cargoes. Admiral Benham finally concluded that this was an unjustifiable interruption of commerce, and told the master of an American vessel that he would have protection in landing his cargo in lighters flying the American flag. The Brazilian admiral forbade the landing, and attacked the lighter as it approached the quay, upon which Admiral Benham fired a warning blank shot, and when it was answered by a shell, which went wide, a small shot was sent through the stern of the Brazilian ship, whereupon the Brazilian commander struck his flag. After that American merchantmen unloaded and took on cargoes without interruption.

Except at Desterro, the rebels were unable to gain a firm foothold on land. They placed a force in the field in Santa Catharina, which was beaten, as well as a body of Federalists from the south which endeavored to form a junction with it. In Rio Grande do Sul, the successes of the Federalists were checked when Peixoto was able to re-enforce his garrisons there. The rebels suffered a serious loss in Rio harbor by the blowing up of their powder magazine on the island of Governadores, which was struck by a shell from Fort Santa Cruz, and two English officers who chanced to be on the island were killed by the explosion. This island was afterward occupied by the Government troops, but they could not hold it long. Mocanguê island was also taken. On December 10, and again on Dec. 14, a brisk cannonade of rapid-fire guns from Admiral da Gama's island batteries and from steam launches killed many people in Rio. An attempt by Peixoto's men to capture Fort Villegagnon by surprise was unsuccessful, and the landing force was repelled with a loss of 20 men. The rebels were no more successful in an attempt to recapture the Armação magazine in armed tugboats. On Dec. 10 the rebels captured the "Parahyba" as she was leaving Rio harbor with a cargo of flour and meat. The firing between the forts and the ships became more frequent toward the end of December, and the guns on both sides were better served than they had been at the outbreak of hostilities. Banking and other business was practically suspended, and most of the population sought safety in places out of range. The rebels were persistent in their efforts to obtain possession of Nictheroy, where the Government batteries kept up a continual duel with their fort on Cobras island. The vessels purchased for the Government in New York were useless, because after the American crews left no trained men could be obtained.

Admiral da Gama became the real head of the rebellion after the departure, on Nov. 30, of Admiral Mello, who was wounded and long incapacitated by a splinter from a shell that struck the "Aquadaban" as she ran past the forts at the entrance of Rio harbor. While Mello was supposed to be a Republican, the Government and the monarchical party as well presumed that the aim of Admiral da Gama was to restore the Imperial Government. The American Government was informed by the governments of France and Great Britain that they would not intervene in any way between the contending parties in Brazil, and Admiral da Gama, when he made a fresh appeal for recognition as a belligerent, received a refusal from the foreign ministers.

BRITISH COLUMBIA. The third session of the Sixth Parliament of British Columbia opened on Jan. 28 at Victoria. The death of the Hon. John Robson, Premier, made a reorganization of the Government necessary, and Lieut.-Gov. Dewdney called upon the Hon. Mr. Davie to form an administration, which he did, with the following Cabinet: Hon. Mr. Pooley, President of Council; Hon. Mr. Vernon, Chief Commissioner of Lands and Works; Hon. Mr. Turner, Minister of Finance; Col. Baker, Provincial Secretary and Minister of Education; Mr. Davie, in addition to the premiership, having the portfolio of Attorney-General.

The Lieutenant-Governor, in his opening address, directed the minds of the members to the matters of public interest that would occupy their attention during the session, the more important being the question of the redistribution of parliamentary seats, public health, the rights of the province to the lands in the railway belt, and the consideration of the relations of labor and capital.

The Minister of Finance, in his budget speech, stated that the public revenue of the province for the preceding year was \$1,088,237, and the expenditure \$1,430,920, or an excess of expenditure over revenue of \$392,683. Much of the expenditure, however, he said, was for roads, public works, and other necessary improvements. There had been paid during the year \$118,978 for interest on the public debt, and \$41,710 on account of the sinking fund. By means of a new system of refunding the public debt, lower rates of interest, and increased revenue, the minister said he hoped to begin the year 1894 with about \$500,000 to the credit of the province.

The Minister of Education, in his annual report, gave the number of pupils in the public schools as 10,773, the number of schools 149, and the expenditure for the year \$160,627.

Other important items of expenditure were for hospitals, etc., \$33,272, and for roads and other improvements \$368,633.

During the session, which ended on Apr. 13, 92 bills were introduced, 66 of which were passed. The most important of the acts were one providing for the establishing of a bureau of labor statistics and councils of conciliation and arbitration for the settlement of industrial disputes; to amend the Married Women's Property act; respecting public health; and acts incorporating railway and other companies.

The Dominion Government subsidy to the province is over \$200,000 a year, and another source of revenue is the tax of \$50 a head on Chinese, which last year netted the province \$26,275. This is only one third of the whole sum collected, the remaining two thirds passing into the Dominion treasury.

Dominion Grants.—The following were the most important grants made by the Government of Canada to the province for the fiscal year 1893-'94: Indians, included under the general heads of salaries, relief of distress, seed grain, implements and tools, medical attendance, education, etc., \$92,282; collection of revenue customs, \$59,495; steam service between San Francisco and Victoria, \$17,640, and between Nanaimo and Victoria, and Comox and Valdez

island, \$6,000; Victoria new post-office, \$100,000; British Columbia Penitentiary, \$49,449.15; Victoria drill hall, \$26,500; improving Victoria harbor, the Fraser River, etc., \$83,500; fortifications at Esquimalt, \$70,000; pay of a detachment of Royal Marine Artillery at the fortifications, \$35,000; and for the quarantine station and wharf at William's Head, \$114,500.

Mineral Products.—Coal, of which British Columbia possesses vast supplies, is the most important mineral production of the province. In 1874, the earliest year of which there are statistics, the amount of coal mined was 81,574 tons. Since 1888, when the product was 548,017 tons, there has been a steady annual increase in the output of over 100,000 tons, and the estimated production for the present year (1893) is 1,059,517 tons. Of the coal produced about two thirds is exported, and for this year the amount received from this source of wealth will probably exceed \$2,100,000. So far coal mining has only been conducted at the Nanaimo, Wellington, East Wellington, and Union collieries; but small supplies for home use are procured from surface outcroppings and shallow deposits in various sections of the province.

Gold mining is not now prosecuted in British Columbia with the enthusiasm and success that characterized the industry in former years. In 1858, a year after gold was discovered there, the value of the product amounted to \$705,000 for the year. The amount produced rapidly increased until 1863, when the maximum was reached, the value of the precious metal for that year being \$3,913,563. Since that time there has been a gradual decline in the yearly product, until now scarcely \$400,000 worth is secured. Since the discovery of gold in the province the value of the entire quantity produced is \$56,500,000 nearly.

Considerably more than half the men engaged in gold mining in British Columbia are Chinese, and their methods, while giving them what they consider fair remuneration, are not at all scientific, or calculated to secure the best results. But the falling off in the amount of gold produced is less owing to improper methods than to exhaustion of the old sources of supply. The discovery of a rich auriferous belt at Alberni last summer was hailed with delight by gold miners. Col. Baker, a member of the British Columbia Cabinet, visited the place a few months after the discovery, and spoke highly of its prospects. He describes the auriferous belt as being 6 miles wide and extended between China and Highwatches creeks as far as prospected to a distance of 80 miles. A large number of claims were recorded when Col. Baker's visit was made, and prospectors were eagerly pressing forward to the neighborhood. Alberni has a magnificent harbor, and large water power almost in the center of the town, which at the time of the gold find had a population of about 200. A large area of rich agricultural land and immense tracts of valuable timber exist in the district.

Lumber.—The revenue received by the Dominion Government from the Crown Timber Agency of the province in 1892 amounted to \$30,916, being \$15,078 less than for the year before. The total quantity of lumber manu-

HELL GATE GORGE, FRASER RIVER, BRITISH COLUMBIA.

factured in the licensed sawmills of British Columbia in 1892 was 20,062,680 feet, as compared with 30,507,439 in 1891. This only represents the lumber product of which returns are received by Government. Much is manufactured by private individuals in the unlicensed areas of which no returns are received. The principal wood made into lumber, etc., is red cedar, otherwise known as Oregon pine. The area of crown timber land licensed in 1892 was 243·82 square miles.

Fisheries.—The total yield of the British Columbia fisheries for 1892 amounted to \$2,849,488, which was a decrease from that of the previous year of \$159,271. The quantity of salmon disposed of in a fresh state exceeded that of 1891 by 800,000 pounds, while the pack of the canners fell short by 3,600,000 cans. The limited output for 1892 was probably due more to a desire to regulate the supply than to any scarcity of fish. The season was considered satisfactory for what is there termed an "off year," having turned out much better than the preceding periodical "off year" (1888). The product of halibut for the year showed an increase over that of 1891 of over 200,000 pounds. An incident worthy of note was the capture during 1892 of several shad at River's Inlet, and on the north arm of the Fraser river. The fisheries inspector stated that all the shad on the Pacific coast originated from the fry planted in the Sacramento river, and he alluded to the incident to show a northward migration by these fish of over 1,000 miles.

The total number of seal skins captured by the British Columbia sealing fleet in 1892 amounted to 46,382, valued at \$602,706, as compared with 52,995 skins, valued at \$688,935, for 1891.

For 1893 the aggregate salmon pack of the Fraser river canneries was 20,500,000 pound tins, or 425,200 cases of 48 cans each, the total weight being 10,000 tons. The fisheries elsewhere were also unusually productive. The estimated value of the fish consumed by the Indians of British Columbia annually is \$3,000,000, which is not included in the annual production.

In 1892 there were 143 vessels, valued at \$656,150, and 1,766 boats, valued at \$91,365, employed in the fisheries of the province. The number of sailors and seal hunters was 1,472, and of fishermen and canners 6,698. The number of salmon canneries in operation during the year amounted to 38.

Seal Fishing.—In consequence of the restrictions placed upon the capture of seals, the British Columbia seal fishers were not very sanguine of success when the season opened last spring, but notwithstanding their misgivings the season was fairly successful. Fifty-four vessels were engaged in the industry, 24 of which sent in their spring catch early in the season, and the remaining 30 obtained, up to Sept. 28, on the British Columbia coast, 25,120 skins. The estimated catch for the season is 60,000 skins.

During the preceding year (1892) the British Columbia seal fishing was prosecuted at a loss of about \$100,000. Of the 65 vessels employed 3 were wrecked, 10 were seized by American or Russian cruisers, and the rest secured a catch of 50,000 skins. There were 1,452 persons employed during the season, their wages aggregating \$30,000.

Salmon Fishing.—The season of 1893 was one of the most successful for salmon fishing ever known in British Columbia. The canning establishments were all busy, and a large export trade was transacted. On Fraser river the run of salmon was the largest on record, and as many as 45,000 were caught in three days in August. Though complete and reliable statistics are not obtainable at the time of writing, sufficient is known to warrant the assumption that the season's fishing was successful in a marked degree.

Exports.—The chief exports of the province are mineral productions, fish, cattle, fruit, and timber. Large shipments of fruit were forwarded to England last autumn, and large consignments of canned salmon and of cattle were also sent there during the season. Shipments of lumber were sent to China, Japan, and elsewhere, and of coal to San Francisco. Complete statistics are not yet obtainable of the export trade of the province for 1893.

Criminal Statistics.—The number of criminal convictions in British Columbia last year was 187, or a ratio of 17·34 per 10,000 inhabitants; for the year preceding, 145, or a ratio of 14·85 per 10,000. Including summary convictions by justices of the peace, the total for last year was 1,321, or 1 to 81 inhabitants, and for the year before 1,360, or 1 to 71. The increase in crime in the province during the past ten years has been 201·55 per cent., while the population increased only 98·50 per cent.

The disproportionate increase in crime may be largely attributed to the fact that the majority of those employed in mining, in the fish-canning industry, and in the lobster and seal fishing, while responsible for much of the crime, are not enumerated among the permanent population of the province.

Progress and Development.—When British Columbia entered the Dominion of Canada, in 1871, its population was 36,000. According to the census of 1891 the population then was 96,560. Last year the increase in the number of the inhabitants amounted to 10,441, and for the present year (1893) allowing a similar increase, which is probably a moderate estimate, the population would amount to over 117,000. This enumeration does not include occasional or temporary dwellers in the province, Indians, of whom there are 35,202, or Chinese, of whom many thousands are employed in mining and other industries.

The increase in the population of the towns of the province has been at a much higher rate. Vancouver, the Pacific terminus of the Canadian Pacific Railway, had in 1893 a population estimated in round numbers at 20,000. Until May, 1886, its site was covered by a dense forest. It is now a place of great commercial importance, having extensive wharves and warehouses, fine hotels, churches, and schools, and many miles of well-paved streets lighted by gas and electricity. It has a regular steamship service to China and Japan, to Australia via Honolulu, to San Francisco, to Alaska, and to various points in the province.

Victoria, the capital of British Columbia, with an estimated population in 1892 of 17,431, in 1893 of 20,000, is at the southern extremity of Vancou-

ver Island, overlooking the straits of Fuca. It has steamship connection with San Francisco, Mexico, South America, Honolulu, and Australia, and in the summer months with Alaska. In addition to the Government buildings and other fine edifices previously existing in the city,

shops, and graving docks. Recently an arrangement was effected between the British Government and that of Canada whereby the fortifications will be much strengthened and extended. During 1893 a corp of marine artillery was in charge of the work, which, when completed, will

INDIAN TRAPPERS, BRITISH COLUMBIA.

many were erected in 1893, among the more important being the new post-office, the drill hall, and the Young Men's Christian Association building, reputed to be equal to any structure of the kind in Canada.

Esquimalt harbor, 2 miles from Victoria, is the British naval station and rendezvous on the north Pacific, with naval storehouses, work-

render Esquimalt harbor one of the best fortified places on the Pacific coast. Canada contributes largely toward the expense of the work.

The profitable trade with China, Japan, and Australia opened up by the steamships sailing in connection with the Canadian Pacific Railway, has so strongly impressed the Dominion Government with its great promise that last

October the Hon. Mackenzie Bowell, Minister of Trade and Commerce, went on a mission to Australia to negotiate special tariffs with reference to this new trade route. Recently the new steamship line between Sydney, New South Wales, and Victoria, British Columbia, entered into a ten years' defensive and exclusive working arrangement with the Canadian Pacific Railway.

A little earlier in the season Sandford Fleming, C. M. G., a noted Canadian surveyor and engineer, visited Australia in the interests of a project to establish telegraphic communication between that continent and British Columbia; but as to the success of his mission, nothing can with certainty be affirmed.

BROOKS, PHILLIPS, fifth bishop of the Protestant Episcopal Church in the diocese of Massachusetts; born in High Street, Boston, Mass., Dec. 13, 1835; died in that city, at No. 233 Clarendon Street, Jan. 23, 1893. His parents, William Gray Brooks and Mary Ann Phillips, were descended from the early founders of New England, and among his maternal ancestors there was a long succession of Congregational clergymen. Thomas Brooks, his paternal ancestor, came to this country about 1630, and settled in Watertown, in the same town in which the Rev. George Phillips, his maternal ancestor, who had come from England in 1630, in company with Governor Winthrop, was the first pastor. Phillips Brooks was the second of six sons, four of whom became Episcopal clergymen, and one of whom died of disease in the civil war. At the time of his birth the parents of Phillips Brooks were connected with the First Church of Boston, and he was baptized on May 1, 1836, by the Rev. Nathaniel L. Frothingham, a Unitarian minister of eminence, who was then pastor in that church, and who had married a cousin of both Mr. and Mrs. Brooks. In 1839 the family formed its connection with the Episcopal Church by the confirmation of Mrs. Brooks in St. Paul's Church, Boston, which shortly afterward came under the rectorship of the Rev. Alexander H. Vinton, D. D., with whom, until the time of his death, in 1881, Phillips Brooks was closely connected by ties of admiration and friendship.

Phillips Brooks was educated in the public schools of Boston, being graduated at the Latin School in 1851, when he entered Harvard College. There he attained high rank, and was graduated twelfth in the class of 1855. He received in his junior year, the Bowdoin prize for an English essay, and his course was marked by an unusual degree of popularity among his fellow-students. After his graduation he taught in the Public Latin school of Boston from September, 1855, to February, 1856, and in October, 1856, he entered the Theological Seminary in Alexandria, Va. He had been confirmed by Bishop Eastburn in St. Mary's Church, Dorchester, Mass., on July 2, 1856, and he was ordained deacon at the Theological Seminary on July 1, 1859, by Bishop Meade, of Virginia, and delivered his first sermon in St. George's Church, Fredericksburg, Va., on July 3. Previous to his graduation at the seminary Mr. Brooks had consented to serve for three months as temporary supply at the Church of the Advent, Phila-

delphia, where he entered upon his duties on July 10, 1859, and on Oct. 16 of the same year he assumed the place of rector, which he had accepted on the termination of the three months of trial. He was ordained priest by Bishop Alonzo Potter on May 31, 1860.

Mr. Brooks's rectorate of the Church of the Advent continued until January, 1862, when he became rector of the Church of the Holy Trinity in the same city, which place he occupied until he assumed the rectorship of Trinity Church, Boston, in October, 1869. During these ten years of residence in Philadelphia his reputation as a preacher became thoroughly established and was recognized throughout the country. In the civil war his patriotic efforts in behalf not only of union but also of freedom called wide attention to his ability as a thinker and an orator. His sermon entitled "Our Mercies of Reoccupation," on Thanksgiving Day, 1863, and the one on April 23, 1865, in memory of Abraham Lincoln, were widely circulated, and had a deep effect upon public opinion throughout the country. He was not only largely influential in increasing moral enthusiasm for the prosecution of the war, but also advocated boldly and ably the cause of the negro, claiming for him equal political rights with white men, and interesting himself in many projects for his education and improvement. His pulpit and parish work were noted for their thoroughness and earnestness, and he identified himself with the interests of the evangelical societies in the Protestant Episcopal Church, and was constant in his labors in their behalf. His wide interest in missionary and philanthropic projects brought him into connection with all who were active in the charities of the country, and his advocacy was relied upon for all good causes.

In July, 1865, after the close of the war, Mr. Brooks offered the prayer at the commemoration services at Harvard College, and immediately afterward he sailed for Europe on leave of absence from his church for a year. He visited Ireland, England, and the Continent of Europe, and Palestine and Egypt, and returned to the United States in September, 1866. This was the first of a series of journeys which continued through all his life, and which not only rendered him a traveler of large experience, but also furnished the opportunity for the spread of his reputation as a preacher and for the cultivation of acquaintance with men of letters in Europe. In 1870 he visited Switzerland and the Tyrol, and on his return he was in Paris at the time of the overthrow of the Government of Louis Napoleon. In 1872 he visited Norway, Sweden, and Russia, traveling as far as Nizhni Novgorod. In 1874 he visited France, and on this trip he preached in Westminster Abbey, being the first American clergyman to receive an invitation to do so. In 1877 and 1880 he revisited familiar ground, and in July, 1880, preached at Windsor Castle before Queen Victoria. In 1882-'83 he was absent from home for more than a year, spending several months in study in Germany, and visiting India, and on his return passing several months in England, the memory of which is embodied in his published volume, "Sermons preached in English Churches." In 1885 he preached at the Uni-

versities of Cambridge and Oxford, and at the latter received the degree of doctor of divinity. In 1888 he made the trip across the continent to San Francisco, and in 1889 visited Japan. In 1890 and 1893 he again visited England, where he was received with enthusiasm by a host of friends and listened to by large congregations, and also extended his trips to the Continent of Europe for rest and recreation.

In October, 1869, Mr. Brooks removed from Philadelphia to his native city, and became the rector of Trinity Church. Here his close relation with the thought and interests of the community, his remarkable ability as a preacher, his breadth of conception of the power and character of Christianity, his intense earnestness, his faithfulness to all parish duties, his wide sympathy with rich and poor, his large cultivation and charming personality, won for him the affection of the whole community, and steadily, until the time of his death, his influence increased until he became the representative man in the city of Boston. His connection with Harvard College, of which he was an alumnus, was very close. Immediately on his removal to Boston he was elected in 1870 an overseer, an office which he held for two successive terms, retiring in 1882, when he received the degree of doctor of divinity from the college. He was again elected

gation had worshiped in the hall of the Technological Institute, which was near the site of the new building. The construction of this building is a permanent memorial of the ministry of Dr. Brooks. In many features it marks an era in the church building of this country. Its architect, Henry H. Richardson, and its decorator, John La Farge, here first showed the full scope of their genius.

In 1877 Dr. Brooks delivered for the Divinity School of Yale College the Lectures on Preaching on the foundation established in 1871 by Henry N. Sage. These lectures, in accordance with the custom of the lectureship, were published, and immediately attracted wide attention, and in 1888 the sale of the American editions has reached 7,500. In 1888 they were translated into French, and in 1886 into Dutch. The demand for them overcame, to a certain extent, Dr. Brooks's reluctance to publish his sermons, and in 1878 his first volume of sermons appeared. In 1879 he delivered the Bollen Lectures in Philadelphia, and in the same year they were published under the title "The Influence of Jesus." In answer to an increasing demand, other volumes of sermons were given to the public. In 1881 appeared "The Candle of the Lord, and other Sermons"; in 1883, "Sermons preached in English Churches"; in 1887, "Twenty Sermons"; and in 1890, "The Light of the World, and other Sermons." In 1893, after his death, a volume of his sermons appeared, selected and arranged by his brother William G. Brooks. All these volumes have also been published in England. Other volumes of published sermons are in contemplation, the demand for which is indicated by the fact that of all the volumes of his sermons the total number issued in the United States up to December, 1898, has been 60,000.

On April 23, 1895, Dr. Brooks delivered an oration on the occasion of the two hundred and fiftieth anniversary of the Public Latin School of Boston, which was published in the same year under the title "The Oldest School in America." In 1887 he delivered two lectures in New York before the students of the General Seminary of the Protestant Episcopal Church, which have been published under the title of "Tolerance." Other publications of his include various occasional sermons and magazine articles, among which may be mentioned one on "The Pulpit and Popular Skepticism," published in the "Princeton Review" in March, 1879, and one on his friend Dean Stanley, published in the "Atlantic Monthly" in October, 1881. He was frequently a speaker and writer at the sessions of the Church Congress of the Protestant Episcopal Church, and he also contributed to the "Memorial History of Boston" a paper on "The Episcopal Church in Boston," which was afterward published, with but few changes, in "The Centennial History of the American Episcopal Church," under the title "A Century of Church Growth in Boston." One of a series of lectures before Phillips Exeter Academy was delivered by him in 1886, and has been published in separate form for educational uses under the title "Biography." Dr. Brooks wrote several Christmas and Easter carols, one of which, "O Little Town of Bethlehem!" has found a place in the

TRINITY CHURCH, BOSTON, MASSACHUSETTS.

overseer in 1883, and served until 1889. In 1881 he was invited to become Preacher to the University and Plummer Professor of Christian Morals—an invitation which he declined after long and serious consideration. In 1886, on the establishment of a body of preachers to the university, he was one of the first number appointed, and he continued in this relation to the college until he was elected bishop in 1891. Dr. Brooks again received the degree of doctor of divinity in 1887 from Columbia College at its centennial anniversary. On Oct. 10, 1872, Trinity Church was destroyed in the great Boston fire. Before that event plans had been made for the removal of the church to a new part of the city and its construction on an enlarged scale. The destruction of the old building caused the undertaking to be pressed more vigorously, and the new Trinity Church, at the corner of Huntington Avenue and Clarendon Street, was consecrated on Feb. 9, 1877. Meantime the congre-

hymnal of the Protestant Episcopal Church. Reports of certain extemporaneous addresses and sermons were made against his protest during his life and have appeared in book form since his death.

Dr. Brooks was one of the deputies from Massachusetts to the General Convention of the Protestant Episcopal Church in 1877, 1880, 1883, 1886, and 1889. In June, 1886, he was elected assistant bishop in the diocese of Pennsylvania, but declined the office. On the death of Bishop Paddock, of Massachusetts, in March, 1891, the name of Dr. Brooks, who was then chairman of the standing committee of the diocese, became prominent among the candidates for the vacant episcopate. Much interest in the election was shown by the secular press throughout the State, and the desire that he should be chosen was very general, even among those who had no connection with the Episcopal Church. He was elected in the convention of the diocese on April 30, 1891, on the first ballot, by 92 votes of the clergy out of a total of 154, and by 71 votes of the laity out of a total of 109. Some newspaper discussion ensued upon the subject of the confirmation of Dr. Brooks by the bishops and standing committees of the various dioceses. In July the necessary assent to his election was completed, and he was consecrated on Oct. 14, 1891, in Trinity Church, Boston, by the Rt. Rev. John Williams, D. D., Bishop of Connecticut and Presiding Bishop of the Protestant Episcopal Church. Bishop Brooks resigned the rectorship of Trinity Church before the date of his consecration, and devoted himself to the duties of his new office with that untiring zeal and enthusiasm which had been characteristic of his whole life. He was warmly received in all parts of his diocese by every class in the community and by persons of every religious connection. In October, 1892, he occupied his place in the House of Bishops in the General Convention, which met in Baltimore.

But his episcopate was of short duration. On Jan. 18, 1893, he attended the annual dinner of the Choir Guild of Grace Church, in Newton, Mass., and made an address. It was his last public appearance. He was then suffering from a cold, which showed serious symptoms during the following days, and developed into bronchial diphtheria, from which he died early on Monday morning, Jan. 23, 1893. His unexpected death caused a great shock wherever he was known. In the city of Boston the grief was universal. His remains were viewed by thousands in the vestibule of Trinity Church. The funeral took place on Thursday, Jan. 26. No building could hold the multitude that gathered, and after the services in the church a service was held in Copley Square, in front of the church, where crowds were assembled. Services were also held at the same hour in the neighboring churches and in Philadelphia. His burial place is in his father's plot at Mount Auburn. Hundreds of memorial sermons and addresses, many of which have since been published, were delivered, at home and abroad, by clergymen of every denomination, and the city of Boston provided for a public eulogy by Samuel Elliott, LL. D., which was delivered on April 11, 1893. A public meeting in New York on Feb. 16, at Carnegie Music Hall,

was addressed by eminent speakers, among whom was a Jewish rabbi as well as Christians of every name.

Since Bishop Brooks's death a volume of his letters of travel has appeared, and also a volume of short selections from his writings for devotional uses. His miscellaneous papers and addresses will be prepared for the press by his brother, the Rev. John C. Brooks, rector of Christ Church, Springfield, Mass., and his biography is in preparation by his brother, the Rev. Arthur Brooks, D. D., rector of the Church of the Incarnation, New York city.

Bishop Brooks's personal appearance was such as always to attract attention. He was 6 feet 4 inches in height, and of commanding presence. The noble proportions of his figure increased the charm of his genial and scholarly bearing and expression, which made themselves felt universally. His mode of speech was exceedingly rapid, but was clear and distinct. He was easily understood by all classes, by reason of his clearness of thought and simplicity of language and rich use of illustration. He was an indefatigable worker, willing to preach at all places and all times. Both with manuscript and extemporaneously he appealed at once to the hearts and minds of hearers, and held them captive by the rush of his thought and his poetic utterances. His large reading and ripe scholarship showed itself in a power of adaptation to the minds of many men by reason of a deep understanding of the humanity that belonged to them all. He repeated his sermons in places differing widely in character, and they were equally acceptable and helpful in all. His preaching was free from sensational features; seldom, except in critical times, did he refer to current topics. No strange subjects were given out in order to attract attention, and every trick of style was conspicuously absent in his methods. His attractiveness to all classes of men grew with the advance of years. His nobility of character and purity of motive and kindness of heart were a subject of universal comment. His printed sermons drew attention to him in all parts of the world, and wherever he went his fame had preceded him. To the clergy of all denominations his sermons have been especially helpful and stimulating. The secret of their power has been a subject of much discussion, for their eloquence, poetry, logic, and original thought were never obtrusive, but were blended under the influence of a deep spirituality and love for men which made analysis of the effect they produced peculiarly difficult.

Bishop Brooks, through all his life, was identified with the Broad Church clergy. His training was in the evangelical school, but without dogmatism, and the devotion to the personal Christ, which was thus given him, grew as the prominent feature of his theology. His mind was eminently constructive. Old forms of thought and expressions of doctrine received new meaning under his large and intelligent and spiritual interpretation of them. There was no hostility toward ideas that he had outgrown, and which to him had been the starting point in the search for new truth. He was intensely loyal to all the doctrines and discipline of his own Church, but he claimed the right of free and large interpretation in their use, and of Christian charity

and fellowship with all who were servants of the truth under any name. He deprecated all movements and tendencies that looked toward separation of the Episcopal Church from connection with the religious life of the country; and ecclesiastical theories of exclusive claims or of priestly authority met with his instant opposition. He exercised a large influence in drawing persons to the Episcopal Church by his illustration of its comprehensiveness and spirituality, and during thirty-five years of active life as a clergyman he probably did more than any other man by his personal character and influence, and by his preaching and writings, to guide and to assist those who were most in sympathy with the powerful movements in speculative and religious thought which have characterized the latter half of this century.

BULGARIA, a principality in eastern Europe, tributary to Turkey. It was created by the Treaty of Berlin, signed July 13, 1878, which provides that the Prince of Bulgaria shall be elected by the population, which election must be confirmed by the Sublime Porte and the signatory powers. Ferdinand, Duke of Saxony, born Feb. 26, 1861, youngest son of Prince August, Duke of Saxony, and Princess Clementine, daughter of Louis Philippe, King of the French, was elected Prince of Bulgaria by the unanimous vote of the Great Sobranje on July 7, 1887. He assumed the Government on Aug. 14 of the same year without having obtained confirmation from the Porte or the sanction of the great powers, which was and has been withheld up to date by reason of the objection of the Russian Government. The Constitution of 1879 vests the legislative authority in a single Chamber, the Sobranje or National Assembly. Its members are elected by universal manhood suffrage, in the proportion of 1 member to every 10,000 inhabitants, for the term of three years. Eastern Roumania, now called South Bulgaria, was created an autonomous province of Turkey by the Treaty of Berlin, to be administered by a governor-general appointed by the Sublime Porte for five years, with the consent of the powers. On Sept. 17, 1885, the Government was overthrown and the union with Bulgaria proclaimed. As a result of a conference of the signatory powers, the Sultan appointed Prince Alexander, then Prince of Bulgaria, Governor-General of Roumelia. When the latter was forced to abrogate, his successor took upon himself the Governor-Generalship as well, but neither the union nor the rights assumed by Prince Ferdinand have ever been recognized by the Porte or the powers, although the province to-day forms part of the principality of Bulgaria.

Area and Population.—The area of Bulgaria proper is 24,360 square miles, that of South Bulgaria 13,500 square miles. The total population on Jan. 1, 1888, numbered 3,154,375, of which 1,605,389 were males and 1,548,986 females. Of the total population, 2,432,154 belong to the Orthodox Greek Church, 668,173 are Mohammedans, 24,352 Jews, and 18,539 Catholics. Sofia, the capital, has a population of 30,428; Philippopolis, the capital of Roumelia, has 33,442 inhabitants; and Varna, on the Black Sea, has a population of 25,256. (For the army, see the "Annual Cyclopædia" for 1892.)

Finances.—The budget for 1892 places the revenue at 82,647,400 lei or francs, and the expenditure at 88,248,075 lei. The principal sources of the revenue and the amounts derived therefrom in 1892 were: Direct taxes, 43,762,400 lei; customs and excise, 16,083,000 lei. The principal items of expenditure were: Army, 21,855,850 lei; public debt, 13,853,525 lei; finance, 13,177,200 lei; public works, 11,326,175 lei; interior, 9,216,800 lei; instruction, 6,756,400 lei.

Commerce.—The total imports in 1891 were valued at 81,848,150 lei, and the exports at 71,055,085 lei. The chief imports were textiles, to the amount of 20,961,000 lei; articles of food and drink, amounting to 15,042,863 lei; chemicals, 8,155,425 lei; metals and metal goods, 7,017,292 lei; machinery, etc., 3,778,507 lei. The principal exports were grain, amounting to 53,430,411 lei; and live stock to the amount of 6,000,000 lei. The following table shows the trade with the principal countries in the same year in lei:

COUNTRIES.	Imports from	Exports to
Austria	38,992,704	3,131,554
Great Britain.....	15,994,628	16,775,004
France.....	8,968,888	24,257,106
Turkey.....	10,009,825	17,147,828
Germany.....	4,916,761	1,044,921
Russia.....	5,428,299	87,812
Italy.....	1,400,086	1,471,665
Roumania.....	1,816,464	639,994
Belgium.....	1,440,592	702,187
Servia.....	909,261	585,001
Switzerland.....	943,590	6,947
Greece.....	170,192	446,761
United States.....	57,455	7,723

Communications.—In 1892 Bulgaria had 806 kilometres of railroads, of which 494 kilometres belonged to the state and 312 kilometres to private companies. There were 31 kilometres under construction.

The post-office in 1890 forwarded 3,698,000 letters, 876,000 postal cards, 3,466,000 printed inclosures and samples, and 77,000 money orders of the declared value of 17,353,000 francs.

In 1891 there were 4,710 kilometres of telegraph lines belonging to the state, with 8,484 kilometres of wire. There were transmitted over the wires 742,295 domestic dispatches, 181,895 international and 23,203 official dispatches.

Proposed Change in the Law of Succession.—The Constitution of Tirnova makes the princely dignity hereditary in the family of the prince duly elected by the National Assembly, confirmed by the suzerain power, and approved by the signatories of the Berlin Treaty. In case of a vacancy the election of a new prince shall take place under the same conditions and with the same forms. The prince first elected may belong to a different confession from the state religion, but his successor must be a member of the Greek Orthodox Church. The Bulgarian jurists decided that this last rule did not apply to a new prince, and consequently did not incapacitate Prince Ferdinand, a Catholic, when he was elected to succeed Alexander of Battenberg. The son of an elected prince, however, could not succeed to the throne unless he was a member of the Orthodox Church. An attempt to sow the seeds of religious rancor had been made by pro-Russian intriguers, who accused the

Prince and his mother of proselyting designs, and the visit of the latter at Sofia was made unpleasant by the outcry against the services of her chapel. The diplomatic world was dumb-founded in the latter part of 1892 when the Bulgarian Prime Minister laid before the ordinary Sobranje a project for amending the Constitution in order to permit the Prince to bring up his heir, if he should have one, in the Catholic faith. It was understood that Ferdinand was anxious to found a dynasty, a desire that augured well for the security of his position, and the accomplishment of which would tend to consolidate it, even though an alliance with a Catholic princely family was found most desirable, since the attitude of the Czar shut the Prince out from any suitable match in an Orthodox family; but to permit the Catholic Church to stipulate that a born Bulgarian prince must be a Catholic and require the Bulgarians to alter their Constitution, with the probable result of establishing a Roman Catholic dynasty on the throne, seemed doubly hazardous. The constitutional amendment, as reported by the committee of the Sobranje on Dec. 19, 1892, runs as follows:

The Prince of Bulgaria and his descendants can profess no other religion than the Orthodox religion. Nevertheless, a prince ascending the Bulgarian throne by right of election, and also his first successor, if they belong to another religion, may retain it.

This was agreed to by the Chamber, with only 13 dissenting votes. The Russian ambassador at the Porte had suggested to the Bulgarian exarch in Constantinople that he should menace those who voted for the revision with excommunication. The latter made the proposition to the Bulgarian Government that the Holy Synod should be invited to deliver an opinion on the ecclesiastical bearings of the amendment before the Great Sobranje took action upon it, but refrained from positive measures. Dragan Zankoff, the exiled chief of the Russophile party, issued a manifesto appealing to patriots, especially officers and soldiers of the army, to rise and deliver the country from the clutches of false friends and avert the general danger that threatened the whole Bulgarian people. An exposure of Russian intrigue published by Jacobsohn, the former dragoman of the Russian legation at Bucharest, had done much to keep alive the popular distrust of the Russians. The Metropolitan Clement on Feb. 26 delivered an incendiary sermon at Tirnova urging the people to oppose the Government as far as lay in their power, in consequence of which members of his congregation and other citizens sent a deputation to request him to refrain from inciting revolution; and when he declared in a speech to the crowd assembled before his residence that he would continue in the same course, he was forcibly carried off and imprisoned in a monastery, and a telegram signed by the mayors of Tirnova and other towns and several members of the Sobranje was sent to the Stambuloff, requesting the Government to regard his removal as an accomplished fact, since the people declined to submit to a bishop who had always ignored the true interests of Bulgaria. The exarch, who had abandoned his opposition to the proposed change in the Constitution, promised to move in the matter should it be established conclusively that

Mgr. Clement had abused the sanctity of the Church in order to excite the population. The question of his removal or the infliction of any ecclesiastical penalty was brought before the Holy Synod, and the Government refused to sanction his illegal deposition by the people, but was ready to have him tried for incitement to insurrection.

The first declaration of the Russian Government in regard to the Bulgarian crisis was an official *communiqué*, printed in the "Government Messenger," defining its position in the following language:

Since these leaders of the Government now propose to convene the Sobranje in order to modify Article XXXVIII of the Constitution of Tirnova, and thus encroach upon the religion of the country, the Imperial Government, while adhering to the principle of non-intervention in the internal affairs of the principality, can not remain a dumb witness of an experiment which encounters active opposition among the Bulgarian people. The Imperial Government expresses its earnest desire that the voices which have made themselves heard among the clergy and the well-disposed citizens will serve as a warning to all Bulgarians, without distinction of party, and ward off a danger threatening the whole people, which is on the point of renouncing the most sacred traditions of centuries. The Imperial Government is convinced that the contemplated revolution in the ecclesiastico-political life of the principality will achieve no favorable results, and will have only sad consequences in the future, inasmuch as it will produce internal dissensions, and will seriously disturb the moral relations of the people.

This *communiqué* was sent to the Russian ambassadors, accompanied by a circular letter stating that the Imperial Government had obeyed considerations of a paramount order in refusing to recognize a *régime* deprived of legal sanction, which it had always regarded as contrary to the interests of the Bulgarian nation. The ground is taken that a decision of a Bulgarian Assembly with reference to the dynastic question is subject to dispute because the treaty of Berlin establishes no reigning dynasty in the principality. It stipulates how the Prince shall be elected, and that the same conditions and procedure shall be observed in choosing a successor in case of a vacancy, but contains no provision that "gives to the power of the Prince an hereditary character." The circular defines the special position of Russia in the following terms:

But it is not merely as one of the signatory powers of the Treaty of Berlin that Russia believes it is her duty to raise her voice in the present circumstances. By profoundly wounding the religious feelings of the Bulgarian nation, the measure proposed by the Sofia Government would deal a severe blow at the work of liberation, in the service of which Russia has not spared her blood. The proceedings employed by those who at present govern the principality are known. They will permit these rulers perhaps to gain their ends. But it is our duty none the less to stigmatize as it deserves an undertaking tending to retard the free development of the national life, in disregard of the principles and historic traditions which lie at its foundation. No power would show itself indifferent toward a positive attempt against an order of things which it had sought to cement at the price of the greatest sacrifices. It certainly was not in order to implant in Bulgaria the present *régime* that Russia created the principality by force of arms. Persuaded that the blow now being dealt at the Bulgarian Constitution can only drag in its train fright-

ful consequences, we have wished to warn those who are destined to endure them.

The Metropolitan Clement was tried, in July, on the charge of inciting the people against the Prince and Government. The incriminating passage in his sermon was: "The people will punish persons in high places for any injury done to our faith." This was adjudged to be seditious, and he was sentenced to perpetual exile. The Russian Government, after the adoption of the constitutional amendment, presented a demand for the payment of 2,000,000 rubles due from Bulgaria, on account of the Russian occupation in 1878-'79. If this was paid, there would remain due, under the treaty of June 28, 1883, the sum of 3,018,250 rubles, besides a smaller amount for arms furnished to Bulgarians. When a similar demand was made by Russia in 1889 the Bulgarian Government had the money already deposited to meet it, but this time it was prepared to present claims for money intrusted by Bulgarians to the Russian legations or banks or left with the Russian Government to aid the war of liberation, which more than offset the amount still due to Russia.

Marriage of Prince Ferdinand.—Before the Great Sobranje had met to ratify the constitutional revision, the Prince, accompanied by his chief minister and the Minister of Foreign Affairs Grekoff, free from all apprehension of political disorder, paid a visit to the Court of Vienna. The attentions paid to the Prince and the conferences of Stambuloff with the Emperor and Count Kalnoky gave proof of the determination of Austria to prevent, by armed force if necessary, the interference of any foreign power in Bulgaria. The raising of a loan of 26,000,000 francs for Bulgaria in Berlin afforded a fresh indication of the policy of the triple alliance to preserve the *status quo* in the Balkans. The princess that Ferdinand had chosen was related to the Austrian imperial family. It was Marie Louise, the eldest daughter of the Duke of Parma, a Bourbon of the Spanish line, whose mother, a princess of Bourbon-Artois, protested as regent against the annexation of the duchy to Sardinia in 1859, when the duke was eleven years old. The mother of the Princess Marie Louise was likewise a Bourbon, of the house of the Two Sicilies. His marriage into a family whose fortunes were peculiarly connected with the Roman Church absolved Ferdinand of the odium of insisting that his prospective heir should be reared as a Catholic, and his own descent on the maternal side from the Orleans Bourbons was an additional reason. The princess was born in Rome, Jan. 17, 1870. The marriage took place at the residence of the Duke of Parma at Viareggio, Italy, April 20.

Revision of the Constitution.—The Great Sobranje met May 15 to act upon several amendments of the Constitution proposed by the Government, for the consideration of which the ordinary Sobranje had authorized the convening of a Grand National Assembly, the fourth one held since the foundation of the principality. The Assembly was called not merely for the purpose of modifying the statute relating to the religion of the Prince's successor, but also for introducing changes in the system of representa-

tive government that might be considered suitable to Bulgarian conditions, though undemocratic, if Bulgaria was not ruled by a dictator whose powers they enlarge. These changes consist in the extension of the duration of the ordinary Sobranje from three to five years, and the reduction of the number of its members from 320 to 161, with a corresponding diminution of members in the Great Sobranje, which had twice as many as the ordinary Chamber. The proportion to population was 1 to 10,000 for the regular Chamber, and 1 to 5,000 for the Constitutional Congress, whereas the amended law makes it 1 to 20,000 and 1 to 10,000 respectively. The necessary quorum in the Sobranje for the enactment of any measure is henceforth to be fixed at a third of the total number of Deputies. The voting is to be open, but the Chamber may decide on secret voting at the demand of 10 or more Deputies. In addition to these amendments it was proposed to change the title of highness, bestowed on the Prince by the Constitution as originally made under the direction of Prince Dondukoff Korsakoff, to that of royal highness. Prince Ferdinand's desire to assume the title of king was vetoed, probably by the friendly powers which have not yet been able to obtain the legalization of his position as Prince of Bulgaria. Another amendment, while continuing to prohibit the creation of hereditary titles in Bulgaria, empowers the Prince to bestow orders and decorations for merit, thus giving legal sanction to the order of civil merit introduced by Prince Ferdinand and that of St. Alexander which his predecessor established. Under special circumstances the Prince is empowered to raise a loan of 3,000,000 francs, or to make an expenditure of 1,000,000 francs without previous authorization from the Chamber, but subject to its subsequent approval. An increase in the number of Cabinet ministers is authorized by a special enactment of the ordinary Sobranje. The object of this proposal was to legalize the intended appointment of a minister of agriculture and a minister of public works. The various constitutional amendments were embodied in a bill, which was passed unanimously on May 28, and on the following day the Great Sobranje was closed with an address by the Prince, in which he said:

The unanimous consent with which my people have accepted the law for the change of the Constitution is a fact patent to all, and a clear proof of the unbounded love of the Bulgarians for their beautiful country, as well as of the tact and wisdom with which they know how to protect their rights and their freedom, and to preserve their political independence.

Elections.—The elections for the Sobranje took place on July 30. In the new house of 161 members the Government secured 152 seats. This enormous majority, taken in connection with the fact that nearly four fifths of the electors abstained from voting, reveals the arbitrary nature of the Stambuloff *régime*, and indicates what are the causes of revolutionary uprisings, military conspiracies, and ecclesiastical incendiarism, and the motives that led to the flight of Zankoff, the imprisonment of Karaveloff, the court-martial and execution of Panitza, the retirement of Radoslavoff, and the violent removal of the Metropolitan Clement.

C

CALIFORNIA, a Pacific coast State, admitted to the Union Sept. 9, 1850; area, 158,360 square miles. The population, according to each decennial census since admission, was 92,597 in 1850; 379,994 in 1860; 560,247 in 1870; 864,694 in 1880; and 1,208,190 in 1890. Capital, Sacramento.

Government.—The following were the State officers during the year: Governor, H. H. Markham, Republican; Lieutenant-Governor, J. B. Reddick; Secretary of State, Edward G. Waite; Treasurer, J. R. McDonald; Comptroller, Edwin P. Colgan; Attorney-General, W. H. H. Hart; Surveyor-General, Theodore Reichert; Superintendent of Public Instruction, James W. Anderson; Railroad Commissioners, William Beckman, J. M. Litchfield, and James W. Rea; Chief Justice of the Supreme Court, W. H. Beatty; Associate Justices: T. B. McFarland, A. Van R. Paterson, C. H. Garoutte, Ralph C. Harrison, J. J. De Haven, and W. F. Fitzgerald, appointed by the Governor to succeed J. R. Sharpstein, who died Dec. 28, 1892.

Finances.—According to the report of the State Treasurer, there was a balance in the treasury on July 1, 1890, of \$3,565,259.36; the total receipts for the year ensuing were \$8,231,298.93, and the total expenditures \$7,955,689.94, leaving a balance on July 1, 1891, of \$3,840,868.35. For the year next following the total receipts were \$7,309,430.94, and the total expenditures \$7,900,069.99, leaving a balance of \$3,250,229.30 on July 1, 1892. These figures include all the funds held by the State Treasurer. The separate receipts and expenditures of the more important of these funds were as follow: General fund—balance on July 1, 1890, \$1,830,636.85; receipts for the year ensuing, \$3,721,855.55; expenditures, \$3,585,249.91; balance on July 1, 1891, \$1,967,242.49; receipts for year ending July 1, 1892, \$2,712,189.98; expenditures, \$3,496,572.91; balance on July 1, 1892, \$1,182,859.56. School fund—balance on July 1, 1890, \$420,160.64; receipts for the year ensuing, \$2,661,505.70; expenditures, \$2,632,211.98; balance on July 1, 1891, \$449,454.36; receipts for the year ending July 1, 1892, \$2,845,372.19; expenditures, \$2,387,168.09; balance on July 1, 1892, \$907,658.46. Interest and sinking fund—balance on July 1, 1892, \$194,126.84; receipts for the year ensuing, \$203,403.87; expenditures, \$183,482.50; balance on July 1, 1891, \$214,048.21; receipts for the year ending July 1, 1892, \$114,299.12; expenditures, \$157,370.79; balance on July 1, 1892, \$170,976.54. State school land fund—balance on July 1, 1890, \$48,140.17; receipts for the year ensuing, \$197,793.02; expenditures, \$189,505.12; balance on July 1, 1891, \$56,428.07; receipts for the year ending July 1, 1892, \$198,951.71; expenditures, \$194,846.40; balance on July 1, 1892, \$60,533.38. The large reduction in the general fund balance is due to unusual demands made by many of the counties for aid granted by the State for the care of aged persons and orphans. Claims for this aid should have been paid in

former years, but, owing to imperfect knowledge of the law, have never before been presented.

The State debt on Jan. 1, 1893, was \$2,533,500, of which all except \$5,000 is represented by funded debt bonds of 1873. These became due on Jan. 2, but no provision had then been made by law for their redemption. The Legislature of 1891 passed an act providing for refunding them at a lower rate of interest, but made it operative only after its approval by the people at the November election in 1892. At this election a majority of the voters refused their approval, and the Legislature of 1893 was obliged to devise some other means for sustaining the credit of the State. There were in the hands of private individuals \$251,000 of these bonds, for redeeming which an appropriation was made; but as there were no funds in the State treasury for meeting the remaining \$2,277,500, which were held by the school fund and university fund, an act was passed by which the State agreed to pay to these funds 6 per cent. interest on the amounts held by each, and provision was made for levying annually a tax sufficient to raise the necessary amount.

Owing to the very liberal appropriations made by the Legislature, the tax rate for 1893 was increased by the State Board of Equalization to 57.6 cents on each \$100. The total amount to be raised by this tax for State expenses was \$6,460,939.

Legislative Session.—The regular biennial session of the Legislature began on Jan. 2 and ended on March 14. On Jan. 18 both Houses, in joint convention, elected Stephen M. White, Democrat, on the first ballot, as United States Senator to succeed Charles N. Felton, Republican, the vote being as follows: White, 61; Felton, 12; George C. Perkins, 11; Thomas R. Bard, 9; D. C. Reed, 8; Thomas V. Cator (Populist), 7; Widney, 6; scattering, 5. One result of the session was the passage of an act to promote the purity of elections. It provides that every candidate, upon filing his certificate of nomination, shall also file the names of five persons selected to receive, expend, audit, and disburse all moneys contributed or furnished for the purpose of aiding his election, and forbids any expenditure for such purpose by any person except the candidate himself and the five persons so named as his committee. Within twenty-one days after the official canvass of the election returns the committee is required to file with the Secretary of State or the county clerk, as the case may be, a sworn itemized statement, showing all its receipts, with the names of the persons contributing, and showing the names of all persons to whom money has been paid and the character of the services which they have rendered therefor. A similar sworn statement of his personal receipts and expenditures shall be filed by the candidate himself within fifteen days after the election is held. Such statements shall be recorded in the respective offices where they are filed, and shall be open to public inspection. Vouchers

must be filed for all expenditures except in the case of sums under five dollars. Any candidate who shall fail to file such a statement, or who shall make a false statement, shall, in addition to the other penalties prescribed by law, forfeit any office to which he may have been elected at the election mentioned in the statement, and also any State office of which he was already the incumbent. Neither the candidate nor the committee shall pay any money or incur any expense to promote his election, except for holding public meetings for the discussion of public questions, for printing and circulating specimen ballots, handbills, cards, and other papers, for advertising, postage, expressage, telegraphing and telephoning, for supervising the registration of voters, and watching the polling or counting of votes cast at the election, for salaries of persons employed at office or headquarters, and necessary expenses of maintaining the same, for rent of rooms necessary for the transaction of business of the candidate or committee, and for necessary incidental expenses not exceeding \$100, if expended by the candidate, or \$1,000, if expended by the committee. The total amount that any candidate or committee may expend is also limited to a fixed percentage of the salary of the office that the candidate seeks. Any candidate who makes any payment contrary to the provisions of the act shall forfeit the office to which he is elected, and any other State office which he may then hold. Any person may bring suit against any candidate to have his right to any office forfeited for violation of this act. Numerous other stringent regulations are made, and numerous offenses against the fair conduct of elections are defined and punished.

Another act provides for the reassessment of property for all taxes made after 1879 wherein the original assessment has been declared invalid or may hereafter be so declared. In recent years the State has found great difficulty in collecting taxes from some of the railroad corporations, its assessments, after long litigation, being often declared invalid by the courts. By this act the State attempts to recover the amounts so lost, and to prevent future litigation.

The term of office of the Supreme Court Commissioners was extended for another period of four years, the regular docket of this court being still too large for the judges to dispose of without great delay to litigants. The office of Commissioner of Public Works was established for the term of four years, its incumbent being required to perform such duties as the Governor shall direct in the examination of lands subject to overflow by flood waters and in the preparation of plans and estimates for constructing works to control such flood waters. The sum of \$80,000 was appropriated for his use in this work.

State officers and employees were forbidden to create any deficiency in excess of any appropriation made by law, except in case of actual necessity, and then only upon written authority of the Governor, Secretary of State, and Attorney-General. The State will not be liable for any indebtedness incurred contrary to this regulation.

Employers were forbidden to require from their employees more than six days' work in

seven. Subject to the approval of the electors residing therein, the county of Riverside was created out of the southwest part of San Bernardino County and the northern part of San Diego County; the county of Madera out of the northern part of Fresno County; and the county of Kings out of the western part of Tulare County.

Constitutional amendments were proposed for submission to the people at the next general election, changing the State capital from Sacramento to San José, provided the State shall receive a gift of 10 acres as a site for the Capitol, and a gift of \$1,000,000 as a building fund therefor; authorizing the Legislature to provide by general law for the establishment of new counties; establishing an educational qualification for voters; exempting from taxation young fruit and nut-bearing trees and grapevines, and the property of free public libraries and free museums; making the President and Professor of Pedagogics of the State University members of the State Board of Education; and fixing the compensation of legislators at \$1,000 and mileage, instead of the present *per diem* allowance.

Legislation respecting the State debt, the State series of school text-books, and hydraulic mining is elsewhere considered.

Resolutions were adopted favoring the annexation of the Hawaiian Islands.

Other acts of the session were as follow:

To abolish all fees or commissions paid by the State to any officers for services in the assessment, equalization, auditing, and collection of *ad valorem* taxes.

To prevent combinations to obstruct the sale of live stock.

Requiring all street-railroad companies hereafter granted franchises in public streets to allow mail carriers in discharge of their duty to ride free.

Authorizing suits against the State and regulating the procedure therein.

Establishing a naval battalion, to be attached to the National Guard of the State.

Making prize fighting a felony punishable by a fine of not less than \$1,000 nor more than \$5,000, and by imprisonment not less than one year nor more than three years.

Revising the law governing the State militia.

Creating a commission for investigating and reporting upon the Torrens Land-Transfer act of Australia.

To provide for the planting, maintenance, and care of shade trees upon streets, lanes, alleys, courts, and places within municipalities, and of hedges upon the lines thereof, and for the eradication of certain weeds within city limits.

To compel savings banks to publish every two years a sworn statement of all unclaimed deposits.

Making the ninth day of September and the first Monday of October legal holidays.

Establishing a tax on collateral inheritances, bequests, and devises.

Making it unlawful to refuse admission to places of amusement.

Abolishing the State Board of Forestry.

Establishing a board of commissioners of building and loan associations.

Requiring the State Board of Prison Directors to fix from time to time the price of jute goods manufactured at the State Penitentiary, and forbidding sales of such goods to any but consumers. [This law, being in restraint of trade, is probably unconstitutional.]

Appropriating \$98,000 for the erection of an additional wing to the main building of the California Home for the Care and Training of Feeble-Minded

Children at Glen Ellen, Sonoma County, for the female department.

Appropriating \$145,000 for completing the building of the Preston School of Industry at Lone.

Appropriating \$100,000 for completing the female ward of the Mendocino State Asylum.

Appropriating \$117,500 for a new building and other improvements at the Southern California Insane Asylum.

Appropriating \$15,000 for completing and preserving Sutter's Fort.

Appropriating \$75,000 for a new building for the State Normal School at Los Angeles.

Appropriating \$25,000 for the completion and printing of a volume expository of the resources of the State, to be distributed at the World's Fair, Chicago.

Appropriating \$63,500 for a new building and other improvements at the Deaf, Dumb, and Blind Asylum.

Appropriating \$100,000 for additional improvements at the Reform School for Juvenile Offenders at Whittier.

United States Senator.—On June 21, by the death of Leland Stanford, the State lost the services of her senior Senator in Congress. As the Legislature was not then in session, Gov. Markham, on July 22, appointed ex-Gov. George C. Perkins as his successor until the meeting of the next Legislature.

Education.—The following public-school statistics for the years ending June 30, 1891, and June 30, 1892, are contained in the last report of the Superintendent of Public Instruction:

ITEMS.	1891.	1892.
Children between 5 and 17 years	235,775	238,897
Number attending public schools	208,808	213,359
Number attending private schools	22,587	21,001
Number not attending any school	59,880	59,587
Children of all ages enrolled in public schools	239,966	238,106
Average daily attendance	153,599	158,375
Male teachers	1,181	1,233
Female teachers	4,478	4,669
Monthly salary, male teachers	\$89 11	\$93 96
Monthly salary, female teachers	\$66 43	\$66 12
Average school year in months	8-05	7-95
Number of schoolhouses	3,174	3,283
Total school revenue	\$6,099,553	\$6,322,965
Total school expenditures	\$5,112,500	\$5,351,591

The series of public-school text-books prepared under the direction of the State Board of Education, and published and sold by the State at cost prices, has not given entire satisfaction to teachers or pupils. In his report to the Legislature of 1893 the Superintendent of Public Instruction recommended that many of these books be revised or wholly rewritten, and, in accordance with his suggestions, an act was passed authorizing the Board of Education to revise the first, second, and third readers, the English grammar, the United States history, and the advanced arithmetic, and to compile a primary history of the United States. For these purposes \$25,000 was appropriated from the School-book fund.

Statistics.—The following statistics, showing the resources of the State for the year 1892, are compiled from the "San Francisco Chronicle": Assessed valuation of all property, \$1,275,816,228; assessed value of real estate, \$797,221,036; assessed value of improvements, \$249,630,321; assessed value of personal property, \$187,008,874; assessed value of railroads, \$41,956,000; total indebtedness of all counties, \$6,256,301; total deposits in savings banks, \$120,782,643;

total deposits in commercial banks, \$110,782,617; total deposits in private banks, \$1,858,908; total deposits in all banks, \$238,424,168; total merchandise imports at San Francisco, \$46,209,985; total merchandise exports from San Francisco, \$42,799,100; quicksilver product, 27,259 flasks; whaling catch of San Francisco fleet, \$1,250,000; wheat crop (Agricultural Department estimate), 38,554,000 bushels; wine receipts at San Francisco, 10,219,096 gallons; brandy product, 2,000,000 gallons; barley crop, 12,333,000 bushels; raisin crop, 57,162,000 pounds; prune crop, 30,000,000 pounds; wool crop, 34,000,000 pounds; hop crop, 89,750 bales; fresh fruit shipped east, 108,828,667 pounds; orange crop 1892-'93, 7,500 car loads; canned goods put up in the State, 971,000 cases; area of fruit trees now planted, 401,415 acres; area under ditch, 4,500,000 acres; area actually irrigated, 3,550,000 acres; average value of irrigated land, \$150 an acre; number of artesian wells, 3,500; area in peaches, 54,884 acres; area in prunes, 49,626 acres; area in oranges, 59,006 acres.

Irrigation Congress.—On Oct. 10 an international irrigation congress met at Los Angeles, at which more than 200 delegates were present, representing Kansas, Nebraska, Illinois, Tennessee, Washington, Arizona, New Mexico, Texas, Iowa, Connecticut, Montana, Wyoming, Oklahoma, Mexico, Ecuador, Prussia, France, Hungary, and New South Wales. Its session continued for five days. Various phases of the irrigation problem were fully discussed, and resolutions were adopted expressing the general results of the conference. The following plan for future action was recommended and accepted:

There shall be appointed by the National Executive Committee of the Irrigation Congress a commission for each State and Territory in the arid or semiarid regions, consisting of 5 members each, who shall be competent and experienced men. These commissions shall at once enter upon a careful investigation of the conditions existing in each of their States or Territories, and then formulate plans looking to the adoption of a national policy, to be supplemented by appropriate local laws. The results of the investigations of the several commissions shall be submitted to the next Irrigation Congress, and upon these reports the final and definite declarations of the people of the Western States and Territories may be based.

Hydraulic Mining.—Early in March, through the efforts of Congressman Caminetti, a bill was passed by Congress to promote the resumption of hydraulic mining in the State, and to restore the former navigable conditions in the Sacramento and San Joaquin river systems. The following is a synopsis of the measure:

A commission of 3 members of the corps of engineers of the United States army is created to mature, adopt, and execute plans to carry out the purposes of the measure and to prescribe rules and regulations therefor. These will include methods of restraining material now in the rivers and tributaries, as well as that now in place which may be moved by future operations under the law; the determination of the practicability of storage sites for debris, or water, or as settling reservoirs in tributaries, or in the basin sloughs and swamp lands; the examination of mines now working or hitherto worked, without injury, to ascertain the results of experience therein; inspection from time to time of the channels of the river systems, to note the effect of mining operations and erosion generally.

Other duties of the commission are to be: The limitation of the amount of *débris* washed from the mines to the capacity of the restraining works erected; the exercise of power to modify any permission granted, or, when public interests demand, to absolutely revoke the same; the enforcement of the orders thereof, when violated, by process in the courts, in addition to the forfeiture of the rights previously secured, and the execution of the law when parties mine without lawful permission.

The term "hydraulic mining" is declared to have the meaning applied thereto in California. Such mining carried on in territory tributary to the river systems mentioned, directly or indirectly injuring their navigability, other than as permitted by this law, is prohibited and illegal.

To obtain permission to mine, a verified petition must be filed.

If a majority of the members of the commission concur in a decision favoring the granting of permission, the order shall specify in detail what impounding or other restraining works shall be built and maintained at the expense of the petitioner and of what material, and in general shall set forth any further requirements and safeguards for the protection of the rivers and the lands adjoining.

Authority is conferred for conference with any State commission on the subject of drainage, reclamation of lands, or the working of hydraulic mines.

Soon after the enactment of this law the Legislature passed an act permitting the resumption of hydraulic mining in the State whenever and wherever it can be carried on without material injury to the navigable streams and the lands adjacent. By another act, provision was made for the appointment of a *débris* commissioner having authority to consult with any board of engineers of the United States respecting the adoption of plans for the construction of works to impound mining *débris*. The sum of \$250,000 was appropriated, whenever a like sum shall be appropriated by Congress, to be used in the construction of works to restrain or impound such *débris*.

Midwinter Exposition.—On Aug. 24 ground was broken in Golden Gate Park, San Francisco, preparatory to the erection of buildings for holding a grand exposition on the Pacific coast. The project had begun to take shape several months before, when Mayor Ellert appointed a committee of 50 citizens of San Francisco to consider the matter. The outlook appeared so favorable that the committee decided that the plans should go forward, and an executive committee of 9 persons was appointed to have full charge of the enterprise. Liberal pledges of financial assistance were made, and Congress was induced to pass a resolution admitting free of duty all exhibits coming from foreign countries for the exposition, and permitting foreign exhibitors at the World's Fair at Chicago to remove their exhibits to San Francisco; in fact, giving to foreign exhibitors at this fair the same privileges as at Chicago. The ceremonies on Aug. 24 were attended by a great concourse of people, and throughout the State much enthusiasm was manifested for the enterprise. The plans include an administration building, a mechanic arts building, a manufacturers' building, an agricultural building, and a fine arts building. These five structures will be grouped about a central concert valley, from the center of which is to rise an electric tower 260 feet in height, and

in beauty of architecture as well as in dimensions will compare favorably with many of the lesser buildings at Jackson Park. Many of the exhibitors at Chicago have manifested their intention of transferring their exhibits to San Francisco. The exposition is called the California Midwinter International Exposition. It will open on Jan. 1, 1894, and continue six months.

CANADA. See DOMINION OF CANADA.

CAPE COLONY AND SOUTH AFRICA.

The colony of the Cape of Good Hope, founded by the Dutch in 1652, became a dependency of Great Britain in 1806. Representative government was established in 1853, and responsible government in 1872. British Caffraria was annexed to the colony in 1865, Basutoland in 1871, the Transkei and other parts of independent Caffraria, with Fingoland, in 1875, and more recently Tembuland, including Galekaland and Walfisch Bay. Griqualand West, which was detached from the Orange Free State and annexed to the British Empire in 1871, after diamond mines were discovered in it, is also now incorporated in Cape Colony. Pondoland, a native territory with 200,000 inhabitants, is administered by a resident commissioner of the Cape Government. The Transkeian territories are also governed as native districts under resident magistrates. Basutoland has been detached from the Cape, and preserves its native mode of government, subject to the direction of a resident commissioner. The Governor of Cape Colony is also High Commissioner for South Africa, directing the affairs of Basutoland, the crown colony of British Bechuanaland, the Bechuanaland Protectorate, and British Zambesia.

Cape Colony.—The Governor is Sir Henry Brougham Loch, appointed in 1889. The ministry was composed in the beginning of 1893 of the following members: Premier, Cecil Rhodes; Colonial Secretary, J. W. Sauer; Attorney-General, H. J. Rose Innes; Secretary for Native Affairs, P. H. Faure; Commissioner of Crown Lands and Public Works, Sir J. Sivewright; Colonial Treasurer, J. X. Merriman. The legislative power is exercised by a Legislative Council, consisting of 22 members elected for seven years, and a House of Assembly of 76 members elected for five years. To be elected to the Council a man must own £2,000 worth of real property or personal property of twice that amount. The members of both Houses are elected by male citizens who are occupiers of houses of the annual value of £25, or who receive a salary of £50, or wages of £25 with board and lodging. The number of registered voters in 1891 was 76,562.

Area and Population.—The area of Cape Colony proper is 191,416 square miles. The population, as determined by the census of April 5, 1891, is 956,485. The population by the census of 1875 was 720,984. The European population has increased from 236,783 to 336,938, which is at the rate of 2.63 per cent. a year, the rate of increase for the whole population being 2.03 per cent. Including the dependencies, excluding Pondoland, the total population in 1891 was 1,527,224, of whom 376,987 were of European origin and 1,150,237 belonged to the native races, Hottentot, Caffre, Fingo, or Bechuana, excepting 247,806 of mixed blood and 13,907

Malays. Of the whites, 27,667 were English by birth, 6,646 Scotch, 6,540 German, and 4,184 Irish. Of the European population, 74,015 were agriculturists, 77,118 were domestics, 81,177 followed industrial, 17,922 commercial, and 14,253 professional occupations; 155,333 were dependent, and 7,069 of unknown occupation. The population of Cape Town, the capital, in 1891 was 51,251, or with suburbs 83,718. Kimberley had 28,718 inhabitants, and Port Elizabeth 23,266. The number of arrivals by sea in 1891, counting only adults, was 11,509, while the number of adults who departed was 8,415.

Commerce and Production.—The foreign trade of the Dutch republics and of other parts of the interior of South Africa must pass through either Cape Colony or Natal. The Cape levies a duty on most imports, averaging 20 per cent. of their value, allowing a rebate on those destined for the Boer republics. In 1892 the value of the imports was £9,500,000, including nearly £1,250,000 for transit beyond the customs union. The exports, including Transvaal gold, were nearly £12,250,000 in value. The total value of the imports, including specie, in 1891 was £8,532,776, and of exports £11,131,024. The value of merchandise imports was £7,518,437; of exports of native products, £10,934,974. The exports of the principal South African products for 1891 were valued in the custom-house returns as follow: Diamonds, £4,174,208; wool, £2,264,498; hides and skins, £489,929; ostrich feathers, £468,221; Angora hair, £355,426; copper ore, £254,184; wine, £20,183. The aggregate value of the diamonds exported since 1867 is £56,693,000.

The production of wheat in Cape Colony for the year 1890-'91 was 2,894,482 bushels; of tobacco, 10,993,200 pounds; of wine, 6,012,522 gallons; of brandy, 1,423,043 gallons; of raisins, 2,599,147 pounds; of wool, 56,083,659 pounds; of mohair, 6,893,660 pounds. The number of hides and skins was 3,228,094. The Colony had 2,210,834 head of cattle, 444,147 horses, 96,345 mules and asses, 16,706,106 sheep, 6,628,087 goats, and 154,890 ostriches. The quantity of public land alienated up to the end of 1891 was 94,265,893 acres, while 40,979,890 acres still belonged to the Crown. In 1891 titles were given for 3,724,750 acres.

Navigation.—The number of ocean vessels entered in 1891 was 796, of 1,464,720 tons, of which 572, of 1,320,164 tons, were British. The number cleared was 771, of 1,426,887 tons, of which 551, of 1,282,981 tons, were British. The number of coasting vessels entered was 1,386, of 2,537,375 tons, and cleared 1,386, of 2,523,942 tons. The number of vessels registered in the colony in 1892 was 25, of 2,836 tons.

Railroads, Posts, and Telegraphs.—The railroads belonging to the Government had in 1892 a total length of 2,250 miles. There are 177 miles of private railroads. The western system, starting from Cape Town and running to the diamond district of Grigqualand West, with an extension running into British Bechuanaland in the direction of the British South Africa Company's territory, is joined by cross lines to the lines running from Port Elizabeth and East London to the border of the Orange Free State, beyond which they join the line

that extends through the Free State and into the South African Republic, terminating at Pretoria. Direct communication between the capital of the Transvaal and Cape Town was opened on Jan. 1, 1893. The Government expended £16,949,722 in the construction of these lines, the cost per mile being £8,968. The receipts were £1,896,376, and the expenses £1,117,649 for 1891, when there were carried 4,342,547 passengers, and 672,760 tons of freight. The Government receives a net profit of about 4½ per cent.

There were 12,353,040 letters, 7,187,167 newspapers, 370,579 postal cards, 1,699,920 books and samples, and 603,792 parcels carried by the post-office in 1891. The receipts were £252,199, and the expenses, including the telegraph service, £282,273. The number of telegraph messages transmitted during 1891 was 1,317,021. The telegraph lines had a total length of 4,930 miles. A project for the continuation of the telegraphs of the Cape and the South Africa Company from the present terminus at Port Salisbury through the continent of Africa is entertained by the promoters of the South Africa Company. The line would cross Portuguese East Africa on the Zambesi, and extend through Nyassaland and the lake region to Uganda and thence to the Nile, connecting with the Egyptian and European telegraphs, reducing the cost of telegraphing from South Africa from 9s. to 2s. a word.

Finances.—The revenue for the year ending June 30, 1891, was £5,557,019, including loans amounting to £1,418,143. The amount produced by taxation was £1,654,583; receipts from the services, \$2,098,351; from the colonial estate, £348,143; fines, stores issued, etc., £42,329. The total expenditure was £6,436,007, of which £1,220,963 went for the service of the debt, £1,117,953 for expenses of the railroads, £152,430 for defense, £234,364 for police, and £126,831 for the civil establishment, while £1,913,504 were expended under act of Parliament. The estimated ordinary expenditure for 1892-'93 is £4,642,986. The development of the Transvaal gold fields has benefited the revenue of Cape Colony greatly; but expenditure has increased at an equal pace, although the competition of Natal is likely to prevent a further large growth of the revenue from this source. The revenue for the year ending June 30, 1893, was £5,008,241, and the expenditure £4,689,424. The public debt of the colony on Jan. 1, 1892, amounted to £23,206,206, exclusive of £1,632,962 of debts of harbor boards and corporations guaranteed by the colony. Nearly three quarters of the debt was raised for railroad construction. In January, 1893, a new loan of £1,454,611 was raised at 3½ per cent. interest.

A New Ministry.—The ministry, in consequence of dissensions among its members, resigned, and a new one was constituted on May 3 as follows: Premier, Cecil Rhodes; Treasurer-General and Minister of Agriculture, Sir Gordon Sprigg; Commissioner of Crown Lands, — Laing; Attorney-General, W. P. Schreiner; Colonial Secretary, P. H. Faure; Secretary of Native Affairs, — Frost. The Cape Parliament was opened on June 20. On July 1 the Bechuanaland Protectorate entered the customs union, and the postal service of British Bechuanaland

was taken over by the Cape Government. The Government gave considerable attention to the subject of immigration, studying specially the methods pursued in the United States. The question of regulating the influx of Asiatics also engaged its attention. The restriction of the franchise recently enacted called forth a protest from the Malays, who sent a petition signed with 10,000 names to the Imperial Government requesting the Queen to veto the act.

Natal.—The Constitution granted to the colony of Natal in 1856, when it was set apart from the territory of Cape Colony, was modified in 1875 and 1879 by the introduction of the representative system of government, under which the Governor is assisted by an Executive Council and a Legislative Council. The former is composed of the chief justice, the officer commanding the troops, the colonial treasurer, the attorney-general, the secretary for native affairs, and 2 members of the Legislative Council selected by the Governor. To these the manager of the state railroads and the colonial engineer have since been added. The Legislative Council originally consisted of 13 appointed and 15 elected members. Under the acts of 1883 and 1889 the number of members was increased to 31, of whom only 7 are nominated. Sir Charles Mitchell was succeeded as Governor in July, 1893, by Sir Walter Hely-Hutchinson, Governor of the Windward Islands since 1889, and before that of Barbadoes, Malta, and Fiji.

Area and Population.—The area of the colony is estimated at 20,460 square miles. The population in 1891 was 543,913. The number of Europeans had increased since 1879 from 22,654 to 46,788, the East Indians from 16,999 to 41,142, and the native population from 819,934 to 455,983. Durban, the capital, has a population of 25,512. Since 1879 there have been 7,197 immigrants brought from Europe, whose passages were paid in part or altogether by the Government. The number of assisted immigrants in 1891 was 581.

Commerce.—The total value of the imports by sea in 1891 was £3,335,331; of the exports, £1,371,340. Over 75 per cent. of the trade is with Great Britain. The export of Angora hair in 1891 was 526,854 pounds; of hides and skins, 808,825; of wool, 27,688,314 pounds; of raw sugar, 36,846 hundredweight; of rum and spirits, 85,605 gallons; of coal, 30,358 tons. The total value of native produce exported was £970,650. For the year ending June 30, 1892, the total value of the imports was £3,690,734. The exports, exclusive of those in transit, were valued at £1,184,118. Of the total area of the colony, 8,250,000 acres have been granted to Europeans, besides 750,000 acres sold on deferred payments and 700,000 acres held on pastoral leases, while 2,250,000 acres are reserved for the natives, and 1,000,000 acres remain unalienated. The area cultivated by the Europeans in 1892 was 102,678 acres. The product of sugar in 1892 was 26,111 tons, a considerable increase over that of the preceding year. Most of the sugar manufactured is consumed in the colony or sent across the inland borders. There were 1,368 acres planted to tea, the cultivation of which has been recently introduced. The yield of tea in 1892 was 841,380 pounds. Coal, bark,

and fresh fruit figure with tea among the comparatively new exports. Wheat, maize, and other cereals and green crops are largely cultivated. The natives had 294,339 acres under cultivation in 1892. During 1891-'92 there were 120,000 tons of coal raised, of which one half was exported. The coal compares favorably in quality with the best that is imported from England, and the demand for export has led to the opening of new collieries. The iron deposits in the colony are also beginning to attract notice. Sheep farming has increased in spite of the low price of wool, on account of which the farmers stored much of their wool in 1892, instead of exporting it. Gold is mined in small quantities. Leather and woollen manufactures have recently been established. The *Acacia molliissima*, which yields a valuable tan bark, and other useful trees are being extensively planted.

Finances.—The revenue of the Government for 1891 was £1,336,112, of which £673,090 were derived from railroads, £291,257 from customs, £19,518 from excise, £45,024 from sales of public lands, £44,614 from the post-office, £15,123 from telegraphs, £23,223 from stamps and license fees, and £77,936 from the native hut tax. The total expenditure was £1,361,387, the chief items being £653,435 for the railroads, £91,118 for public works, £32,994 for education, £70,649 for defense. The permanent expenditure from loans for the year was £904,184. For the year 1891-'92 the revenue was £1,392,455, and the ordinary expenditure £1,280,965. The amount of the public debt on June 30, 1892, was £7,170,354. The expenditure for the maintenance of the military force of 739 officers and men in 1891 was £64,534, two thirds of which the Imperial Government paid.

Responsible Government.—After legislative deliberations and discussions with the British Colonial Office extending over several years, the Natal Legislative Council on May 11, 1893, passed a bill to establish responsible government. The new Constitution was proclaimed by Sir Charles Mitchell, the Governor, on July 4, when the Legislative Council was prorogued. The question of responsible government was decided after a sharp and prolonged electoral contest by the election of two members in its favor in the constituency of Newcastle in February, giving a majority of 4 in the Legislative Council. The general election held in September, 1892, had given the same majority to the opponents of the measure; but the elections in two districts had been annulled, and on the final vote they were reversed. The home Government had insisted that full responsibility for the defense of the colony should rest with the natives. The Governor is to act also as paramount chief of the natives, and remains Governor of Zululand. The Legislative Council on June 23 passed a resolution condemning the decision of the Imperial Government to restore the banished Zulu chiefs before the expiration of their sentences, as likely to lead to a renewal of disturbances and bloodshed and produce a bad effect upon the natives in Natal.

British South Africa Company.—The British South Africa Company, having a capital of £1,000,000, obtained by a royal charter grant-

ed Oct. 29, 1889, the right to administer and exploit the region south of the Zambesi and north of the South African Republic declared to be within the British sphere of influence in 1888, comprising Matabeleland and Mashonaland. The company was formed for the purpose of working mining and other concessions and developing the commercial resources of Zambesia, and it undertook to extend northward from Bechuanaland the railroad and telegraph systems of Cape Colony, and to encourage immigration and colonization and promote trade and commerce. When by the Anglo-German agreement of 1890 and the Anglo-Portuguese agreement of June 11, 1891, all the regions east of the twentieth degree of longitude, except a small part conceded to Germany, and west of the possessions of Portugal on the east coast were included in the British sphere of influence, the company undertook the task of developing, and was granted sovereign rights over the whole of South and Central Africa north of the Transvaal and British Bechuanaland and south of the Congo Free State and German East Africa, except Nyassaland. This vast region is known popularly as Zambesia, and is divided by the river Zambesi into Northern and Southern Zambesia. Except a strip along the Zambesi extending as far as their settlement at Zumbo, the Portuguese are precluded from claiming territory south of the Zambesi west of longitude $32^{\circ} 30'$ east of Greenwich, or the English territory east of longitude 33° , the line following that meridian and, farther south, the slope of the Manica plateau, with a deflection that leaves to the Portuguese their station of Massa-Kessi, but gives to the English Mutassa.

It was the great natural wealth of the part of their territory that here borders on the Portuguese possessions, especially the gold reefs of Mashonaland and Matabeleland, that attracted the capital and enterprise of the South Africa Company. The company extended the railroad from Kimberley to Vryburg, a distance of 126 miles, and then transferred this section, which is in British Bechuanaland, to the Cape Government, and proceeded to extend it 98 miles farther to Mafeking. This section also will probably be taken over by the Cape, with a view to the eventual incorporation of British Bechuanaland in the colony. For the extension beyond Mafeking the Imperial Government has agreed to contribute, on condition that no competing line shall be allowed, £10,000 a year for ten years toward the extension to Gaberones, and an equal amount for the section between that point and Palapye. The telegraph was extended from Mafeking 800 miles to Fort Salisbury in Mashonaland along the route on which a road was built by the pioneer expedition, which reached Mount Hampden on Sept. 12, 1890. The expedition numbered 1,500 able-bodied men, including the police who accompanied the expedition and were disbanded on reaching the gold-fields. Stations were established at Mafeking, Ramutsa, Palapye, Macintse, Tuli, Tati, Lunde, Charter, Victoria, and Salisbury, and forts were built in Matabeleland and Mashonaland at Tuli, Charter, Victoria, and Salisbury. A mail and passenger service was established which brought Salisbury within eight weeks' communication with Eng-

land, which will be made much shorter when a railroad is built through Portuguese territory to connect Mashonaland with the port of Beira. A company was organized for the construction of this railroad, which is provided for in the Anglo-Portuguese agreement, and the first section of 75 miles, crossing the belt infested with the tsetse fly, was built before the summer of 1893. After arriving in Mashonaland the pioneers disbanded and set to work prospecting and staking out mining claims under the concession obtained from Lobengula, the Matabele king, who was recognized as the native sovereign by right of conquest of the countries of the Mashonas and Makalakas surrounding Matabeleland. Before March, 1893, the pioneers had discovered 5 different gold-fields and registered 15,500 mining claims, in 2,000 of which shafts had been sunk. The gold ledges were found to extend over 400 miles. Claims were entered also for mines of copper, silver, zinc, tin, antimony, arsenic, and lead, and deposits of nitrate of potassium and of plumbago were discovered. The country was found to be a remarkably promising region for grazing and agriculture. Townships were surveyed at Salisbury, Victoria, Hartley Hill, and Umtali, and a trek of Boer farmers was permitted to enter from the Orange Free State, to whom the company allotted farms. A town was built at Fort Salisbury, with a bank, hotels, churches, and a hospital. A government for the civil administration of the whole country was organized, and revenues were collected from licenses of traders, miners, and professional men, from the postal and telegraph services, and from sales of lots in the towns. There were 3,000 white settlers in the country in the spring of 1893.

Farms representing a total area of 2,000,000 acres had been granted, and the demands had so increased in number that a price of 9*d.* an acre was asked in addition to the annual quitrent of £3 for a farm of 3,000 acres.

War with the Matabele.—The Matabele are an offshoot of the Zulu race who conquered the rich grazing-country which they call their own, and have been accustomed to dominate and plunder the neighboring tribes and live by robbery and the labor of captured slaves. Though they are a composite race, the product of intermarriages with captive women or boys adopted into the tribe, and have not more than 5,000 pure Zulus among their 200,000 of people, they are the equals of the old Zulus in physical strength and vigor and in the love of battle and proud confidence in their martial prowess. They have the old skill with the assegai, and having never found a foe that could stand before their battle rush, they believe one Matabele to be a match for four Englishmen, and that their native weapons in their hands are superior to machine guns and repeating rifles handled by whites, who have been known to retreat, whereas they have faced firearms and won the day, and never have been beaten. They preserve the Zulu military system, the whole nation being a territorially organized army, having four divisions corresponding to the districts, in each of which one of the chief indunas is both commandant and magistrate, while the kraals are nothing but regimental camps, which have one, two, or three indunas over them, according to their size. A hut in

the center of each kraal is the arsenal in which are kept the assegais and war shields of the regiment. The members of the regiment are always on the spot ready for the call to arms, except in the case of some regiments that have

A MATABELE LADY.

grown small from losses or from age, which are brought up to their normal strength by drafts of young men who remain inhabitants of other kraals. The vigilant chief of this military organization is King Lobengula, who is an absolute monarch, exercising power of life and death over all his subjects, the fountain of justice, power, and honor. He is said to be a man of intellectual force, enlightened and progressive, a capable organizer and administrator, a cunning diplomatist, and an incessant worker, keeping all the affairs of his little kingdom well in hand. He is about sixty years old, a man of huge frame, dignified and agreeable in manners. Some say that his disposition is mild and his policy one of peaceful progress toward civilization. His liking for white men has long been a notable trait in his character, which was exhibited in his admission of the English to Mashonaland, where his people would come into a contact with the whites free from subjection. Some, however, represent Lobengula as false and bloodthirsty, and it is said that, like other Zulu tyrants, he has maintained himself in power by ruthlessly putting to death most of his near relatives. Conflicting accounts have been given of the character of the Matabele as a people. Their history shows them to be a tribe of robbers and slave hunters, whose chief occupation was making raids, sometimes beyond the Zambesi, and killing the young men, carrying off the women and

children, and driving away the cattle of other tribes, or imposing upon them a regular tribute. The Mashonas, who are not much skilled in war and have no king nor military organization, but are industrious producers and possess remarkable facility in mechanical work, were subjugated and enslaved by the Matabele. But when the Matabele tyrant gave the English permission to settle in Mashonaland, his people could no longer expect to live on the labor of these people or continue long their predatory customs. The promoters of the South Africa Company hoped that they would learn to depend on the abundant resources of their country, composed of grassy plains where immense herds of fine cattle range, all the absolute property of the king, and in which millet is grown with little labor, though only to be converted into the native beer, all of which must be delivered up to the king. While some who knew these people believed them capable of and ripe for peaceful development, like the Basutos or Bechuanas, others depicted them as incorrigible savages, unable to live without bloodshed, and even given to cannibalism. When a new regiment is formed Matabele law forbids the young men of the kraal to marry until they have won from the king the Zulu ring by washing their spears in blood and thus proving themselves men. The company had built plenty of strong places and provided an abundance of improved arms and perfected a militia organization, in order to be ready not merely for an outbreak of the young men of the royal guard, whose turbulence was with difficulty restrained by Lobengula, or an incursion of a young regiment ambitious to prove their title to the estate of warriors, but for a war with the whole military force of Lobengula, numbering at least 20,000, perhaps 25,000 trained men under thorough discipline.

Lobengula's change of attitude after the arrival of the expeditionary force caused the officers of the company to redouble their military precautions, and acted as a serious check upon the enterprise. He denied that he had granted the right to settle, or conveyed a title to any land, or abandoned his sovereign rights over Mashonaland and its people, and repudiated the treaty and concessions as construed by them by sending back the 10,000 rifles, and renounced the allowance of £100 a month which he received as a consideration. He had taken this position when the whites first entered Mashonaland, and there was indeed nothing in the treaty that gave the South Africa Company the right to rule in the country or to occupy and convey land, though such right was conceded in the royal charter. Against his protest, and with a display of military force, they had taken possession of the country, and made use of the labor of the Mashonas, who had previously toiled under the Matabele yoke. Lobengula dreaded to engage in an armed conflict with the British, and did his best to restrain the rage of the young fighting men. At length their impatience at his dilatory policy rose to such a pitch that he was compelled to put the question to a test whether he had resigned his sovereign rights over the Mashonas if he would remain King of the Matabele. Outside of the districts claimed by the British as their territory, the Matabele were suf-

ferred still to harass the Mashonas and Makalaka. The Mashonas who lived within the protection of British forts had become defiant. Early in 1892 a Matabele impi entered Mashonaland and killed a chief and a large number of men, carrying off the women and children into captivity. The Administrator of Mashonaland sent a warning to Lobengula, who replied that he was punishing the theft of his cattle, and that his impi had strict orders not to interfere with the white man. In July, 1893, Lobengula, yielding to pressure, ordered an impi into Mashonaland to chastise the Mashonas for another theft of cattle. The Matabele fell upon the native settlements near Fort Charter, killing the men, burning the kraals, and carrying off the young women. The king's orders were to take all the women and cattle they could, but not to molest his friends the whites or touch their property. They ravaged the country between Fort Charter and Fort Victoria, burned the grain and kraals around those places, and on July 8 pursued fugitives into both places, and hunted fleeing Mashonas up to the walls of the latter fort, where there was a force of 400 men, demanding

A MATABELE WARRIOR.

of the commander the surrender of the slaves of the king whom he harbored. This demand was promptly refused. The whites were as eager for the inevitable conflict as the savages. Capt. Lendy ordered the Matabele to return to their own side of the border within a certain number

of hours. They asserted their right to be in the country and were slow in withdrawing. Captain Lendy led 40 mounted riflemen in pursuit of a returning impi, and to punish their insolence, the British attacked them, killing 2 indunas and 30 men. Dr. Jameson, the Company's Administrator of Mashonaland, sent a message to Lobengula demanding reparation for the invasion of British territory and for cattle belonging to white men which the Matabele had driven off. To this he sent a friendly reply; but at that time he did not know of the shooting of his indunas and warriors. On Aug. 20 another message was received from Lobengula, in which he said he had sent his impi to punish the Makalaka for stealing his cattle, and that he would not return any cattle or pay for any damage unless Rhodes, the managing director of the South Africa Company returned to him the captives, with their women and children, cattle, goats, and sheep, that the Victoria people were keeping from him. If he had known beforehand what he now knew, he said, he would have ordered his people to take everything belonging to the whites that they could lay their hands on. Sir Henry Loch's message asking him to punish the indunas who were responsible for the violation of the white men's territory he answered diplomatically by denouncing the whites as the aggressors and insisting on his rights over Mashonaland. When the Company's officials tendered an installment of the king's subsidy he refused to receive what he called "blood money." The British Government promised to uphold the officers of the company in their determination not to surrender the fugitives, but cautioned them to confine themselves to defensive measures. Soon, however, an aggressive policy was adopted, with the sanction of the imperial authorities. Dr. Jameson sent an ultimatum to Lobengula, and both parties began to prepare for hostilities. A regiment of imperial troops was moved up the country toward Mashonaland, and reserves were sent out from England. A Boer trek had recently arrived in the north, but the Boers declined to engage in a war with the Matabele as allies of the English, and made arrangements to return to their own country. The Matabele continued their raids throughout Mashonaland without check. The Boers, who had settled in the south, returned to the Transvaal by order of Commandant Raaf, of Tuli. Lobengula, who had sent his strongest impi on a raid beyond the Zambesi, recalled it quickly, and before the middle of September impi were advancing toward the border to attack Victoria and Tati. The latter post was deserted by the whites, who abandoned most of the mines and farms everywhere to seek refuge within the fortifications at Victoria, Charter, and Salisbury, which were provisioned for a long siege. The Matabele sent all their women, children, and cattle back from the border districts for safety. Before Oct. 1 some of the impi, which had collected along the border, entered British territory and ravaged the native settlements. The Company then had 1,000 men and 600 horses in Mashonaland. Chief Khama sent a large body of his native soldiers, trained in the use of firearms, to re-enforce the Bechuanaland police, and under their protection the miners returned to

work on the Monarch reef. In the Transvaal, where public feeling was hostile to the Company, an American filibuster, named Whittaker, enrolled a force of 380 white men, all of British origin, to serve with Lobengula. A few lawless and adventurous Boers were willing to join these volunteers, to whom Lobengula promised farms. In the beginning of October a police patrol exchanged shots with a party of Matabele scouts across the Shashi river. When Dr. Jameson had procured additional horses from the Orange Free State and the Transvaal, he sent out two divisions each of 400 mounted men, armed with Winchesters and with Maxim and other machine guns, from Fort Victoria and Fort Salisbury, with the object of attacking Lobengula's forces in Matabeleland, and, after effecting a junction, marching upon Bulawayo, the king's kraal. The officers were men experienced in African warfare, such as Major Sir John Willoughby, Major Forbes, Capt. Lendy, and Captain Hayman, of the Cape mounted rifles. Major Goold Adams, commanding the border police, took 230 men from the garrisons at Maelutse and Fort Tuli, and was joined at Tati by 300 of the Bechuanaland police, while Major Gray undertook to raise 150 more, and Khama furnished 1,500 trained men armed with Martini-Henry rifles. Major Adams, who had two or three field guns, as well as several machine guns, was ordered to advance at once upon Lobengula's capital and

FORGING POINTS FOR ARABIA.

co-operate with the other two columns. On Oct. 15 the advance guard of the Fort Salisbury column encountered a party of Matabele who were guarding cattle and put them to flight. About the same time a detachment of 400 of the native levies, led by whites, attacked a position held by a body of Matabele, but after an engagement, in which the Matabele lost 80 men, the Company's force retreated.

Cecil Rhodes hastened to Mashonaland to assume the direction of the operations. Lobengula sent envoys to treat with Major Goold Adams, who was advancing to the pass leading to Bulawayo; but when the delegates entered Tati they were seized as prisoners, two who attempted to escape being shot. The relentless and irreconcilable spirit in which the colonists had opened the campaign impelled the Imperial Government to interfere. Sir Henry Loch was ordered to the scene of hostilities to supersede Cecil Rhodes as commander-in-chief, and after his arrival all operations and negotiations were conducted by him under instructions from the Marquis of Ripon, Colonial Secretary.

Swasiland.—The native State of Swasiland is inclosed on three sides by the territory of the South African Republic, and on the east is separated from the sea by Tongaland, part of which, by the Anglo-Portuguese agreement of June 11, 1891, was included in the English sphere of influence, while the rest is attached to the Portuguese province of Lorenzo Marques. The area of Swasiland is estimated at 10,000 miles. The native population is about 60,000. Boers of the Transvaal hold titles to farms and winter grazing-grounds, and there is a settled trading and pastoral population of about 600 whites, which is increased in winter to 1,500. The king, Ungwan, at the age of twelve, succeeded Umbandine in 1890, and the native government is directed by the queen regent, who has a council of 40 chiefs. In the treaty of 1891, in which the independence of the Transvaal Republic was recognized, the English Government, which had befriended the Swazi in their difficulties with the Zulus, inserted a clause by which the independent and autonomous existence of the Swazi nation was affirmed. By a convention concluded in 1884 between the Transvaal and the British governments the independence of Swasiland was guaranteed under their joint protection. In 1890 a convention was concluded which vested the government of the whites in a mixed commission, consisting of the resident agent of the Swazi nation, as chairman, and representatives of Great Britain and the South African Republic. The Resident Adviser and Agent of the Native Government in 1893 was Theophilus Shepetone; the Transvaal member of the commission, D. J. Emmelen; the British representative, Col. Martin. The revenue of the state for 1891-'92 consisted of £14,000 contributed by the protecting governments, and £3,370 raised by taxation. The expenditure was £17,060.

The convention of 1890 was concluded for three years, ending Aug. 8, 1893. The Transvaal Government denounced it, giving the required six months' notice, necessitating a new settlement or a reversion to the *status quo ante*. A conference between the British High Commissioner and the President of the South African Republic to arrange a final settlement as plenipotentiaries of their respective governments was appointed to be held at Coleberg, Cape Colony, on April 18, 1893. A modification of the convention in favor of the Transvaal had been promised in 1891 by the Salisbury Government, which undertook that, if President Krüger, of the Transvaal, would prevent the threatened great Boer trek which endangered the British claim to Mashonaland, it would consider the question before the expiration of the three years. Already in 1890 the British Government had been prepared to hand the administration of Swasiland over to the Boers, but was prevented by popular clamor, on the proof of mining and other interests in Swasiland belonging to British subjects, from carrying out its preliminary agreement; and, instead of it, assented to the Boer project of building a railroad to the sea through Tongaland to Kosi Bay. The Cape Colonists were anxious to debar the Boers from all railroad communications, except through their colony, and to force the South African Republic to join the South African customs union, from

which Natal also held aloof. The people and Government of Natal supported the claims of the Boers in Swaziland, with the exception of direct railroad communication with the sea through Portuguese territory, expecting that the Boer Government would consent in return to extend to the gold-fields and the capital the railroad that Natal had constructed to the border of the Transvaal. One of the chief objects of the Transvaal Government in endeavoring to obtain possession of Swaziland, for which more valuable interests in the north had been sacrificed, was to secure ultimately a seaboard and harbor. This aim the imperial and colonial British authorities still expected to defeat. In order to strengthen its case the Transvaal Government, since 1890, had managed to acquire nearly all the valid property rights and concessions of value that had been held by English subjects. This was easy, because the gold mines that had originally attracted British immigration had not proved productive.

President Krüger and Sir Henry Loch conferred at Colesberg and agreed to the basis of an agreement, which could not be concluded definitely until it was ratified by the Transvaal Volksraad. The existing arrangements for the government of Swaziland were continued temporarily, and a period of three months from the ratification of a new convention was allowed before the introduction of the new system. They parted on April 21, and on June 5 met again in Pretoria. The Volksraad rejected the conditions imposed by the British plenipotentiary regarding the autonomy of the Swazis. The convention was concluded and signed on June 8. The convention provides for the cession of Swaziland and the transfer of the protectorate to the South African Republic. The native Swazi Government and all the existing rights of the Swazis are preserved. The sale of liquor to them is prohibited. All Europeans resident in Swaziland on April 30, 1893, are admitted to full citizenship in the South African Republic. No restrictions on the importation of products of the British colonies into Swaziland will be permitted, except in regard to brandy. The Transvaal Government agrees to forego its right to build any railroad to the coast. In connection with the convention an assurance was given by the representative of the Transvaal Government regarding the entry of the republic into the customs union, and a promise was made of satisfactory connections with the Natal Railroad now terminating at Charlestown.

German Southwest Africa.—The German protectorate on the southwest coast of Africa embraces the region west of the boundaries agreed upon between Germany and Great Britain in 1884 and 1890, extending from the Orange to the Cunene river, with a coast line of 930 miles, along which no practicable harbors have been found, except Walvisch Bay, which is British, Sandwich Harbor, and Angra Pequena. The total area is estimated at 840,000 square miles, and the population at from 200,000 to 250,000. The coast lands and various concessions and privileges have been held by the German Colonial Company for Southwest Africa, which has not made much progress in developing the resources of the country, and has hindered the

enterprise of German and foreign mining companies. In 1892 a concession for Damaraland, in the north, which is adapted for cattle-raising, and through which passes the trade route to the Zambesi that has been conceded to Germany by Great Britain and Portugal, was granted to a company composed mostly of Englishmen. A project for a railroad from Walvisch Bay to Bechuanaland it was impossible to carry out on account of the opposition of the Cape authorities, who had bespoken a monopoly for the Bechuanaland extension of the colonial system.

The depredations committed by a Hottentot robber chief, Hendrik Witbooi, upon the Hereros, and his insolent behavior toward the German authorities, at last impelled Capt. von François, the German Imperial Commissioner, to undertake a punitive expedition against his stronghold at Hoornkrans, and thus inaugurate a vigorous policy that would restore the respect of the natives for German authority. The Hereros had repeatedly broken their treaty engagements, and in the beginning of 1893 one of their chiefs, Kambasembi, had gone so far as to stop an expedition sent out by the Colonial Company to prospect for minerals, and to compel the imperial commissaries, Mine-Inspector Duft and Lieut. von Bülow, to return, allowing the others to proceed only because they pretended to be Englishmen. Capt. von François reached the mountain fastness of Hoornkrans by a circuitous route, and carried it by storm on April 12. The Hottentots lost 80 killed and 100 wounded, including many women and children, who fell victims to the sudden attack and indiscriminate firing. On the German side 1 man was killed and 8 were wounded.

Orange Free State.—The smaller of the two Boer republics, which is separated from Cape Colony by Orange river and from the Transvaal by Vaal river, and has Basutoland and Natal on the east, and Griqualand West on the west, has maintained its independence by a policy of subservience to Great Britain and by preserving the good will of the Dutch of Cape Colony, with whom its people have closer relations than have the Boers of the Transvaal. It has an area of 48,326 square miles, and in 1890 had a population of 77,716 whites, divided into 40,571 males and 37,145 females, and 129,787 natives, of whom 67,791 were males and 61,996 females, making the total population 207,503. Of the whites, 51,910 were natives of the Free State, and 21,116 of Cape Colony. Every adult white male is a full burgher, having a vote for President, who is elected for five years, and for a representative in the Volksraad of 57 members, who are elected for four years, one half being replaced every two years. There is an increasing immigration movement, chiefly from Germany and England.

The revenue for the year ending with February, 1892, was £386,589, and the expenditure £407,610. For 1892-'93 the estimated revenue is £263,000 of ordinary receipts. Including unexpended balances the total revenue is £447,671, while the expenditures are estimated at £434,120. The chief sources of revenue are the following: Import duties, £100,000; stamps, £38,000; transfer dues, £23,000; quitrents, £15,500; native poll tax, £13,000. The chief items of ex-

penditure are: Public works, £90,518; salaries, £45,930; education, £34,500; post-office and telegraphs, £28,030; police, £11,376; artillery, £4,968. The public debt amounts to £65,000, while the property of the Government, consisting of telegraphs, lands, buildings, etc., is valued at £417,000, besides £70,000 of shares in the National Bank.

The land of the Free State is suited rather to grazing than agriculture, and the people follow pastoral pursuits mainly, though grain is produced in considerable quantity by native labor. There were 6,000 farms in 1890, stocked with 248,878 horses, 276,073 oxen, 619,026 other cattle, 6,619,992 sheep, 858,155 goats, and 1,461 ostriches. There are rich coal mines, and gold has been found, as well as various precious stones, especially diamonds, of which the value produced for 1890 was £223,960; for 1891, £202,551. These and ostrich feathers now supplement the staple exports of wool and hides.

F. W. Reitz, then Chief Justice of Cape Colony, was elected President of the Free State on the death of Sir John Brand, and took the oath of office on Jan. 11, 1889. In 1893 he consented to re-election for a second term.

South African Republic.—The Boers of the Transvaal, who defeated British regulars at Majuba Hill, and regained in the treaty of March 21, 1881, their political independence of which they had been deprived in 1877, have had to contend with British influence in a new form, since their country has developed into one of the chief gold-producing regions of the world. The area of the South African Republic is about 120,000 square miles. The imperfect census of 1890 makes the white population 119,128, of whom 66,498 are males and 52,630 females. The natives in 1892 were estimated to number 189,295 men, 175,610 women, and 334,665 children; in all, 649,560. The influx of miners and other immigrants has since increased the total population to over 1,000,000. In 1890 the white population of the gold fields was 20,993. The capital, Pretoria, has 5,055 white inhabitants. Johannesburg, the center of the main gold field, had in 1892 a resident population of about 15,000. The revenue of the Government increased from £668,438 in 1887 to £1,577,445 in 1889, and then fell off to £1,229,060 in 1890, and £967,191 in 1891. Fluctuations in the receipts for mining licenses, which have become the largest source of income, are the principal cause of the decline. The revenue from the gold fields was £727,132 in 1889; £492,830 in 1890; £405,397 in 1891; and £277,677 for the first six months of 1892. The total revenue for this half of 1892 was £598,026, and the estimated revenue for the whole year £1,073,093. The expenditure increased with the receipts from £621,073 in 1887 to £1,226,135 in 1889, and the increase was not checked in the following year, when it amounted to £1,531,461. In 1891 it was reduced to £1,350,073, and in the first half of 1892 the disbursements were £473,441. On June 30, 1892, the Government had an unexpended surplus of £333,604 remaining. The estimate of expenditure for the whole year was £1,127,457. Besides mining licenses, the sources of revenue are sales of land, quitrents, customs, a native hut tax, stamps, and transport licenses. The Government lands have an aggregate area

of 5,660,744 acres. They were estimated in 1884 to be worth £400,000, but as they include the Barberton gold fields their value is now several millions sterling. A loan of £2,500,000 bearing 5 per cent. interest was negotiated with Rothschild in 1892, making the public debt on June 30, 1892, £2,858,695, including a debt of £192,271 paying 3½ per cent. interest that is due the British Government.

The principal exports, besides gold, are wool, cattle, hides, ostrich feathers, and ivory. The dutiable imports were valued at £721,353 in 1886, £2,204,327 in 1887, £3,748,830 in 1888, about £5,000,000 in 1889, and \$5,500,000 in 1890. The import duties amounted to £398,190 in 1890, and in 1891 to £316,610. The export of gold through Natal and Cape Colony was £1,851,905 in 1890, and in 1891 it was £2,901,470.

The railroad from Norvalspoor, on Orange river, to Vaal river, running through the Orange Free State for 334 miles, was extended, by agreement between Cape Colony and the Transvaal Government, to Pretoria, whence a line has been built to Johannesburg. The Natal line, now terminating at Charlestown, is to be carried into the Transvaal. A railroad has been built from Delagoa Bay to the eastern border of the Transvaal, and of the continuation to Pretoria 75 miles have been completed, leaving 218 miles yet to be built. There are 2,560 miles of telegraph lines.

The Constitution of the Transvaal Republic, adopted in 1858, has been modified several times. The most important changes have been made to satisfy the demands of the mining population, which demanded a share in the government. Originally there was one Chamber or Volksraad, and only male whites who were born in the country or had been residents for sixteen years had votes. Now the legislative power is vested in two Volksraads of 24 members each elected for four years. There are 2 members in each chamber from each of the 5 principal electoral districts, 1 member from each of the 12 smaller districts, and 1 from the Witwatersrand and 1 from the Barberton mining community. Only male citizens born in the Transvaal sixteen years of age, or those who have resided fourteen years in the republic, are entitled to vote for members of the First Volksraad, while for the other chamber male Protestants thirty years of age who have resided four years in the country and own real estate may qualify as electors by becoming naturalized on paying a fee of £5 and taking the oath of allegiance. The President and the Commandant-General are each elected by the direct suffrage of the electors for the First Volksraad, and the State Secretary and nonofficial members of the Executive Council, of which the Commandant-General is the head *ex officio*, are chosen by the First Volksraad. The State President is S. J. Paul Krüger, who was elected for the third term of five years in 1893. The Commandant-General is P. J. Joubert; the other members of the Executive Council, N. J. Smit and M. A. Wolmarus; the State Secretary, Dr. W. J. Leyds. There was a sharp contest in the presidential election between the supporters of the President and the partisans of Gen. Joubert, and the latter challenged the returns by which Krüger was declared re-elected. An official scrutiny was con-

cluded by the Executive on April 12, by which it appeared that Krüger received 7,881 votes and Gen. Joubert 7,009. As the Joubert party continued to throw doubt upon the result, President Krüger declared that he would not enter upon the office until the scrutiny was confirmed by the Volksraad. This was done, and he was sworn in on May 12.

The Gold-Fields.—The number of white men employed at the end of 1892 in gold mining in the districts of Witwatersrand and Heidelberg, which embrace Johannesburg, Boksburg, Krügersdorp, Florida, Doornkop, and Heidelberg, was 2,852, and the number of blacks was 21,619. There were 2,440 stamps in operation, and the output for the last quarter of 1892 was 313,612 ounces, having a value of £1,100,329. In the De Caap mines at Barberton 12,645 ounces, worth £43,250, in Little Leteba 6,846 ounces, worth £22,309, and in Lydenburg 6,108 ounces, worth £21,508, were produced, making the total output for that quarter of the principal gold fields 342,653 ounces, worth £1,201,028. When gold was first discovered, in 1886, in conglomerate beds on the southern slope of the Witwatersrand range, which is the watershed between the east and west coasts of Africa, there was a rush of gold-seekers, who supposed that gold could be obtained as easily as from the alluvial deposits in California and Australia. Claims were staked off and bought and sold at extravagant prices, and companies were formed for the purpose of gambling in shares on the London Stock Exchange. The directors who were in earnest were not experienced in the business, and few of the managers of the mines were experts in gold-mining. Even those who were were ignorant of the new and peculiar character of this reef. The machinery sent out was not suitable, and the lack of trained persons to work it, and the costliness of supplies and transportation, made the expenses of operation disproportionately high. When the fever of speculation died away and no more money was to be had from the pockets of European shareholders the managers applied themselves to the problem of making the mines pay dividends. They require unusually costly and elaborate mining plants and reduction machinery, and the management must be economical, because there is no remarkably rich ore. The product of the Rand in 1887 was 35,000 ounces, valued at £120,000. In 1892 the yield had grown to 1,200,000 ounces, valued at £4,250,000. The Transvaal now ranks below the United States, Russia, and Australasia as a gold-producer, but experts believe that the product will go up to £10,000,000 a year in the Witwatersrand alone. Hamilton Smith, an American mining engineer, who has made a study of the main reef, from which 2,000,000 ounces of bullion have been extracted, or two thirds of the total product of the district, finds that the outcrop has a length of 11 miles, with an average thickness of 5 feet, and that the dip is about 35 degrees. He believes that the beds of "banket" or conglomerate, in which the gold is found in fine particles adjoining the pebbles, continue in probably the same thickness and richness throughout the formation, but that the trough of the basin is much deeper than the ledge can be mined. If, as is likely, it is possible

to sink the mines to a depth of 5,200 feet along the dip, or 3,000 feet below the surface, the gold that can be obtained from the main reef would be £215,000,000 in value. The mining claims under the Transvaal laws are staked out on the surface of the ground. The owners of the mines that are in active operation neglected to obtain rights to the ground for more than a short distance below the outcrop, as a monthly license fee must be paid for every claim. Other capitalists have acquired claims on the dip, and a syndicate has been formed, with a capital of £1,000,000, to sink vertical shafts on the "deep-level" claims and raise the ore to the surface. Of the 36 mining companies now working the main reef 21 are making a profit, and several others are in a fair way to become profitable. The average yield is 12½ pennyweights per ton of ore, though in their reports the mining companies have claimed a higher percentage.

CHEMISTRY. Chemical Theory.—In a review, made in his presidential address before the chemical section of the British Association, Prof. Emerson Reynolds described the chemical work of the year as substantial in character, although almost unmarked by discoveries of popular interest. In this category may be placed the measure of success which M. Mersson has attained in the artificial production of the diamond form of carbon, apparently in minute crystals similar to those recognized by Koenig, Mallard, Daubrée, and Friedel, in the supposed meteorite of Cañon del Diablo, Arizona. Not less interesting or valuable are the studies of Dr. Perkins on electro-magnetic rotation; of Lord Rayleigh on the relative densities of gases; of Dewar on chemical relations at extremely low temperatures; of Clowes on exact measurements of flame-cap indications afforded by miners' testing lamps; of Horace Brown and Morris on the chemistry and physiology of forage leaves, by which they have been led to the conclusion that cane sugar is the first sugar produced during the assimilation of carbon, and that starch is formed at its expense as a more stable reserve material for subsequent use of the plant; and of Cross, Bevan, and Beadle on the interaction of alkali-cellulose and carbon bisulphide, in the course of which they proved that a cellulose residue can act like an alcohol radical in the formation of thiocarbonates. "When we consider the drift of investigation in recent years," Prof. Reynolds continues, "it is easy to recognize a distinct reaction from extreme specialization in the prominence now given to general physico-chemical problems and to those broad questions concerning the relations of the elements, which I would venture to group under the head of 'comparative chemistry.' Together, these lines of inquiry afford promise of more definite information about the real nature of the seventy or more entities we term 'elements,' and about the mechanism of that mysterious yet definite change in matter which we call 'chemical action.'" Thus, a curious side-light seems to be thrown on the nature of the elements by the chemico-physical discussion of the connection existing between the constitution of certain organic compounds and the colors they exhibit. While we have no knowledge of the origin of the chemical elements, much suggestive work has recently been

accomplished in the attempt to apply the principle of gravitation, which explains the relative motions of the planets, to account for the interaction of the molecules of the elements. The first step in this direction was suggested by Mendeleef in his Royal Institution lecture of May 31, 1889, wherein he proposed to apply Newton's third law of motion to chemical molecules, regarded as systems of atoms analogous to double stars. The Rev. Dr. Haughton has followed up this idea mathematically, and has shown, in a series of papers recently published, that the three Newtonian laws are applicable to explain the interactions of chemical molecules, "with this difference, that whereas the specific coefficient of gravity is the same for all bodies, independent of the particular kind of matter of which they are composed, the atoms have specific coefficients of attraction which vary with the nature of the atoms concerned." The laws of gravitation, with this proviso, were found to apply to all the definite cases examined, and it was shown that a chemical change of combination is equivalent to a planetary catastrophe. The author then proceeded to a comparative study of the elements carbon and silicon.

The most remarkable outcome of what he calls "comparative chemistry" is described by Prof. Reynolds as the periodic law of the elements, which asserts that the properties of the elements are connected in a periodic function with the masses of their atoms. Concurrently with the recognition of this principle other investigations have been in progress, aiming at more exact definitions of the characters of the relations of the elements, and ultimately of their respective offices in Nature. Among inquiries of this kind the comparative study of the elements carbon and silicon appears to the author to possess the highest interest. Carbon is the great element of organic nature, while silicon, in union with oxygen and various metals, forms about one third of the solid crust of the earth, and is unquestionably the most important element of inorganic nature. The chief functions of carbon are those which are performed at comparatively low temperatures; hence carbon is essentially the element of the present epoch. On the other hand, the activities of silicon are most marked at very high temperatures; hence it is the element whose chief work in Nature was performed in the distant past.

A discussion on the dry-dust theory of explosion in mines was opened in the British Association with a paper by Prof. H. B. Dixon, who said that opinions on the subject may be grouped under three heads: (1) That although it is possible to stir up and ignite a cloud of dust, the flame dies out and is not explosive; that is, that a mixture of coal dust and air is not of itself explosive. This is the view held by Mallard and Le Chatelier. (2) That although a mixture of coal dust and air is not of itself explosive, a very slight addition of fire damp, insufficient to be recognized by the Davy lamp, will render the mixture explosive. This view is supported by the experiments of Abel. (3) That a mixture of fine coal dust and air is of itself explosive, and that the explosion, once started in such a mixture, can be propagated as far as the mixture extends. In relating the facts and experi-

ments that bear upon these views Prof. Dixon dealt specially with the explosion in the Seaham colliery in 1880, and showed that the only parts of the mines untouched by the explosion were those which were damp and therefore free from dust. It was impossible to explain the method of propagation of this explosion otherwise than by the dust theory. After explaining and illustrating Mr. Hall's experiments in which a cannon was fired at the bottom of an old shaft in which coal dust was suspended, the author said that in some cases explosions could be brought about by these means, and in others not, suggesting that the effect was largely dependent on the character of the coal dust. Mr. Galloway brought forward a number of facts bearing in favor of the coal-dust theory, and recommended a repetition of the experiments. Mr. Hall said that the higher the quality of the coal the greater was the liability of explosion. Prof. Thorpe said that in an explosion caused by flour dust, which had reduced a mill to a heap of dislocated bricks, he had received an object lesson that had converted him to the coal-dust theory. Experiment had shown him that coal dusts vary greatly in their capacity of exploding. Remarks from other speakers were mostly in favor of the coal-dust theory.

The Permanent International Commission appointed at the International Chemical Congress of 1889, in Paris, to consider the unification of chemical nomenclature, adopted, in 1892, 46 resolutions embodying the conclusions to which, on consultation with a special subcommittee, they had arrived. These resolutions, or rules, relate only to compounds of which the constitution is known, those of unknown constitution being reserved for further consideration. The first one, the most important and comprehensive of the list, recommends that, besides the usual processes of nomenclature, an official name be established for each body, under which it may be found in all tables and dictionaries; and that authors, besides the name which they may choose, insert in their memoirs the official name in parentheses.

The American Association for the Advancement of Science has recommended the following more important changes in the spelling, pronunciation, etc., of chemical terms, accompanying each recommendation with a statement of the reasons for which it is made: *Aluminum* instead of *aluminium*; *cesium* without the *a* of the diphthong; *columbium* instead of *niobium*; *glucinum* in preference to *beryllium*—both of these on grounds of historical priority; *sulfur* instead of *sulphur*; the termination *ic* to be used for metallic derivatives only when there is a contrast with *ous*; the termination *ol* to be used exclusively for alcohols; the termination *id* instead of *ide*, dropping the final *e*; likewise the termination *in* instead of *ine*; words used in the metric system ending in *meter* to be pronounced as compound words, each element retaining its own accent, as millimeter; Latin prefixes to be used, to the exclusion of Greek, with derivatives of *valence*, *arsin*, *stibin*, *phosphin*, *hydrogen sulfid*, to supersede such cumbersome terms as *arseniuretted hydrogen*, etc.; to retain the final *me* in *gramme*, and so avoid confusion with *grain*.

In discussing the subject of the carburization

of iron, John Parry shows that the theory of gaseous solution may be applicable to the solution of carbon in, molten, semifluid, or merely heated iron, apart from possible cases of dissociation and chemical combination. Solution, he says, is simply the even distribution of one body in another, or such distribution as that of permanently gaseous matter through space. It may be urged that the theory is not applicable to semifluid or merely heated iron. No definite line can, however, be drawn; it is obvious that the different grades of temperature are simply approximations, more or less, to the ideal fluid condition.

Of the two theories on which the process of dyeing has been explained, one—the mechanical view—regards the process as a simple absorption, similar to that by which animal charcoal takes up gases and liquids and retains them in its pores; while the other theory traces the effects to definite combinations. Neither of these theories being wholly satisfactory, M. Witt has put forward a hypothesis in which he assimilates tinctorial operations to the phenomena of solution, or to combination in indefinite proportions. He maintains that the coloring matter is dissolved in the fiber, which becomes dyed only if its affinity for the dye is greater than that of the previous solvent. If the solvent powers of the fiber and of the water are approximately equal a kind of equilibrium is established, and the dye does not become completely exhausted. If the solvent power of the fiber is less than that of the water there is no dyeing. In this case the solvent power of the water may be decreased by adding sodium chloride, or sulphate, etc.; or the solvent power of the fiber may be heightened, for example, by chloring wool, or by depositing sulphur upon it, or by mercurizing cotton.

The origin of color and fluorescence has been discussed in the English Chemical Society by W. N. Hartley and H. E. Armstrong. Mr. Hartley assumes that it can not be stated in general terms that color is due to special methods of atomic arrangement; but the statement may be applied in a restricted sense to certain organic compounds, especially to those included in the class to which organic dyes belong. The author points out that all organic coloring matters are endothermic compounds, and considers this to be the physical cause of what Armstrong terms "reactivity," or "high-potential." It is shown that anthracene is not colorless, but has a true greenish-yellow color in addition to its fluorescence. The conclusions are drawn from the author's experiments on fluorescence that alcoholic solutions of quinine exhibit a beautiful, bright violet fluorescence; that hydrochloric acid is not fluorescent; that quinine hydrochloride and chloroform are feebly fluorescent, but without distinct color; that both hydrochloric acid and chloroform can extinguish those rays which are the cause of fluorescence in quinine; that some alkaloids may be recognized by the degree and color of their fluorescence; that normal alcohols of the ethylic series and the fatty acids are fluorescent; that glycerol has a bright fluorescence; that benzene has a pale blue, azobenzene a greenish-blue fluorescence; that rock-crystal has a pale bluish-violet, flint glass a strong blue, and crown glass a very brilliant blue fluorescence;

and that substances which are not fluorescent in strong solutions may become so on dilution, particularly if they exert a very powerful absorption of the ultraviolet or invisible spectrum. Mr. Armstrong holds that in those cases in which the constitution is fairly well established, colored substances are all of one type. From this basis he starts to inquire whether all colored organic substances are not similar in type.

G. Hinrichs considers that the researches of an entire century have established the fact that if we take $O = 16$, the atomic weights of almost all the elements border very closely upon whole numbers; for others, such as copper and chlorine, the value is close upon a whole number and a half. "We may affirm," he says, "that the most precise determinations of all the elements are exactly what they ought to be if all the elements had been formed from a single primitive substance."

Chemical Physics.—Liquid oxygen, as it appears in Prof. Dewar's experiments, is a non-conductor of electricity, and is a high insulator. The spectrum of the spark taken in the liquid is a continuous one, showing all the absorption bands. The lines A and B of the solar spectrum are due to oxygen, and came out strongly when the liquid was interposed in the path of the rays from the electric lamp. Both gaseous and liquid oxygen have substantially the same absorption spectra. This is a very noteworthy conclusion, considering that no compound of oxygen, so far as is known, gives the absorption spectrum of oxygen. The persistency of the absorption spectrum through the stages of gaseous condensation toward complete liquidity implies a considerable persistency of molecular constitution. When the evaporation of liquid oxygen is accelerated by the action of a high expansion pump, and an open test tube is inserted into it, the tube begins to fill up with liquid atmospheric air, produced at the ordinary barometric pressure. In his lecture at the Royal Institution Prof. Dewar took a cup made of rock salt and put in it some liquid oxygen. The liquid did not wet rock salt, but remained in a spheroidal state. The cup and its contents were placed between and a little below the poles of an electro-magnet. Whenever the circuit was completed, the liquid oxygen rose from the cup and connected the two poles. Then it boiled away, sometimes more on one pole than on the other, and when the circuit was broken it fell off the pole in drops back into the cup. It was also shown that the magnet would draw up liquid oxygen out of a tube. A test tube containing liquid oxygen, when placed in the Hughes balance, produced no disturbing effect. The magnetic moment of liquid oxygen is about 1,000 when the magnetic moment of iron is taken as 1,000,000. On cooling, some bodies increased in magnetic power. Cotton wool moistened with liquid oxygen was strongly attracted by the magnet, and the liquid oxygen was sucked out of it on to the poles. A crystal of ferrous sulphate, similarly cooled, stuck to one of the poles. Fluorine is so much like oxygen in its properties that the author ventures to predict that it will turn out to be a magnetic gas. Nitrogen liquefies at a lower temperature than oxygen, and one would naturally expect the oxygen to come down before the nitrogen when air is liquefied, but

this is not the case. They liquefy together. In evaporation, however, the nitrogen boils off before the oxygen. Between the poles of the magnet all the liquefied air goes to the poles; there is no separation of the oxygen and nitrogen. Liquid air has the same high insulating power as liquid oxygen. The phenomena presented by liquefied gases offer an unlimited field for investigation. At -200°C . the molecules of matter have only one half of their ordinary velocity, and have lost three fourths of their energy. At such low temperatures they seem to be drawing near what might be called "the death of matter," so far as chemical action is concerned; liquid oxygen, for instance, has no action on a piece of phosphorus, or potassium, or sodium dropped into it. The author once thought, and publicly stated, that at such temperatures all chemical action ceased. That statement requires some qualification, because a photographic plate placed in liquid oxygen can be acted upon by radiant energy, and at a temperature of -200°C . is still sensitive to light.

In H. E. Baker's experiments on the influence of moisture on chemical action, ammonia was dried as completely as possible by freshly ignited lime; on then subjecting it to the action of phosphoric anhydride very little of the gas was absorbed. Hydrogen chloride was dried first by sulphuric acid and finally by a week's contact with phosphoric anhydride. On mixing ammonia and hydrogen chloride, dried in this way, no ammonium chloride fumes were produced, and no contraction was indicated by the mercury gauge attached to the apparatus: it was therefore concluded that ammonia and hydrogen chloride do not combine when dry. Union at once occurs, however, on introducing a small quantity of moist air. In like manner sulphur trioxide would not unite with lime, barium monoxide, or copper oxide. Furthermore, no brown fumes were produced on mixing dry nitric oxide with dry oxygen.

While making his experiments on the production of alloys by contact of the constituent metals, W. Hallock applied his method to some chemical reactions—the common freezing mixture of salt and ice, sodium and potassium nitrate, potassium, calcium and ammonium chloride, and sodium and potassium hydrate—the materials all having first been cooled far below the centigrade zero so as to assure perfect dryness. The result was always the same—liquefaction and union at temperatures below the melting point of either substance, but above that of the product. The questions were suggested: Wherein do the results differ from the new method of forming alloys? and, Are the metals combining to form alloys in the new way a freezing mixture? The result of a test made with potassium and sodium indicated an affirmative answer to the latter question. In experiments in which ice is used it is hardly safe to suppose a chemical action between solids, but rather that the vapor from the ice attacks the metal, forming the hydrate which unites with other ice, forming a solution, which is then further acted upon by the metal. In view of these and other considerations, it is suggested that perhaps many substances have a slight vapor tension at temperatures considerably below their melting

points, and are surrounded by a thin atmosphere of their own vapor over their clean surfaces, and that it is only necessary to bring two such atmospheres to interpenetration in order to initiate the reaction, which will then continue, provided the product escapes easily and does not clog the operation. Mr. Hallock believes that chemical action may take place between solids wherever the product or products are liquid or gaseous, even though the reagents are solid, with perhaps the added condition that both the reagents be soluble in the liquid produced. If this be true, his new method of forming alloys is simply a special case of this general principle.

The power of different metals to occlude hydrogen has been determined by G. Neumann and F. Streinz, as follows: Palladium is capable of absorbing hydrogen to the extent of 502.35 times the volume of the metal; platinum sponge, 49.30 times its volume—a figure that varies considerably from that found by Graham; gold, in different experiments, from 37.31 times to 46.32 times its volume—a value higher than that ascertained by Graham; silver, according to the authors' experiments, none—according to Graham, 0.211 times its volume; iron, in a state of fine division, 19.17 times its volume; copper, 4.1 times its volume; nickel, 17.57 volumes. The absorption of hydrogen by cobalt is rather large, and the metal, when charged with hydrogen, becomes incandescent in a current of oxygen. The occlusive power of some metals for hydrogen decreases on a repetition of the experiments. The attention of the authors was called to this subject by the view that lead, as the negative pole of a secondary element, is capable of occluding hydrogen. On testing the metal, it occluded, in one experiment, 0.15 time, and in the other, 0.11 time its volume of the gas. Neumann has examined the behavior of the precious metals with oxygen. Silver absorbed 4.09 volumes; while Graham found the absorption to be from 6.15 to 7.4 volumes; gold absorbed 48.49 volumes, while Graham observed no absorption—a difference attributed by Neumann to the temperatures of the experiments; platinum occluded 77.14 volumes. With palladium the author found a formation of suboxide, since the residue, after treatment with oxygen, contained 6.99 per cent.; while Pd_2O contains 7.33 per cent. He believes that the absorptions of oxygen depend on a power of the metals to become oxidized at about 450°C ., the temperature of the experiment.

The observation of A. S. Johnson, made in 1876 and 1879, that hydrogen gas, occluded in copper turnings, is a source of error on the side of excess in hydrogen determinations, is confirmed by Neumann. Mr. Johnson found that metallic copper occludes varying quantities of hydrogen, according to the state of its surface; that alternate oxidation and reduction of the same copper tends gradually to diminish the weight of the occluded hydrogen; that copper, which has occluded hydrogen, parts with its occluded gas when heated to redness in pure nitrogen, but does not part with it when heated to redness in a vacuum; that pure copper occludes no hydrogen; and that the presence of sulphur tends to increase occlusion.

It is well known that the amount of gas capable of being held in solution by a given liquid is

directly proportional to the pressure exerted, unless chemical combination takes place between the gas and the solvent. Inasmuch as the pressure at any point within a fluid incapable of being compressed is proportional to the depth of that point below the surface of the fluid, it is obvious that the water deep down in the ocean must be capable of dissolving greater quantities of air than water at the surface. It is mathematically calculated by A. E. Richardson—on the basis, however, of the coefficient of absorption for pure water, which will give a result exceeding that of sea water—that a cubic foot of water at the extreme depth of the Pacific Ocean would be capable of absorbing 29 cubic feet of air measured at normal pressure, or about one twenty-seventh of its own weight. "Nor does there seem any reason to suppose that this amount is not absorbed, for the atmospheric gases must permeate the whole of the ocean's depth, in order that deep-sea fishes may obtain the oxygen necessary for the preservation of their existence. At a depth of 1,580 feet water absorbs its own volume of air (measured at atmospheric pressure). Thus in all water below this depth more than its own volume of air is dissolved. We have thus a second but submerged atmosphere.

Prof. Camille, in 1884, using a metachromatic scale, constructed by W. Ackroyd, found indications that the color of compounds is a periodic function of the atomic weight. In 1892 Mr. Ackroyd stated, as his view of the law of color and constitution, that in a series of molecules with a constant radical, R, and a weight-variable radical, R', the color varies in a definite order, increase of the weight-variable radical R' causing change of color toward the black end of the color scale, viz., white, blue, green, yellow, orange, red, brown, black. Several substances, including binary compounds, crystallized salts, periodic series of compounds, isomorphous compounds, and colored nonmetallic elements, are cited as conforming to this law, which the author phrases: increase of absorption of light in the order of the metachromatic scale is accompanied by increase of molecular and atomic volume. At the present stage of the inquiry it is difficult, on account of the uncertainty in some cases as to what may be the molecular weight of compounds that can not be vaporized, to say what are the real exceptions to this law.

Dr. S. Rideal described to the British Association the results of his experiments to determine the iodine value of sunlight in the high Alps. The experiments were made at St. Moritz, in the Engadine, at a height of about 7,000 feet. From comparison of the results with some obtained in Manchester, England, at the same time of the year (January), it appears that as much sunshine falls upon St. Moritz in one day as upon Manchester in ten days. It is this larger amount of sunshine, doubtless, that renders St. Moritz so favorable a health resort. It appears from some experiments made in the Alps by Prof. Dixon and Dr. Kohn that above a certain height the amount of sunlight, as determined by the liberation of iodine, does not increase.

It was observed by A. W. Hoffmann, in 1874, that charcoal—especially animal charcoal—can exert a strong oxidizing action. Cazeneuve made similar observations on boiling certain

substances with animal charcoal, when their color was changed, and the charcoal retained the color firmly but yielded it up again to boiling alcohol. The idea that the oxidizing action of carbon was concerned in the decolorizing action was at once suggested. On experiments made for this purpose it was found that charcoal which had been previously ignited and cooled in a current of dry nitrogen or in carbon dioxide had less decolorizing power than such as had been cooled in the air. Cazeneuve is of opinion that the residual oxygen in the charcoal burns the coloring matter. On the other hand, while Birnbaum and Bomasch recognize a chemical process in the matter, the decolorizing action of animal charcoal is explained by F. Schiller on purely physical principles.

The report of the committee of the British Association on the action of light on the hydracids of the halogens in the presence of oxygen deals with an investigation of the conditions necessary to start the decomposition of hydrochloric acid in the presence of oxygen. Experiments show that the presence of metallic salts is of great influence in the matter; the action of metallic chlorides is a subject of special study.

New Substances.—An important new series of compounds, the thionylamines, in which two new hydrogen atoms of the amido group of the primary amines are replaced by the radicle thionyl SO, are described by Prof. Michaelis. The thionylamines of this series are colorless fuming liquids that boil without decomposition and emit a powerful odor. They are decomposed by water into the original amines and sulphur dioxide. The amines of the aromatic series likewise form thionylamines with thionyl chloride; and the hydrochlorides, unlike those of the fatty series, react with equal facility. The lower members of the aromatic thionylamines are yellow liquids which distill without decomposition; the higher members may likewise be distilled without loss under diminished pressure. Alkalies convert them into the original amines and a sulphite. In the presence of the moisture of the air, or of a small quantity of added water, the thionylamines are converted into compounds of the amines with sulphur dioxide. In seeking to ascertain whether a similar kind of compound to the thionylamines is formed when thionyl chloride is allowed to act upon the amines of the acid radicles, Prof. Michaelis and Dr. Siebert have obtained a nitrite as the main product, with sulphur dioxide and hydrochloric acid as by-products. As the two latter are gaseous substances, it is evident that the reaction affords a convenient method of preparing the nitrites in a state of purity.

A series of compounds formed by the direct union of nitrogen peroxide with certain metals are described by MM. Sabatier and Senderens as having been recently discovered and investigated by Mr. Mond and his coworkers. It was observed that when vapor of peroxide of nitrogen of tolerable purity was allowed to stream at the ordinary temperature over metallic copper, cobalt, nickel, or iron in the finely divided and pure condition obtained by the reduction of their oxides by hydrogen, rapid absorption of the nitrogen peroxide occurred with the formation of definite compounds. These compounds are

solid nonvolatile substances, and are represented by the general formula M_2NO_3 , where M stands for either of the four metals mentioned. The discoverers propose the name *metaux nitrés*, or, in English, *nitro-metals*. Nitro-copper is unalterable in dry air at ordinary atmospheric temperature. When heated in pure nitrogen it is dissociated. It is useful in liquefying nitrogen peroxide. If a quantity of it be placed in one limb of a Faraday V-tube and heated, the nitrogen peroxide liberated collects as a liquid in the cool limb. In moist air it deteriorates rapidly, is enveloped in red fumes, and its surface becomes green. Hydrogen is without action on it in the cold, but when it is heated to 180° C. large quantities of ammonium nitrite and free ammonia are produced. Dry ammonia gas reacts at the ordinary temperature with some energy upon it. With sulphureted hydrogen at the ordinary temperature heat is evolved, and the water sulphur and a blue sulphide of copper are separated. Nitro-copper thus appears to be of a kindred nature with the metallic carbonyls, the nitrogen peroxide being held in a similar manner to the carbonic oxide of those compounds. It may be employed as a convenient means of storing nitrogen peroxide, with a certainty of being able to liberate it by a comparatively slight rise of temperature. Metallic cobalt burns energetically in the cold in nitrogen peroxide. When the nitrogen peroxide vapor is diluted with nitrogen, the heat of the reaction is modified, and the formation of nitro-cobalt occurs in a regular manner. It is a black solid. Its reaction with water is very violent, but less nitric oxide is produced than in the case of nitro-copper. Heated in an atmosphere of nitrogen it deflagrates violently and burns with a very brilliant flame. It forms a dangerous explosive when mixed with a combustible substance. Nitro-nickel is more difficult to procure in a pure state. It closely resembles nitro-cobalt; is black; reacts with water, giving out nitric oxide; and deflagrates with explosive force when heated in a current of inert gas. Nitro-iron is still more difficult to isolate, the energy of the action often bringing about a brilliant deflagration and destruction of the product.

Turacin is the name given to soluble animal pigment containing copper, which Prof. A. H. Church has discovered in the feathers of the plantain-eater bird, or turaco. It is a colloidal substance, which retains, when precipitated, an immense proportion of water. Consequently, when its solution in ammonia is precipitated by an acid the coagulum formed is very voluminous. One gramme of it is capable of forming a solid mass with 600 grammes of water. But, while soluble in pure water, it is insoluble in presence of mere traces of saline matter. When heated to the boiling point of mercury it becomes black, is no longer soluble in alkaline liquids, and ceases to yield, on the application of stronger heating, the purple vapors which the unchanged turacin gives off under the same circumstances. Treated with concentrated sulphuric acid, it is dissolved with a fine crimson color and yields a new compound, the spectrum of which greatly resembles that of hæmatoporphyrin, the substance obtained by the same treat-

ment from hæmatin; to which the author gives the name turacoporphyrin. But, unlike the derivative of hæmatin, it seems to retain some of its metallic constituent. The percentage composition of turacin is probably one which corresponds nearly to the formula $C_{22}H_{21}Cu_2N_2O_{12}$.

Copper, according to Prof. Church, is widely distributed in the animal kingdom, but only one organic compound besides turacin has been as yet recognized in animals. This is a respiratory product, discovered by Léon Fredericq, and called by him hæmocyanin. It has been observed in several genera of crustacea, arachnida, gasteropoda, and cephalopoda, but has not probably ever been obtained in a state of purity.

Carbide of boron, as isolated and described by Dr. Mühlhäuser, of the University of Chicago, is an extremely stable substance, and capable of resisting the action of almost all the usual solvents and reagents. It was prepared by heating boric anhydride with the hard kind of carbon employed for making the terminals of electric arc lamps, and appears in the form of black graphitoidal spherules, having a bright metallic luster, frequently aggregated so as to resemble a bunch of grapes in shape. When reduced to powder it closely resembles graphite in outward appearance, blacking the fingers in a similar manner with a coating that has the same bright metallic luster and greasy feel. Examined under the microscope it appears bluish black and transparent, and reflects light with chromatic effects. When heated to a high temperature the powder cakes, forming a solid mass, which is readily malleable and capable of being rolled. At a very high temperature it fuses into a liquid resembling molten metal. It burns with great difficulty in oxygen, but is combustible with chromate of lead. It is insoluble in all the ordinary solvents, but fused caustic or carbonated alkalis attack it with formation of borate of the alkali and liberation of the carbon.

The statement made three years ago that the hydrate of hydrazine may be preserved in closed vessels unaltered for any length of time is now modified by Herr Schrader, who says that it decomposes sooner or later, with the production chiefly of ammonium hydrate. The reactions between the hydrate of hydrazine and a large number of metallic oxides are described by Herr Schrader in his paper. In them the strong reducing proclivities of hydrazine are exhibited in a marked degree, and the reaction is frequently explosive. A series of double sulphates containing hydrazine sulphate and the sulphate of a metal are characterized by the general formula $R'SO_4(N_2H_4)_2H_2SO_4$, where R' may represent copper, nickel, cobalt, iron, manganese, zinc, or cadmium. These double sulphates, which contain no water of crystallization, and are further distinguished from the double salts containing ammonium by their difficult solubility, are readily prepared by the admixture of solutions of the constituent simple sulphates. Difficulty was found in preparing double chlorides of fixed composition containing hydrazine chloride. Good crystals of very soluble double chlorides are easily obtained, but so many appear capable of existence that the conditions for the formation of salts of definite constitution have not yet

been ascertained. Two new compounds are described—the sulphocyanate and the sulphocarbamide. The latter possesses fairly strong acid properties.

Of the organo-metallic compounds of magnesium, the dimethyl, diethyl, and dipropyl compounds were obtained by Dr. Löhr, of Tübingen, in 1890. The work has been continued in the same laboratory by Dr. Fleck, who now describes the diphenyl compound, and gives additional information concerning the others. The magnesium alkyls are of a somewhat similar nature to the well-known zinc methide and ethide, but differ in the nature of certain of their reactions, and their chemical activity is even considerably superior to that of the zinc alkyls. They are all spontaneously inflammable in the open air, and the methyl compound is described by Dr. Löhr as igniting spontaneously and burning in carbon dioxide gas, from which it is capable of extracting the oxygen in combination. The three fatty alkyls are best prepared by the action of the alkyl iodides upon magnesium amalgam. They all react in a most violent manner with water. In the case of magnesium diphenyl $Mg(C_6H_5)_2$, even when the substance is covered with ether, and small pieces of ice are slowly added, the reaction occurs almost explosively. The substance is consequently extremely hygroscopic, and attracts moisture from the atmosphere very rapidly when covered with a layer of benzene. When freely exposed to the air it at once burns to magnesium oxide and a carbonaceous mass. If, however, the composition is covered with benzene and exposed to dry air for some days, an oxy-compound, $Mg(OC_6H_5)_2$, is formed as a brown solid. Bromine reacts with great energy to form bromides of magnesium and phenyl, but the intermediate compound—bromo-magnesium diphenyl, corresponding to zinc iodo-ethide—is not formed; and incapability of forming mixed halogen-alkyls is one of the most characteristic distinctions between the magnesium and the zinc alkyls.

The properties of amidophosphoric acid, $PONH_2(OH)_2$, the primary amine of orthophosphoric acid, and those of several well-crystallizing salts, obtained from the chloride of diphenylphosphoric acid, are described by H. N. Stokes, in "The American Chemical Journal"; the acid crystallizes in tabular or short prismatic crystals, which are insoluble in alcohol, but readily soluble in water, to which they impart a sweetish taste. The solution is easily distinguished from phosphoric acid by its yielding no precipitate with silver nitrate. It evolves no ammonia upon treatment with caustic alkalies, but merely forms the salt of the alkali metal. The solution slowly decomposes into ammonium phosphate. The solutions of the acid and neutral salts of the alkali metals yield many corresponding acid and neutral amidophosphates of other metals by double decomposition with soluble salts of those metals.

Besides the powerful affinity of hydroxylamine, NH_2OH , already described in the "Annual Cyclopaedia," causing rapid action, Mr. Labry de Bruyn has discovered many interesting properties in that substance. If the liquid is heated under ordinary atmospheric pressure in contact with the air, it explodes with great

violence when a temperature between 60° and 70° C. is obtained; if air is excluded, it may be heated to 90° C. without accident, when regular decomposition into gaseous products occurs. Explosion, however, usually follows at once if this temperature is much exceeded, and generally after a short time if the source of heat is removed as soon as the temperature has reached 90° C. The decomposition induced at this temperature is accompanied by evolution of heat. The crystals are without odor. They react with considerable violence with the halogen elements, the reaction in the case of chlorine being accompanied by production of flame. With metallic sodium brilliant incandescence occurs. Warm zinc dust reduces hydroxylamine to ammonia so rapidly that if any considerable quantities are employed a violent explosion follows. Highly oxidized compounds react with the crystals in a most energetic manner, with the accompaniment of brilliant flame and detonation. Other reactions described by the author amply demonstrate the remarkable chemical agency with which anhydrous hydroxylamine is endowed. The melted substance is capable of dissolving a considerable volume of ammonia gas; and carbon dioxide and sulphureted hydrogen are so soluble in it that viscous liquids are produced that remain liquid even at -10° C.

Two well-crystallized compounds of the lactides derived from salicylic acid and the next higher (cresotinic) acid with chloroform are described by Prof. Anschütz, of Bonn. Chloroform being so loosely united with the lactides that the temperature of boiling water is sufficient to dissociate them, the compounds may be employed for obtaining pure chloroform, and for preserving chloroform in a solid form, in which it is not prone to decomposition. The lactide of salicylic acid has long been supposed to be formed when the acid is treated with oxychloride of phosphorus. Prof. Anschütz, however, shows that the product of this reaction contains many substances in addition, but by working under special conditions he has succeeded in isolating pure salicylide. Owing to the property which salicylide possesses of combining with chloroform, it may be extracted from the white solid product of the reaction with phosphorus, after drying by means of chloroform. The compound is deposited from the chloroform solution in large colorless crystals belonging to the tetragonal system. It possesses the composition $C_{14}H_{14}COO_2 \cdot CHCl_3$. The chloroform readily escapes upon warming, in very much the same manner as the water of crystallization contained in many crystallized salts. The free salicylide remaining is a solid substance melting at 261° C. In a similar manner, phosphorus oxychloride reacts with the three cresotinic acids, with formation among other substances of lactides, which may be isolated in the same way in the form of their chloroform compounds. The pure lactides are readily obtained from the chloroform compounds by warming to 100° C., with evolution of pure chloroform.

A new series of compounds, in which the hydroxylic hydrogen of phenols is replaced by the element titanium, are described by M. Livy. Their discovery was the result of a color reaction of titanous acid in contact with sulphuric acid

containing a little phenol. Titanium phenylate, $Ti(C_6H_5O)_4$, is obtained in the form of rhombohedral crystals of the color of bichromate of potash, which yield on pulverization a powder still more yellow. The analogous compounds with the cresol phenols, thymol, naphthol, resorcinol and salicylic acid, have also been prepared. They are all red or brownish-red substances possessing properties similar to those of titanium phenylate.

New Processes.—Previous to the appearance of M. Moissan's paper on carbide of silicon, Dr. Mühlhäuser, of Chicago, had made a series of experiments on the preparation of the compound on a large scale, for the purpose of its manufacture. His process consists in heating a mixture of silica or silicate of alumina and carbon by means of the electric furnace to the temperature of $3,500^{\circ} C$. The crystals obtained possess many of the properties, particularly the hardness of the diamond. According to the materials employed in manufacture they are colorless, or colored yellowish green, bluish green, or pale blue. The name carborundum is suggested for the substance. Upon the large scale the cheaper materials sand and coke are employed, with the addition of common salt as a flux. The product of the reaction, which is distinguished by some remarkable features, is an ellipsoidal hardened mass, surrounding the carbon high resistance, which is found, on making a section, to consist of six distinct layers. The first, close against the carbon high resistance bar, is a zone of graphite, in hollowed hexagonal plates, pseudo-morphs of silicon carbide, from which they are produced by dissociation at the extremely high temperature of the bar, silicon escaping as vapor. The second and largest zone consists of the crystals of silicon carbide, in elongated aggregates, radiating in all directions from the axis of the ellipsoid, the individual crystals being bluish or yellowish green, and of various sizes up to a centimetre in diameter. Surrounding this zone of crystals is a narrow zone of amorphous carbide of silicon, outside of which is a layer of nodules of minerals produced from the impurities during the reaction. The fifth layer consists of the remains of uncombined mixture; and the sixth is the crust of common salt. The crystals obtained by employing silicate of alumina are usually colorless or pale blue, and have been used by M. Nikola Tesla in his new lamp for the transformation of electric waves into waves of lights.

Gaseous iodine and hydrogen have been found by Prof. Victor Meyer and Herr Bodenstein to unite with comparative readiness without the aid of the condensing agents.

The question of the action of light upon pure hydriodic-acid gas was definitely decided. Bulbs exposed upon the roof of the Heidelberg laboratory during the summer months became filled in a few days with brilliant crystals of iodine. After ten days' exposure, 58 per cent. of the gas had been dissociated, and at the end of the summer 99 per cent., or practically all. The fact that the waves of light are so active in effecting dissociation made it necessary for the thermal experiments to be performed in the dark. They revealed many interesting facts, chiefly of technical bearing.

By attaching to the electric furnace a condensing tube of copper shaped like the letter U, so arranged as to be surrounded by an outer jacket of cold water constantly changing under high pressure, M. Moissan has been enabled to distill and condense most of the elements which have been found refractory. A piece of metallic copper weighing more than a hundred grammes having been placed in the inner crucible of the furnace and subjected to the arc, brilliant flames shot forth from the aperture through which the carbon terminals were inserted, accompanied by copious yellow fumes, the result of the combustion of the issuing vapor of copper. Nearly thirty grammes of copper were volatilized in five minutes. Metallic copper was afterward found condensed in an annular deposit of globules under the cover of the furnace, and a large proportion of the volatilized copper in the condensing tube in almost a pure state. Silver was brought to full ebullition in a few moments, distilled with ease, and a portion of it was condensed in the form of small globules of various sizes, while another portion was deposited in the form of arborescent fragments. Platinum fused in a few minutes, began soon afterward to volatilize, and condensed in the U-tube in brilliant little spheres and fine dust. Aluminum distilled readily, and condensed in the form of a gray powder containing admixed spherules exhibiting brilliant metallic luster. Tin likewise distilled with facility, and the condensed product usually contained a considerable proportion of a curious fibrous variety of the metal. Gold emitted abundant light yellowish-green fumes, and was deposited in the condenser in the form of a powder exhibiting a purple sheen. The powder consisted of minute regular spheres, which under the microscope appeared to reflect the yellow color. Three distinct annular deposits were observed on the under side of the cover of the furnace. Manganese was remarkably volatile, and iron was readily distilled and deposited in the form of a gray powder, with numerous small particles exhibiting brilliant surfaces interspersed. Silicon volatilized rapidly and condensed in minute spheres and dust. Carbon was almost immediately converted into graphite, which distilled over and was deposited in light semitransparent plates exhibiting by transmitted light a chestnut color. The refractory alkaline earths appear likewise to be capable of distillation in the electric furnace. Lime was distilled rapidly, and magnesia more slowly, with brilliant fumes of various tints.

Tungsten may be readily prepared in solid ingots in M. Moissan's electric arc furnace. A mixture of tungstic acid and carbon after ten minutes' subjection to the arc gives a button of the metal. If care be taken to have an excess of tungstic acid, pure tungsten is obtained; otherwise a carbide is produced, which must be refined. Metallic molybdenum was obtained by the reduction of the oxide with powdered charcoal. It is, however, not quite free from carbon, and requires refining. More difficulty is met in preparing metallic vanadium. Even after twenty minutes' action of the arc only a trace of reduction is apparent on the surface of the mixture of oxide and charcoal. Upon increasing the tension of the arc by trebling the strength of the cur-

rent, complete reduction occurs, but the resultant metal combines, as in the case of tungsten, with a large quantity of carbon. It would appear, therefore, that at these high temperatures, these refractory metals combine with carbon to form definite binary compounds.

The success of the Brin method of isolating oxygen indirectly from the atmosphere by the agency of barium peroxide has provoked attempts to find other substances that will do the work as well and cheaply. Superiority is claimed by Herr G. Kassner for calcium plumbate. His method is first to expose this substance in the form of spongy porous pieces to the action of moist furnace gases, at a temperature not exceeding 100° C. The calcium plumbate under these conditions rapidly absorbs the carbon dioxide contained in the furnace gases, and is thereby decomposed with formation of calcium carbonate and free peroxide of lead, and without any change of form, the spongy pieces still retaining their shape and texture. The product of this first operation, when fully saturated with carbon dioxide, is transferred to a strong red-hot retort, where oxygen is rapidly disengaged. When the peroxide of lead has given up most of its available oxygen, carbon dioxide is evolved and is separated from the oxygen as long as that continues to go over by passing it over a further quantity of calcium plumbate. The residue is then, by driving a current of air through the retort, reconverted into calcium plumbate for use in another operation. In a plumbate of calcium process patented by Peitz, pure carbon dioxide is used instead of furnace gases; and a paper has been published on the subject by Le Chatelier.

A method of increasing the illuminating power of coal gas by introducing pure oxygen into it is to be adopted at the Huddersfield gas works, England. It was suggested by Mr. Edward Tathan, of Australia, in 1890, that a stable gas of high illuminating power could be obtained by adding oxygen to warm, heavy oil gas. The fact was experimentally verified in the same year by Dr. L. T. Thorne. Preparations have since been made for practically testing the applicability of oxy-oil gas to the enrichment of coal gas, for which works have been erected at Huddersfield and at Salisbury Square, London. The oxygen is introduced into the oil gas by an automatically adjusted arrangement soon after it leaves the retorts and while it is still warm; the mixed gases then pass together through the condensers. The oxy-oil gas is stored in special holders, so arranged as to admit it into the coal gas just before its entry into the station meter. The results so far obtained are highly satisfactory, and still better have been realized at Salisbury Square.

Osmium has been melted by MM. Joly and Vézès, at the temperature of a very powerful electric arc, in a similar manner to that in which ruthenium is melted. To avoid loss of metal by oxidation and the formation of the poisonous volatile tetroxide, the operation is performed in the electric furnace of Ducretet and Lejeune, in which the metal is heated in a carbon crucible placed in a closed chamber traversed by a stream of carbon dioxide, when it melts at the requisite temperature without seri-

ous volatilization. After fusion the element presents a brilliant metallic surface, the blue color of which is slightly tinged with gray. It breaks with a crystalline fracture, and is distinguished by its remarkable hardness, exceeding that of ruthenium and iridium, and cuts glass and scratches quartz. It also after fusion retains its bright surface, apparently proof against the attacks of atmospheric oxygen. All of the refractory metals of the platinum family have now been obtained in liquid form. Of them all osmium is the most refractory, its melting point being considerably higher than that of ruthenium. It resembles that metal very much in many of its properties, particularly in the ready formation of a volatile tetroxide. It, however, differs in aspect entirely from ruthenium, exhibiting a remarkable blue metallic luster, while ruthenium is more white than platinum. The six metals of the platinum group appear to resemble one another more particularly in pairs, ruthenium and osmium having many physical and chemical attributes in common; rhodium and iridium are similarly nearly allied, and palladium and platinum form the third pair. In many respects, however, osmium exhibits a peculiar and somewhat isolated character, more akin to that of the metalloid elements. Indeed, Deville and Debray termed it the metalloid of the platinum group; Berzelius compared it to arsenic, and Dumas to tellurium.

Atomic Weights.—In a memorial paper on Richard Servais Stas, read before the English Chemical Society in December, 1892, Prof. J. W. Mallet, after reviewing the work of that chemist, particularly in the determination of atomic weights and his inquiry concerning the possible dissociation of the elements at high temperatures, considered the objects to be aimed at and the methods to be pursued in future work. He advocated the repetition by competent hands of some one at least of Stas's fundamental results, making no distinction between rare and common elements, and aiming at the determination of the atomic weights of all with the least possible delay and the highest attainable degrees of accuracy. Certain of the elements—for example, tellurium and cobalt—particularly call for a more searching and exact investigation of their atomic masses. In a number of cases the accepted value is based upon the investigation of only a single interchange; it is desirable that in such cases other and independent methods should be resorted to. It is eminently desirable that an attempt be made to determine directly the ratio of hydrogen to each of the halogens without bringing in the atomic mass of oxygen. The metals of the yttrium and didymium groups should be further investigated. It is time that the foundation be made for a more minute and critical study of the periodic system of classification, for which closer than the roughly approximate values hitherto used should be employed. The author advocates the substitution of the expression "atomic mass" for "atomic weight," as being a more precise term; and he urges that all atomic masses be expressed in terms of the mass of the hydrogen atom taken as unity, strongly objecting to the change advocated by many to O=16.

Prof. Seubert has made a redetermination of

the atomic weight of osmium, by which the true value of the constant is fixed at 190.3 and it given a place at the head of the platinum group instead of at the end of it.

In his new system of atomic weights, founded in part on the direct determination of the molecular weights, A. Leduc has found the atomic weight of oxygen—the density of the gas with reference to air being 1.10503, and that of nitrogen 0.97203—to be 15.88. He has more recently determined the molecular volume of carbon monoxide, with reference to oxygen under normal conditions, to be close upon 1.0001. Hence we are led to admit that nitrogen and carbon monoxide, by reason of the proximity of their critical points, have, to within about $\frac{1}{1000}$ part, the same molecular volume. The atomic weight of nitrogen is hence deduced as 13.97, while the determinations of Stas lead to the value 13.94; that of silver as 107.17; that of chlorine as 35.21; that of bromine as 79.39; that of iodine as 125.96; and that of carbon as 11.916.

As the result of eleven series of experiments embodying 43 determinations, Theodore W. Richards computes the atomic weight of copper—O=15.96 as 63.44; O=15.87 as 63.09. In his investigation every reaction was assumed to involve some constant error, and every substance to contain some constant impurity, till the contrary was proved.

Chemical Analysis.—An account of an investigation of the composition and properties of the dangerous explosive iodide of nitrogen has been published by Dr. Szuhay, of the University of Buda-Pesth. The substance was obtained by adding excess of aqueous ammonia to a concentrated solution of iodine in potassium iodide in the form of a very fine powder, which was found to be capable of safe purification by washing with a dilute solution of sodium sulphate. The filter should be protected from draughts of air, which are liable to induce explosion. The purified substance—in a moist condition, because it can not be dried without explosion—was analyzed by decomposition with a solution of sulphurous acid of known strength, and estimation of the amount of iodine and ammonia in the solution. Its composition was proved to be NH_4I , as Dr. Gladstone and Bineau had determined it. This conclusion as to its composition is also supported by the fact that Dr. Szuhay has been able to prepare a silver derivative of the compound by replacing the hydrogen atom with silver. The silver compound is a black flocculent substance, quite as explosive as iodide of nitrogen itself. When it is carefully dried, the least rise of temperature provokes explosion. It also detonates on being struck, or even when brought into gentle friction with any other substance. When warmed under water, or when treated with dilute acids, it is quietly decomposed. Evidence was adduced by the author to show that potassium, sodium, and barium replacement compounds are capable of existence in solution.

A comparison of the results given in the "School of Mines Quarterly" by Dr. Waller, of Columbia College, of his recent determinations of the dissolved salts in the water of the Great Salt lake with those obtained by Gale, Allen, Bassett, and others, shows that the salinity is constantly changing; and a closer examination

reveals the fact that there is a variation from place to place. This is ascribed to local differences in the amount of evaporation, and to the influx of springs which are not seen at the surface. For some of the constituents the water is nearly at saturation point. Differences of temperature are also apt to cause slight differences in composition.

In the determination of the acidity due to the fixed and the volatile acids of wine by J. A. Müller, the determinations of potassium bitartrate and of tartaric acid, succinic acid, and tannin having been effected, the acidity of the fixed acids enables the analyst to find the quantity of the other acids, such as the malic, or of acid salts that may be present. On the other hand, the standard of the volatile acids shows whether the wine examined is sound or diseased.

The method of Dr. Robert Koch for the detection of cholera bacilli requires that, while observing the well-known precautions, a little of the suspected water be added to a solution of peptone and allowed to stand at 37° C. If there are in the material any cholera bacilli capable of development, they increase rapidly at the temperature mentioned in from six to twelve hours. In consequence of their avidity for oxygen, they collect on the surface of the liquid, where under certain circumstances they form a fine film, distinctly visible. On the microscopic examination of a drop of the liquid from the surface the characteristic comma bacilli are seen in prodigious numbers. The bacilli will also develop in their characteristic colonies in from twenty-one to twenty-four hours when dropped upon gelatin plates.

A quantitative method of separating iodine from chlorine and bromine, by D. S. Macnair, is based on the fact that, when treated with chromic acid mixture, silver iodide is converted into the iodate, while silver chloride and bromide are converted into the sulphate.

On account of the generally great stability of organic fluorides, the determination of fluorine in gaseous compounds presents some difficulties. In a method recommended by Maurice Meslaus, when the combustible organic fluorides are burned in oxygen, the fluorine is transformed into hydrofluoric acid if the molecule contains the quantity of hydrogen necessary for this transformation. We may then perform a volumetric determination of this acid by means of an alkaline solution, or convert it into calcium fluoride and thus weigh the fluorine.

Meeting some difficulty in removing suspended finely divided particles of clay from water, Francis Watt, after experimenting with various precipitates which could be produced in the water and carry down with them the troublesome particles, found the formation of aluminum hydrate by adding alum or some other suitable aluminum salt and precipitation with lime water efficient. It then occurred to him that the method might be applicable for purifying water from micro-organisms. He, however, substituted ferric chloride for the alum. This was filtered in fully saturated solution through sterilized filter paper, and small quantities of the water were introduced into nutrient solutions. In practically every case no development of micro-organisms took place, even when the solutions were kept for more than a

week. Similar tubes were treated with the water before the addition of the iron solution, and growth in every case followed in eighteen hours. The experiments were repeated at intervals over a period of two years, and always with the same results. The process has been employed in public institutions and private houses in the Leeward Islands, with apparently good results.

Sodium peroxide is used as an analytical agent by J. Clark, who finds that by heating powdered minerals with it, the arsenic and sulphur may be made soluble.

Chemical Synthesis.—The fundamental hypothesis which has guided Raoul Pictet in his experiments in chemical synthesis, and the experimental variations of it, have enabled him to establish eight laws: 1. At very low temperatures (below -130°C.) no chemical reaction takes place, whatever substances are present. 2. All chemical reactions are manifested spontaneously at a certain temperature and under a certain pressure exerted upon the constituents; this is the temperature limit. 3. The same reactions may be obtained below the temperature limit if we apply auxiliary energy by the use of electric currents or discharges. 4. Exothermic reactions always present two phases: in the former we retain a control of the temperatures if we can remove from the combining bodies by radiation as much heat as is produced at the same moment by the simultaneous effect of the affinities of the extraneous energies introduced into the substances; in the second phase, the temperature rises suddenly until the reaction takes place above the temperature limit. The first phase is the reaction limit; the second phase is the reaction in mass. 5. Endothermic reactions are always limit reactions. 6. The dissociation of the products obtained by exothermic reactions corresponds to the laws of endothermic combinations, and reciprocally. 7. The temperature limit of chemical reactions is not in a known simple relation with the apparent energy of the phenomenon; on the contrary, the quantities of heat liberated seem to class the ascending order of the temperature limit, especially in one and the same family of substances. 8. The electric spark and current seem to be the best media for supplying extraneous energy to limited chemical reactions. With these eight practical laws we may establish a complete scientific programme for the discovery of a general method of chemical synthesis. We begin by bringing in contact the simple bodies, and defining experimentally the laws which govern their combinations. Next we shall study combinations of the binary compounds, ternary substances, etc., to constitute our dynamic tables. The successive experiments will discover the laws which govern the phenomena, and chemical reactions will be defined precisely and certainly. The present experimental results give a preliminary sanction to this programme.

Bacteriological Chemistry.—Speaking in the British Association of "The Present Position of Bacteriology," more especially in its relation to chemical science, Prof. P. Frankland showed that microscopical characteristics, even under favorable circumstances, were insufficient for the recognition of bacteria; consequently morphological methods have had to give way to chemical and physiological tests. Chemical tests, being

as yet few in number, are apt to be treacherous, but they are capable of considerable extension. The typhoid bacillus, for example, will give no reaction with indol, such as is characteristic of the cholera bacillus, and will not ferment glucose, but will coagulate milk. With regard to the chemical products of the action of organisms, the questions suggest themselves, Does the same substance yield different products with different bacteria? Do the same bacteria give rise to the same products with different substances? Experiments with pure cultures have shown that the same bacillus will give identical products with such chemically related bodies as glycerol, arabinose, mannitol, etc. It is probable that fermentability is due to the power possessed by a set of substances of yielding the same intermediate body which will give identical end products in all cases. This may explain why only those sugars which contain three carbon atoms or a multiple of three in their molecule appear to be fermentable. The production of all three varieties of lactic acid by fermentation of glucose by different organisms has been accomplished. The problems of selective fermentation were next dealt with. Its cause was to be sought for in the slight differences of solubility, etc., shown by active substances when in combination with optically active isomeric bodies. One isomer is not found always to be quite unfermentable; in some cases both isomers can be destroyed if time be allowed, one, however, always disappearing first. Of great interest is what may be called educational culture, by means of which new characteristics may be artificially impressed upon an organism. A species of bacillus morphologically identical with anthrax, but incapable of producing spores, may be obtained by cultivation of true anthrax in broth containing certain salts, such as potassium dichromate or nitrate. The new characteristics will even persist after passage through the bodies of animals. On the other hand, by various means the virulence of pathogenic organisms can be greatly increased, though it has not been found possible to produce pathogenic from nonpathogenic organisms. It becomes probable, therefore, that naturally occurring bacilli will acquire new characteristics according to alterations in the conditions of their growth. The occurrence of nontoxic associated with certain toxic organisms—for example, those of diphtheria, anthrax, cholera, and typhus—is suggestive in connection with this fact. It is possible that aerobic organisms may become so far modified as to be active in the absence of air. Much study is wanted in this direction. Speaking of the disinfecting action of light under different conditions, Prof. Frankland said that the generation of hydrogen peroxide from air and moisture under the influence of light, discovered by Richardson, seemed to play an important part in this action of sunlight, and the problem partly resolved itself into the study of the conditions of formation of this substance. The effect of different salts in modifying the bactericidal effects of sunlight was touched on, and, in conclusion, the necessity was urged upon chemists of a knowledge of biology and botany, to enable them to carry on bacteriological work, for which the first necessity had now become profound knowledge of chemistry and chemical

methods. In the discussion following the reading of Prof. Frankland's paper, Prof. Burdon-Sanderson advocated the establishment of an institute for research where chemists, biologists, and pathologists could mutually assist one another.

The fact that modifications may be produced in the physiological character of micro-organisms by natural or artificial means, and that they may become inherited and permanent, carries with it an important problem in the identification of bacteria, for the characteristic appearance of an organism may be so modified that its original parentage will be difficult to recognize. A race of sporeless anthrax or *asporogène* anthrax, possessing the same virulent properties as the original form, has been produced by Chamberland and Roux, Lehmann, and other investigators. Phisalix has produced sporeless anthrax by the continuous and successive cultivation of anthrax bacilli at 42° C., the process having been continued through twenty-five generations for five months. The twelfth generation yielded a variety incapable of producing spores except on being first passed through the body of a mouse, and the fourteenth generation established a race permanently incapable of producing spores. These *asporogène* cultures, however, unlike those of Chamberland and Roux, suffered an attenuation of their virulent properties, and the descendants of the twentieth generation were absolutely harmless as toward animals. The possibility, therefore, of pathogenic microbes losing their virulence, or of harmless saprophytes being trained up to acquire pathogenic properties, is one that must be taken into consideration; and when it is remembered that sunshine alone may produce such modifications in the physiological development of microbes as permanently to deprive certain pigment-producing bacteria of this property, and raise up instead a colorless race, the indulgence of this possibility becomes yet more within the bounds of legitimate conception.

Several observers have noticed that the development of putrefactive organisms is checked by the combined action of sunlight and oxygen, which was regarded as an outcome of an action excited by the organism, A. Richardson made experiments with urine in order to ascertain whether, when sterilization has been effected by light, any oxidizing agent, such as hydrogen peroxide, is formed, and whether such substance may not be the sterilizing agent. No hydrogen peroxide is produced by the action of oxygen on sterilized urine in the dark, but an appreciable amount is formed on exposing the urine to light; the production of the peroxide is hence independent of the presence of organisms. Substances such as manganese dioxide, which destroy hydrogen peroxide, greatly facilitate organic growth. The addition of hydrogen peroxide to fresh urine renders the liquid much less liable to change under the influence of organisms, while, if added to urine in which fermentation has already set in, the peroxide is rapidly decomposed.

The micro-organisms comprise chiefly in their constitution substances—albuminoid, cellulose, and mineral substances, which are isolated by incineration—which are heavier than water. If the living organisms float in liquids, such as wine, cider, or milk, the specific gravity of

which borders closely on unity, it is because they probably contain small quantities of gas. Considering the small dimensions of the bodies in question, the force that impels them to rise or sink in a liquid heavier or lighter than their protoplasmic substance is certainly very feeble. The tendency to separation may be intensified by submitting vessels containing fermentable liquids and organisms to rapid rotatory movement. The centrifugal force may be rendered several hundred times greater than the force of gravitation. Rotation, according to M. R. Lezè, classifies fermentable liquids, and determines the formation of a glutinous or gelatinous deposit at the outermost parts of the apparatus employed. On examining the muddy deposits under the microscope they are found to consist chiefly of a heap of living organisms. By this method M. Lezè has separated the organisms from a considerable number of liquids in course of fermentation. The organisms appear to separate the more easily the larger are their dimensions. To facilitate the separation, the liquid may be heated, or diluted with liquids lighter than water. This method of separating bacteria may find an application in bacteriological research.

Vegetable Chemistry.—Remarking upon the immense variety of substances produced in the vegetable kingdom, E. Warington observes that the plant is the finest chemical laboratory with which we are acquainted. While some kinds of chemical work are common to all plants, there is hardly a species which does not possess some special capacities, which does not produce some compounds different from its neighbors. The extent to which this specialization is carried and the immense variety of the products obtained are truly wonderful; and our wonder increases when we turn to the materials employed in this work, which are of the simplest kind—water, carbonic-acid gas, oxygen, nitric acid, and a few inorganic substances. Out of these the whole of the immense variety of vegetable products is constructed. The methods of plant chemistry are of supreme interest to the chemist and to the vegetable physiologist. The higher plants are in some respects unfavorable subjects for the study of plant chemistry. Their different parts have different functions, and the changes in progress are obscured by the fact that changes of a different type are going on at the same time, and in places very near to each other. In bacteria, however, we have the vegetable cell in its simplest form, and the life changes, so far as we know, in all the cells of every species living under the same conditions are the same. Moreover, these organisms grow freely in suitable solutions, and the chemical changes produced in the materials held in these solutions can be readily ascertained. We have thus in a study of the chemistry of bacteria a splendid opportunity for enlarging our knowledge of plant chemistry, and, indeed, of becoming acquainted with the fundamental reactions on which synthetic organic chemistry depends. The results, so far, of the study of the chemical work performed by bacteria have been remarkable. The immensely numerous species of bacteria have been found to exhibit an almost equally great diversity of action, and the study has widely

enlarged our conceptions of the chemical power of the vegetable cell.

The chemistry of the two nitrifying organisms furnishes an excellent example of the way in which certain special functions, indicating narrowly limited lines of work, are exercised by individual species of bacteria. By one of these organisms ammonium carbonate is oxidized and the nitrogen converted into a nitrite. By the second organism nitrites are converted into nitrates. The nitrous organism can oxidize ammonia to nitrite, but it can not change a nitrite into a nitrate. The nitric organism, on the other hand, oxidizes nitrites readily, but it can not oxidize ammonia. Both organisms are in all fertile soil, but the formation of nitrites is not usually perceived, as they are at once converted into nitrates. The organisms develop and perform their functions only when certain inorganic salts supplying phosphates, sulphates, potassium, calcium, and magnesium are present. The continued omission of one of these has been proved in several cases to bring about a cessation of growth and function. Nitrogenous food is amply furnished to these organisms by ammonia, the nitrite or nitrate of which is intentionally added to the solution. It is unnecessary to supply them with any carbonaceous food except carbonates, bicarbonates being preferred. The fact of the conversion of carbonates into organic cell substance has been proved in the case of the nitrous organism; it is at present assumed to be also true of the nitric organism. A third organism has been obtained from soil by Winogradsky, which possesses the remarkable power of assimilating the free nitrogen of the atmosphere. To accomplish this assimilation it is simply necessary to grow it in a solution containing sugar (dextrose) and the necessary salts, no combined nitrogen being supplied. Under these circumstances a vigorous growth of the bacillus takes place, the sugar undergoes a butyric fermentation, and at the end of the operation it is found that the culture has acquired nitrogen. We have no clew as yet to the mode in which the nitrogen enters into combination; but it is evident that in this case, as in the nutrition of the nitrous organism, the difficult piece of chemical work forms but a small part of a much larger reaction that is at the same time in progress, and with which it is essentially connected.

A paper by H. T. Brown and G. H. Morris deals with the occurrence, relations, and physiological significance of the starch, diastase, and sugars contained in foliage leaves. The work originated in an attempt to discover the explanation of the conditioning effect of "dry hopping," or the addition of a small amount of dry hops to finished beer. This was ultimately traced to the presence in the hop strobiles of a small but appreciable quantity of diastase, sufficient to cause slow hydrolysis of the noncrystallizable products of starch transformation left in the beer, and to reduce them to a condition in which they can be fermented by the yeast. The authors were then led to inquire into the first formation of the starch in the chloroplasts of the foliage leaf, the mode of its dissolution and translocation in the plant, and the nature of the metabolized products; the results obtained are antagonistic to the assumption made by Sachs, that all the

products of assimilation at some time take the form of starch. Only a small portion of the assimilated material exists at any one time as starch. The fluctuations in the amount of starch in leaves were also determined. Wortmann's recent denial that diastase plays any part in the dissolution and translocation of starch in leaves is pronounced incorrect. The authors show that instead of leaves containing little or no diastase, every leaf examined by them contained sufficient diastase to transform far more starch than the leaf can have contained at any one time. The products of the hydrolysis of starch by leaf diastase are identical with those formed by malt diastase, maltose having been directly separated from the leaves; leaf diastase does not convert maltose into dextrose, but the leaf contains an enzyme capable of inverting cane sugar. The amount of diastase present varies greatly in different plants, and within narrow limits even varies in the same plant at different times. It is very high in the case of the leguminosæ. Any conditions that favor a decrease in the leaf starch result in an increase of the leaf diastase; thus a marked increase in diastatic activity is observed in leaves kept in darkness. Contrary to Wortmann's statement, leaf diastase can attack the starch granule under certain conditions; no evidence could, however, be obtained of the disappearance of starch in killed leaves under the influence of the contained diastase, and the authors are led to conclude that the first stage of dissolution of the starch granule in the leaf is in some way or other bound up with the life of the cell. From experiments on the leaves of *tropæolum*, the authors draw the following conclusions: Cane sugar is the first sugar to be synthesized by the assimilatory processes. This sugar accumulates in the cell sap of the leaf parenchyma while assimilation is progressing vigorously, and when the concentration exceeds a certain point starch begins to be elaborated by the chloroplasts at the expense of the cane sugar. This starch forms a more stable reserve material than the cane sugar, and is drawn on only when the latter more readily metabolized substance has been partially used up. Cane sugar is translocated as dextrose and levulose and the starch as maltose. From the invert sugar derived from the cane sugar the dextrose is more readily used up for the respiratory processes, and possibly also for the new tissue building than is the levulose; hence in a given time more levulose than dextrose must pass out of the leaf into the stem.

Miscellaneous.—Increased attention is given to the study and utilization of the disinfecting properties of peroxide of hydrogen. Richardson has shown that the antiseptic action of the sun on urine is due to the production of this substance; for samples exposed to the sun remained clear, and on examination were found to contain it, while similar samples kept in the dark became turbid and contained none. Traugott has pointed out as a result of his investigations that it may be substituted for corrosive sublimate and carbolic acid in all cases where the period of contact is not less than from a quarter to a half an hour; but that it is not suitable when rapid disinfection is required. Being innocuous and not injurious to clothing, etc., it is a safer disinfectant for general application than the others, but its cost is

considerably greater. Heidenhain mentioned several years ago that he had used peroxide of hydrogen constantly as a gargle in cases of diphtheria, and Traugott relates that a 2-per-cent. solution of it with a young and vigorous growth of the diphtheria bacillus on blood serum destroyed the organism. If, however, two-days'-old cultures were similarly treated, contact for thirty minutes, even when repeated 8 times, was not sufficient for its annihilation. Thus its therapeutic value depends on its immediate application at the very outset of the disease; while it may be recommended as an important prophylactic during epidemics of diphtheria. Van Tromp mentions that an addition of peroxide of hydrogen in the proportion of 1 to 10,000 parts of water, when shaken up and allowed to stand for twenty-four hours, is usually sufficient to sterilize a water. Althaefer found that to insure sterility it was well to use larger proportions of the peroxide, or 1 to 1,000 parts of water. Experiments made with waters purposely infected with cholera and typhoid bacilli respectively showed that in both cases those organisms were destroyed after twenty-four hours in the 1 to 1,000 mixture. The dietetic value of the water is not affected by the addition of the peroxide, and no danger is incurred if the peroxide is pure.

Ammonia vapor is recommended by Riglet as an important means of disinfection. The author experimented with Koch's cholera bacillus, the typhoid bacillus, Loeffler's diphtheria bacillus, and the spores and bacilli of anthrax. Threads soaked in broth cultures of these various organisms were freely exposed in a room filled with ammonia vapor, while other threads were wrapped up in dry and damp cloths respectively before being submitted to the vapor, and in every case control threads were simultaneously exposed to air. Cholera bacilli were killed after two hours' exposure in the ammonia room, whether free or inclosed in dry cloths, while twice that time elapsed before they succumbed in moist surroundings. In ordinary air they were destroyed in three hours, but they were alive after two days when kept in moist cloths. Two hours' exposure in the ammonia vapor sufficed to destroy the typhoid bacilli, but six hours were necessary in moist surroundings, while twenty-four hours' exposure in ordinary air produced no effect upon them. Anthrax bacilli succumbed in three hours in the ammonia room, in five hours when wrapped in dry cloths, while they were not affected by a day's exposure in ordinary air. The spores were not destroyed till after being eight hours in the ammonia vapor, and were not affected in ordinary air. Diphtheria bacilli, whatever their environment, were annihilated in four hours by the ammonia vapor, while they survived twenty-four hours' contact with ordinary air.

In the case of the poisoning of 20 persons at Columbus, Ohio, in October, 1892, from eating canned corned beef, examination for mineral poisons formed by the action of the meat on the materials of the can yielded, according to Thomas K. Lewis, no traces of toxic substances. A systematic examination for ptomaines was then made, and gave evidence of the presence of such substances. After eighteen days the

same methods were employed without success, for no tests could be obtained. When the meat was first analyzed, it was found to be poisonous to animals to which it was given. Eighteen days afterward it was fed to animals without inducing symptoms of poisoning. Hence, the poison is supposed to have been decomposed during the interval.

The products of the sublimation of arsenic and the various allotropic modifications of the element have been investigated by Dr. Retgers. His experiments show that there is no amorphous modification of arsenic. The deposit called black amorphous arsenic, which is obtained during the sublimation of the element in a current of hydrogen and also in a number of high temperature decompositions of arsenic compounds is found to be microcrystalline, and exhibits distinct evidence that it consists of the ordinary regular variety. There are consequently only two known well-defined modifications of arsenic: the stable form, which crystallizes in hexagonal prisms, is silver-white and specifically heavy, and requires a comparatively high temperature for volatilization; and the specifically lighter and more volatile modification, which crystallizes in octahedrons and exhibits a black surface. These two forms correspond with the two modifications of phosphorus—the regular black variety with the regular yellow form of phosphorus, and the silver-white hexagonal form with the hexagonal red phosphorus. Evidence is adduced of the probable existence of a third crystalline modification of arsenic, the crystals of which belong to the monoclinic system. All elementary arsenic is opaque; the former observations of yellow and brown transparent arsenic are shown to relate to compounds that have been mistaken for the element. Information has been gained by Dr. Retgers concerning the little-known solid hydride of arsenic, AsH_3 , and the suboxide, As_2O , the existence of which has hitherto been considered doubtful, but is now regarded by the author as reasonably established.

Four samples of powders sold for washing clothes were analyzed by W. J. Kinney, W. H. Wenger, and an associate. In three of them the principal ingredients were sodium carbonate, 45.2 to 49.2 per cent.; fatty acids, 25.6 to 26.4 per cent.; and water, 19.1 to 24.9 per cent.; and combined soda, 2.6 to 3.5 per cent. The fourth sample consisted of sodium carbonate, 26.9 per cent.; fatty acids, 44 per cent.; combined soda, 3.4 per cent.; fine sand, 16.3 per cent.; and water, 8.8 per cent. A portion of the water was necessarily in the soap, and the remainder was with the sodium carbonate, which had in each case been partly dried. No resin or borax was found in the soaps. The powders may therefore be generally described as mixtures of soap and dried washing soda, both powdered. While a small amount of such powders may properly be employed in conjunction with soap to remove the "hardness" of the water in washing, the substitution of any of them for soap must result in the gradual corrosion of cotton, linen, or woollen goods. Borax might be employed in place of soda in these preparations with great advantage; for it has no corrosive action on textile fabrics, and while it removes the hardness from the water it is also an excellent detergent.

CHILI, a republic in South America. The Chilean people declared their independence on Sept. 18, 1810, but independence was not established until April 5, 1818. Their Constitution was adopted in 1833. The legislative power is vested in a Congress consisting of a Chamber of Deputies and a Senate. The former is composed of 94 members in the proportion of one to every 30,000 inhabitants, elected for three years, by direct vote of the departments. The Senate consists of 32 members in the proportion of 1 to every 3 Deputies, elected for six years by direct vote of the provinces, one half of that body going out every three years. Electors must be twenty-one years of age, and be able to read and write. The executive is vested in a President, elected by indirect vote for the term of five years, and not re-eligible while in office. He is assisted by a Council of State, in which he nominates 5 members, while 6 are chosen by Congress, and by a Cabinet of 6 ministers, which in the beginning of 1893 consisted of the following members: Minister of the Interior, R. Barros Luco; Minister of Foreign Affairs, Worship, and Colonization, I. Errazuriz; Minister of Justice and Instruction, M. del Campo; Minister of War and Marine, Gen. L. Arteaga; Minister of Industry and Public Works, W. D. Larrain. The Ministry of Finance was vacant.

The Army and Navy.—According to a law passed on Jan. 2, 1892, the regular army is limited to 6,000 men, who are organized into 3 regiments of artillery, 3 regiments of cavalry, 8 regiments of infantry, and a corps of engineers. The army is commanded by 104 field and 855 inferior officers. The National Guard in 1892 numbered 51,090 men, of whom 42,120 belonged to the infantry and 8,970 to the artillery.

The navy consisted in 1892 of 3 ironclads, 3 deck-protected cruisers, 2 torpedo catchers, 3 corvettes, 2 gunboats, 10 first-class and 2 second-class torpedo boats, 2 dispatch vessels, 2 transports, 3 small gunboats, and 4 sailing vessels. The "Capitan Pratt," built in France at the cost of \$3,000,000, was completed in 1892. She is a steel ironclad of 7,000 tons, having a length of 327 feet, with 60 feet of beam and a draught of 20 feet, and is propelled by engines of 12,000 horse power which give a speed of 17 knots. The armament consists of 12 Canet guns, 20 Hotchkiss guns, and 5 Gatling mitrailleuses, the guns being worked by electricity. The navy was manned by 130 officers, 126 engineers, 215 employees, and 1,285 sailors.

Finances.—The budget for 1893 estimates the revenue at 65,020,000 pesos (1 peso=91 cents), of which 25,000,000 pesos are derived from export duties, 22,000,000 pesos from import duties, 14,000,000 pesos from railroads, 1,150,000 pesos from the agricultural tax, 800,000 pesos from stamps, 800,000 pesos from posts and telegraphs, 270,000 pesos from storage and wharfage, and 1,000,000 pesos from various other sources. The expenditure is estimated at 50,302,000 pesos, of which 18,174,204 pesos are for public works, 12,534,585 pesos for financial administration, 7,154,263 pesos for public instruction and justice, 6,480,308 pesos for the army, 5,627,786 pesos for the navy, 4,285,251 pesos for the interior, and 1,045,600 pesos for foreign affairs, worship, and colonization. An extraordinary

revenue of 10,589,000 pesos is estimated to accrue from the sales of lands and silver bullion.

The public debt on Jan. 1, 1892, amounted to 110,162,620 pesos, including an external debt of 46,655,489 pesos, an internal debt of 21,124,108 pesos, and 42,383,023 pesos of paper currency. In October, 1892, a loan of \$8,750,000 was raised in London and Paris, paying 5 per cent. interest, for extinguishing the floating debt.

Commerce.—The imports in 1890 amounted to 67,889,079 pesos, and the exports to 68,391,381 pesos. Of the total exports, 46,085,857 pesos went to Great Britain, 8,540,075 pesos to the United States, 6,356,470 pesos to Germany, 2,824,455 pesos to France, 2,164,725 pesos to Peru, 79,548 pesos to Brazil, 43,252 pesos to Italy, and 35,808 pesos to the Argentine Republic. The principal exports were: Niter, to the amount of 36,950,339 pesos; copper in bars, 7,618,840 pesos; silver, 4,335,215 pesos; wheat, 1,581,449 pesos. The principal imports and their values in 1889 were: Textiles, 10,887,696 pesos; sugar, 6,766,985 pesos; cattle, 5,083,715 pesos; coal, 2,992,905 pesos; iron goods, 2,895,630 pesos; sacks, 1,415,246 pesos; timber, 870,194 pesos; tea, 817,940 pesos; wine, 793,425 pesos.

Communications.—In 1892 there were 1,735 miles of railroads open for traffic, of which 696 miles belonged to the state. The Transandine Railroad is nearing completion; only the section of 42 miles between Santa Rosa and Mendoza is left to be built; 18 miles of the Chilean section, and 88 miles of the Argentine section are finished and open for traffic.

The post-office in 1890 forwarded 18,509,709 letters and postal cards, 32,446 samples, and 24,308,877 pieces of printed matter and journals.

The length of state telegraph lines in 1891 was 12,390 kilometres. In 1890 there were 619,429 messages transmitted over the wires.

Political Troubles.—Chili has been governed since the overthrow of Balmaceda by a coalition of the various elements that joined in the revolution, and a safe policy of peaceful recuperation and material development has been pursued which gave general satisfaction, especially to the Conservatives. A tendency to restore the influence of the latter in legislation finally roused the dormant jealousy of the Liberals, especially when the reaction in favor of clerical education which pervades many Catholic countries began to gain headway in Chili. The Congress in February, 1893, passed a bill to grant full amnesty to the Balmacedists, except the officers who took part in wrecking the "Blanco Encalada," and those who were concerned in the massacre at Los Canos. A measure passed in November, 1892, for the redemption of treasury notes in specie and the resumption of gold coinage could not be carried out, and Congress was called upon to modify the project for paying off the paper currency in silver coin. In order to avert a banking crisis and satisfy the claims of the bankers of Valparaiso and Santiago, the Government agreed in March to pay into the banks \$9,000,000 in treasury notes, the amount of the forced loans exacted by the Balmaceda Government. In the beginning of April a conspiracy against the Government was discovered. An attack was made on the Government buildings by a mob, and a quantity of con-

coaled arms fell into the hands of the authorities. The disorders in Santiago were easily put down, but the Minister of War, upheld by the President, decided to proclaim martial law in the provinces of Santiago, Valparaiso, and Aconcagua. The rest of the ministers refused to take the responsibility for this course, and on April 7 they offered their resignations. The persons who engaged in this seditious plot were arrested, except such as made their escape. Two of the latter took refuge in the American legation, the minister giving them the right of asylum, which in South American countries has been regarded as a diplomatic privilege, but is strongly objected to by the present Government of Chili. On instructions from Secretary Gresham, Minister Egan afterward withdrew the asylum. The Chilean Minister of Foreign Affairs complained that the American minister connived at the escape of one of the refugees, Blondlott Holley, in the disguise of a workingman, but the authorities in Washington did not consider the surrender of the accused persons to the Chilean authorities a necessary part of the important step they had taken in abandoning an established customary right with the object of placing the United States in accord with the Spanish American States in questions affecting their standing as civilized powers. The other refugee, Col. Fuentes, was captured while leaving the American legation. Several of the leaders of the conspiracy were tried and condemned to be executed. The United States consul at Valparaiso declined to sign a petition for the pardon of Briceno, the most prominent of these, as did all the European consuls except the Spanish, on the ground that he did not wish to interfere in the internal affairs of the country. President Montt, with the approval of the Council of State, commuted the sentence of Briceno to imprisonment for life. This act of clemency drew from the leaders of the old Balmaceda party a declaration of a desire to obliterate past differences and work in harmony with the Government in the common cause of restoring Chili to her former prosperous condition. The revolutionary attempt deterred the Government from carrying out the policy of conciliation which Congress had previously approved. The state of siege had been extended by act of Congress till December, and when Congress met in regular session on June 1, President Montt in his opening speech lamented the fact that the recent conspiracy prevented him from granting a general amnesty yet. He hoped, however, in view of the expressions of loyalty made by those who had opposed the Government, to be able to issue a decree of amnesty at an early date, and said that it was his earnest desire that all the sorrowful memories growing out of the civil war should disappear.

The New Cabinet.—President Montt declined to accept immediately the resignation of his Cabinet when it was proffered, and requested the ministers to continue to carry on the business of their departments until he could consult with the presidents of the two houses of Congress. He formally accepted the resignations of the ministers on April 17, having induced Errazuriz to undertake the task of forming a new ministry. The list was announced on the next day as follows: Premier and Minister of the

Interior, Isidoro Errazuriz; Minister of Foreign Affairs, Public Worship, and Colonization, Joaquin Rodriguez-Rosas; Minister of Finance, Alejandro Viel; Minister of Justice and Public Instruction, Pedro Montt; Minister of War and Marine, Ventura Blanco Viel; Minister of Industry and Public Works, Vicente Davila-Larrain. All the ministers were members of Congress, and the Cabinet was a combination of all the parties. There was a redistribution of portfolios before the Cabinet was finally constituted on April 26, as follows: Minister of the Interior, Pedro Montt; Minister of Foreign Affairs and Colonization, Blanco Viel; Minister of Justice and Instruction, Joaquin Rodriguez-Rosas; Minister of Finance, Alejandro Viel; Minister of War and Marine, Isidoro Errazuriz; Minister of Public Works, Vicente Davila-Larrain.

The question of redeeming the floating debt and paper currency was taken up by the new ministry and again brought before Congress. In the President's speech at the opening he stated that the estimated resources for 1894 were \$60,000,000 in paper and £1,500,000 sterling, while the expenses were estimated at \$49,500,000 in paper and £1,400,000 sterling, leaving \$11,000,000 to pay the floating debt, exclusive of moneys that were expected to be realized from sales of nitrate lands. He expected that before July, 1896, enough bullion would be amassed in the treasury to redeem \$38,000,000 of paper, leaving less than \$30,000,000 in circulation.

Chilian Claims Commission.—A treaty between the United States and Chili provides for the adjudication of unsettled claims between the two countries by a Chilean claims commission to be composed of three commissioners, one appointed by each of the governments and one appointed by a third party chosen by agreement between them. Domingo Gana, the Chilean minister at Washington, was appointed to act on the commission as the representative of his Government, and John Goode, of Virginia, was nominated commissioner for the United States, while the Swiss minister at Washington, Alfred de Claparede, was appointed by the President of the Swiss Confederation as the third commissioner and final arbitrator on matters on which the Chilean and United States commissioners differ. The task imposed on the commission was to pass on all claims for damages inflicted by citizens of Chili upon citizens of the United States or by citizens of the United States upon citizens of Chili. All claims were to be presented within two months of the first meeting of the commission, unless the commissioners extended the time for good reasons by virtue of express authority granted to them to allow a delay not to exceed two months. The commission must examine and pass upon every claim within six months from the time of its presentation. The expenses of the commission are deducted from the sums awarded. The American claims in some cases date from the Chilean war of independence, when arms and supplies were furnished to the insurgents which have never been paid for. Many claims belong to various periods in the succeeding fifty years of Chilean history, but the bulk of the money claimed by American citizens is due as compensation for property seized or destroyed in Peru by the invading Chilean army during the

war between Chili and Peru. Edward C. Dubois claims \$500,000 for the railroad from Chimbote to Huaraz, built by him and torn up by Admiral Patricio Lynch. The Central and South American Telegraph Company demands \$160,000 as compensation for the interference of the Balmain Government with its business during the late revolution. Other claims are from owners of shares in the nitrate beds. About 75 claims were made by Americans through the Department of State, but many of them are of doubtful merit. The claims of Chilians were comparatively insignificant in number and amount. The commission met in Washington in the office of the Bureau of American Republics, and began its work on Oct. 9, 1893.

CHINA, an empire in eastern Asia. The Government is an absolute monarchy under the Tsing or Manchu dynasty, which has reigned since 1644. The throne descends on the death of an emperor to the prince among the sons of his three first wives whom he has appointed his heir. When the young Emperor Tungchi died without issue, Jan. 22, 1875, the order of direct hereditary succession was broken for the first time since the foundation of the dynasty. He was his father's only son, and none of his father's brothers was eligible for the throne, because the law requires an heir to be younger than the person from whom he inherits. It was necessary, therefore, to select one of the sons of his father's younger brothers, and the choice—announced by the two Dowager Empresses, and said to have been recorded in his will—fell upon the son of Prince Chun, the seventh son of the Emperor Taoukwang. The infant Emperor, born Aug. 2, 1872, was proclaimed, and the Eastern Empress and Tungchi's mother, the Western Empress, became regents during his minority. The latter survived and ruled until after the Emperor reached his legal majority, in February, 1887, and after he married, on Feb. 26, 1889, she resigned the Government into his hands, March 4, 1890.

The Emperor is advised by a Grand Council, called the Chun-Chi-Chu, a Privy Council or Cabinet, the Nui-Ko, and a Ministry of the Imperial Household, the Tsung-yen-fu. The administration is carried on by six ministries, the Liu-pu (courts, which deal respectively with the civil service, finance, worship and ceremonies, war, justice, and public works. There is a Foreign Office, which deals with affairs connected with subject countries, while true foreign relations are referred to a board called the Tsungli-Yamen. The Tu-Cha-Yuen, or Board of Censors, is not only the supreme court of appeal for the empire, but is an important factor in the legislative and administrative machinery, because it has power to pass under review and publicly criticise any imperial edict, and address memorials to the Emperor upon errors or abuses in any branch of the Government.

The government and revenues of the provinces are to a great extent administered independently of the central authorities, but the latter retain dominion and control through their power to appoint and remove the administrators. The Governor-General of the imperial province of Pechili, at present Li-Hung-Chang, is also superintendent of the commerce of the ports of Tientsin, Chifu, and Niuchwang. The Governor-

General of the Liangkang, embracing Kiangsu, Kiangsi, and Nganwhai, is superintendent of the southern ports. The governor-generalship of Minche comprises Che-Kiang, Fokien, and Taiwan or Formosa. Honan, Shantung, and Shansi have each a governor, like the individual provinces of a governor-generalship, while the great province of Szechuen, like the imperial province, is administered by a governor-general. Other governor-generalships are Lianghu, composed of the provinces of Hupeh and Hunan; Shankan, embracing Shensi and Kansu; Liangkwan, composed of Kwangtung and Kwangsi; and Yunkwe, containing Yunnan and Kweichau. Sintsang, or the New Territory, embracing the Tianshan districts, with Kulja or Ili, has a governor. In Manchuria there is a commander in chief of the field army, while Shingking, or Southern Manchuria, is administered by a commandant-general, and Kirin, or Central Manchuria, and Holunkiang, or Northern Manchuria, each by a governor, who is at the same time the Manchu general. The Li-Fan-Yuan, or subject countries, of Mongolia are ruled by military governors. Tibet is administered by native officials, who are supervised by two Chinese residents in Lhasa, and in Sining, or the Koko-Nor territory, there is a Chinese governor, while a garrison of several thousand Chinese troops, distinct from the native Tangut forces, is distributed in various places throughout the country. The Dalai Lama, or spiritual ruler of the country, can not be enthroned without the previous assent of the Emperor of China.

Li-Hung-Chang.—The international relations of China, as well as all the progressive movements of the empire in appropriating the Western arts and sciences, have been for twenty years mainly concentrated in the personality and labors of one man. His achievement has been so remarkable that a connected sketch of his life is desirable. Li is viceroy of the metropolitan province of Chihli, in which Peking is located, Senior Grand Secretary of State, High Imperial Commissioner of Foreign Affairs, Director-General of the Coast Defenses of the North and Imperial Navy, Northern Superintendent of Trade, and Commander in Chief of the Army of North China. These various offices are not merely nominal, but are watched over with the utmost vigilance by their executive, who is a man seventy-three years of age. Viceroy Li, according to the "Peking Gazette," was born at Seu-chew, in the Hobei district, in the year 1819, of pure Chinese blood, and has always been identified with the native party. He was among the first in the three successive literary examinations, and in 1847 was enrolled in the Hanlin or Imperial Academy, the highest degree in the empire. He was an official in the imperial printing-office when the Taiping rebellion broke out in 1851—a convulsion that almost ended the empire in twain, cost 20,000,000 lives, and 3,000,000,000 taels, and took thirteen years to suppress. In this struggle Li became prominent. First called into the field to act on the staff of the generalissimo, he was in the last years of the war the Governor of Kiang-su, which, with Che-Kiang, constituted the most important field of operations. Li's appreciation of Western military skill was shown in the part he took in the organization and use of the "Ever Victorious

Force," a Chinese legion armed, drilled, and disciplined according to European fashion, led first by the American Ward, who recruited the corps, and afterward by the more celebrated Gordon. Under both these leaders it fought with great valor and success, and was a prime factor in the overthrow of the Taipings. The last campaign, resulting in the capture of Nanking, the rebel capital, was conducted by Li in person, who had developed as much genius in the field as he had shown in council. From the very close of the Taiping war Li-Hung-Chang began that persistent labor for the adoption of the arts and sciences of the West which has furnished the keynote of his life. He at once began to memorialize the throne for the creation of an army and navy on the European model, and found a hearty supporter in Prince Kung, but an uncompromising opponent in the senior Empress Dowager, as also in the Board of Censors, who were saturated with the ancient Chinese traditions. In 1870 Li was promoted to the viceroyalty of Chihli, a province of 20,000,000 inhabitants, and made Senior Grand Secretary of State, which gave him direct supervision of international questions. The eyes of foreign powers had now begun to turn to him as best fitted to inspire the foreign and domestic policy of China, so far as one man could move the machinery of an enormously cumbersome system. It was by Li's authority that 30 Chinese boys were sent for education to the United States in 1872, and that the Tung-Wan-Kwan College was established at Peking under Dr. W. H. P. Martin, with the help of Prince Kung. The nucleus of this as a training school for interpreters already existed. It was now made a college for training in the arts and sciences of the West, under a large and able faculty. Li availed himself of the Russian war scare of 1880 to give his plans a great impetus. He was the authoritative leader of the peace party, and it was with much difficulty that he prevented China from rushing into a disastrous war. His powerful argument was not merely that the army and navy were not fitted to meet the forces of a Western power, but that the internal constitution of an empire extending over an immense area made the transmission of intelligence tedious and difficult. The telegraph was advocated as a factor of war power. This logic outweighed the Conservatives. Imperial authorization was given, and the work was pressed with extraordinary vigor under the charge of Mr. Paulsen, a distinguished Danish engineer and electrician. The system now has a network of about 10,000 miles; its nerves everywhere connect the provincial and commercial centers with Peking, and it is said to be administered admirably. Simultaneously with his agitation of telegraphs he began to work for railroads in the empire, but the opposition from all classes was overwhelming. A short line had been built by foreign capital in 1876 from Shanghai to Woosung, but this was bought and dismantled the next year by the Government. Li quietly began a propaganda among the high officials, and Prince Kung soon acceded to his views. The viceroy instigated various memorials to the throne, which were followed by others from himself. The power of his influence was specially shown when the late Tso-Tsung-Tang, the gen-

eralissimo of the Chinese armies, who had always been Li's bitter enemy and rival, adopted his opinions and urged on the throne the authorization of a railway system, as well as of other progressive movements. "Let railways and mines, and the construction of ships and guns, be undertaken at once, as a means of insuring our national prosperity and strength," were almost his dying words. While following up this agitation without ceasing, Li was active in remodeling the army and navy on a Western model, in establishing arsenals and dockyards, military and naval colleges, and in importing Western experts in the various scientific professions as instructors and leaders in the new movement. As administrator of foreign affairs his constant policy was peace even at the price of concession, so that the empire should have no break in her course of internal development. The various imbroglions with Russia, Japan, and France were honorably settled without recurring to arms, except in the case of the Formosa war with France, 1884-'85. This nominally ended with a victory for the French, but Li's crafty diplomacy at its close left the victors with scarcely a shred of honor or advantage. The Army of North China, which includes the flower of the troops, began to be armed with Remington breechloaders in 1876. The change has been progressing without break, and there are now 150,000 men equipped with the deadliest weapons, and officered by Germans or by Chinese trained in the military colleges, of which there are three, located at Tientsin, Fuchan, and Shanghai. In 1877, Li, as administrator of the navy, bought 4 ironclads which had just been built in England for the royal navy, but had been rejected as not up to the standard in speed. From this beginning the great viceroy has gradually formed a navy of 12 wholly or partly armored ships, provided with the best guns, and a large accessory fleet of cruisers, gunboats, and torpedo boats. It is the ambition of Li to build in Chinese navy yards, which have already begun to exist, and to this end he is actively pushing the opening of coal and iron mines, and the establishment of blast furnaces and steel plants. It was not till 1888 that an active beginning was made in railway enterprises. A small road, which had been operated as a tramway from the Kaiping coal mines to tidewater, was equipped for steam, and it was so successful that it was extended. From this nucleus a road has been built 200 miles long, from Tientsin into Manchuria. Its effect as an object-lesson opened the eyes even of the Board of Censors. Li concentrated every influence at Peking, and the result has been that another line is projected from Tientsin south along the coast; and a great trunk line from Peking through northwest China to Hankow, on the Yangtse river, though now in abeyance, will probably be constructed. Two large and well-equipped steel plants have been established at Hankow, on the Bessemer and Siemens-Martin methods. The railway era has just begun, and Li has now the advantage of being supported by such powerful officials as Chang-Chi-Tung, the Viceroy of Honan, and Liu-Ming-Chuan, the Governor of Formosa, who has begun railroad building in his province. It is also understood that Prince Chun, father of the Emperor, and the Empress-Dowager have

been brought into full sympathy with Li's plans. The policy proposed by Li is to build slowly and with Chinese capital, avoiding the incubus of a foreign debt. Joint-stock companies have been organized under the viceroy's encouragement for various industrial enterprises, such as silk, cotton, woolen, glass, and iron manufactures, and Chinese capitalists are learning and following the methods of Western finance as applied to industry. All this awakening has been mainly the work of Li-Hung-Chang, whose tenacity has never lost its grip, in spite of the numerous and almost insuperable difficulties that are imbedded in the very structure of Chinese society. He has now overcome the main obstacles, and he and his successors—for there are a number of able officials trained in his school of thinking—will have an easier task in hastening progressive movements throughout the empire.

Area and Population.—The area of China proper is estimated at 1,336,841 square miles, with a population of 349,250,000. Mongolia, with an area of 1,288,000 square miles, has about 2,000,000 inhabitants; Manchuria, 862,810 square miles in extent, has 7,500,000; Tibet, with an area of 461,000 square miles, is estimated to have 1,500,000; and the countries under imperial administration, containing 1,828,000 square miles, have a population of about 3,500,000. The number of foreigners residing in the open ports in 1891 was 9,067. There were 345 British commercial houses, in which 3,746 individuals were employed; 27 American, having 1,209; 31 Japanese, with 883; 24 French establishments, with 681; 82 German, with 667; 7 Portuguese, with 659; 5 Spanish, with 316; 1 belonging to Sweden and Norway, with 270; 12 Russian, with 146; 4 Italian, with 133 resident foreigners; and Austria and Denmark were represented by 5 concerns, employing 210 foreigners, while there were 36 Dutch and 111 other Europeans. About half of the foreign mercantile population is in Shanghai. The population of Pekin, the imperial city, is variously estimated to contain from 500,000 to 1,650,000 inhabitants. The population of the other great cities is likewise very uncertain. The commonly accepted estimates for the largest of the treaty ports are: Canton, 1,600,000; Tientsin, 950,000; Hankow, 800,000; Foochow, 686,000; Shanghai, 400,000; Ningpo, 250,000.

Finances.—The accounts of the Imperial Government are not published, excepting the receipts from maritime customs. The revenue from ordinary sources for 1889 was estimated at 78,500,000 haikwan taels, the sources of which were: Land tax collected in money, 10,000,000 taels; commuted likin tax or transit duty on imported opium and other merchandise, 13,000,000 taels; maritime customs, 15,000,000 taels; salt duty, 12,000,000 taels; licenses, stamps, and registration, 15,000,000 taels; other sources, 3,500,000 taels. The income of the Government is more than this, and when a war or famine or other emergency arises the Government can multiply its receipts, especially by forced contributions from the officials who have grown rich in the provincial administrations. The Chinese Government has thus far avoided incurring a foreign debt beyond two loans, one of £627,675, contracted in 1874, and one of £1,604,276, issued in 1878, both secured on the customs revenue

and paying 8 per cent. interest. The internal debts amounted in 1882 to 80,000,000 taels.

Navigation.—During 1891 there were 38,992 vessels, of 27,710,788 tons, entered and cleared at the ports of China. Of these, 28,040, of 26,720,841 tons, were steam vessels. Of the total number, 17,718, of 17,438,995 tons, were British; 11,802, of 6,642,273 tons, Chinese; 2,520, of 1,911,897 tons, German; 604, of 515,236 tons, Japanese; 172, of 264,660 tons, French; and 113, of 67,095 tons, American. The heavy coasting trade is carried on in native junks and foreign-built vessels belonging to Chinese and under foreign flags. There is a large Chinese steamship company whose vessels ply between the ports of China and visit other ports of the East.

Commerce and Production.—The official returns for imports in 1891 make the total value 184,008,863 haikwan taels, against 127,093,481 taels in 1890, 110,884,355 taels in 1889, and 124,782,893 taels in 1888. The exports for 1891 were valued at 100,947,849 taels, against 87,144,480 taels in 1890, 96,947,832 taels in 1889, and 92,401,067 taels in 1888. The net imports are here meant, the value of re-exports having been deducted; but the values are based on the prices in the ports of China, which include the duty paid and the cost of landing and storage and the merchants' profit. When these are deducted, the value of the imports for 1891 is found to be 115,023,051 taels. The value of the exports, on the other hand, is placed too low, as the export duty, the exporter's profit or commission, and the cost of packing, storing, and shipping, should be added to obtain the true export value, which is 115,553,640 taels for 1891. For 1892 the official value of the imports was 135,101,198 taels, and of the exports 102,583,525 taels. The values in haikwan taels of some of the principal imports for 1891 and 1892 are given in the following table, the exchange value of the haikwan tael being in 1892 about \$1:

IMPORTS.	1891.	1892.
Cotton goods.....	53,290,200	52,707,482
Opium.....	25,338,156	27,418,152
Metals.....	7,254,448	7,180,866
Rice.....	6,597,259	5,826,415
Kerosene oil.....	5,267,061	5,049,558
Woolen goods.....	4,696,256	4,794,280
Fish.....	2,640,444	2,656,228
Sugar.....	1,774,111	2,447,807
Coal.....	1,708,298	2,007,685
Matches.....	1,506,591	1,428,596
Raw cotton.....	1,196,262	1,157,001
Timber.....	895,840	1,062,227
Seaweed.....	765,707	1,065,318
Bêche-de-mer.....	654,954	1,080,905
Aniline dyes.....	976,016	978,921
Ginseng.....	710,141	847,466
Flour.....	704,869	790,905
Machinery.....	900,550	598,449
Birds' nests.....	411,508	449,356
Mushrooms.....	402,865	488,014

The quantity of opium imported decreased from 77,227 to 70,929 piculs of 133½ pounds. The import of gray shirtings increased from 5,985,598 to 6,460,792 pieces, and in value from 10,206,236 to 10,992,034 taels; that of Indian cotton yarn from 1,138,084 to 1,254,490 piculs, and in value from 19,396,855 to 21,056,464 taels. Of the kerosene oil, 89,348,477 gallons, valued at 4,308,839 taels, was American, and 10,000,902 gallons, valued at 958,212 taels, Russian in 1891; and

in 1892 the American import was \$1,864,018 gallons, valued at 4,081,706 taels, and the Russian 8,649,818 gallons, valued at 967,847 taels.

The values of the principal exports for 1891 and 1892, as returned by the Imperial Maritime Customs, were, in haikwan taels, as follow:

EXPORTS.	1891.	1892.
Silk:		
Raw white.....	22,109,749	22,519,567
Piece goods.....	4,962,454	4,992,908
Refuse.....	2,922,928	2,608,745
Raw yellow.....	2,402,743	2,092,128
Wool.....	1,512,670	1,479,233
Pungoes.....	302,085	471,944
Opium.....	860,836	414,488
Other.....	362,948	579,167
Tea:		
Black.....	34,979,309	19,989,599
Green.....	8,565,911	8,446,604
Brick.....	2,928,788	2,219,179
Tea and dust.....	74,628	198,165
Raw cotton.....	8,441,129	2,040,861
Straw braid.....	1,605,344	2,166,456

The total export of tea in 1891 was 1,750,084 piculs, of which 636,407 piculs went to Russia, 411,284 to Great Britain, 375,696 to the United States, 178,460 to Hong-Kong, and 101,557 to Australia.

The trade with the principal countries in 1891 is shown in the following table, giving the values in haikwan taels;

COUNTRIES.	Imports.	Exports.
Hong-Kong.....	68,167,956	87,797,661
Great Britain.....	29,895,087	18,771,567

Russia in Europe and Asia.....	1,061,478	11,139,038
Japan.....	5,704,743	5,901,828

Communications.—The railroad from Tongku, at the mouth of the Peiho, to Tientsin, 27 miles, begun in 1888 as a result of the alarm caused by the French war of 1884, carried up to the Tungshan and Kaiping coal mines, a distance of 67 miles, for strategical and speculative commercial purposes, through the influence of Li-Hung-Chang, has since been prolonged toward the terminus of the Great Wall at Shanhaikwan, and is being pushed into Manchuria toward Kirin, as an answer to the Russian Transiberian Railroad to Vladivostok and a warning that China will defend Manchuria against Russian aggression more strenuously than she did the provinces south of the Amur. At one time the superstitions and economic prejudices against railroads, which caused the short line from Woosung to Shanghai to be torn up in 1877, having again gained the upper hand in court and governing circles, the work was stopped, but the influence of Li-Hung-Chang finally triumphed.

The project of a branch road to the river port of Tungchow, 18 miles from Peking, nevertheless had to be abandoned in submission to Chinese conservatism, and because some statesmen thought that a railroad to the capital would be likely to fall into the hands of a European enemy in case of war and be used to transport the invaders. The opposition to railroads in China arising from the dread that they would offend the *Feng Shui*, or spirit powers, and disturb the repose of the dead, has less practical force than the economic argument that they would throw millions of coolies, carters, and junkmen out of employment. The more intelligent of the leading statesmen, even those who are most strongly opposed to the spread of foreign influence and ideas, and favor the movement to exclude foreigners from the position they have already gained, are anxious to have a system of railroads that will enable the Government to collect forces and materials at threatened points in the event of war. Through their influence telegraphs have been extended into the remotest provinces, despite the superstitious objections of the ignorant. The Chinese system is now joined to the Russian, and messages can be sent to all parts of the world by the Chinese telegraph authorities, who made the prices by the overland telegraph to Europe 15 per cent. less than by cable. The long-expected era of railroads seemed to be at hand, and European financiers, manufacturers, and engineers rushed into a contest for contracts to float loans, furnish rails, and build the lines. The imperial sanction was retracted because cautious statesmen feared that to pledge the resources of the imperial treasury for a foreign loan and take a large additional number of foreigners into the service of the Government might give occasion for diplomatic and military interference, and that this danger to the security of the empire would more than counterbalance new and untried methods of transportation. These counsels appear to have convinced the Chinese that the network must not be undertaken until it can be built with Chinese capital and with steel rails manufactured in Chinese furnaces from Chinese iron.

Defense.—China has arsenals or dockyards fitted with the most modern appliances at Foochow, Nankin, Shanghai, Tientsin, Port Li, Wei-Hai-Wei, Port Arthur, and Kirin, which are capable of turning out turret ships, torpedoes, cannon of large caliber, Gatling guns, rifles, cartridges, powder, and gun-cotton. Her navy, especially the northern squadron, is a powerful force, provided the *personnel* and organization are equal to a conflict with European ships. The northern squadron consists of 4 seagoing barbette armor-clads, one of them having a displacement of 9,850 tons, 1 turret ship, 5 deck-protected cruisers, each of 2,200 tons, 4 torpedo cruisers, 28 first-class torpedo boats, 4 small torpedo boats, and 11 gunboats. In the Foochow squadron there are 9 cruisers ranging from 1,800 to 2,480 tons, besides 8 gunboats and 9 dispatch boats. The Shanghai flotilla contains 1 armor-clad frigate, 1 gunboat, and 6 floating batteries. The Canton flotilla consists of 13 gunboats. The Manchu army, or Army of the Eight Banners, which constitutes the ancient military force of the empire, numbers about 288,000 men, of

whom only 90,000 have been instructed in European tactics and armed with modern weapons, including the guard of 18,000 men at Peking. In each province of Manchuria and Mongolia is a separate body of troops, 23 independent commands altogether. Mongolia has also its native militia, numbering 117,000 men. The native militia of Tibet forms a force of 64,000 men, of whom 30,000 are constantly with the colors. The Chinese troops, or Army of the Green Flag, number 539,000 men, not including 98,000 *yung* or volunteers and 161,000 *lien-chun* or militia available in case of war. In the province of Pechili alone are 99,000 well-instructed soldiers, with 581 guns, of which 245 are of modern make. The province of Kwangsi and the island of Formosa are occupied by strong military forces trained and armed in European fashion. The troops of Eastern Turkestan and the territories of Kulja and Tarbagatai number 30,000 men, of whom 8,100 have received military training. The total numerical strength of the Chinese army is 1,088,000 men, but of these only 387,000 are supposed to be efficient enough for a campaign against disciplined troops. An English officer, Admiral Lang, was long employed in organizing the naval force, and a German military engineer, Gen. von Hanneken, in fortifying the coasts and improving the arsenals. Both have been dismissed, and Chinamen will continue their work.

The Antiforeign Movement.—There was in 1893 a recrudescence of the antiforeign and anti-Christian feeling that manifested itself in the outbreaks of 1891. Investigation of those occurrences proved that influential scholars, and even officials, were the prime movers, and that the scurrilous pamphlets and placards reviling the Christian religion were written by *litterati* of rank. Chu Han, the head of the propaganda in Hunan, seemed to have sympathizers in high places in Wuchong, Peking, and Tientsin, some of them mandarins even, who held official intercourse with foreigners. He was not punished or degraded in rank, only reprimanded in an ambiguous imperial proclamation which might be interpreted as covert praise. The murderers of Green and Argent were not brought to justice, and the leaders of the mob that drove the Europeans out of Ichang and sacked and destroyed their buildings were not even reprimanded. A pecuniary indemnity was paid for actual damages, and the outrages were condemned in formal proclamations. The European governments were not disposed to exact more, nor was the Chinese Government willing to yield more in the face of the truculent hostility to foreigners that pervades all classes in China at the present day. In former ages the Christian propaganda was carried on in China without hindrance, but since the treaties that closed the first China war in 1842 and the second in 1860 imposed on the Government the duty of countenancing and protecting the missionaries and their converts, and especially since the recent French war, the sight of a missionary or a native Christian is to Chinamen a reminder of national defeat and humiliation, and many of them consider Christianity a serious danger to the social system and the existence of the state, remembering the Taiping rebellion, by which over 20,000,000 of their countrymen perished, led, as it was, by a Christian

convert with the object of Christianizing China. On Dec. 2, 1892, there was an antiforeign riot at Ichang, a purely local and spontaneous outbreak, but an indication of the influence on the masses of the antipathy and distrust manifested toward Europeans in high quarters. Two weeks before, while workmen were digging the foundations for some houses that a foreigner was having built, one of them drove his spade through an old grave. An aged woman who was looking on denounced him as the desecrator of the tomb of her ancestor, and went round the town beating a gong and railing against foreigners. The authorities, at the instance of the British consul, warned her, and some days later, when she appeared again and incited a mob to throw stones at the new houses, posted a placard warning every one against interfering with foreigners. The town was full of students, and the proclamation simply spurred them on to disorder. They incited a mob to pelt a Scottish missionary named Cockburn when he appeared in the street on the following day, stopped work on the obnoxious buildings, and finally, when the foreign officials of the customhouse were receiving a new governor, they so inflamed the populace that the foreigners were mobbed and compelled to flee to the customhouse compound, into which some of the students forced their way, and were beaten after the gate was shut. The riot went no further because a party of blue-jackets was landed from the British warship "Esk." Not long after this a ferocious attack was made on the native Christians in the town of Teatsui, 70 miles northeast of Amoy. A band of ruffians, headed by *litterati*, fell upon a company gathered for worship, beat some of them to death, and subjected others to torture. The ringleader was arrested a few days later, and this so incensed the people that they made a fresh attack on the Christians residing in the city, and stoned the English missionary, the Rev. R. M. Ross, who fled to another city under the protection of an escort of soldiers furnished by the magistrate. Another antimissionary outbreak occurred at Szechuen, which was quelled by the authorities after the English ladies of the mission had been compelled to take to flight. An attempt was made to destroy the Italian convent at Hankow, which ended in failure. On July 1 two Swedish missionaries, named Wikholm and Johansen, were murdered at Sungpu, in the province of Hupeh, 56 miles from Hankow. They had come there in April to establish the first Christian mission in that fanatical town, and instead of making converts they went about in constant fear for their lives. They knew from their Chinese servants the day set for their murder, and asked the mandarins for protection, but got none. The Taotai at Hankow had learned of the plot, and warned the Swedish consul to call the missionaries away, but the latter said that the Chinese authorities were obliged by the terms of the treaty to protect missionaries. On the day named a mob surrounded the house of the missionaries and drove them out and over the roofs with stones, until they fell into the street and were beaten to death, a petty magistrate and a small military guard having feebly attempted to avert the tragedy. In the same month the Italian mission at Mienyang, 90 miles southwest

of Hankow, was destroyed in a riot; and a few weeks later the French Catholic mission at Lichuen, in the same province, was attacked, and the priests barely escaped with their lives.

The Audience Question.—In no capital in the world are the relations between the representatives of foreign powers and the government of the country similar to or as unsatisfactory as they are in Peking. The Chinese, in pursuance of their policy of seclusion, have arranged to shut out the members of the diplomatic corps from any direct communication with the Government itself. For the nominal purpose of discussion, but more frequently for the purpose of avoidance and delay, foreign questions must be presented to the Tsungli-Yamen, which is a numerous commission composed of officials whose real authority and experience are confined to other departments of the Government, and which does not pretend to decide the questions that are submitted to it. The functionaries who are responsible for the decision the ministers of the Western powers have no means of finding out. They are treated as unwelcome intruders, emissaries of the enemy, who obtained for them the footing that they have by superior force. No official of standing will associate with a European, and except for purely ceremonious visits the foreign diplomats never see the inside of a Chinese minister's house. At the end of the eighteenth century the British minister, Lord Macartney, was received by the Emperor. No audience was again granted till in June, 1873, the Tungche Emperor received the entire diplomatic corps. It was discovered later that Tse-Kung-Ko, where the audience was given, was the hall of tributary nations. The diplomatic corps pressed for a proper reception, but declined to be received again on such a mean footing, until in March, 1891, after they had secured the right to an annual audience, recorded in the imperial decree of 1890, they consented to have the observance take place in the same building—only for one time, they stipulated. Since the Chinese mind is impervious to the idea of the equality of nations, the diplomats have been inclined to recede from this position and accept the advantages of an annual repetition of the function, with the exception of the French and Russian representatives, who hold firmly to their declaration. In October, 1891, the Austrian minister presented his credentials to the Emperor in the Cheng-Kuan palace. In December, 1892, the newly appointed British minister, Nicholas Rodenrick O'Connor, was received in the same palace and with somewhat more distinction.

Famine and Flood.—A severe drought, which lasted six months, reduced the population of the northern part of Shansi and a section of Mongolia to poverty and distress in the early months of 1893. The people of the famine-stricken region wandered southward in the hope of obtaining succor, and numbers perished of cold and hunger. Traders who met them bartered food for all their possessions, and even their children—a camel load of wheat for a girl of marriageable age.

In March the Hoang-Ho overflowed its banks, and flooded about 400 villages. In July and August more disastrous floods occurred in the valley of the Yangtse-Kiang and in the country drained by the Peiho and the Grand Canal. The

plain between Peking and Tientsin was converted into a lake, and countless people were swept away by the rushing waters. The loss of life would have been much greater but for the indefatigable labors of the Viceroy Li-Hung-Chang, and the great number of boats which he and the Taotai of Tientsin and the customhouse authorities were able to send out. At Kinchow, a city on the Yangtse below Ichang, the embankments of one of the tributaries of the great river gave way, and the escaping waters demolished hundreds of houses, and swept over the plains, carrying away whole villages and their inhabitants.

CHRISTIAN ENDEAVOR SOCIETIES.

Including nearly a thousand societies in foreign lands, the secretary of the United Society of Christian Endeavor reports the whole number of local societies for 1893 as 26,284, with a membership of 1,577,040. Outside of the United States, there are in Canada 1,882 societies; in England, more than 600; in Australia, more than 525; in India, 71; in Turkey, 41; in New Zealand, 39; in Japan, 34; in Madagascar, 32; in Scotland, 30; in Mexico, 22; in the West Indies, 19; in Africa, 15; in China, 14; in Ireland, 10; in France, 9; in Samoa, 9; in the Sandwich Islands, 6; in Bermuda, 3; in Brazil, 2; in Persia, 2; and in Chili, Columbia, Norway, and Spain, 1 each. The net gain in the number of societies for 1893 was 5,276, against 4,806 in 1892. The model constitution has been translated, and is printed in the English, German, Swedish, Norwegian, French, Danish, Dutch, Spanish, Chinese, Japanese, Tamil, Telugu, Hindi, Hindustanee, Bengalee, Marathi, Arabic, Turkish, Bulgarian, Armenian, and modern Greek languages. The greatest proportionate increase in the number of societies in the United States in the past year was in New Mexico; the greatest absolute increase was in Pennsylvania. Besides the regular societies mentioned above, 4,136 junior societies are enrolled. Thirty evangelical denominations are represented in the fellowship of the societies, among which the Presbyterians lead in the number of societies, and are followed, in order, by the Congregationalists, Baptists, Disciples of Christ and Christians, Methodist Episcopal Church, Methodist Church in Canada, Presbyterian Church in Canada, Methodist Protestant Church, etc. Among the noteworthy events of the year's history of the society are mentioned the journey of President Clark around the world; the marked favor gained in all evangelical denominations save one; the emphasis given to systematic benevolence; the energetic support given to missionary and evangelistic work; the formation of senior societies of Christian Endeavor; the organization of floating societies of Christian Endeavor among the life-saving stations on the seacoast, of which there were 21; the formation and growth of the Traveler's Union of Christian Endeavor; the society among the policemen; the societies in the army and navy and among inmates of prisons and houses of correction; work for temperance; and open hostility to every plan for destroying in any way the sanctity of the Sabbath day. The publication work of the society, which is self-supporting, and the circulation of local Christian Endeavor papers and of the general denominational papers are

also mentioned. Local unions, in which the several church societies in a single city are represented in a joint organization, have been formed in several cities.

The twelfth International Convention of the Christian Endeavor Societies met in Montreal, Canada, July 5. Seventeen thousand delegates were in attendance. The meetings were held in two sections. The first leading subject discussed was "The Junior Christian Endeavor Society: Its Past, its Present, its Future," on which the Rev. J. W. Cowan, who founded the first junior society, spoke, describing the beginning of this movement. Other addresses were on "The Possibilities of the Junior Society," by the Rev. Dr. Wayland Hoyt; "Junior Methods of Work," by the Rev. H. N. Kinney; "Junior Christian Endeavor in Foreign Lands," by Mrs. Francis E. Clark. Other subjects discussed by speakers or in "parliaments" were "Soul-Winning"; "What Evangelistic Work is your Society doing?" The particular features of the Christian Endeavor Society—the pledge, the consecration meeting, and fellowship; "The Christian Endeavor Society the Typical Church Institution"; "Our Relationship to the Sunday School"; "Missions," under several subheadings; "Temperance"; "The Religious Press"; "Social Purity"; "Foes to Society"; "The Sanctification of Common Life"; "Every Man's Vocation a Call of God"; "Spiritual Power." The conception of a "Senior Endeavor Society" was explained by the Rev. C. P. Mills. President Francis E. Clark, the originator of the societies, who had been around the world visiting the organizations in all countries, addressed the convention on the subject of "Larger Things for the Year to come," and urged the three objects of the cultivation of a larger and more intelligent spirit of patriotism and good citizenship; a more practical exemplification of the missionary spirit; and an enlargement of interdenominational, international fellowship. Resolutions were adopted reaffirming the principles of personal devotion to Christ, the covenant obligation embodied in the prayer-meeting pledge, constant religious training for all kinds of service, loyalty to the local Church, interdenominational spiritual fellowship, and the free action of the individual conscience; recommending wherever feasible the holding of meetings at the life-saving stations and lighthouses and work among the police forces, charitable and reformatory institutions, commercial travelers, and men employed on railroads; inviting all societies that are on the basis of the prayer-meeting pledge and the consecration meeting to join the Christian Endeavor brotherhood by uniting with their own denominational title the interdenominational title; and condemning the opening of the gates of the Columbian Fair to the public at Chicago on Sunday.

CITIES, AMERICAN, RECENT GROWTH OF. This subject has been treated in every volume of the "Annual Cyclopædia since 1886, the total number of cities described in the six volumes preceding the present one being 397. In this volume the number is increased to 424.

Alameda, a city of Alameda County, Cal., on the east side of San Francisco Bay, 7 miles from San Francisco. It is south of Oakland, being

separated therefrom by San Antonio creek, and 3 bridges span that wide but shallow estuary. Its site is a peninsula 4 miles long and 1 mile wide, and on the outlying Bay Farm island. The peninsula (formerly styled Encinal de San Antonio) rises but a few feet above the sea level. On the bay shore there is a good sandy beach, and Alameda is a popular bathing resort; but on the creek shore there are salt marshes, and a rip-rap wall is greatly needed to keep out the sea. The population in 1870 was 1,557; in 1880, 5,000; in 1890, 11,000; in 1893, 14,000. The city owns its own electric plant, has an effective fire department, a free library, a good water supply from the artesian wells at Fitchburg and High Street, and a sewer system considered the best in California. Alameda has good public schools and a high school, the school property amounting to \$180,000. The traveling facilities are exceptionally good, the Southern Pacific having possession of two railway lines, which run alternately every fifteen minutes to Oakland and connect by ferries with San Francisco. An electric line passing through the middle of Alameda to Broadway, Oakland, is now being extended to Oakland's business center. There are 14 churches, 4 daily newspapers, 1 weekly, 2 banks, and several manufactories, as the Pacific Coast Oil Works, Pacific Coast Borax Company, which uses the crude borax mined near Death valley in San Bernardino County, the Clark Pottery, and planing mills. The Occidental Smelting and Refining Company, have also secured a 25-acre tract for a smelting plant, which it is estimated will cost \$1,000,000. The city has 50 miles of sewers, macadamized streets, and artificial stone sidewalks. About 75 per cent. of the inhabitants own their own homes, which are largely built of wood, brick and stone being unpopular in California on account of earthquakes. The oldest maps of the town (1854) show that it was originally located in the vicinity of High Street, and that the entire Encinal was owned by William W. Chipman and Gideon Aughinbaugh. Some years ago an appropriation was made by Congress for the improvement of Oakland Harbor, which included the building of a tidal canal through the isthmus that connects Alameda with East Oakland. A bill is now (1893) pending in Congress for an additional appropriation to finish the tidal canal and to dredge Oakland harbor. The climate of Alameda is equable, the thermometer ranging from 40° to 70° above zero. Almond, pepper, orange, and magnolia trees bloom out of doors, as well as the fruit trees of the temperate zone. Hon. J. A. Waymire's experiments in raising trees of various climes on his Oak Shade Tract have attracted much attention, but the raising of eucalyptus trees has been wholly abandoned on the Encinal and in many parts of California.

Alexandria, a city and port of entry of Virginia, county seat of Alexandria County, on the right bank of the Potomac, 7 miles below Washington. It is bounded on the west and south by Fairfax County, and by the last Federal census has a population of 14,339. In 1870 it had 13,570, and in 1880, 13,658. In 1669 a patent was obtained for the land on which the city now stands, and the first settlement, known as Bellehaven, was made in 1695. In 1749 William

Ramsey, John Carlyle, and others founded Alexandria, with jurisdiction over 66 acre lots, 9 streets, a market space, and 2 public landings, Lord Fairfax and Lawrence Washington being among the trustees. Public warehouses and wharves were built out of the proceeds of lotteries. In 1780 the articles of incorporation granted in the year previous took effect, with 12 councilmen, who elected the mayor and other officers from their number. In 1796 the town was made into four wards and policed. About the close of the century it was ceded to the Federal Government as part of the District of Columbia, and in 1804 it received a charter from Congress. In 1846 it was ceded back to the State of Virginia. During the period between 1791 and 1821 the city paid into the Treasury nearly \$4,000,000 in customs duties, and about \$173,000 on post-office account. The river, a mile wide at this point, affords an excellent harbor for the largest vessels. A report of the Board of Trade, published two years ago, shows the annual volume of business to be \$3,955,000; the tonnage by water in coastwise and foreign vessels, 60,000 tons; by river, 18,000 tons; and by rail, 90,000 tons. In 1891 the total tonnage of the port was 101 vessels, the value of the imports entered being \$17,332. Transportation facilities are afforded by the Pennsylvania, the Chesapeake and Ohio, the Washington and Ohio, and the Virginia Midland Railroads; there is a steam ferry line between the city and Washington, with boats running hourly, and there is daily communication by steamer with Norfolk, as well as triweekly with Baltimore. A considerable tonnage of coal from mines around Cumberland, Md., is received by means of the Chesapeake and Ohio Canal, which before the civil war was one of the large feeders of the city. An electric railway, which passes through the main streets of the city, has been constructed to Mount Vernon. A charter for a street railway has been obtained, and surveys made. Gas and electric lighting are in use. Water of great purity is supplied from two large reservoirs, on an eminence a mile west of the city, one of which, ten times larger than the other, is kept as a reserve in case of drought. The volunteer fire department consists of 8 steam fire engines, 1 hand engine, and a hook and ladder company. The streets are paved. The city has increased at the rate of about 100 houses a year since the free mail delivery was established, and about \$160,000 are expended in building improvements each year. Many of the old buildings possess historic interest, such as the Carlyle House, occupied by Braddock in 1755, which was often visited by Washington; the house where Lafayette was entertained in 1824; Christ Church, where Washington worshiped, and his pew is still shown; the Braddock House, with its colonial furniture and high ceilings; and the old City Hotel, where Washington's headquarters were once established. Pollock Church, the parish church of Mount Vernon, six miles from the mansion, was built in 1768-'70 from plans drawn by Washington, who was a vestryman of the parish for twenty years. There is 1 Catholic church in Alexandria, 1 Baptist, 1 Lutheran, 8 Episcopal, 2 Presbyterian, 4 Methodist, 1 Methodist Protestant, 1 Jewish synagogue, and

a dozen buildings used by colored people as places of worship. There are 2 brick and 2 frame public-school buildings. The public schools employ 32 teachers; the attendance in 1893 was 1,162 whites and 677 colored. The first public school was erected in Alexandria in 1785, and was endowed by Washington with £1,000. The present system of public instruction was organized in 1871. In addition there are 2 parochial schools, a military, a Catholic, and one other academy; also 3 female institutes. A mile from the city are the buildings of the Episcopal Theological Seminary and High School, which commands a fine view of Washington. Two national banks have an aggregate capital of \$200,000; there are 14 building and loan associations, and 8 local insurance companies. One weekly, 1 triweekly, and 2 daily newspapers are published, the "Gazette" being one of the oldest in the country. A new opera house has been completed recently, and there are 7 halls and a large public library. There are in all 281 firms and companies engaged in manufacturing, and the capital so employed is \$1,104,480. In 1892 goods were manufactured to the amount of 2,500,000, and the monthly pay roll is \$70,000. One of the largest establishments is a brewery, capitalized at \$300,000, the plant of which covers two squares, and which manufactures its own ice. Against 26,000 barrels of beer which it turned out in 1883 it showed 60,000 barrels in 1890, and its capacity has been increased to 100,000 barrels. There is also a tannery, which with its branch at Sperryville tans 30,000 hides yearly, consumes 6,000 cords of oak bark, and disburses \$3,000 monthly in wages. The shops of the Virginia Midland Railroad are here, and the company expends nearly \$500,000 yearly. Other establishments include 3 brick works, with a capacity of 20,000,000 bricks yearly, 3 fertilizer factories, a steam cracker and candy factory, 1 shipyard, with 2 marine railways, representing a capital of \$100,000; 3 iron foundries and a vulcanizing company, 2 machine shops and 1 boiler works, 4 lumber mills, and 14 cigar factories. In 1891 the lumber trade amounted to 12,000,000 feet. There is a national cemetery here, and the United States Government has constructed a fine macadamized roadway and brick pavement thereto. There is a United States Post-Office and Customhouse building and a Young Men's Sodality Lyceum (Roman Catholic).

Baton Rouge, a city of Louisiana, capital of the State and of East Baton Rouge Parish, on the eastern bank of the Mississippi, 120 miles north of New Orleans. By rail it is 89 miles from the same city. The situation is picturesque, on a bluff about 25 feet above high-water mark, and commands an extended view of the wide-spreading lowlands of cotton and sugar-cane plantations. Much of the primeval forest remains intact, contiguous to the city on the north and east. As early as 1838 the city was the seat of a college, and from 1847 to 1864 it was the capital of the State. In the latter year the capital was removed to New Orleans, but it was restored in 1880. It is the third city in size in the State. In 1880 the population was 7,197, and it increased to 10,478 in 1890. Its principal growth has been within the past decade, when it was

connected with the world by the two trunk lines of railroad, the Louisville, New Orleans and Texas and the Texas and Pacific. It has 2 banks, an insurance company, a board of trade, systems of street railway, electric lighting, and water works, 1 daily and 3 weekly newspapers, churches of all denominations, a good public-school system, and private institutions for the higher education of women. The State University and Agricultural and Mechanical College is here, as are also the institution for the education of the deaf and dumb and blind (established in 1852), and the State Prison. There is a national arsenal and barracks, and a military hospital. The Statehouse is a handsome building. The industries of the city include a cotton-seed-oil mill, a brickyard, an artificial ice and cold-storage company, with a building and plant that cost \$100,000 and has a daily capacity of 60 tons of ice, a small broom factory, a sash, door, and blind factory, several cotton and moss ginneries, and a lumber company operating a sawmill within the city limits which cuts 40,000 feet of lumber a day and manufactures shingles by the million. Thousands of cords of ash are shipped annually to New Orleans for firewood, and white oak is cut into pipe staves and shipped to Europe. Ten miles from the city a large sawmill has been erected for the sole purpose of squaring out logs of oak, gum, and hickory for shipment in the log to England. Cypress is abundant and cheap. The rich alluvial lands south and west of the city produce from 2,000 to 4,000 pounds of dry sugar to the acre; 60 bushels of rice, and 50 barrels of corn are not an unusual yield. Vegetables and fruit are also raised in abundance. The forests are full of the *magnolia grandiflora* and yellow jasmine, and the flowers bloom all winter in the city gardens.

Bayfield, a city of Wisconsin, county seat of Bayfield County, on Lake Superior, 18 miles north of Ashland, and about 66 miles east of Duluth. Its harbor, directly under the lee of the Apostle Islands, possesses great natural advantages, and has been reported by United States engineers as requiring no improvements. As it lies on the route between the shore ports, the steamers touch regularly at the wharf. The city has an altitude of 616 feet. The population in 1890 was 495; in 1890, 1,373. It is reached by the Chicago, St. Paul, Minneapolis and Omaha Railroad, and is a health resort, particularly in cases of hay fever. Its three leading industries are lumber, brownstone, and fish. A logging railroad has been built into the forests adjacent, and a towing company is one of the growing institutions. During the season of 1892 it towed 41,000,000 feet of logs. One lumber company has constructed a wharf of its own, and in the season of 1892, from May 1 to Nov. 19, it turned out 18,000,000 feet of merchantable lumber. A box factory is in operation. From Bayfield was shipped to the World's Fair at Chicago the great brownstone monolith, 107 feet high, which will remain as a permanent attraction on the grounds, as well as the 4 obelisks forming part of the State exhibit. The output from one brownstone quarry on Bass Island, 8 miles from the city, was 300,000 cubic feet in 1892. About 200 persons are employed in fishing among the Apostle Islands, for which about 25 sailing vessels are re-

quired. One fish-packing company owns 8 steam tugs and an entire block of the lake front, with 2,000 feet of wharf room. About \$160,000 were expended in building improvements in Bayfield in 1892. There are 2 banks, 1 national; a high school, a public-school system into which the kindergarten has been introduced, and a Catholic parochial school; Presbyterian, Methodist, Catholic, Episcopalian, Swedish Lutheran, and Scandinavian Congregational churches; a Catholic orphanage, and a three-story brick building for the use of resident and traveling priests and brothers of the Franciscan order. Water and electric lighting are supplied by private companies, and there is a hose company. The county newspaper is issued weekly. The Masons and Odd Fellows have halls, and there is a Grand Army post.

Cairo, a city of Illinois, county seat of Alexander County, known as the Delta City, at the confluence of the Ohio and Mississippi rivers, at the southern extremity of the State, 175 miles below St. Louis. It had a population of 10,324 by the last Federal census, and now claims 14,000. In 1880 it had 9,011. The importance of the site of the city was realized as early as 1818, when a company was formed to improve it, which was short-lived. In 1838, when a charter was given to the Illinois Central Railroad, the Cairo City and Canal Company was organized, largely with English capital, and large mills, an immense foundry, and iron works were erected, and a population of 2,500 was attained. The finest marine ways and floating docks on the river were also built, which afterward were taken to Algiers, La., and during the early part of the civil war did a great deal of work for the Confederacy. Three years later, on the suspension of building operations on the Illinois Central, the town declined, and was almost abandoned, having a population of but 250, living in flat-boats along the levees. A trust company, which is still in existence, was subsequently formed for the development of the place, and in 1855 the first train of cars entered the city. In addition to the levees, an embankment 80 feet wide and 10 feet high was begun in 1857, but in 1858 the town was nearly destroyed by a flood. The levees are now more than 7 miles in extent, and tower 55 feet above low-water mark. Inside the streets have been filled to a height approximating the levees. They are paved with a material known as Elm concrete (a species of broken stone mingled with iron ore), found in Alexander County, which is practically indestructible, as it becomes harder and more compact with use. The 7 miles of river front has always a depth of 30 feet of water, and the city has a larger number of arrivals and departures of vessels every year than any other inland port in the United States, as low water and ice never interfere with navigation of the Mississippi below this point. In May, 1892, the United States war ship "Concord" arrived in the harbor, by order of the Secretary of the Navy, and for four days lay at anchor in 10 fathoms of water. The Illinois Central Railroad bridge across the Ohio river, with the approaches, is 4 miles in length, and cost \$4,000,000. Its 13 piers of limestone, 58 feet high, rest upon caissons of timber sunk 70 to 80 feet below the bed of the river and filled with concrete. The Mobile and Ohio Railroad crosses the same river by a trans-

fer-boat system. The same system is employed by roads crossing the Mississippi. In addition to the 2 railroads named, the city has 4 trunk lines—the Missouri-Pacific, the Iron Mountain, the St. Louis and Southwestern, and the "Big Four." In addition to the St. Louis and New Orleans and the Ohio river packets, the city has a local business served by local packets. These ply between Cairo and Paducah and Gayoso. The annual shipments by rail and river from the city aggregate nearly \$80,000,000, divided as follows: \$6,500,000 by river south; \$4,500,000 by river north; \$30,000,000 by rail south, and more than \$37,000,000 by rail north. There are 4 banks—2 national and 2 savings; 3 building and loan associations; a Federal customhouse and post-office, which cost \$271,260; a county courthouse; an opera house, which cost \$50,000; a United States Marine Hospital; an infirmary, under the care of the Catholics; a private sanitarium; a public library, the gift to the city of Mrs. Anna E. Saffone, valued at \$50,000; several hotels; 8 public-school buildings; churches of various denominations; and 2 lines of street cars—1 electric, each operating 5 miles of track; both reach St. Mary's Park and the grounds of the Three States Fair and Racing Association. Gas and electricity are employed in lighting. The water works, erected at a cost of \$100,000, have 20 miles of mains and a capacity of 2,000,000 gallons daily. There is a volunteer fire department and a thorough sewerage system. Three daily and 5 weekly newspapers are published. There is an active board of trade. The city is the great distributing point for the product of the immense hardwood forests of Missouri, Arkansas, and Mississippi—in fact, of all the vast country through which the Ohio and Tennessee rivers flow, and also that which is reached by the great lines of railroad centering here. Hardwood lumber is turned out by the sawmills, which in a radius of 40 miles from the city number 860. Twenty-five firms and corporations handle the lumber business in and about the city, and among the factories is to be noted that of the Singer Sewing Machine Company, employing 170 men and boys, and making the tables of all the sewing machines turned out by the factory at South Bend, Ind., and a portion of those for the factory at Glasgow, Scotland. The establishment has a capacity of 1,500 tables daily. Another firm, turning out the various kinds of wagon and agricultural-implement stock, consumes its own sawdust and shavings by a system of automatic collectors and boiler feed. This department consumes 15,000 feet of oak and about 25,000 feet of gum, cypress, and poplar daily; and in another building curtain poles are fashioned at the rate of 9,000 a day, equipped with rings made also in the establishment. A large company, capitalized at \$200,000, manufactures, in addition to all classes of building and furnishing material, egg cases, and fruit and vegetable packing boxes. Another, with a capacity of 1,000,000 feet of lumber a month, ships sycamore and poplar logs to Chicago to a packing-box factory; and there are also various concerns manufacturing barrels, staves and heads, and hoops. In all, there are more than 30 manufacturing establishments, employing over 1,000 men. The city is the natural gate-

way between the grain fields of the Northwest and the consuming markets of the South and Southwest, and in 1891 20,000,000 bushels of grain were shipped from the elevator of the Illinois Central Railroad to New Orleans, for export to Europe and South America. For 100 miles in either direction the country is one vast cornfield. The traffic of the lower Mississippi is greatly augmented by the output of the Ohio river at this point, the single item of coal affording employment to a large fleet of towing steamers and barges. In 1890, 18,500,000 bushels were delivered at New Orleans alone. The altitude of the city varies from 270 to 377 feet above sea level. Contrary to the reputation given the city by Dickens, it has been pronounced by the United States Surgeon-General "quite as healthful as any other place in the Union." Nearly 7,000 acres, known as the Drainage District, are under development by the trustees of the city, whose predecessors lifted the load of debt of the original City and Canal Company in 1846, and led to the resuscitation of the place. The levees inclosing this district are 15½ miles long, and in their construction 1,684,558 cubic yards of earth were used. The cost of the work done was \$320,000. Eight large sewers have been put in, 4 of which are 40 inches in diameter, and lead to the rivers, with automatic gates at the river end that close immediately if the river rises. A portion of the district is under cultivation, and schools and mills have been established.

Cañon City, a city of Colorado, county seat of Fremont County, 4½ miles west of Pueblo and 161 miles southwest of Denver, on Arkansas river, a mile below the Royal Gorge. It lies near the eastern base of the Rocky mountains, in a natural park protected by mountains and foothills on three sides, and has an altitude of 5,320 feet above sea level. About 2,000 acres of the open park immediately northeast of the city will be irrigated by the State canal now under construction by convict labor, 85 miles in length, from the Grand Cañon of the Arkansas to the Fontaine Qui Bouille. There are already 100 miles of irrigating ditches in the county, and in addition to the crops of cereals and grasses there are large orchards and nurseries near the city which in 1892 shipped 172,840 pounds of grapes and 151,800 of strawberries, as well as pears, peaches, and apples. Cañon City is the natural point of supply for the coal and mining camps of the county, which is second to Las Animas County only in production of coal, the output in 1892 being 497,322 tons. It contains gold, silver, lead, iron, copper, and zinc, as well as 106 oil wells, the refineries of which product are at Florence, 8 miles from the county seat. Cañon City has a population, by the census of 1890, of 2,825, having increased more than 88 per cent. in the decade from 1880. It is on the main line of Denver and Rio Grande Railroad, and is the terminus of the Pueblo branch of the Atchison, Topeka and Santa Fé. In addition to carrying passengers, a daily mail and express service is also had by a stage line to Cripple Creek, a large and prosperous gold camp. The streets, which are broad and level, are shaded with mature trees, with a stream of pure mountain water on either side. They are graded, and have substantial sidewalks. The business houses and resi-

dences are of brick and stone. The water supply is drawn from Arkansas river, and is filtered and purified before being sent through the mains. The water works are the property of the city. The pressure is sufficient for fire protection. Electric lighting is in use, and there is telephone communication with the neighboring towns and mining camps. The public-school building is of stone. A Catholic academy is completing a new structure. The churches are respectively Methodist Episcopal, Presbyterian, Baptist, Cumberland Presbyterian, Episcopal, Christian, and Catholic. The Young Men's Christian Association numbers 184. The city government consists of a mayor and 6 trustees. The county bank is at Cañon City, and there is also a building and loan association. Two weekly newspapers are published, and there are 8 hotels. The industries of the city include a zinc-lead smelter for complex ores, employing from 50 to 100 men; tile and brick works, the plant of which cost \$30,000; machine shops and boiler works; flouring mills with a capacity of 100 barrels, representing a capital of \$60,000; a cigar factory, and bottling works. The State Penitentiary is here, the massive stone walls of which inclose about 7 acres. At the hot soda springs, at the entrance of the Grand Cañon of the Arkansas, on the south side of the river, there is a hotel with bath houses. The water as it flows from the spring is at 102° Fahrenheit. There are cold soda springs also. Fine lime is manufactured from the magnesian limestone with which the county abounds, as it does in many species of clay and kaolin, building stone, gypsum, alabaster, mica, and mineral paint.

SOUTH CAÑON, with a population by the last census of 801, was incorporated in 1890. It is a purely agricultural town, and has a complete system of irrigation, raising large quantities of fruit. In the public school 210 pupils are enrolled. Water is supplied from the pumping station of the zinc-lead smelter at Cañon City.

Carbondale, a city of Pennsylvania, in Lackawanna County, in the northeastern part of the State, on Lackawanna river, near the north end of the Lackawanna valley, 16 miles from Scranton, the county seat, and 15 from Honesdale. It has an altitude of 1,079 feet. The population in 1880 was 7,714, and it increased to 10,833 in 1890. The first log house was built in Carbondale in 1824, and in 1829 the Delaware and Hudson gravity railroad was completed, over which the "Stourbridge Lion," the first engine in America, was successfully run the same year. Railroad facilities are now afforded by the same road (which crosses the Moosic mountains, 850 feet above the valley, by means of inclined planes), the Delaware and Hudson, the New York, Lake Erie and Western, and the New York, Ontario and Western, there being 64 passenger trains a day. Carbondale received its name from Washington Irving; it was incorporated in 1851, and a wooden courthouse was erected which cost \$3,000. The Delaware and Hudson Canal Company, which operates most of the great coal mines here, has a capital of \$5,000,000 invested. Unlike most coal districts, the central portion of the city is not undermined, and deeds for property in the business portion are made without the coal-reserve clause.

An electric railway connects with the suburban towns of Simpson on the north, and Jermyn, Mayfield, and Archbald on the south. Gas and electric lighting are in use; the city has a complete sewerage system, and many of the streets are paved with vitrified brick. Two water companies are capitalized at \$90,000. There are 2 banks, 1 national. One daily and 1 weekly newspaper are published. The new public hospital cost \$20,000, and there is a new city hall under construction, to cost \$50,000. The various religious denominations are represented, and a new Methodist church building will cost \$40,000. A Catholic convent is also here. The new high school cost, with the ground, \$41,500, and one of the larger public-school buildings cost \$21,000. The opera house has a seating capacity of 1,100. A large coal and iron company has \$2,000,000 invested here, and 2 coal companies are capitalized at \$500,000 and \$300,000. One large company has machine shops and oil works for the manufacture of appliances connected with the refining of petroleum and extracting paraffine wax from the oil, in addition to various specialties which it turns out. Another large industry is a foundry with machine shops, valued at \$250,000. The city is the headquarters of a large lumber interest.

At **MAYFIELD** are the Erie, Glenwood, and Keystone collieries, the first of which has a Thompson-Houston electric haulage plant, the only one of its kind in this part of the anthracite region; the last two employ together 750 men.

At **JERMYN**, which is a small borough, with a population of 2,700 by the census of 1890, and has water works, electric lighting, and excellent railroad facilities, one coal shaft employs 450 men and boys. Several factories are at Jermyn, and a handsome Catholic church has recently been erected.

Carlisle, a borough of Pennsylvania, county seat of Cumberland County, 19 miles west of Harrisburg and 125 miles from Philadelphia, in the center of the Cumberland valley. It is picturesquely situated on a rising ground, with wide, well-made streets, lighted by gas and electricity. It is on the main line of the Cumberland Valley Railroad, over which there are 14 passenger trains daily, and also on the Philadelphia and Reading Railroad, which has 12 trains a day. The population in 1880 was 6,209, and in 1890 it had increased to 7,620. The first settlement of Carlisle took place in 1751. There is a free mail delivery; the usual telegraph and telephone facilities are afforded, and there are 2 express companies. Two daily and 3 weekly newspapers are published. In addition to 3 banks there are 3 building and loan associations. A good system of water works supplies pure water, and for fire protection there are 3 steam engines and hose carriages, as well as a hook and ladder company. The churches number 15, and the Young Men's Christian Association owns its own building. There are 2 high schools and 23 public schools. Dickinson College, one of the oldest in the country, is here; it was founded in 1783, and was originally a Presbyterian institution. In 1816 it was suspended, but in 1822 was revived, and in 1833 was transferred to the Methodists, to whom it still be-

longs. It employs 18 professors and instructors, and has 800 students. Its library contains 80,000 volumes. There is also an endowed school for young ladies. The United States training school for Indians, which occupies the barracks built in 1777 principally by the Hessians captured at Trenton, capable of containing 2,000 men, has now 800 pupils. There is a fine market house and market, as the borough lies in a rich agricultural country. The manufactures, which employ 1,200 persons, with a monthly pay roll of \$40,000, embrace extensive car shops, steam-engine works, chain, axle, frog, and switch works, 3 shoe and 2 carpet factories, a silk mill, 1 paper-box and 1 clothing factory, carriage, novelty and electro-plating works, and smaller industries. The town is growing, nearly 100 new houses having been under construction in the spring of 1898.

Columbia, a borough of Pennsylvania, in Lancaster County, on the eastern bank of Susquehanna river, in the southeastern part of the State, 80 miles from Philadelphia, 24 from Harrisburg, and 12 from Lancaster, the county seat. In 1880 it had a population of 8,312, which increased to 10,599 in 1890. The borough was laid out in 1788, and incorporated in 1814. There are 25 passenger trains daily over the Pennsylvania and the Philadelphia and Reading Railroads. Over a million and a half cars moved here during 1892. It is the terminus also of the Pennsylvania and Tide-water Canals. The Susquehanna, here a mile wide, is spanned by a covered railroad bridge connecting Columbia with Wrightsville, and there is also a steam ferry. A railroad 44 miles long connects with Port Deposit, Md. There are over 14 miles of macadamized streets, and nearly 29 miles of paved sidewalks, in Columbia. Gas and electric lighting are in use; water is supplied from the river in abundance, and there is an efficient fire department, with 3 steam engines and a hook and ladder company. One private and 3 national banks have a capital and surplus of over \$1,000,000. The tax rate is 4 mills, and the valuation low. There are 7 building associations, 2 express companies, and the usual telegraph and telephone facilities. A free postal delivery system is in operation. Two daily and 4 weekly newspapers are published. There are 16 churches and 5 public school buildings, in addition to 2 parochial schools and 2 private academies; a public library, 3 markets, an opera house that cost \$80,000, 2 public halls, a public park and a driving park, and 2 lines of electric railway. The surrounding scenery is fine. As Columbia is only 60 miles from the anthracite coal fields, there are extensive coal wharves along the line of the Pennsylvania Railroad. Over \$400,000 are disbursed annually to employees of this road and of the Philadelphia and Reading, the two giving employment to 700 men. Over \$1,500,000 are paid yearly in wages by the manufacturing establishments, which include 4 rolling mills employing 1,000 hands, stove works, a gray-iron casting company, a factory of laundry machinery, a lace mill employing 800 persons and turning out 4 tons of lace curtains weekly; a flour mill with capacity of 200 barrels daily, a silk mill employing 500 persons, a shirt factory, a steam engine and boiler shop, planing mills, 3

tobacco warehouses and 7 cigar factories, a wagon company, and a steam cracker bakery, as well as several smaller industries, among which are a steam tannery, a flint mill, 4 machine shops and foundries, 3 large stone crushers, a shoe, a fagot, a basket, and a slate-mantel factory, a steam ice plant, with capacity of 80 tons daily, 2 steam brick works, a brewery, and a factory of pocket-books. Sites and water for manufacturing are offered free.

Danville, a city of Illinois, the county seat of Vermilion County, 4 miles west of the boundary of the State, on Vermilion river, at the confluence of its north fork, 124 miles south of Chicago, 85 from Indianapolis, and 54 from Terre Haute. Stony Creek cuts through the eastern part of the city, which for the main part is built upon a plateau 90 feet above the river and 523 above sea level. The population increased from 7,783 in 1880 to 11,491 in 1890. In 1870 it was 4,751. One hundred and twenty-two trains arrive and depart every twenty-four hours over the main line of the Wabash Railroad, the Chicago and Eastern Illinois, the Peoria division of the "Big Four," and the Chicago, Vincennes and Cairo. The fine natural drainage is supplemented by sewerage of the Waring system, and the city is lighted by gas and electricity. The business streets and many in the residence portion are paved with vitrified brick, as is the public square. Maple and other shade trees add to the beauty of the residence streets, and there are 8 miles of Thompson-Houston electric street railway, representing an expenditure of \$150,000. The water company, which has 17 miles of mains, draws its supply from the North Fork of Vermilion river, and has also constructed a lake reservoir with a capacity of 7,000,000 gallons, fed by natural springs, into which water can be pumped also from the river for storage. Two horizontal duplex pumping engines have a combined capacity of 4,000,000 gallons in twenty-four hours, and the standpipe is 200 feet high. The paid fire department has a Gaynor system of alarm. There are 4 banks—3 national and 1 State; 7 building and loan associations; 6 Methodist, 3 Presbyterian, 2 Baptist, 2 Lutheran, 1 Episcopal, 1 Disciple, 1 United Brethren, and 2 Catholic churches, 3 of which together represent an expenditure of over \$100,000; and 8 public-school buildings valued at \$140,000, in which 58 teachers are employed, and the enrollment is 3,000. There are also 2 parochial schools (1 Catholic and 1 German Lutheran), an academy for young ladies belonging to the Catholics, which cost \$40,000, and a business college. The city library contains nearly 7,000 volumes. The opera house has a seating capacity of 1,300, as has the armory, and there are 3 large halls, and 3 parks. Three daily papers are published, and 5 weeklies, 1 in German. The hospital is under the direction of the Catholics. The Fifty-first Congress appropriated \$100,000 for a Federal building. Danville lies on the northeastern outcrop of the great coal fields of Illinois, the seam, except immediately under the old part of the city, averaging a thickness of 54 feet, and in some places the coal is so near the surface that it is only necessary to strip off a shallow layer of earth to expose it. The output from

the Danville fields is placed at 1,500,000 tons yearly. More than 1,000 railroad men are employed here, the shops of the Chicago and Eastern Illinois employing 800, and disbursing between \$30,000 and \$40,000 monthly. The shops of the Wabash Railroad are at the little village of Tilton, across the river, which is included in the township; they employ about 200 men. Three hominy mills run night and day, and there are 4 flouring mills also, in addition to 2 planing mills, 3 galvanized-iron works, 3 foundries and machine shops, 2 boiler works, 4 carriage and buggy, 1 woolen, and 1 knitting factory; another of lounges and mattresses, 1 of excelsior, 1 of grain-weighing machines, 1 of automatic bell-ringers, a large sawmill for the production of wagon timber, and a heading factory; a starch company with a capacity of 3,000 bushels of corn daily, a soap factory, 2 of patent medicines, 6 of cigars, a brewery and bottling works, and 2 blank-book and binding establishments. A large quarry of limestone near the city is being worked, and there are quarries of sandstone and sand, while the fine clay beds along Vermilion river are utilized in the manufacture of paving brick, a company having purchased 80 acres and erected brick buildings at a cost of \$50,000. Three kilns have a capacity of 100,000 each, and 2 others are in process of erection.

Dunkirk, a city and port of entry in Chautauqua County, N. Y., on Lake Erie, nearly midway between Buffalo, N. Y., and Erie, Pa. It has an excellent harbor, and is the terminus of the New York, Lake Erie and Western and the Dunkirk, Allegheny Valley and Pittsburgh Railroads, and on the main line of the Lake Shore and Michigan Southern, the New York, Chicago and St. Louis, and the Western New York and Pennsylvania. In 1880 the population was 7,248, and it increased to 9,416 in 1890. In 1893 it was about 12,000. It was incorporated as a village in 1837, as a township in 1859, and as a city in 1880. The city is in and is a portion of the township of Dunkirk. The name was given to the place (originally Chadwick's Bay) by Elisha Jenkins in 1818, for Dunkirk in France, on account of its harbor resemblance. The electric-light plant and the water works are owned by the city. The last are of the Holly system, and cost \$100,000. The supply is drawn through a crib in Lake Erie, near the beacon light. In 1889 there were 20 miles of mains, and 112 fire hydrants with pressure sufficient to render the use of fire engines superfluous. There are about 6 miles of paved streets, a beautiful park, and a complete system of sewers; 2 national banks with joint capital of \$205,000; 15 churches, of which 2 are Presbyterian, 1 Episcopal, 3 Lutheran, 3 Methodist (1 German), 1 Baptist, 1 Hollander, and 3 Catholic (respectively Irish, German, and Polish, each with a parochial school), and a Catholic orphan asylum. The public schools number 12. One daily and 2 weekly newspapers are published, and there is an opera house. An electric street railroad connects the city with Fredonia, 3 miles distant. On Point Gratiot, about a mile and a half beyond the business portion, is a beautiful summer resort known as Hickoryhurst. Dunkirk has an altitude of 598 feet above sea level. Being on the south-eastern shore of the lake, the harbor is free from ice earlier than Buffalo. The receipts of the port

for the year 1890 were 20,651 tons. It is surrounded by an agricultural and dairying district, and among its manufacturing establishments are large locomotive works, which in 1889 employed nearly 1,000 men. The capacity of the works was 250 engines a year. There are also iron works, car heater and radiator companies, several planing and flour and feed mills, a brewery, and minor manufactures.

Durango, a city of Colorado, the county seat of La Plata County, and metropolis of the southwestern part of the State, known as the San Juan country, in the valley of Animas river, sheltered by mountains and foothills, 450 miles from Denver. The river runs through the entire length of the city, about 2 miles, with 2 creeks flowing into it, one near the north and the other near the south end. It has an altitude of 6,405 feet. It was laid out as a site in 1880, and patents for the land were obtained from the United States Government in 1881. The same year it was incorporated and became the county seat. By the last Federal census it had a population of 7,726, and in 1893 it claimed between 7,000 and 10,000. The gross receipts of the post-office for the year ending Dec. 31, 1891, were \$8,071. It is the terminus of the Denver and Rio Grande and the Rio Grande Southern Railroads, and also of the Silverton branch of the former. The two portions of the city are connected by a bridge. On the first *mesa* on the eastern bank are the business blocks, buildings, and warehouses, and on the second *mesa*, east of the first, stand the residences, churches, schoolhouses, and public buildings. On the third *mesa* is the reservoir. More than \$1,000,000 were expended in building during 1892. The streets are 80 feet wide, with the exception of Third Street, or the Boulevard, which is 125 feet in width. There are two public parks. By reason of the location the city is almost self-drained, and can be easily sewered. Bonds for sewerage have just been issued. Water is pumped from the river, by the Holly system, to the reservoir, which has a capacity of 2,000,000 gallons. The pressure is 164 pounds, and the water mains are 8 inches in diameter. The water works are owned by the city, and cost \$100,000. There are 65 fire hydrants, an electric system of fire alarm, and a volunteer fire department. Electric lighting was introduced in 1885, and there is an electric street-car line, the company being capitalized at \$250,000. In 1889 6 blocks of the city were destroyed by fire, the loss being placed at \$500,000. They are now rebuilt in brick and stone, and are valued at \$3,000,000. There is a stone hospital, with accommodations for 100 persons, under the care of the Catholic Sisters of Mercy. The building cost \$40,000. There are 7 churches, those of the Presbyterians and Episcopalians being of stone; 2 belong to the Methodists, and the remainder are 1 Lutheran, 1 Catholic, and 1 Baptist. There are 2 large brick public-school houses and a high-school building that cost \$30,000. The school population is placed at 850. There is in addition a Catholic academy for young ladies, and a parochial school. Two daily and 3 weekly newspapers are published. The city has 2 national, 1 State, and 2 savings banks, and one local building and loan association. The county courthouse was erected at a cost of \$30,000. The city hall was destroyed

by fire in 1889. A United States land office is located here. Durango is known as the Smelter City; 2 smelters running night and day employ 450 men all the year round. One of these, which has been in successful operation since the city was founded, in 1881, employs 300 men, and has 6 blast furnaces, treating 300 tons of ore a day. The plant covers 160 acres. The company is capitalized at \$2,000,000, and has a monthly pay roll of \$30,000. Its shipments of bullion and matte during the year 1892 were 10,326.69 ounces of gold, 1,097,385.67 ounces of silver, 6,059,059 pounds of lead, and 1,089,552 pounds of copper. The other smelter, capitalized at \$500,000, is one of the 4 plants of its kind in the United States treating copper by a new process known as Bessemerizing. Ore-sampling works (auxiliary to the smelters), which date from 1891, employ 30 men in handling 15 cars of ore a day. Next to the smelting, the coal industry is most important. The mountains and foothills surrounding the city for miles contain vast coal beds, which can be mined at small cost. The present output of the mines is about 300,000 tons annually; \$2,000,000 capital are invested, and about 300 men are employed. Four large lumber firms, with mills near the city, operate planing mills in Durango, and disposed of lumber to the amount of \$200,000 in 1892. Two machine pressed-brick and several hand pressed-brick companies employ 100 men in turning out 100,000 bricks a day, and there are 3 large limekilns. Two flouring mills have a combined capacity of 200 barrels a day. A foundry and iron works, 3 wagon factories, and 2 breweries, one having its own ice machine and turning out 18,000 barrels of beer yearly, complete the list of large establishments. Fine building stone is found on all sides of the city. In four months from Aug. 6 to Dec. 6, 1892, the 2 railroads brought into the city 7,228 loaded freight cars and took out 2,582. Of this amount 2,546 were cars of ore and 732 of merchandise. Much traffic is also carried on by wagon. There is a board of trade. Nine miles from the city are natural hot springs. A Keely Institute is located here. The valleys and *meads* around Durango form one of the richest agricultural regions of the State, having an inexhaustible supply of water for irrigation. The average yield of wheat by irrigation is 25 bushels an acre, and from 60 to 100 bushels of oats. Fruits of all kinds are raised. The United States Land Office has disposed of 102,000 acres of land under the pre-emption, and given away 50,000 under the homestead laws. It has sold about 7,000 acres of coal land, at \$10 to \$20 an acre, according to the distance from a completed railroad, and has issued receipts for about 3,000 mines of gold and silver.

Fergus Falls, a city of Minnesota, of about 5,000 inhabitants, beautifully situated in a fine farming country on both sides of the Red River of the North. It is the county seat of Otter Tail County. The increase in population from 1,635 in 1880 to 3,773 in 1890 was 130.7 per cent. Many of the business buildings are of brick, as are also the county buildings, courthouse and jail, the City Hall, and 3 fine school buildings. The schools have an enrollment of 1,000 pupils, and prepare students for the State University. The churches are, respectively, Methodist, Presbyterian, Congregational, Baptist, Catholic, and

Lutheran. There are 8 national banks, with a paid capital aggregating \$250,000. One daily and 3 weekly newspapers are published, one of the latter in the German language. Gas and electricity are used for lighting. An abundant supply of pure water is pumped by water power from the river, above the city. The population is largely American, from New England and the Middle States, and the foreign portion of both city and county is mostly Scandinavian. Fergus Falls has two through lines of railroad, the Great Northern and the Fergus Falls and Black Hills branch of the Northern Pacific. There is also a branch of the Great Northern, which runs north along the valley of Pelican river. The largest industry in the city is the flour mills, of which there are 5, with an aggregate capacity of 2,000 barrels a day, employing about 100 men, with a capital aggregating \$250,000. There are also 2 sash and door factories, a wagon factory, and a woolen mill which employs 40 persons, as well as minor concerns. The third hospital for the insane is here. The streets are of gravel, and dry and clean. The well-equipped fire department numbers 40 men. The city possesses abundant water power. A flood in the river at this point is altogether unknown, and a rise of 1 foot very rare. The reason for this unvarying flow lies in the peculiarity of the country in which the river rises and through which it flows, its course being through a succession of lakes. The city has many advantages also as a health and pleasure resort, as it lies in the center of the most picturesque part of the State, known as the Park Region. To one traveling here in any direction there is always a view of one or more lakes of pure clear water, with a gravelly beach and grove of trees. Most of the lakes are well stocked with pickerel, pike, bass, and whitefish; and for hunting during the autumn months there are prairie chickens, wild ducks, and geese in abundance.

Flint, a city of Michigan, the county seat of Genesee County, on Flint river, in the heart of one of the most prosperous agricultural sections of the State. It is 64 miles northwest of Detroit, on the Flint and Père Marquette Railroad, and 33 miles south of Saginaw; 66 miles from Port Huron, on the Chicago and Grand Trunk Railroad; and 49 miles from Lansing. The main lines of these railroads intersect almost at right angles here, and the city is also the terminus of a third branch road. In 1880 the population was 8,409, and it increased to 9,803 in 1890. The first settlement was made here in 1819, but it was not until 1836, when the Government land office was opened, that the place assumed any proportions even as a trading post. In 1845 there were 193 resident taxpayers, and in 1855 the city was incorporated. The valuation of property is \$3,432,471 real and \$829,507 personal, making a total of \$4,261,978, a gain of \$150,000 over 1892. The rate of taxation is \$1.10 on \$100. There are 8 miles of paved streets, and others are graveled, lined with shade trees, and illuminated by the Vanderpool tower system of electric light in addition to gas. The drainage is excellent, and is supplemented by a complete sewerage system. Water is supplied from the Flint river by water works of the Holly system, completed in 1883 by a company with a

capital of \$100,000. Three pumps have an aggregate capacity of 7,000,000 gallons a day, and the regular pressure is 45 pounds, but in case of fire this can be increased to 140 pounds. There are nearly 20 miles of mains and pipes, and 118 fire hydrants. The fire department is ample and well equipped. There are also several artesian wells. Three daily newspapers are published, and 5 weeklies, one of the last being issued from the State institution for the deaf and dumb. There are 11 churches. Of the 8 public-school buildings, one—the high school—cost \$100,000. There are also a normal college and a Catholic parochial school. In the public schools 86 teachers are employed, and there is an average attendance of 1,716 out of a school population of 2,771. The public library, which owns 8,000 books, occupies a building of its own, and there is a music hall with a seating capacity of 1,200. Iron bridges cross Flint river and Swartz Creek, which flow through the city. The buildings of the Genesee County Fair Association are also here. Of the 4 banks, 1 is national, with a capital of \$200,000, and 3 are savings. Their aggregate capital is \$450,000. A private hospital for nervous and mental diseases consists of 4 brick structures, on a tract of 60 acres. The State Deaf and Dumb Asylum comprises 6 buildings, surrounded by 40 acres tastefully laid out. The industries include woolen mills, the plant of which covers 3 acres, turning out 1,200 yards daily, several large lumber and planing mills, cooper shops, 2 large carriage factories, wagon works, 2 road-cart factories, boiler and engine works, breweries, numerous cigar factories, creamery and churn factories, 4 large flouring mills, a factory of tables, and 1 of hat cases. Flint has an altitude of 712 feet above sea level.

Fort Madison, a city of Iowa, the county seat of Lee County, in the southeastern part of the State, on Mississippi river, 19 miles southwest of Burlington and 24 miles above Keokuk. The location, on a plateau several feet above high water, is peculiarly favorable, and on the north it is backed by a line of high bluffs. It has an altitude of 522 feet above sea level. In 1880 the population was 4,679, which was increased to 7,901 in 1890. In 1887 the Atchison, Topeka and Santa Fé Railroad extension, from Kansas City to Chicago, reached Fort Madison, which is the chief division point between those cities. This road built a large railroad and wagon bridge across the Mississippi, and also located here extensive shops, employing 1,000 hands, and a large and complete hospital. Further transportation facilities are afforded by the St. Louis, Keokuk and Northwestern, the Chicago, Burlington and Kansas City, and the Chicago, Fort Madison and Des Moines Railroads. The city is lighted by gas and electricity, and has an extensive system of water works. There are also 5 artesian wells. A street railway 8 miles long extends from the eastern to the western boundary. The principal business streets are paved with brick. There are churches of nearly all denominations, an excellent public-school system, 3 public parks, 2 with artesian wells and fountains, and 4 banks. Three daily newspapers are published, as well as 4 weeklies and 2 monthlies. The industries of the city include a car-wheel foundry, 2 large lumber mills, a beef and

pork packing house, extensive stock yards, a paper mill, farming tool, chair, boot and shoe, plow and cultivator, and sash, door, and blind factories; flouring and planing mills, foundries and machine shops, creameries, a brewery, brick-yards, stone quarries, etc. The State Prison is located here.

Greeley, a city of Colorado, the county seat of Weld County, on Cache La Poudre river, 4 miles from its junction with the South Platte, and nearly midway between Denver and Cheyenne, Wyo., 52 miles from the former and 54 from the latter city. It has an altitude of 4,779 feet above sea level. The valley in which it lies is exceedingly fertile. It is on the Cheyenne division of the Union Pacific Railroad, and on the Greeley, Salt Lake and Pacific. The city was settled in the spring of 1870 by families constituting the famous Union Colony (of which Horace Greeley was treasurer), under the lead of N. C. Meeker, who lost his life in the White River Massacre, in September, 1879. In 1871 the assessed valuation of real and personal property in Greeley was \$400,000. In 1886 it was \$1,000,000. In 1880 the population was 1,297, and in 1890 it was 2,395. In 1893 it was over 3,000. The lands near Greeley are irrigated by means of a canal 40 miles long, taken from the Cache La Poudre river, 17 miles west of the city, the head of the canal being 160 feet higher than its site. This canal is owned and operated by the farmers. Large quantities of farm produce are raised, from 8,800 to 4,500 car loads of potatoes being shipped yearly from Greeley. Electric lighting was introduced in 1886, and the water works were erected in 1888-'89. These have a tower or standpipe 80 feet in diameter and 80 feet high, with a capacity of 160,000 gallons. The supply is drawn from a well of 12 feet diameter, 28 feet deep, with 18 feet of water. The pumping capacity is 1,000,000 gallons in twenty-four hours. The entire plant cost \$65,000. In 1890 there were 50 hydrants for fire protection, and an efficient and well-furnished fire department. In the same year there were 4 public-school buildings, and a handsome high school, also a business college; 8 churches, Presbyterian, United Presbyterian, Methodist, Baptist, Congregational, Episcopal, Unitarian, and Catholic; a public library, owned by the city and supported by taxation; 8 weekly newspapers, and 8 banks with a joint capital of over \$300,000. The county courthouse, erected in 1883, cost \$40,559, and is of brick with stone trimmings. Two opera houses have an aggregate seating capacity of 1,200. There are several handsome blocks. The Union Pacific Railroad depot is of stone. The streets are 100 feet wide, and lined with trees. The industries of the city include a large irrigating-pump manufactory, with complete foundry and machine shops, several brick factories, and 1 brick and tile works, a flouring mill with a capacity of 400 sacks daily, a planing mill, a creamery with a capacity of 1,000 pounds daily, a cigar factory, and pickling works. An elevator has capacity of 100,000 bushels of grain and 16,000 bushels of potatoes. The city has a board of trade. The climate is beneficial to consumptives.

Hagerstown, a city of Maryland, the county seat of Washington County, on the west bank of

Antietam creek, surrounded by beautiful scenery, 75 miles by rail from Washington, 80 from Baltimore, and 175 from Philadelphia; 12 miles from the battlefield of Antietam, and 32 from that of Gettysburg. The plateau on which it is built is 700 feet above tide water, and commands a view of the four States of Virginia, West Virginia, Pennsylvania, and Maryland. In addition to 6 railroad lines—the Martinsburg and Potomac, the Baltimore and Western, the Cumberland Valley, the Baltimore and Ohio, the Western Maryland, and the Shenandoah Valley, over which there are 50 passenger trains daily—there are 9 macadamized roads leading into the country, which afford beautiful drives and fine wheeling for bicyclists. Hagerstown is the third city of Maryland, having a population in 1890 of 10,118, which had increased from 6,627 in 1880. The natural drainage of the city is excellent, and its reservoir of pure mountain water lies 7 miles away at the base of the Blue Ridge. The pressure is 80 pounds to the square inch. Electric lights are employed in illumination, in addition to gas, and an electric street railway was chartered in 1890. Four daily newspapers are published. Of 6 banks, 2 are national and 2 savings. There is an academy of music and an opera house, a county courthouse which cost \$100,000, a large market, an orphan home, a Keeley institute, churches of all denominations, the edifices of the Catholics, Presbyterians, and Episcopalians being of cut stone, and 3 public-school buildings, the enrollment in which in 1888-'89 was 1,585, while that of the parochial schools was 300. Kee Mar College, for young women, comprises 3 large brick buildings south of the city, with 16 professors and teachers, and over 100 pupils. It is forty years old. The soil here, at the junction of the Cumberland and Shenandoah valleys, is rich and fertile, and abounds in mineral resources as yet undeveloped. Fine timber is found within thirty miles. The industries of Hagerstown number 90, with capital of \$5,000,000, and employ 5,000 hands. They include a silk mill manufacturing ribbons, a cotton mill, 1 steam engine and machine works, 2 planing mills, iron works, paper mills, spoke and bending works, a rim factory, a knitting and a hosiery company, 2 fence companies, churn and crate works, 3 furniture factories, 2 bicycle works, rope works, 1 ice, 1 canning, and 8 cigar factories, a glove factory, a window-glass company, 4 marble and granite works, a paint mill, unfermented wine works, 4 fertilizer factories, 1 establishment turning out steam hay packers and another agricultural implements, chair works, a mattress and upholstering company, carriage and wagon factories, 6 bottling works, 2 flouring mills, and 1 grain elevator. A Chauntauqua circle was inaugurated at Hagerstown in the summer of 1893.

Hamilton, a city of Ohio, the county seat of Butler County, in the southwestern part of the State, 20 miles from Cincinnati, on Miami river and the Miami and Erie Canal, both of which flow directly through the city, the latter having 2 locks within the limits. It is also on the main line of the Great Pan Handle Railroad, and on the Cincinnati, Hamilton and Dayton. There are 23 passenger trains daily between the city and Cincinnati. In 1880 it had a population

of 12,122, which increased to 17,565 in 1890. It has an altitude of 591 feet above sea level. Hamilton is a century old, and in 1891 it celebrated its beginning as a fort, erected, in September, 1791, by Gen. St. Clair, and named in honor of the Secretary of the Treasury. Three years later the town of Hamilton was laid out on the same spot. It was incorporated as a village and made the county seat in 1810, became a town in 1827, and in 1854 the neighboring town of Rossville was annexed and it became a city. Surface drainage to the river insures excellent sanitary conditions, and is sufficient for the greater portion of the streets. The water works, erected in 1884-'87 at a cost of \$300,000, draw their supply from a series of driven wells. They are owned by the city, as are the gas works, which cost \$140,000. There are 8 miles of electric street railway, an efficient fire department, 6 public-school buildings, a county infirmary, and a children's home; 1 Baptist, 1 Episcopal, 1 Evangelical German Protestant, 1 Jewish, 1 Lutheran, 3 Methodist Episcopal, 2 Presbyterian, 1 Reformed, 1 Universalist, 2 United Brethren, and 5 Roman Catholic churches; a free circulating library and a public library, each having a building of its own; 3 national banks, capitalized at \$100,000 each; and 4 building and loan associations, with an aggregate capital of \$4,000,000. Two daily papers are published, 4 weeklies (one in the German language), and 2 monthlies. The old courthouse and county buildings were torn down in 1883, and a new courthouse was built in 1885-'87, for which bonds were issued to the amount of \$290,000. The manufactures of Hamilton include 5 paper mills (one turning out colored papers only), knitting mills, a woolen mill, and 3 flouring mills, 2 safe and lock companies, a stove foundry, a company of gray-iron foundries, factories of paper-mill machinery, wood-working machinery, grain-cleaning, laundry, punching and shearing machinery, and paper slitters, machine tools, bent-wood work, plows, wagons, and agricultural implements, furniture and furniture specialties, traction engines and sawmills, clothing, gelatin, hub and spoke works, buggy and carriage companies, iron foundries, 1 company turning out steam pumps, 2 furniture casters, 1 autographic registers, 1 artistic tiles, 1 cider mills and ice tools, as well as a separate factory for the latter, 1 light machinery, 1 mattresses, and 1 turned-wood work. There are 5 malting concerns and 1 brewery. In addition to the Fair Grounds the city has a public park.

Helena, a city of Arkansas, county seat of Phillips County, at the foot of Crowley's Ridge, on Mississippi river, midway between St. Louis and New Orleans, 75 miles below Memphis and 100 miles from Little Rock. It is on the only high land on the west bank of the Mississippi south of Cairo, and has an altitude varying from 141 to 197 feet. In 1880 the population was 3,652, which increased to 5,189 in 1890. Transportation facilities are afforded by the Arkansas Midland and the St. Louis, Iron Mountain and Southern Railroads, as well as by boats and barges on the river. The city has gas and electric lights, a street railway, telegraph and telephone facilities, water works supplied by artesian wells 500 feet deep, with 6 miles of mains, the reservoir being on one of the high hills; an opera

house, 9 churches, fine public-school buildings, 1 daily and 3 weekly newspapers, 1 national and 2 State banks, 2 building associations, a courthouse, and a handsome Federal building. The cotton trade has reached over 60,000 bales. There are 2 cotton compresses, 2 cotton-seed-oil mills, 1 large shingle and 3 large saw mills, a foundry, and a box factory. The city has a chamber of commerce.

Ironton, a city of Ohio, the county seat of Lawrence County, 10 miles from the most southern part of the State and from the mouth of Big Sandy river, on the northeastern bank of the Ohio, 325 miles from Pittsburgh and 141 from Cincinnati. The site occupies a gently rolling plat extending nearly a mile from the river to the hills. It has an altitude of 544 feet above sea level. Through the center of the city runs a little creek, which provides good drainage. Ironton was first laid out under the auspices of the Ohio Iron and Coal Company in 1849, and by 1860 it had a population of 3,700. In 1870 there were 5,888 inhabitants; in 1880, 8,857; and in 1890, 10,939. In 1892 the city claimed over 12,000. An important provision in the deeds of the Ohio Iron and Coal Company to the town lots was that in case ardent spirits should be sold on any of the premises, there should be a forfeiture of the property to the company on payment to the owner of half the appraised value. Transportation facilities, in addition to the river, are afforded by Norfolk and Western, the Dayton and Ironton, and the Chesapeake and Ohio Railroads. The Iron Railroad, 13 miles long, running into the furnace region, was constructed in 1851. Within 3 miles of the city are the Newport News and Mississippi Valley and the Ohio and Big Sandy Railroads. About one fourth of the shipments of Ironton are by the river. In 1891 the total inbound and outbound freight aggregated 471,609 tons. Gas was introduced in 1867, and the city has also an electric-light plant. In 1892 one of the streets was paved with fire brick, and the contract was given for another. It is proposed to extend the system until the city is paved throughout, and in connection a system of sewerage is being established. The water works, which are owned by the city, are of the Holly system and have 12 miles of mains. The pressure is 120 pounds to the square inch, and there are fire plugs at all the corners, from which several streams 100 feet high can be thrown in a few minutes. The fire department consists of 6 companies. The river bank for a long distance is well graded and paved, making the receipt and delivery of freight easy; and just below the water works the Government has erected 2 substantial ice piers, which provide protection for craft moored at the wharves. There is a street railroad over 7 miles in length, to Petersburg. Two daily and 4 weekly newspapers are published. Three national banks have an aggregate capital of \$650,000, and there are 2 private banks and 10 building associations. Forty-eight teachers are employed in the 5 commodious public-school buildings, one of which cost \$65,000. The total public-school enrollment is 2,200. There are also 2 Catholic parochial schools, a Catholic academy, and a County Children's Home. In 1892 there were 15 churches, and 3 in course of construction. Of these, 5 are Methodist, 1 African Methodist, 1

Lutheran, 1 Episcopal, 1 German Reformed, 2 Congregational (one of them Welsh), 1 Welsh Calvinistic Methodist, 2 Baptist (1 colored), and 2 Catholic. In the Masonic Temple is an opera house which seats 900, and there are also an Odd Fellows' Temple, a county courthouse and jail, and a Soldiers' Memorial Hall, erected at a cost of \$28,000. In the hills north and east of Ironton lie the vast resources of coal and iron which are the mainstay of its industries. There are 7 veins of coal in Lawrence County, and it is estimated that 1,000,000,000 tons are in sight, while 100,000 tons are used yearly in the mills and shops of the city. The iron ore of this region is easily and cheaply mined, and the product of the furnaces in the county which are tributary to Ironton is 140,000 tons yearly, one fifth of which is charcoal metal. Within 25 miles of the city, in Kentucky and Ohio, are 22 furnaces. The city has 5 iron furnaces, 3 foundries, 3 rolling mills, and 2 nail factories. In the iron mills and furnaces 1,300 men are employed, and 160 in the foundries; 250 more are engaged in the 8 lumber mills, and as many more in the 3 fire-brick factories. Ten million fire brick are turned out yearly, and between 3,000,000 and 4,000,000 building brick, as the clay deposits of the county are among its most valuable resources. There are also 3 carriage shops, 1 machine shop, 1 large flouring mill, a tannery, 1 soap factory, 1 ice factory, 1 shoe factory, 2 marble works, 1 brewery, 3 planing mills, and 2 cigar factories.

Jackson, a city of Tennessee, the county seat of Madison County, in the southwestern part of the State, on the north side of Forked Deer river, 150 miles from Nashville, and 90 from Memphis. In 1880 it had a population of 5,377, which increased to 10,039 in 1890, making it the fifth city of the State. It has an altitude of 372 to 427 feet, the ground on which it is built being gently rolling, giving fine natural drainage, which is supplemented by sewerage of the Waring system, 14 miles of sewer pipes having been laid to 1892. The corporation limits, which have been recently extended, embrace a little over 4 square miles. The city is the relay point for both the northern and the southern division of both the Illinois Central and Mobile and Ohio Railroads and the eastern and western division of the Tennessee Midland. The Mobile and Ohio Railroad has its offices here, as well as large shops in which most of the car and engine work on the road from St. Louis to Mobile is done. The Illinois Central also has shops, and the two roads pay out nearly a million dollars here yearly. Jackson was founded in 1821 by Dr. William E. Butler, the land being a grant from the State. The streets, which are graveled, have been extended and widened, and the old wooden structures in the business portion have been replaced by handsome brick buildings. In 1892 there were but two business houses twenty years old. The water supply is exceptionally pure, being drawn from 22 artesian wells, sunk close together, and connected with the pumps by one large main. The pressure is direct, as there is no standpipe. In 1892 there were 18 miles of pipe, and the maximum supply was 3,500,000 gallons in twenty-four hours. A lake, kept up by the overflow from the pumps, is in reserve for any unusual demand. The cost of

the plant, which is owned by the city, was \$155,000. Gas and electricity are employed in lighting, and there is a system of street railroad. Four banks have an aggregate capital of \$350,000, and there are 8 building and loan associations. Two daily, 1 semiweekly, and 4 weekly newspapers are published. The Southwestern Baptist University is here, which has an attend-

the Kankakee and Southwestern Railroads. The population in 1890 was 9,035, an increase of 59-71 per cent. over 5,651 in 1880. There are 10 miles of electric street railway, and 20 miles of sewers; the water works (gravity system) cost \$150,000, and have a reservoir with a capacity of 800,000 gallons, with 15 miles of mains. The supply is drawn from Kankakee river. The fire

FEMALE INSTITUTE, JACKSON, TENNESSEE.

ance of 250 students, and there is a female institute under the control of the Methodist Church, South; the Roman Catholics have 2 flourishing parochial schools, and the public schools had in 1889 an enrollment of 1,414 in 5 buildings. Lane Institute is a colored school under the charge of Bishop Lane. The various religious denominations are represented. The Supreme Court of the State for the western division sits in Jackson, as does the United States District and Circuit Court for the eastern division of West Tennessee. The Federal courthouse and post-office building cost \$85,000. The industries of the city include 3 foundries and machine shops, 3 planing and 2 large flouring mills, a cotton compress, a gin factory, a large cottonseed-oil mill, a fertilizer factory, a steam-printing house, a woolen mill, 2 ice factories, 1 of hoops, 1 of spokes, 1 of plows, 3 brickyards, 1 hardwood and ornamental furniture factory, 1 cigar factory, and 1 bottling works. Between 17,000 and 20,000 bales of cotton are marketed here yearly. The Board of Trade numbers about 100 members. Timber abounds in the county, which is well watered, and produces, in addition to cotton, fruits and vegetables of all kinds, which are shipped to northern markets. Jackson is known as the "Rose City," from its charming gardens, and the streets are lined with shade trees.

Kankakee, a city of Illinois, county seat of Kankakee County, in the northern part of the State, 56 miles south of Chicago, on Kankakee river, and the Illinois Central, Big Four, Indiana, Illinois and Iowa, the Kankakee and Seneca, and

department has an electric alarm system, and gas and electricity are employed in illumination. There is an \$80,000 summer hotel, a country courthouse, an arcade building and opera house which cost \$100,000, 13 churches, a high school, 5 public-school buildings with an enrollment of 1,200, 4 parochial schools (French and German Catholic, German Baptist, and German Evangelical), and a Catholic seminary; also a business college. Two of the 8 banks are national, and the total of banking capital is \$250,000. The city has also 4 building and loan associations, and a Business Men's Association. Two daily and 3 weekly newspapers are published, and there is a Ladies' Library Association. Sixteen organizations of secret and benevolent orders are represented here. An infantry company of the State National Guard has a fine armory, and a soldier's monument has been erected at a cost of \$5,000. The streets are luxuriantly shaded, and there is a public fountain. There are many handsome residences. Free mail delivery has been established. Pleasure steamers ply on the river, the driving park association has a kite-shaped track, and the county fair grounds are here. The city is the site of the Eastern Illinois Hospital for the Insane, valued at \$1,500,000, which has 2,000 inmates. There is also a county infirmary. The industries include a paper mill, a shoe factory, a flouring mill, a foundry and machine shops, extensive stone quarries, 2 tile and brick works, transfer elevators, a tannery, a planing mill, an ice factory, refrigerator works, a nail factory, an oil mill, 6

furniture factories, steam laundries, wagon shops, ornamental iron and wire works, and a brewery. The Illinois Central, Big Four, and Three I Railroads have shops here.

Kearney, a city of Nebraska, county seat of Buffalo County, south of the center of the State, 195 miles from Omaha, 136 west of Lincoln, and 9 west of Fort Kearney. It is 16 miles from Platte river, with which it is connected by a canal 80 feet wide and 4½ deep, which furnished 2,000 horse power for manufacturing in 1892. It has since been widened and deepened. In 1875 it had a population of 250, in 1880 of 1,782, and in 1890 of 8,074. In addition to the Union Pacific, the city has transportation facilities by the Burlington and Missouri River Railroad, while the Kearney and Black Hills Railroad, a local enterprise of which 66 miles had been constructed in 1892, has its main offices and shops here. It is to be extended to the coal fields of Wyoming and the mineral lands of South Dakota. In 1892 the Missouri Pacific Railroad was operated within 26 miles of Kearney. There are 175 miles of graded streets in the city, and 53 miles of sidewalks. The streets vary in width from 80 to 130 feet, and the main business street is provided with stone curbing and gutters. Electricity is employed in illumination. Twelve and a half miles of sewers have been laid, at a cost of \$70,000. The water supply is drawn from the great underflow which underlies the broad Platte valley, and has its source in the snows of the Rocky mountains. This is pumped and distributed through 16 miles of mains. There are 160 fire hydrants, and the pressure is sufficient to obviate the use of fire engines. There are volunteer fire companies, with 3,000 feet of hose, and an electric alarm system. From 1868 to 1892 \$3,576,852 were expended in improvements in Kearney, and an opera house 5 stories high, which cost \$140,000, and has a seating capacity of 1,200, 2 bank buildings, a business block, and several large buildings, all of brick and stone, were erected. The buildings of the State Industrial School cost \$500,000, the county courthouse \$100,000, and the City Hall \$25,000. The depot of the Union Pacific Railroad cost also \$25,000. A public library is maintained. Four of the 7 public-school buildings are of brick, and occupy squares of several acres each. One of these is a high school. The public-school enrollment is 2,200, and 40 teachers are employed. There is also a business college and an Episcopal school which accommodates 150 boarders, in 3 buildings, surrounded by 25 acres of land. There are 13 churches, and the headquarters of the missionary diocese of the Platte (Episcopal Church) are here. The net profit to the United States Government from the post-office in 1890 was \$8,328. The city has a free mail delivery. Four national banks have an aggregate capital of \$500,000, and there are also a State bank and a savings institution, as well as 2 loan and trust companies, with handsome buildings. Two daily newspapers are published, also 4 weeklies, and 2 monthlies, 1 religious and the other issued by the State Industrial School. Five and a half miles of electric street railroad are in operation. Nearly every industry in the city uses the electric power developed by the overflow of the

canal with a fall of 61 feet. Among these is a mill with a daily capacity of 200 barrels of flour. A cotton mill has been completed recently, at a cost of \$400,000, which operates 15,000 spindles and employs 450 persons. It has a daily capacity of 26,000 yards of unbleached muslin. It is operated by water power from the canal. There are 25 industries, among which are a paper mill, oatmeal mill, woolen mill, cracker factory, 3 brick works, an ice company, canning, pickling and vinegar works, stone works, a packing house, cornice works, a plow factory, a cold-storage, commission and seed company, a foundry and iron works, a manufacturing company (of hinge work), and a consolidated tank line. The race track of the county agricultural association is within 2 miles of the business center of the city. Kearney has an altitude of 2,200 feet above sea level. The climate is dry and healthful. The rainfall averaged, in twenty years, 25.42 inches.

Lebanon, a city of Pennsylvania, the county seat of Lebanon County, southeast of the center of the State, 25½ miles east of Harrisburg, and 82 miles from Philadelphia, on the main line of the Philadelphia and Reading Railroad. The Moravians built a church here in 1740, and another was built the same year by the Mennonites. In 1750 the town was laid out by George Steitz and called Steitztown. Twenty-two years later it contained 200 houses. In 1813 its name was changed to Lebanon, at the time Lebanon County was formed, being made the county seat, and in 1821 it was incorporated as a borough. Its growth in population, wealth, and commercial importance has been rapid and steady, and it ranks in proportion to population among the first manufacturing towns of the State. In 1880 it had a population of 8,778, which increased to 14,664 in 1890. The early settlement of the town was originally made south of Quittaphilla creek, along which mills were erected; about 1827 the Union Canal was constructed, on the line of which North Lebanon was built, about half a mile from the original town. In 1856-'57 the Lebanon Valley Railroad was completed, the line of which divided the two towns, and added materially to their growth and prosperity. In 1869 they were consolidated and many improvements were made. The city is regularly laid out, and the streets are macadamized, with the exception of one, which is paved with asphalt blocks. An electric street railway operates 14 miles of track, and connects the city with Myerstown on the east and Annville on the west. Pure spring water is brought several miles, and both gas and electricity are employed in lighting. Two daily and 6 weekly newspapers are published. The 25 churches are divided as follow: 5 Lutheran, 4 Methodist, 3 Reformed, 3 United Brethren, 3 Union, 2 Presbyterian, 2 Episcopal, 1 Baptist, 1 Catholic, and 1 Moravian. The public library is contained in the high school, and there are also a hospital and a widows' home. In 1887-'88 there were 8 public-school buildings, with 37 teachers, and an enrollment of 2,078, besides 350 pupils in private and parochial schools. The courthouse, a substantial brick building, was erected in 1816 and enlarged and remodeled in 1858. There is also a well-

arranged opera house. Lebanon lies in a fertile limestone valley of one of the richest agricultural regions of the State, in close proximity to the great coal fields and but 5 miles from the immense iron deposits of Cornwall, with which it is connected by the Lebanon and Cornwall Railroad. The passenger station of this road is one of the handsomest pieces of railroad architecture in central Pennsylvania. The Pennsylvania and Northern Central Railroad gives outlets to the North, West, and South. In the immediate vicinity of the city an abundance of limestone and brown building stone is found, as well as a superior quality of clay for bricks. The chief industry is the production of iron. The city has 6 iron furnaces. There are also 5 rolling mills, nut and bolt works employing from 300 to 400 persons, 3 machine works, boiler works, 2 stove works, and 1 chain works. The 3 hills of iron ore at Cornwall are respectively 150, 200, and 400 feet high, and have been worked for more than a century. In the Revolution, munitions of war were supplied to the colonists from the Cornwall mines. In these and the more recent formations of the South Mountain there are supposed to be more than 30,000,000 tons above water level. Lebanon has an altitude of 466 to 475 feet above sea level.

Macon, a city of Georgia, the county seat of Bibb County, in the central part of the State, 103 miles from Atlanta, 100 from Columbus, 124 from Augusta, and 198 from Savannah. It is on both sides of Ocmulgee river, at the head of navigation. The site is on the dividing line of two distinct geographical formations, where 300 miles of plain stretches south from granite hills. It is the center of a rich agricultural and fruit-growing region. Yearly 175,000 bales of cotton are received, and there is warehouse storage for 80,000. In 1806 Macon was an Indian trading post known as Fort Hawkins. It became the county seat of Bibb County when it was organized in 1822, and was named for Nathaniel Macon, of North Carolina, then President of the United States Senate. It was incorporated in 1824, and in the year following the first railroad survey in the State was made from this point to Milledgeville. In 1880 the population was 12,749, and it increased to 22,746 in 1890, exclusive of the suburbs, which by the census had 13,000. The streets of Macon alternate 130 and 180 feet in width, and are curbed with granite. They are beautified with fine shade trees, water oaks, and elms; the residences are generally surrounded by large yards and flower gardens, and there are three large parks and numerous smaller ones, in addition to parking in the center of the broader streets with Bermuda grass. Central City Park, which was laid out in 1871 at a cost of \$200,000, belongs to the city. With 600 acres adjoining it was reserved in the early days of settlement. The park contains 237 acres, including a fine race course, and here the Georgia Agricultural Society holds its fairs and has its buildings. Macon has an altitude from 311 to 334 feet above sea level. The drainage is excellent, and in 1893 the city was preparing to issue bonds for the purpose of putting in a complete system of sanitary sewers. The water is supplied from 18 natural springs, which furnish 3,000,000

gallons daily. They are 2 miles south of the city, and the water is pumped to a large reservoir on the top of the highest hill near the city. The standpipe that supplies the northern and western parts of the city is 91 feet high. There are 35 miles of mains, and 125 fire hydrants. There is a well-organized paid fire department, and 3 systems of electric street-car lines run through the business and residence streets. In 1889 the tax valuation was \$11,300,423, and in 1891 it was \$14,623,999. The bonded debt was \$568,800, and the city tax \$1.25, the whole tax being \$2.35. The post-office receipts for the year ending March 1, 1892, were \$53,590. The city is the center of 11 lines of railroad, all terminating here and having their shops here. In these about 1,000 men are employed. One bank has a capital of \$500,000, with surplus of the same amount; 2 are capitalized at \$250,000, 1 at \$200,000, 2 at \$100,000, and in addition there are several private banking institutions, making a total of \$1,660,000 banking capital. Macon has the honor of possessing the first female college in the United States, the Wesleyan, chartered in 1836. It cost \$125,000, and has an endowment of \$100,000. The building is 255 x 85 feet, and is 5 stories high. To 1891 the college had graduated 2,039 pupils, and in that year it had an enrollment of 260. There is also a Catholic academy for young ladies. Mercer University, founded in 1831, belonging to the Baptists, is here, and educates free of charge. St. Stanislaus College (formerly Pio Nono) is for initiatory training and education for priesthood in the Jesuit order. The State Academy for the Blind was incorporated here in 1852, and it had 89 pupils, with 12 instructors, in 1888-'89. There are 45 public schools, with 100 teachers and 5,419 pupils, in addition to the Alexander Free School, which has no connection with the county free-school system, but was the gift to the city of Elam Alexander shortly after the civil war. There are Methodist and Episcopal orphans' homes, a home for the indigent, and a home for indigent women, the last erected by Julia Parkham Jones, at a cost of \$25,000. The public library, which cost \$15,000, was completed in 1889, and has accommodation for 100,000 volumes. In 1890 it had 15,000. The academy of music, completed in 1884, has a seating capacity of 1,500. There are about 30 churches, white and colored, the Methodist, Baptist, Presbyterian, Catholic, Episcopal, and Hebrew having the handsomest edifices. Among public buildings are to be noted the Federal post-office and courthouse, erected in 1889 at a cost of \$125,000, the county courthouse, which cost \$130,000, the City Hall and city prison, and the Volunteers' Armory. Two daily papers are published, 3 weeklies (one of them religious), and a dental quarterly. The wholesale trade of Macon amounts to \$50,000,000, and it has nearly 100 wholesale houses. It is the largest inland cotton market in the State, and has 3 large cotton warehouses and compresses. It has also a large trade in lumber. In 1880 it had but 54 manufacturing establishments, representing \$651,800 capital, and employing 1,115 persons. In 1890 it had 161 establishments, with capital of \$3,608,977, employing 3,142 persons, which produced \$4,974,914, and consumed materials to

the amount of \$2,534,144. Four cotton factories represent \$1,430,390, and employ 1,088 persons. There are also knitting mills, 5 planing mills, 9 brick and tile works, 5 foundries and machine shops, 5 furniture factories, as many carriage and wagon shops, guano and phosphate works, a brewery, ice works, factories of wheels and spokes, agricultural-implement works, flouring mills, barrel and broom factories, canning establishments, gin shops, cotton-seed-oil mills, granite quarries, a candy and cracker factory, and smaller industries. Immediately adjoining the city is a fine supply of clay for brickmaking, and there is a large area of hard-wood land along the Ocmulgee. At Bellevue, a suburb of Macon, with which it is connected by an electric car line, there is a handsome clubhouse.

Menominee, a city of Michigan, the seat of Menominee County, on the west shore of Green Bay, at the mouth of Menominee river, on the south bank of which, across the State line, lies, directly opposite, the city of Marinette, Wis., with which Menominee is connected by a new iron swing bridge, 2 railroad bridges, an old wooden wagon bridge, and a foot bridge. The county covers 1,275 square miles of the southern end of the Upper Peninsula of Michigan, and, extending north from the city, the land rises to the great divide that separates from the Lake Superior region, reaching an altitude of 1,000 feet above Menominee in places. The city itself has an altitude of 594 feet above sea level. In 1880 it had a population of 3,288, which increased to 10,630 in 1890. In addition to the transportation facilities afforded by the Chicago and Northwestern and the Milwaukee and Northern Railroads, there are 3 lines of steamboats. During 1890 the arrivals and clearances of schooners at the port were 697, and of steamers, 593. The assessed valuation of property in 1890 was \$2,427,862, and the actual value \$7,500,000. The city is well lighted by electricity. A complete sewerage system was under construction in 1891, the estimated cost of which was \$75,000. Considerable work has been done in paving with cedar blocks, and an electric street railway is in operation, the company of which is capitalized at \$100,000. Water is drawn from the bay, and the plant of the water works is valued at \$150,000. It has been enlarged since its erection, in 1885. The fire department has an electric alarm system. In addition to a high-school and 5 public-school buildings, valued at \$50,000, in which 27 teachers are employed, there are 3 parochial schools—2 Catholic (French and German) and 1 Lutheran—and a commercial college. Of the 11 churches, 9 are Protestant. There are 2 hospitals, numerous hotels, a city library, 2 national banks, a county courthouse which cost \$30,000, and a county jail completed in 1888. Three weekly newspapers are published, 1 in the German language. The leading industry is lumbering. In the decade from 1880 to 1890 the city showed the greatest increase in the production of lumber in the United States. In 1880 it ranked sixth in the 9 principal lumber-producing points in the country, and in 1890 it was found to be the second. During the winter logging is carried on, and sawing in summer in 12 mills, which in 1889 turned out 832,469,247 feet of lumber, 45,047,550 laths, and 131,104,000 shingles, as well

as planed lumber, the total being valued at \$4,579,024. Three thousand men were employed. In addition to almost unlimited quantities of pine, in which the county abounds, there is excellent cedar, and traffic in this wood has attained large proportions. The shipments of lumber from the port in 1890 amounted to 202,452,000 feet, in addition to 11,474,000 laths and 2,341,000 shingles; about 100,000,000 feet of lumber were also shipped by rail; 642,137,318 feet of logs passed through the Boom Company's boom in 1889. The northern part of Menominee County is rich in iron mines, and the product of the range for the year ending Dec. 31, 1889, was 10,416,859 tons. The industries include a pulp mill and a mill for making manilla paper, the offices of which, and a mill for making print paper, are in Marinette, on the opposite side of the river. The pulp from the Menominee mill is carried by means of an endless cable across the river. The company is capitalized at \$175,000, and the pulp mill requires 40 cords of pulp wood a week. About 100 skilled laborers are employed in the mills the year round. There are also saw works, boiler works, and 2 breweries. A feature of interest is the "Mascot Kennels," just within the northern limits of the city. It is one of the few large kennels in the country, over 3,800 feet of netting being used in the yards, and is devoted entirely to St. Bernard dogs. There are more than 60 specimens of the finest strains.

Muscatine, a city of Iowa, the county seat of Muscatine County, on rocky bluffs which here form the bank of Mississippi river, 30 miles below Davenport, about 300 miles above St. Louis, and 220 miles by rail from Chicago. It is on the Chicago, Rock Island and Pacific and the Burlington, Cedar Rapids and Northern Railroads, and being nearer the center of the State than any other city on the Mississippi river, is advantageously situated for trade. The river, after flowing westward many miles, here resumes a southern direction, forming a great bend. The city is the natural terminus of the Hennepin Canal. It has a population of 11,454 by the last Federal census, having increased from 8,295 in 1880. It was first settled in 1836 and known as Bloomington, and was incorporated as a city in 1853. In 1891 half a million dollars were expended for improvements. Natural drainage is afforded by the gradual slope of the site, which varies from 531 to 562 feet above sea level. The streets are wide and well kept, and there is an electric system of street railway. In addition to gas, there are 2 electric-light plants. Two daily newspapers are published, also 3 weeklies, and 2 German weeklies. The churches number 17, of which 4 are Methodist (1 German and 1 African), 3 Baptist (1 German and 1 Holland), 1 Presbyterian, 2 Congregational (1 German), 1 Episcopal, 2 Catholic, 1 German Lutheran, 1 German Evangelical, 1 Friends, and 1 Dutch Reformed. Several of these have chapels, and there is a flourishing Young Men's Christian Association. In 1892 there were 8 public-school buildings, 1 of them a high school, 2 commercial and several parochial schools. One sixth of the population is employed in the factories. These include 3 large sawmills, 1 of which in 1891 cut 27,500,000 feet of lumber, 7,000,000 shingles, and 8,900,000 laths, 2 sash and door factories, the

largest oatmeal mill in the West, which consumes 1,500,000 bushels of oats yearly, a box factory, a large boiler and canning factory supply establishment, another factory of plumbers' supplies, a woven-wire picket fence factory, paving-brick and tile works, 2 pearl-button factories, novelty works, 1 factory of automatic clothes dryers and 1 of collars, 5 flour and feed mills, 2 potteries and a clay-pipe factory, 2 iron foundries, and 3 machine shops, 5 wagon, 8 carriage, and 5 harness factories, as well as 1 of wagon brakes, 1 spice mill and baking-powder works, a nickel-plating establishment, 3 barrel, 10 cigar, 8 candy, 1 pump, and 1 broom factory, 4 marble works, 2 pork-packing houses, and a flexible harrow factory. Large quantities of lumber and oatmeal are exported. The city is an important jobbing point. In 1892 negotiations were completed for the location at Muscatine of iron and steel rolling mills, a carriage manufactory, road-grader, scraper, and plow works, and a large pickling and preserving factory.

Muskegon, a city of Michigan, the county seat of Muskegon County, on the south bank of Muskegon river, one of the longest and most important rivers in the State, five miles above its mouth. It is the fifth city in size in the State, the third on Lake Michigan, and has the finest harbor on the eastern shore of the lake. By water it is about 120 miles from Chicago and 85 from Milwaukee. The river here opens out from 1 to 2 miles in width, forming Lake Muskegon, and affords 12 miles of water front; the harbor is being landlocked and is open all the year. The population increased from 11,262 in 1880 to 22,702 in 1890. In 1870 it received its city charter, with a population of 6,002, having been incorporated as a village in 1861. Railroad facilities are afforded by the Chicago and West Michigan Railroad, the Grand Rapids and Indiana, and the Toledo, Saginaw and Muskegon. The first has shops here valued at \$200,000, and employs 250 men. In addition to three steam transportation companies carrying on the marine business of the city, there is a tug company and a steam ferry connecting with North Muskegon. The total number of vessels entering and clearing the port during 1891 was 2,887, with a capacity of 706,837 tons. In 1890 the aggregate shipments by water were 355,515,000 feet of lumber, 90,808,000 shingles, and 22,670,000 laths, in addition to slabs, sawdust, excelsior, and general merchandise. In 1891 the shipments of lumber amounted to 224,986,000 feet, with 9,460,000 shingles and 18,770,000 laths. A railroad, five miles long, extends from the Life-Saving Station to the Hackley Assembly Grounds, similar in character and purpose to the Chautauqua. An electric street railroad operates 11 miles of track, and cost \$50,000. This street railroad company owns the handsome park of 58 acres between Muskegon lake and Lake Michigan on the west side of the city. Muskegon has an altitude of 593 feet above sea level. Its corporate limits cover 12 square miles, of which 5 are water. The streets are well paved, and two large main sewers have been constructed recently. Prior to 1891 water was supplied by a series of drive wells operated on the Vergennes system; the new plant, costing \$250,000, is equipped with

duplicate Holly vertical pumps, each having a lifting capacity of 4,000,000 gallons daily, the intake pipe having been extended 4,000 feet into Lake Michigan, where the crib and strainer are submerged 40 feet below the surface. There are 35 miles of mains and 450 fire plugs. The fire department possesses five stations and an electric alarm system. The post-office is second class, and the receipts for the year ending April 1, 1892, were \$24,623.48, an increase of about 9 per cent. over the preceding year. Four national banks have a capital of \$100,000 each, and there is a savings bank capitalized at \$50,000. The total enrollment in the public schools for the year ending June, 1892, was 5,287, an increase of 236 over the preceding year. Public-school property is valued at \$600,000, and, in addition to 6 cottages for kindergartens, there are 17 school buildings, a central building costing \$80,000, and a high school under construction to cost \$50,000. There are also 3 Roman Catholic parochial schools, and 2 others belonging to the German Evangelical and the Holland Christian Reformed Churches. A business college is in a flourishing condition. The church edifices number 24, and several denominations have Scandinavian, Danish, Swedish, Norwegian, and German congregations. The Young Men's Christian Association has a membership of 200. The Hackley Public Library, which cost \$104,000 and owns about 20,000 volumes, was a gift to the city from the citizen whose name it bears, who also presented to Muskegon the Soldiers' Monument, the largest public-school building, a park, and a public fountain. The City Hall and the opera house each cost \$25,000. A large "Wigwam," erected for political assemblages, at a cost of \$5,000, seats 2,500 to 3,000 persons. The city is lighted by gas and electricity. Since 1890 12 large factories have located at Muskegon. Among these is an iron and steel company employing 225 men and disbursing \$10,000 per month in wages, with a yearly output of 18,000 tons of high-grade iron and steel exclusively by the open-hearth process, the heating of which is done entirely by fuel gas manufactured on the premises. The plant covers 19 acres of land, with 800 feet of front on the harbor; its paid capital is \$200,000. There are 3 additional iron works, 1 boiler works, and 2 saw factories; a flour mill with a capacity of 250 barrels daily, and about 20 saw and planing mills; a piano factory, a chemical fire-engine company capitalized at \$240,000, turning out hose carts, hook-and-ladder outfits, and other fire department apparatus; a furniture company, which employs 175 men, and turns out a yearly product of \$200,000 in bedroom suites; a factory of patent earth closets, another of spring curtain rollers, dressed pickets, and other specialties, which employs 200 to 300 persons, and has an annual output of \$250,000, the plant covering 18 acres, with 3,500 feet of water front, and including 20 large buildings; a company turning out reclining, carrying, and invalid rolling chairs, revolving bookcases, library supplies, and portable desks, cots, etc., which last it supplies to the United States army; a company engaged in manufacturing woodwork for hames, using 800,000 feet of elm logs yearly, and disbursing \$1,500 a month; a brewery capitalized at \$250,000, a brick and tile, and stone sidewalk

company, a carriage factory, mattress company, bottling works, a bakery consuming raw material to the amount of \$150,000 yearly, and a chemical fire-kindler and excelsior company, as well as numerous smaller concerns—marble and granite works, cooper shops, willow and rattan, electric alarm and lime works. The Board of Trade has a membership of nearly 800. Two daily newspapers are published.

NORTH MUSKEGON, on the north side of Muskegon lake, on a plateau between it and Bear Lake, had a population in 1890 of 1,590, when still a village. In 1891 it was incorporated as a city. Two bridges have been authorized, one by Muskegon and one by the city itself, to cost \$12,000 each, which will reduce the distance between the two corporations about one mile, and will accommodate the electric car line of Muskegon, which is being extended. Water is supplied from Bear lake by water works which cost \$32,000, the capacity of the pump being 1,500,000 gallons a day. There are 3½ miles of water mains and 37 hydrants. The public-school enrollment in 1891 was 359, and a new central school building has been erected at a cost of \$12,000. There are 5 shingle and lumber mills here, one of which has an annual output of 25,000,000 shingles and 8,000,000 feet of lumber.

MUSKEGON HEIGHTS, south of the city, is a village incorporated Jan. 2, 1891, which, with but 1,800 inhabitants, contains factories disbursing from \$20,000 to \$25,000 a month in wages. It has a public-school building, recently completed, which cost \$9,000. A newspaper is published, and there are Baptist and Methodist churches. A large refrigerator company is located here, the plant of which covers 10 acres, and employs 250 men. A belt line alongside the works connects all railroad and steamship lines centering at Muskegon. Another important industry is an electric-crane company, capitalized at \$150,000, which was organized in March, 1891, and in its second year showed an output of \$250,000. Other establishments turn out key-way cutters with key-making attachments, key-seating machines and planers, horse-power fire engines, pianos, washing machines, and woodwork of all kinds; one company, which makes a specialty of fine interior decoration and finish, employs 125 men.

Oklahoma City, the largest city in Oklahoma Territory, now four years old, claims a population approximating 10,000. In 1890 it had by the Federal census 4,151. On the streets and sidewalks \$20,000 have been expended, \$10,000 on a fire department, and \$20,000 on a system of sanitary sewerage. The city is lighted by gas and electricity, and water works have been in operation nearly a year, which cost \$100,000, the supply being from artesian wells. There are 5,000 feet of stone and brick business blocks, including 13 three-story buildings. The city enjoys excellent transportation facilities, being on the main stem of the Atchison, Topeka and Santa Fé Railroad, running north and south, while the Choctaw Railroad furnishes egress east and west. It is also an important trading and manufacturing center, and is surrounded by a rich agricultural region. It possesses the only foundry and the only canning factory in the

territory, a \$75,000 cold-storage and ice plant, a carriage and wagon factory, a large grain elevator, roller mills with capacity of 400 barrels of flour and 200 of bolted meal daily, also a custom corn and flour mill, 2 planing mills, several steam and hand brick machines, 2 broom and 3 cigar factories. A complete telephone system connects all parts of the city, and there is free mail delivery.

Orange, a city of Essex County, N. J. It has a population of about 20,000, and is the Orange proper, around which lie the townships named East, West, and South Orange. It is the only city of the group, the largest in population and the smallest in area. It is very near the center of Essex County, 4 miles northwest of Newark, on an undulating plain on the first ridge of hills that rises above Newark, and at the foot of the second hill of the Watchung mountain, commonly but improperly called the First Orange mountain. It is within thirty minutes of New York, on the Morris and Essex division of the Delaware, Lackawanna and Western Railroad, is the terminus of the Orange branch of the Erie Railway, and the projected center of the new cable and rapid-transit elevated road from New York to the brow of the First mountain. The main street is traversed by an electric railroad running from the foot of Eagle Rock, West Orange, to Newark, and the principal crosstown thoroughfare by an electric road from South Orange to Rosedale Cemetery, connecting with Montclair, East Orange, and the cable elevator to the top of the mountain. The first settlements here were made by people who moved up from the town, on the Passaic, not long after it was founded by emigrants from Connecticut, in 1666. At the close of the seventeenth century there were several families of prosperous farmers here; in 1718 there were enough to form a Presbyterian society separate from the mother church; and in 1806 the township, named for the Prince of Orange, was laid off from Newark. In 1859 this was divided into the townships of Orange, and the East, West, and South Oranges. Orange, covering a little more than 2 square miles, was incorporated as a city in 1870, under the name of the Town of Orange, which was changed to the City of Orange in 1872. The old road from Newark to the "mountain settlements," upon which are also the centers of both East and West Orange, is now a broad avenue, macadamized and shaded by elms and other trees nearly one hundred years old. The business houses are closely gathered together for half a dozen blocks, in the neighborhood of the railroad station and at the intersection of the Newark and crosstown electric railroads. The city has 5 wards, and the government is represented by the mayor and 16 councilmen. The tax rate for 1892 was \$2.90. The police department, organized in 1869, consists of city marshal, 2 sergeants, 3 roundsmen, 1 truant officer, and 31 patrolmen. The paid fire department, organized in 1873 to succeed the Volunteer Fire Company, has about 25 men, 2 steam fire-engine companies, 1 hook and ladder company, 2 hose companies, and a fire-telegraph system with 25 boxes. The water works are complete and sufficient for the growth of the population. They are supplied from the west branch of Rahway river, and

have a reservoir of 270,000,000 gallons capacity between the First and Second mountains, west of the city. The works were completed in 1884, and cost about \$425,000. In addition to this, a storm water and sewage system is now nearing completion, the total cost of which will be about \$1,000,000. The city and suburbs are well lighted by electricity and gas furnished by private corporations. The shops and office buildings of the merchants, the Music Hall, Masonic Lodge, in which there is a large post-office, and the buildings of the First National Bank, the Young Men's Christian Association and the Women's Christian Temperance Union, besides the many fine churches and the newer schoolhouses, give the city considerable pretensions to architectural beauty. The residences are among the finest in the State. There are 5 public-school buildings, including the high school and a lately perfected manual-training school, employing 55 teachers, with an enrollment of nearly 2,500 pupils. There are several large private schools where young men and women are fitted for college, and kindergarten and music and dancing academies. The leading secular organization is probably the New England Society, which has a membership of 275. It is divided into sections devoted to study in many departments of science and the dissemination of knowledge, by means of lectures and exhibits. It has an historical and reference library and reading-room in its own building, the Music Hall. The Woman's Club has a membership of nearly 300. The Women's Christian Temperance Union has a building of its own, and many branches of educational and practical work. The Bureau of Associated Charities is on the plan of the New York Charity Organization. The Memorial Hospital has a building accommodating 50 patients, with a training-school for nurses. The orphan asylum has a large building. There is a board of health, the Orange Auxiliary of the National Medical Society, and other organizations for protection of the health and other interests of the population. The Free Library Association maintains a free reading-room and reference and circulating library for residents of the city. The Mendelssohn Union is a singing society with a total membership of 270, led by a conductor from New York, and giving several public concerts a year. There is a military company, a post of the Grand Army of the Republic, Order of Elks, Turnverein, Essex County Hunt, athletic club, wheelmen's club, lawn-tennis association, an art association that gives an annual exhibition of paintings and engravings, and a camera club.

The Orange National Bank has a capital of \$150,000; the Second National Bank, a capital of \$100,000; the Orange Savings Bank and the Half-Dime Savings Bank have an aggregate deposit of \$1,750,000. Of the 5 weekly papers, 2 are in the German language. The Board of Trade, which was established in 1891, has a membership of about 160.

This ranks as the fourth hat-manufacturing city of the United States, and the portion of the town known as the Valley, southward toward South Orange, called Highland Avenue, is largely occupied by hat factories and their operatives. In this and other portions of the city, where the small amount of water necessary in the

dyeing has been afforded by the insignificant streams that are the only water courses between the Passaic and Rahway rivers, there are about 20 factories for blocking and finishing men's hats, employing about 5,000 persons, and representing an investment of about \$1,000,000. This industry was begun about one hundred years ago, and has always been the principal one of the place. Two of the largest hat-forming mills in the country have been opened during the past ten years, and that branch of the trade has so grown that a large portion of the finished hats turned out of the binders' hands and boxed by local factories for export have come into the city in the form of bales of rabbit fur, etc. Hatters' tools, shoes, sashes, blinds, doors, carriages, and harnesses are made here.

EAST ORANGE is the most important of the townships surrounding the city, though it is the smallest in area and has the fewest industries. It is a place of suburban homes, and covers $3\frac{1}{2}$ square miles, lying east and a small portion north of Orange. It has 3 railroad stations, and is traversed through the main street by the Newark and Orange Electric Street Railway. The population is 14,000. The government is by a township committee, consisting of the chairman and 12 members. The police department numbers 25 men. The fire department (paid) has 5 hose companies and 1 hook and ladder company. There are 5 graded public schools, including kindergarten and manual training. There is a board of health, and 1 newspaper is published here. The water supply is obtained from driven wells owned by the Orange Water Company, a private corporation. The town has a deodorizing system of sewage, copied from Birmingham, England, and completed about four years ago, at the cost of \$425,000. There is a national bank, a savings bank, a large porous-plaster factory, and a few other industries. There are several athletic and social clubs, and societies for village and personal improvement. There are 4 Presbyterian churches, 2 Episcopal, 3 Methodist, 2 Baptist, 1 Congregational, 1 Dutch Reformed, and 1 Roman Catholic.

WEST ORANGE township lies west of the city, covering about 15 square miles, from the foot of the First mountain beyond the summit of the Second mountain, rising to 650 feet above the sea. The population numbers 5,500. There is a police department of 12 men, a well-organized fire department, 2 Presbyterian and 1 Episcopal churches, and 2 graded public schools. A large portion of this township is still occupied by farms, which supply the markets of the neighboring towns and cities. There are also many fine country residences on the ridge above Orange, commanding a view eastward even to Long Island. The mountain ridge, which is an outcropping of the same geological formation of trap rock as the Palisades of the Hudson, has long been worked by quarrymen and stone crushers for the macadamized roads. There are also valuable deposits of building sand and some soft red sandstone quarries. The highest point of the ridge is Eagle Rock, a well-known place of observation and picnic ground, where the Germans of Newark celebrate their sunrise festival of Pfingster. It is reached by the trolley railroad from Newark, and a cable elevator.

LLEWELLYN PARK occupies about 750 acres on the eastern side of the mountain, between the city of Orange and Eagle Rock. This inclosure was laid out about 1850 by Llewellyn Haskell for a residential park, and is now almost completely taken up by about 60 families, who unite to keep the inclosure as one large estate. There are small pieces of woodland, plantations of rare shrubs and trees, small but carefully kept water courses in rural glens, a ramble of 50 acres, and about 12 miles of drives.

SOUTH ORANGE township covers about 12 square miles, and is the southern boundary of the city and the two other townships. The township has a population of about 6,000. It was organized in 1860, and is governed by a committee consisting of the chairman and 4 members. It is connected with Orange and with Newark by separate and direct lines of trolley electric railroad. The only industry in the place is a grist mill. The township is principally occupied by farms and by residences of Newark and New York business men. There are 4 graded schools, 2 Presbyterian churches and 1 chapel, 3 Methodist churches, 1 Episcopal, and 1 Roman Catholic. The Roman Catholic College, Seton Hall, occupies a large estate with several imposing buildings, and a large orphanage is on the main road to Newark. There are 5 post-offices in the township—Valesburg, Hilton, Manhattan Park, Maplewood, and South Orange. The village of South Orange, which covers about 2 square miles round the railroad station of the same name, was incorporated in 1869, and has a separate government from the township, vested in the Board of Trustees, consisting of a president and 6 members. The village has its own pipes for water, which it buys of the Commonwealth Water Company. It is lighted by gasoline, and has police and fire departments. The farthest station in the township is within an hour of New York.

Ottawa, a city of Illinois, the county seat of La Salle County, on the north bank of Illinois river, just below the mouth of the Fox, 98 miles east of Rock Island and 83 from Chicago, with which city it is connected by the Illinois and Michigan Canal, flowing through its center and terminating at its western boundary. It is on 2 great trunk lines of railroad—the Chicago, Rock Island and Pacific, and the Chicago, Burlington and Quincy. In 1880 it had a population of 7,834, which increased to 9,985 in 1890. The city was settled in 1830, and was made the county seat a year later. It was incorporated as a village in 1838, and as a city in 1853. The streets are well graded, and are being paved exclusively with brick, with tile sidewalks. In 1898 5 miles of these were laid. In 1891-'92 a complete system of sewers was put in. In addition to more than 150 artesian wells, the average depth of which is 800 feet, water works supply an abundance of spring water obtained in the suburbs. There is an efficient volunteer fire department, also an electric street railway, while both electricity and gas are employed in illumination. Two of the 3 banks are national, and have a joint capital of \$500,000. Three daily and 7 weekly newspapers are published, also 1 quarterly. The public-school property is valued at \$100,000, of which \$15,000 belongs to the

high school, and the school fund reaches nearly \$40,000 yearly. There is a Catholic parochial school, and an academy for young ladies. A public library was given to the city in 1885, and a business university is located here. The churches are, respectively, 2 Congregational (1 French), 2 Methodist, 2 Presbyterian, 1 Baptist, 1 Episcopal, 1 German Lutheran, and 1 German Evangelical, and 2 Catholic (1 Irish and 1 German, the former being very handsomely finished and ornamented, and valued at \$72,000). The county courthouse, completed in 1888, cost \$121,833, and there are also a county jail, a supreme court building for the northern judicial district of the State, which cost \$45,000, and a county infirmary 4 miles west of the city, with 200 acres of land attached. The public parks contain fine native forest trees, and the city, lying in the valley of the Fox and Illinois rivers, is surrounded by much beautiful scenery. Especial points of interest are Starved Rock—where the last of the Illinois Indians perished miserably, giving the place its name—Deer Park Glen, Lover's Leap, Bailey's Falls, and Shabbona's Winter Retreat. In addition to its extensive manufactures, Ottawa has large agricultural interests, and ships great quantities of grain. Immense deposits of clay of all varieties are found in the county, and also beds of cement and glass sand. The industrial establishments include a window-glass factory, established in 1867, which turns out 100,000 boxes of such glass yearly, and employs 250 men; a mold, bottle, and glass and a bottle and flint-glass company; lamp-chimney glass works with a capacity of 25,000 barrels of chimneys yearly; an immense fireproof construction company; a sewer-pipe factory, capitalized at \$1,000,000; 1 factory of drain tiles, fire clay and brick companies, terra-cotta works, a pottery or stoneware works, 3 planing mills, flouring mills, a foundry and machine shops, wagon, carriage and buggy, and refrigerator factories, marble works, factories of agricultural implements, 1 of cottage organs, 1 of overalls and shirts, 1 of boxes, 9 of cigars, and 5 of harness and saddlery, pump works, and a photo-engraving establishment. In the South Park there is a celebrated medicinal spring. The city has a driving-park association.

Oxford, a city of Mississippi, the county seat of Lafayette County, on the main stem of the Illinois Central Railroad, in the northern part of the State, 74 miles from Memphis, Tenn. By the last Federal census it had a population of 1,546. It is the seat of the University of Mississippi, which was founded in 1844, and cost, with its grounds, which embrace 640 acres and 16 buildings, \$200,000. The institution is supported by a 6-per-cent. fund, invested in State bonds, which yields \$33,000 per annum, and in addition it receives grants from the Legislature. Students from all States are admitted free to all the departments, excepting only that of the law. There are also 2 large female colleges, a public-school building for whites which cost \$15,000, and a separate building for colored pupils. The church property is valued at \$50,000. The Presbyterians, Cumberland Presbyterians, Methodists, Baptists, and Episcopalians have church edifices, and there are 3 others belonging to the

the colored people. The business houses, about 45 in number, are principally of brick. In the center of the public square stands the county courthouse, which cost \$26,000. The new county jail cost \$15,000. Federal courts, district and circuit, are held here, and there is a Federal building that cost \$60,000. The town site is advantageous, having an elevation of 685 feet above tide water. The surface is rolling, and it is well drained. The corporation covers 1,280 acres, and the streets are regularly laid out and graded. Brick and plank sidewalks have been laid. There are 2 banks, and a building and loan association, but no manufacturing establishments. The personal and real property is valued at about \$1,500,000, and the tax rate does not exceed 12 mills for all purposes. About 9,000 bales of cotton are handled here yearly.

Palatka, a city of Florida, the county seat of Putnam County, on the west bank of St. John's river, 60 miles south of Jacksonville and 80 miles southwest of St. Augustine. It is 18 miles from the Atlantic Ocean, and about 85 from the Gulf of Mexico. Four railroads afford transportation—the Jacksonville, Tampa and Key West, the Florida Southern, the Jacksonville, St. Augustine and Indian River, and the Georgia Southern and Florida. There are several lines of steamers on St. John's river, and in winter two lines of steamers make the famous Ocklawaha river trip, remarkable for its tortuous course and picturesque beauty. These steamers are exceedingly quaint in pattern, stern-wheelers, built on the high-pressure plan; and at night flaring flambeaux of pine torches, hung high in the bow, cast weird reflections upon the tangled foliage of the narrow stream. Palatka was founded by James Marver, and was incorporated in 1853. It has been twice destroyed by fire. After the civil war the culture of oranges became a new industry, and thousands of boxes of the fruit are now shipped annually from the county. In 1880 the population was 1,616, and in 1890 it had increased to 3,039. The city is lighted by gas, and has a street railway. The water supply is drawn from a spring, and a standpipe holding 200,000 gallons is fed by 2 pumping engines with a capacity of 1,250,000 gallons daily. Artesian wells have been sunk, the water, which is strongly impregnated with sulphur, being struck near the surface. The fire department consists of 4 hose companies and a hook-and-ladder company. A valuable adjunct is a fire-police force. There are 2 banks (1 national), 2 public schools for whites and 2 for colored pupils, a Catholic academy, and other private schools, several churches, 2 daily and 2 weekly newspapers. The wharves of the city are extensive. In addition to oranges, cotton and sugar are shipped. Both the Jacksonville, Tampa and Key West and the Florida Southern Railroads have shops here, and the industries include 2 sawmills and 2 shingle mills, the vast forests that border the St. John's and Ocklawaha rivers affording an abundant supply of cypress and long-leaved pine. One of these mills has a daily capacity of 30,000 feet of lumber. There is also a factory for orange boxes, as well as an ice factory and wagon works. Fish are taken by Northern fishermen in autumn, and shipped to the North.

Paterson, a city of New Jersey, the county seat of Passaic County, on Passaic river, 16 miles from New York city, among the foothills of the Ramapo range. The New York, Susquehanna and Western, the New York, Lake Erie and Western, and the Delaware, Lackawanna and Western Railroads pass through the city, and it is also connected with Delaware river by the Morris Canal. Paterson was founded in 1791 by an incorporated company with the title of the Society for Establishing Useful Manufactures (commonly called the S. U. M.), the existence of which was largely due to the influence of Alexander Hamilton, who was convinced that the United States would never be really free and independent of Great Britain until they could manufacture goods enough for their own consumption. One hundred thousand dollars was subscribed for the company, which was the largest of its kind in the country. The location at Passaic Falls was chosen as affording the finest water power anywhere within convenient reach of New York or Philadelphia, and the projected town was named from William Paterson, Governor of the State. Before the immense water power developed by the perpendicular fall of 50 feet made by the river here was so utilized the picturesque beauty of the spot attracted visitors. After its plunge the river flows between vertical cliffs until it sinks 20 feet farther to the level of the plain. The site of Paterson (700 acres), together with the river bed above and below the falls, was purchased by the S. U. M., at a cost of \$8,230, and Major L'Enfant, who laid out the national capital, was appointed (succeeding Nehemiah Hubbard) to superintend and lay out the town, but owing to his extravagant notions he in turn was superseded by Peter Colt. In 1824 the population was 4,787, and in the following year 24,000 spindles were in operation in the cotton mills. In 1860, ten years after its incorporation, the inhabitants numbered 20,478; in 1870, 33,579; in 1880, 51,081; and in 1890, 78,347, an increase of 53.53 per cent. in the last decade. In 1893 the population is claimed to be 90,000. Paterson is the third city in size in the State. Its altitude is from 81 to 193 feet above sea level. From 8,000,000 to 10,000,000 gallons of water are required to supply the city every day, and double that quantity in winter. The capacity of the water works, which are owned by a company, is 58,000,000 gallons, in 4 reservoirs, and a pumping capacity of 26,000,000 gallons a day, by steam and water power. At the end of 1892 there were 74 miles of mains, and there are 913 fire hydrants. The paid fire department maintains a force of 154 men. Its apparatus includes 9 steam engines, and 1 in reserve. Both gas and electricity are used for lighting. There are 2 large hospitals, 31 public halls, and 2 public parks, one containing 66½ acres, which cost \$75,000, and the other, 30 acres, which cost \$45,000. In 1891 several lots on Vreeland Avenue were also given to the city for parks. The public library contains 16,000 volumes. In 1866 the first street railway was built. In 1891 electricity as a motor power was introduced, and the present plant represents an outlay of nearly \$2,000,000. There are 35 miles of track in operation. The first public school in Paterson dates from

1827, and since that year 17 large, well-equipped brick buildings have been built, as well as a high school, and more than 200 teachers are now employed. The school population is about 20,000. There is also a business college. The 64 churches, including missions, are divided as follow: 7 Baptist, 5 Episcopal, 2 Lutheran, 2 Methodist Protestant, 2 Congregational, 12 Methodist Episcopal, 10 Presbyterian, 10 Reformed, 10 Catholic, 3 Hebrew, and 1 Swedenborgian. There are 13 cemeteries. The charitable institutions include 2 large hospitals, 2 orphan asylums, and an old ladies' home. One of the 3 national banks has a capital of \$400,000, and another of \$150,000; there are also 3 savings institutions. For a new City Hall \$400,000 have been appropriated, and in addition to the old one there is a county building and county jail. Five daily newspapers are published, 2 in German, and 6 weeklies, 1 in German and 1 in Dutch. The value of manufactured goods produced in Paterson is estimated at \$48,000,000 yearly. It is known as the Silk City, or the Lyons of America, on account of its leading industry, which dates from 1840. In 1880 the city had 52 industries reporting to the United States census, in 340 establishments: \$11,613,442 capital was employed; and 18,755 persons, with a pay roll of \$6,679,437. The value of the product was \$25,339,300, and materials were used to the amount of \$13,992,233. In 1890 73 industries reported, in 597 establishments, with \$27,387,421 in capital; 24,135 persons were employed, with a pay roll of \$11,523,558; the product was valued at \$41,898,231, and \$22,300,133 were spent for materials. The increase in silk manufacture from 1880 to 1890 was 112 per cent. There are now 90 establishments manufacturing silk and silk goods, with capital of \$14,353,491; 11,596 persons are employed, including 530 children, and \$5,021,768 are paid yearly in wages. The total amount of capital invested in the manufacture of silk in the United States in 1890 was \$51,007,537. Twenty-nine foundries and machine shops in Paterson represent a capital of \$2,769,321, and employ on an average 3,051 persons, at wages of \$1,716,801. The annual product is valued at \$4,048,592. There are also 22 dyeing and finishing establishments for textiles, employing 1,266 persons; 5 iron and steel works, with capital of \$1,535,335, which employ 1,149 persons, and realize \$1,813,313; 5 factories of jute and jute goods, with 836 persons employed, and capital invested to the amount of \$1,309,148; 6 establishments for manufacture of malt liquors, capitalized at \$1,865,889; a plant manufacturing linen thread, which occupies several large buildings, and which dates its eminently successful attempt to Americanize the Irish plant from 1864; 14 printing and publishing houses, and 123 building trades. The assessed valuation of property in the city in 1880 was \$19,898,485, and in 1890 \$28,324,280. The net municipal debt in the last year was \$1,605,993.

Pine Bluff, the third city in population of Arkansas, county seat of Jefferson County, on Arkansas river, 160 miles from its mouth, at the head of low-water navigation and in the center of the most productive cotton region in the State. It is 42 miles from Little Rock. By the

census of 1890 it had 9,952 inhabitants, having increased from 3,203 in 1880. At present it claims 15,000, of which two thirds are white. The town was first settled in 1819 by Joe Bonne, a French-Quapaw half-breed Indian, and was entered in the Government land office in 1832 by John W. Pullen, a North Carolinian. In 1836, the year of the nativity of the State, it was laid off in blocks and lots. Forty-three additions have been made and incorporated with the old town, the whole covering 3,000 acres. Since 1850 it has had a large trade, but its growth has been rapid from the completion of the St. Louis, Arkansas and Texas Railroad, which with the Missouri Pacific passes through the city, with the White River and Munroe Railroad as a feeder. The incoming and outgoing tonnage of the city largely exceeds that of any other in the State; 100,000 bales of cotton are handled here annually. There are 9 miles of a superior system of sewerage, water works, 10 miles of street railway, and gas and electric lighting. The shops of the St. Louis and Southwestern Railroad are here; and extensive shops exclusively for the building of cars are in course of erection, which will give employment to 1,000 men. There is a 90-inch Morse cotton press, with a capacity of 800 bales daily, and storage for 15,000 bales. An elevator and mill turns out 600 barrels of meal every day; a cotton-seed-oil mill has a capacity of 70 tons daily, and there is an ice factory making 20 tons a day. Pine Bluff is an extensive lumber market, being surrounded by a forest of soft and hard woods extending from 50 to 100 miles in any direction, and there are 2 planing mills and sash and door factories, as well as minor establishments. One daily and 3 weekly newspapers are published. Educational and church facilities are excellent, and there are 8 banks. The city has an altitude of 228 feet above sea level.

Plattsmouth, a city of Nebraska, the county seat of Cass County, handsomely situated on the eastern slope of the bluffs at the confluence of the Platte and Missouri rivers, a mile and a half below the mouth of the former. It is 22 miles south of Omaha, and two hours by rail from Lincoln. It is the gateway to the great South Platte country, and in addition to the river transportation 14 passenger trains leave the city daily over the Chicago, Burlington and Quincy, the Burlington and Missouri River, the Kansas City and St. Joseph, and the Missouri Pacific Railroads. A fine steel railroad bridge crosses the Missouri at this point. The land upon which the city is built was obtained by the United States Government through a treaty with the Indians in June, 1854, and in October of the same year a town company was organized, which secured an act of incorporation from the first legislature of the Territory in 1855. The town site was entered in 1856, and Platts-mouth soon became an important trading point as well as an outfitting station for the immense immigration to Pike's Peak and the gold mines. A regular line of packets plied to and from St. Louis. In 1869 the Burlington and Missouri River Railroad was built. The population increased from 4,175 in 1880 to 8,392 in 1890. Main Street, the principal business thoroughfare, has 50 or 60 business blocks, and has been paved

with Sioux Falls granite. Gas and electric lights are employed. The water works cost \$125,000, and a system of storm-water sewerage has been completed recently which cost \$40,000. Three daily and 3 weekly newspapers are published. An opera house, costing \$50,000, has been built, and the county courthouse, recently completed, cost \$80,000. There are 7 ward public-school buildings, and a four-story high school which cost \$25,000; 25 teachers are employed. The high school has a business college department. The churches are: 2 Presbyterian (1 German), 3 Methodist (2 of them Swedish and German), 2 Catholic, 2 Baptist (1 colored), 1 Christian, and 1 Episcopal. Fifty thousand dollars have been appropriated by the Federal Government for the improvement of Missouri river at Plattsmouth, and Fort Omaha was recently relocated 8 miles distant, \$500,000 being appropriated to begin improvements. The principal shops of the Chicago, Burlington and Quincy Railroad are at Plattsmouth, employing hundreds of men, and disbursing between \$35,000 and \$45,000 monthly. Brick and terra-cotta works, with a capital of \$30,000, turn out 37,000 bricks a day. There are also 4 cigar factories, 1 buggy and wagon works, a steam laundry, and a sash, door, and blind factory. The city has a board of trade.

Pomona, a city of California, in Los Angeles County, 32 miles east of Los Angeles, on the Southern Pacific and Atchison, Topeka and Santa Fé Railroads, over which there are 8 passenger trains daily each way. In 1882 it had 150 inhabitants, and by the census of 1890 it had 3,634. In 1890 it was not in existence. It lies in a beautiful and fertile valley, and views taken from it include mountains from 9,000 to 12,000 feet high. Since the introduction of a system of irrigation, largely from artesian wells, trees have been planted here with success, and all sorts of fruits abound. There are extensive orange, lemon, and olive orchards, while vast quantities of figs and deciduous fruits are shipped, as well as canned and dried. Grapes are raised for wine and raisins. In 1890 between 800 and 500 men, women, and children were employed in the cannery here, and 5 firms were engaged in drying the apricot crop. One orange grove, said to be the largest single grove in the world, contains 300 acres. The orange crop for 1890 was 97 carloads. Olives are pickled, and olive oil is manufactured. There are 100 miles of irrigating pipe in the valley, and 40 of iron and steel in the city, carrying artesian water, all under fire pressure. The city is lighted by gas. The gentle declivity of the site, without hill or depression, leaves all the streets on a perfect grade. It has an altitude of 857 feet above sea level. Twenty teachers are employed in the public schools, and bonds to the amount of \$40,000 have been issued for the construction of 2 new brick buildings. A college has been located 4 miles northeast of the business center, and 2 miles distant is the United States Experiment Station for Southern California. Eleven religious denominations are represented, most of

which have church edifices. There is a board of trade, and 1 daily newspaper is published, as well as 3 weeklies. Of the 2 banks, 1 is national. Mining is carried on, in addition to farming and fruit growing, and brass and iron goods are manufactured. A company has secured a water power in San Antonio Cañon, to be utilized for electric power and light. The climate shows a variation of but 16° in the mean average.

Sheboygan, a city of Wisconsin, the county seat of Sheboygan County, on Lake Michigan, at the mouth of Sheboygan river, 52 miles north of Milwaukee, and 43 miles east of Fond du Lac. It has one of the best harbors on the lake, for the improvement of which \$25,000 have been recently appropriated by the United States Government, and there is a shipyard and a modern floating dock at the mouth of the river. Boats touch daily at the port during the season. The first settlement at Sheboygan was made in 1836; in 1846 it was chartered as a village, and in 1858 was incorporated as a city. In 1890 the

FEDERAL BUILDING, SHEBOYGAN, WISCONSIN.

population was 7,814; in 1890 it was 16,359, the United States census placing Sheboygan in the list of the 10 cities in the country showing the best per cent. of growth in the decade; and in 1893 20,000 are claimed. The railroads that enter the city are the Milwaukee, Lake Shore and Western and the Chicago and Northwestern. In 1892, 450 buildings were erected, and \$1,346,850 were expended in improvements. Gas and electric lighting are in use, and there is a fine system of water works, in addition to paid fire and police departments. The fire department has an electric alarm system. The streets are wide and straight, many of them in the residence portion of the city being bordered with shade trees. A street railway operates 6 miles of track. The assessed valuation of property for 1892 was \$5,415,980, exclusive of public-school property, placed at \$200,000, and church property, worth \$260,000. The school population is 7,387, and there are 10 school buildings. In addition there are 5 parochial schools, and a flourishing business college. Eighteen religious denominations are represented, many of the church edifices being fine specimens of architecture. Two daily and 4 weekly newspapers are issued. Two banks

have deposits to the amount of \$2,304,747. An artesian well, the water of which is highly impregnated with mineral salts and possesses medicinal qualities, was bored by the city in 1875, in Fountain Park. It has a depth of 1,475 feet and pressure of 52½ pounds to the square inch, sufficient to force a stream 114 feet above the surface of the ground. A fountain has been erected at a cost of \$2,500. By the State Commissioner of Labor Sheboygan is ranked third in the State in the number of factory hands. Over 5,500 are so employed, the increase in number during 1892 having been 800. The monthly pay roll is \$225,000. The leading industry is the manufacture of furniture, the city being the largest chair-manufacturing center perhaps in the world. Five factories turn out 6,000 finished chairs daily, and 40,000 feet of lumber are consumed by the furniture factories every day. Other establishments are extensive tanneries, 5 large cheese warehouses that handle 18,000,000 pounds of cheese annually, 2 factories of enameled ware, 1 boot and shoe company, 2 carriage works, a foundry, machine shops, a flouring mill, various factories of wooden ware, milk safes, toys, office and hotel furnishings, Venetian blinds, table slides and mattress frames, soap, and cigars, over 300 persons being employed in the last-mentioned industry. There are also 2 breweries and 1 firm of shipbuilders. Extensive fisheries are here and large quantities of fish are shipped. The courthouse, completed in 1860, cost \$65,000.

COLOMBIA, a republic in South America, formerly known as New Grenada. As the result of the revolution of 1885 the 9 federal States were consolidated into the centralized republic of Colombia. The President is elected for six years. The Congress consists of a Senate of 27 members, each department being represented by 3, and a House of Representatives, elected in the departments in the ratio of 1 to 50,000 inhabitants. The President is Dr. Rafael Nuñez, elected for the fourth time in 1892, for the term ending in 1898. Colombia has an estimated area of 564,778 square miles. The population at the census of 1870 was 3,320,530, and in 1881 it was officially estimated at 3,878,600. The Government derives its revenue mainly from customs. The revenue for the biennial period 1891-'92 was estimated at 25,153,600 pesos, and the expenditure at 25,693,015 pesos, in paper, the peso being worth about 30 cents in United States money. For 1893-'94 the budget of receipts is 24,899,200 pesos, and of expenditures 27,322,136 pesos. A foreign loan of £1,913,500, contracted in 1873, has paid no interest for many years, and negotiations were begun in June, 1891, for a settlement of this debt, which amounts, with arrears of interest, to £3,059,985.

Internal Affairs.—On Jan. 30, 1893, a conflict took place in Bogotá between a mob of workmen and the police, which was not ended till 100 persons were killed and 500 wounded. The mob attacked the house of Prof. Gutierrez, a Jesuit, and held possession of the city for two days. The troops were then called out, and martial law was proclaimed. The soldiers had difficulty in restoring order and arresting the leaders, all of whom were executed. After this street gatherings were prohibited, and the city

was strongly guarded by troops. An executive decree was issued suppressing all labor organizations and secret societies. The Liberal party, reorganized under the leadership of Santiago Perez, a former President, planned to overthrow the system of arbitrary government represented by Nuñez. Arms were introduced through Venezuela, until the Government discovered it and secured the co-operation of the Venezuelan authorities in putting a stop to the importation. The Liberals issued a manifesto condemning the new Constitution and the laws framed under it which confer extraordinary powers on the national Executive, and charging the Administration with abusing these powers in a manner not warranted by the Constitution. A projected rising in Cucuta, Santander, was prevented by the vigilance of the authorities. Liberal newspapers were suppressed for attacking the Government. In consequence of the alleged discovery in Barranquilla of plots to blow up public buildings with dynamite and start revolutions both in Colombia and Venezuela, martial law was proclaimed. An executive decree was issued in the summer, and published abroad by Colombian consuls, forbidding the importation of arms or powder except for the National Government.

A heavy tax, of 8 pesos per kilo on cigars and cigarettes, and 5 pesos on smoking and unmanufactured tobacco, was decreed by Congress, in the form of a monopoly, for the purpose of increasing the revenue. The Government offered to farm the monopoly for 2,500,000 pesos in gold for thirty years, but the general discontent caused by the measure, not only among the merchants who were affected but throughout the community, compelled the Government to defer the execution of the law.

A severe famine afflicted the fertile department of Cauca in 1893, reducing a half million of people to starvation; and a volcanic disturbance, which leveled a ridge near Popayan and interrupted the course of three rivers, in March, added to the general distress. The revolutionary ferment in the country led to the reconstruction of the ministry in February, when José M. Campo Serrano became Minister of the Interior, and Domingo Ospina Camacho Minister of War. Dr. Nuñez, who has never taken the emoluments coming to him as President of the republic, renounced also the traveling allowance of 30,000 pesos voted by Congress in 1888, to disarm any suspicion of the purity of his motives in combating the efforts to overthrow his administration.

The Panama Canal.—The original concession for the construction of a canal across the Isthmus of Panama was granted in 1878 to Lieut. Lucien Napoleon Bonaparte Wyse, of the French navy, the engineer who made the survey for the company that was organized by Ferdinand de Lesseps to build the canal. After the appointment of a liquidator for the company in 1890, Lieut. Wyse, who had long before been excluded from the direction by the speculators and contractors who mismanaged the enterprise, went to Colombia and secured from the Government a prolongation of the concession for two years, pending the organization of a new company to carry the works to completion. The prolongation expired on Feb. 28, 1893, and was extended from month to month while negotiations for a

new arrangement were going on. Congress, in January, 1893, authorized the Government to renew in a modified form the contract made with the liquidator, or to make a new contract providing for the resumption in a serious and permanent manner of the work of excavation. The Government was suspicious that property belonging to the canal and pledged to the state was disposed of illegally, and in the new contract at first insisted on having immediate possession. A contract was finally signed by Dr. F. Paul, attorney for M. Monchicourt, the official liquidator, and the Colombian Minister of the Interior, prolonging the time allowed for the organization of a new company till Oct. 31, 1894, and granting a further term of ten years for the completion of the canal. The debt of the company to the Colombian Government is increased from 6,500,000 francs to 8,000,000 francs, and the new liability is to be discharged in three annual payments of 500,000 francs. The plant used in the construction of the canal will remain in the possession of the liquidator, but an inventory is to be taken by representatives of the Government and of the canal company. The other clauses of the previous conventions are renewed.

Controversy with Venezuela.—In Arauca and other frontier towns the administrator of confiscated properties appointed by President Crespo of Venezuela to carry out his decree of Oct. 30, 1892, against sympathizers with Andueza Palacio's usurpation, took away the property of many Colombian citizens. The Colombian Government raised a protest, and after some correspondence the confiscated estates were returned to their owners.

COLORADO, a Western State, admitted to the Union Aug. 1, 1876; area, 103,925 square miles. The population in 1890 was 412,198. Capital, Denver.

Government.—The following were the State officers during the year: Governor, Davis H. Waite; Lieutenant-Governor, David H. Nichols; Secretary of State, N. O. McClees; Treasurer, Albert Nance; Auditor, F. M. Goodykoontz; Attorney-General, Eugene Engley; Superintendent of Public Instruction, John F. Murray; Railroad Commissioner, William A. Hamill; Regents of the University, D. M. Richards, W. E. Anderson. All these officers are Populists. Chief Justice of the Supreme Court, G. W. Allen; Associate Justices, Charles D. Hoyt, Victor A. Elliott.

Finances.—The biennial reports of the auditor and Treasurer, submitted at the beginning of the year, show the expenditures to have been kept almost within the income; the outstanding indebtedness amounted to \$1,462,455.93, from which the capital-building bonds being deducted (\$600,000) the actual floating indebtedness appears to be \$862,455.93. This amount is practically represented by the outstanding warrants of the years 1887-'89. These warrants are held as follows: Public-school fund, \$444,517.46; State University, \$23,645.23; internal improvement fund, \$36,744.59; income fund, \$1,302.59; total, \$505,109.88. The estimated revenue for 1893-'94 is \$700,000 for each year.

Education.—The eighth biennial report, covering the years 1891-'92, gives a history of the public schools of the State. From 1871 to 1892

the number of school districts increased 748; increase in schoolhouses, 16.25 per cent.; increase in value of school property, 64.19 per cent. The average value of schoolhouses, including sites and fixtures, is \$3,949.13, while the average in the United States is \$1,495. In 1892 there were 76,647 pupils, of whom 62.9 per cent. were in graded schools.

A bill was presented to the last Legislature providing for free text-books, but it failed of passage. The State Superintendent has sent circular to book publishers, proposing to deal directly with them, thus saving the pupils the profits of local dealers.

The institutions for higher education show progress and increasing facilities. The Iliff School of Theology has been added to the University of Denver. The building, which was opened in June, is a handsome structure, with a foundation of rose granite, the main portion being of red sandstone. The building is finished entirely in oak, and is so heated that the entire circulation of air can be changed every twelve minutes. There was an attendance during the year of over 700 in all departments. There were 36 graduates—16 in the medical department, 7 in the pharmaceutical, 1 in the dental, 1 in the theological, 5 in the liberal arts, 6 in the law, and 3 in the manual-training department. The total valuation of the university property is given as \$1,560,000. The main building cost \$80,000; the Chamberlin Observatory, \$45,000; and Wycliffe Cottage, \$12,000. The Medical College and School of Pharmacy still occupy the old premises in the lower part of the city.

The State University, at Boulder, sent out 10 graduates from the college course, and 8 in medicine. The School of Law numbered about 25 young men and women. The Colorado Divinity School, though not a department of the university, or supported by it, yet will make use of many of the university courses, its students being enrolled as special students in the College of Liberal Arts. This is an unsectarian school.

The change in the School of Medicine, the recognition and enlargement of the faculty, and the arrangements by which the middle and senior classes receive instruction in Denver, have resulted in a great increase in attendance—over 100 per cent.

The Agricultural College, at Fort Collins, has accommodations for 300 students. Improvements have been made in the buildings and grounds for better sanitation and teaching facilities. The study of irrigation methods and meteorology have prominent places in the curriculum.

The Jesuit College of the Sacred Heart, in the town of Highlands, was established in 1889. The property is valued at \$400,000. The grounds cover an upland tract of 50 acres. The building is 4 stories high, 300 feet long by 76 feet wide. The instruction includes both classical and commercial courses. There are 82 pupils, 13 of whom are in the commercial class. The instructors number 23.

The Normal School at Greeley graduated this year a class of 23; at Colorado College, Colorado Springs, a class of 5.

The New Capitol.—This was so nearly finished that the courts were expected to move into

it in January, 1894, and the assembly chambers will be ready for the next regular session of the Legislature. It is estimated to have cost \$2,250,000. Six years have been occupied in its construction. It is of stone throughout, the roofs are laid on trusses sliding on wheels, thus providing against contingencies arising from the action of heat and cold. Wainscotings are of marble; and staff, the material used in the World's Fair buildings, is largely employed in the interior decorations. The lantern is 200 feet above the street, and is intended to be surmounted by a statue. An underground railway will carry coal to the building and take away ashes and other refuse. The court rooms and legislative chambers have a ceiling 46 feet high.

State Institutions.—The inmates of the State Penitentiary have been employed on an irrigating canal which will water about 81,000 acres. The last biennial report of the officials gave the cost of maintenance for the term as \$168,880.60, and the cost *per capita per diem* nearly 12 cents. Since the previous report 907 prisoners had been received.

The Reform School, at Golden, numbers 180 boys. One building has been provided to be conducted on the family system, but the greater part of the inmates are housed together in the main building. The institution has 57 acres, 35 of which are cultivated, and in addition 435 acres are leased by the school.

The provision for the insane is inadequate to the demand, and in consequence many lunatics have been confined in the county jails.

A new law giving the superintendent, with the consent of two other physicians, the power to discharge cured patients, will also aid in keeping the demand for accommodations nearer to the supply. Heretofore, discharge could only be made by order of the judge of the court from which the patient was committed.

Insurance.—The eleventh annual report of the State superintendent, issued in July, gave the following statistics: "The amount of risks written in the State during 1892 was \$103,168,403.69, compared with \$93,519,766.16 written the previous year. The premium receipts were \$1,721,483.74. The losses paid increased from \$573,139.42 in 1891 to \$806,481.04 in 1892, and the ratio of losses paid to premiums received, from 36.51 per cent. in 1891 to 46.85 per cent. in 1892. "The number and variety of assessment, endowment, and bond companies doing business in the State are something appalling. Under our present insurance system this department has no foothold on which to base legal prosecutions against the frauds and dishonesty of these companies or associations."

Military Department.—An order reorganizing the military Department of Arizona under the name of the Department of Colorado, with headquarters in Denver, was issued in July. The Department of Arizona consisted of the Territories of New Mexico and Arizona, and the southern portion of California. Headquarters were at Los Angeles. The order abolished the department of Arizona, and made a new department composed of Colorado and the Territories of Arizona, New Mexico, and Utah. The reason for the change was that headquarters in Denver

would give the commandant of the department closer connection with Washington.

State Lands.—These lands, given by the National Government to provide a revenue for school purposes and for internal improvements, are under the control of a board consisting of the Governor, the Secretary of State, and the Superintendent of Public Instruction; 504,059 acres, principally grazing lands, are leased, yielding an annual income of something more than \$50,000. The total receipts of the board from all sources were \$265,391.74 for 1891, and \$214,314 for 1892. The board has issued an address to discoverers or prospectors for metallic ores on lands belonging to the State. It explains the provisions made by the board for securing careful adjustment of claims in granting leases. The term of a lease has been fixed at twenty years.

Agriculture.—The opinion of the chief chemist of the Department of Agriculture is that Colorado soil and climate are eminently fitted for the production of sugar beets. He says: "The sugar content of a beet is injured by long-continued, extremely high temperatures during the growing season. The elevated plateaus of Colorado are free from this objection. The summer days on these plateaus, while not cold, are certainly not oppressively hot, and the beets are thus preserved from injury by being baked in the sun. Another point in favor of beet culture is the fact that these plateaus in many cases can be easily irrigated. Take, for instance, a beet crop averaging 15 tons per acre. At the very lowest valuation for a poor beet containing only 12 per cent. of sugar, this crop is worth \$4 per ton or \$60 per acre. The most careful culture of the sugar beet, with the greatest care in every respect, does not cost over \$50 per acre, as has been demonstrated by the experiments at the station at Schuyler, Neb. On a larger scale this cost can be reduced to \$40 per acre. A good factory, capable of working 800 tons of beets per day, should have tributary to it from 8,000 to 10,000 acres of arable land. Of this, at least one third should be grown in beets every year.

Fruit culture is a rapidly growing industry, the climate and soil of western Colorado being specially favorable to horticulture. The orchard area in the valleys of the Uncompahgre, Gunnison, and Grand rivers has increased to thousands of acres, and the peaches of the region have already won a reputation for fineness and flavor. The western valleys are adapted to all the temperate zone fruits except the semitropical species. What gives those valleys a great advantage over most other localities in Colorado is the fact that peaches can be grown there. The climate is much milder than that of the vicinity of Denver. At present the demand for western Colorado fruit far exceeds the supply.

Railroads.—In his inaugural message at the opening of the session, Gov. Waite, after reviewing the progress of legislation on the railroad question since 1885, said:

The right to make tariffs and enforce their collection is inherent in any railway system, but the right directly or indirectly for any railway to rebate a portion of its tariff, and thus discriminate between its customers in the collection of its revenues, is a right which no civilized government claims and no sovereign has dared to exercise for centuries. If the Con-

gress of the United States should enact a law which established on any commodity one import duty for the city of New York and a different duty for other cities, or one duty for one firm and another duty for another firm, no matter how slight the difference, the people would resort to arms, if need be, rather than submit; yet such has been the condition of railway affairs in Colorado for years. The right to discriminate is boldly claimed and has been wantonly exercised. In certain mining districts \$8 per ton is charged freight on silver ore to Denver by the carload, and the shipper loads the cars, and this is claimed to be the lowest possible rate at which silver ore can be transported to Denver at a profit, and this is a rate which compels the bulk of the ore of an ordinary silver mine across the range "to go over the dump," as not paying shipping expenses. At the same time the same railway company mines its own coal at its own expense, loads its cars, ships it 15 miles to its own coke ovens, unloads and cokes the coal, reloads, and then transports the coke over the same mountain range and route it transports the silver ore, and sells the coke at Denver at \$5 per ton. Even in the most favored mining regions there are many mineral deposits unworked, and some entire counties in Colorado, possessed of abundant, varied, and valuable mineral resources, are undeveloped simply because the rates of railroad transportation are prohibitory. . . .

I therefore recommend to the ninth General Assembly the following:

1. The repeal of the present law providing for a railway commission.
2. A new act for a railway commission, with 3 commissioners empowered to hear and determine complaints without recourse to the courts, and to revise the rates of the carriage of passengers and freight.
3. That the system of pooling as now in force among the railways of the State be made illegal.
4. That the issuing by any railroad company of any pass or free ticket to, or the acceptance of or traveling upon such pass or free ticket by, any State, district, county, or municipal official be made a penal offense.

The total mileage of railroads at the beginning of the year was 4,422. Contracts were let in June for an extension of the Missouri Pacific from Pueblo to Durango, 450 miles, shortening the journey between those points by about 300 miles. This line is expected ultimately to reach the Pacific coast.

Preparations have been made at Denver for the building of the Denver, Salt Lake and San Francisco road. Two routes will probably be surveyed and their advantages compared before a decision is made.

Work has begun on the Cripple Creek Railroad, and it is hoped that it will be ready to carry freight by the 1st of April. It will be 22 miles long, will run from Cripple creek to the Santa Fé junction at Florissant, connect with the local mines by spurs, and will cost \$600,000.

On the Colorado Midland road a tunnel has just been completed between Busk and Ivanhoe which cost \$1,000,000, and which substitutes 2 miles of track for 10, and gives certain transit for freight and passengers every day of the year over the highest mountain range on its line. The work has progressed steadily for 8 years and 10 days, with twenty hours to the day, and the tunnel is 10,800 feet above sea level.

Mining.—The report of the director of the mint shows that Colorado is first among the mining States and Territories in the amount and value of output. In 1892 the silver product had fallen off in each of the producing States

and Territories except Colorado and Montana. In the last named the increase was 1,000,000 ounces over the preceding year, while in Colorado the increase was 8,000,000 ounces. Under the division of the report relative to the distribution of silver products of the United States for 1892, as to the sources of the production, it is shown that Colorado produces 10,500,000 fine ounces from milling ores, 12,500,000 from lead ore, and 1,000,000 from copper ore, making a total of 24,000,000 ounces. The report further shows that the aggregate product of gold and silver reported from Colorado was as follows: Gold, 267,950 fine ounces, valued at \$5,539,021; silver, 24,847,017 fine ounces, valued at \$31,478,927; making a total of \$37,017,993.

The bill that passed Congress, suspending for the year 1893 the law requiring that \$100 worth of labor or improvements be placed on each claim located until the patent has been issued for it, on pain of forfeiture of the claim, does not meet with unmixed approval. It is regarded as of more value to speculators than to miners and resident prospectors. The latter class had nearly completed their annual work before the passage of the bill, Nov. 3. The miners usually receive considerable wages for work done for nonresident prospectors. Moreover, it is by the present clause of forfeiture by neglect to work out the assessment that unworked claims come into the possession of industrious men who push them forward to production. By the provisions of the bill, the surface of a district might be so tied up that no development need be carried forward.

The uncertainty regarding the silver market occasioned great distress in silver-mining districts; but many of the camps that were closed in the summer resumed operations late in the year, some of them, if not all, meeting the emergency by reducing wages and securing reductions in expenses of transfer, freight charges, etc. In all instances where the resumption has occurred it has been on agreement between workmen and mine owners that as soon as the price of silver goes up the wages are to be restored.

Meantime the gold camps are gaining. The vast increase in the output of the mines shows that a large percentage of the men thrown out of employment in the silver mines are now employed in digging the yellow metal; while in all the auriferous districts prospecting is going on extensively, new strikes are being made, and work on old properties is being resumed.

The gold output of Cripple Creek for the year will, according to estimates, amount to \$5,000,000. Gold has been discovered near Hahn's Peak, in Routt County.

The Golden Fleece, near Lake City, which was struck two years ago, turns out to be one of the greatest tellurium mines in the world. Thus far the ores have yielded about equal values in silver and gold.

A new camp, on Bear creek, in San Juan County, attracted many prospectors in the summer. The creek is one of the head streams of the Rio Grande. The new gold find is in the basin at timber line, in which this creek heads.

Across the range, on the San Juan side, several rich veins of gray copper have been located. The ore is all dry smelting.

The gold deposits at the Denver mint in July exceeded by \$60,000 the deposits in any previous month in the history of the mint.

The total product of coal in 1892 amounted to 3,770,000 tons; the number of men employed was about 7,500. About one third of the coal mined is sent to other States. The annual increase in the amount mined is about 20 per cent.

The entire value of the mineral products of the State has increased since 1876 from \$6,000,000 to \$33,000,000.

Navigation of the Colorado.—The first attempt to navigate the upper river by steamboat was made in 1891, and failed on account of an accident to the boat. Another attempt, in 1893, was more successful, proving that the river is navigable for 130 miles between Green river and Cataract cañon. It is proposed to run a passenger boat regularly for the accommodation of tourists. Should the navigation of the river be found entirely feasible, it will be of great assistance in opening communication with distant mining districts inaccessible by railroad.

Land-Claims.—An important suit, involving the title to 113,000 acres of land near Denver, was settled by decision of the Supreme Court in April. The decision confirms the title of the present holders, who had bought of the Kansas Pacific Railroad Company, the land having been granted originally to that corporation by the United States Government.

Much excitement was caused in the San Luis valley, in April, by the filing of a claim to nearly all the land in the valley. What is known as the Conejos grant was made in 1833 by Francisco Serracino, political chief or governor of New Mexico, to Geledon Valdez *et al.*, for land on the Conejos river. Owing to the Indian war, which lasted until 1841, the grantees were prevented from taking possession. On Oct. 12, 1842, possession was given to 83 heads of families. The land is bounded on the north by the Garita hill, on the south by the San Antonio mountain, on the east by the Rio Grande, and on the west by the Sierra Montosa.

A colony was brought from Holland not long since by the Netherlands-American Land and Immigration Company, and settled in the San Luis valley, at Alamosa, Conejos County. Complaints having been made that the colonists were defrauded by the company, the district attorney of the county was directed to make an investigation into the facts. The report sustained the charges, finding that the articles of incorporation of the company were defective and not in conformity with the law of the land, so that it had no authority to do business in the State.

The report was sent to the minister for the Netherlands at Washington. Meantime 30,000 acres of land had been purchased near Sterling for another colony, which was prepared to set out from Holland to take possession of it.

The Utes.—In a letter to the President, in May, the Governor attributes the trouble with the Indians to the fact that they are allowed to hunt, off the reservations. The letter says: "The Indians take their vacation in an annual hunt and, contrary to their custom before they were restricted to reservations, they destroy all game in these excursions. They also frequently destroy the cattle of the settlers. Of course

they can not consume the meat they kill, and they make no such pretense.

Sinking of a Town.—Portions of the town of Louisville, a large coal-mining camp in Boulder County, were reported to have sunk two feet in October, in consequence, it is supposed, of the giving way of timbers in the mines beneath the town. The same thing occurred a few years ago, embracing a large tract of land. East of the town where it happened there was nothing but a railroad to be disturbed, and that kept going down until the company was compelled to raise the track several feet. In the present case the situation is more serious, since the houses are partially ruined and the occupants feel unsafe, as there is probability that the ground will settle several feet before the collapse underneath has ended. One of the serious features of the situation is the condition of the wells. By the cracking of the earth the water runs out of the bottom of the wells into the old workings of the mine.

Legislative Session.—The ninth General Assembly numbered in the Senate 15 Republicans, 8 Democrats, 4 Populists, 7 People's-Party Democrats, and 1 Independent; and in the House 33 Republicans, 5 Democrats, and 27 Populists. It met on Jan. 4, and adjourned on April 6—two days after the ninety-day limit fixed by law. A large number of measures, mostly appropriation bills, were passed during the two days preceding adjournment, but the Lieutenant-Governor and the president *pro tem* of the Senate refused to sign them, and the Attorney-General decided that they could not be regarded as legally passed.

The Governor vetoed a bill changing the law of 1891 in regard to incorporation and regulation of trust companies, limiting their liability to the amount of their shares of stock at the par value thereof, on the ground that he was opposed to either enlarging or diminishing the liability of corporations except for good cause shown. He also refused to sign a bill relating to the issuance of bonds by cities and towns, because it provided that they might bond for the purchase of water works or supply or refund such bonded indebtedness by a submission of the question of issuing such bonds to a vote of the qualified electors, either at a regular or special election, thus making the question of incurring bonded indebtedness of any city or town depend upon the result of a special election.

The Legislature passed a law entitled

An Act to repeal an act concerning railroads and railroad corporations, prescribing the duties thereof; providing for the appointment of a railroad commission and prescribing the powers and duties of the same.

This, too, was vetoed by the Governor, on the ground that though the act sought to be repealed is admittedly defective, it is better than no law at all for State regulation of railroads.

The Legislature passed the repealing act over the veto of the Governor.

Another bill was passed "providing that companies, firms, or persons issuing policies against fires must, before receiving authority to transact business in the State, deposit \$20,000 securities with the Secretary of State; providing a similar precaution where life-insurance policies

are issued, fixing the deposit at \$50,000 in securities; where accident policies are issued, fixing the deposit at \$20,000; and where various kinds of policies are issued, fixing the deposit at \$50,000; and providing that guarantee companies shall make a deposit fixed at \$5,000."

A new county—Mineral County—was formed from parts of Hinsdale and Rio Grande Counties. It includes the town of Creede.

Among the measures passed—were one granting a new charter to the city of Denver, one to exempt from taxation property, real and personal, of Grand Army of the Republic posts, and one to prevent short weight in coal; to regulate the sale of oleomargarine, and requiring a license; also a bill making Saturday afternoon a legal holiday in the months of July and August; a bill forbidding insurance on the lives of children under ten years of age; making kindergartens a part of the public-school system; a bill forbidding the employment of detectives in difficulties between employers and employees, and one regulating the granting of divorces. This does not change the causes for which divorce is granted, but provides for greater care and certainty in notifying the party against whom the action is brought. A bill was passed providing that after the year 1900 no person may vote unless he knows how to read and write. This does not prevent voters who can not read and write and who can vote now from voting. Some amendments were made to the election laws, providing among other regulations, for the grouping of candidates on one ballot, with the names of the party represented by each candidate beside his name. It also provides for spaces in which to write names of candidates not printed on the ballot; and allows a candidate to accept a nomination from but one party.

Other bills passed and signed were the following:

To make gold and silver coin a legal tender for the payment of all debts contracted between or payable to any citizen of the State.

Directing the Treasurer and Auditor to transfer upon the books of their respective offices to the general fund of 1893 any unexpended balance standing to the credit of the Ute War debt fund.

Transferring certain unexpended balances to the general revenue fund which stand to the credit of the Bureau of Immigration cash fund, the military poll fund, the saline land permanent fund, and the saline land income fund.

Amending section 12, chapter liv of the General Statutes, relating to the commitment of children to the State industrial school. This fixes the minimum age for admission at ten years.

A memorial was passed requesting the Senators and Representatives of the State in Congress to "do all in their power to secure legislation that will establish a water-storage system to save the water going to waste in the irrigating section of the West"; one favoring the election of United States Senators by direct vote of the people; and one protesting to Congress against the setting apart and the reserving of certain lands covering the sources of Ralston, Clear, and Bear creeks, in Jefferson, Clear Creek, and Gilpin Counties, on the ground that such reservation would interfere with the mining interests; and

a request to the President to open mineral lands in the Uncompahgre Ute reservation to entry.

An attempt was made to impeach the State Auditor, on the ground of an alleged pre-election agreement on the part of the Auditor to reappoint the deputy insurance commissioner, on condition that the deputy should gain the support of the insurance men of the State for him. The Auditor's defense was, that before the election took place he learned that the agreement was in violation of the corrupt-practices act of the eighth General Assembly, and that he then withdrew entirely from the compact. As a matter of fact, the deputy commissioner was not reappointed. The Senate Committee on Elections took evidence on the subject, and the House appointed a committee of five to take testimony for the purpose of bringing impeachment proceedings. The case does not appear to have proceeded further.

Silver Convention.—A State mass meeting of the friends of silver was called in Denver on July 11. Nearly every town, village, and mining district in the State was represented. The sentiments of the convention were embodied in an address to the people of the United States, of which 1,000,000 copies were ordered printed. Of the local effects anticipated from the demonetization of silver the address said:

The silver-mining States and Territories, embracing 1,000,000 square miles of the continent, with 2,000,000 Americans inhabiting them, depend peculiarly upon silver mining for their prosperity. That industry is the very heart from which nearly every other industry receives support.

The reduction of the price of silver to about 70 cents has shut down 99 per cent. of the silver mines of the country, and the smelters must soon follow their example. There are in Colorado to-day 15,000 idle miners, who know not where to turn if work is not resumed. There will soon be added to this idle army of labor 4,000 men from the smelters. The stone quarries are nearly all shut down, the railway companies are laying off train crews by the score, the foundries are nearly all out of orders, the farmers and fruit growers will be barely paid for the cost of saving their crops, and the merchants are countermanding their Eastern orders.

If the silver mines shall remain closed, one half of the American output of lead must be lost. The greatest bulk of the lead product is taken from silver-bearing ores. It requires the one metal, supplemented by the other, to remunerate the lead-silver miner. If the market for silver is broken down, the lead can not be produced.

Not less than 55 per cent. of the gold product of the country depends upon the maintenance of the silver industry. The placer or creek washings, the earliest and most prolific sources of our gold supply, are practically exhausted. That metal is now taken from leads—one half of it from silver leads—as a by-product of silver mining, which, unless the mines may be profitably worked for silver, will never be added to the world's store of gold.

Labor Convention.—The State Labor Convention met in Denver in July. The address issued by the silver convention was heartily approved, and resolutions were adopted denouncing private monopoly of land; declaring for public ownership and control of railroads, telegraphs, gas and electric lighting, water works, and irrigating ditches; demanding reform in taxation; calling for a State convention to revise the Constitution; pledging support to the

woman suffrage movement; asking for free textbooks, and the enactment of the following laws:

Regulating the employment of children; regulating the weighing and screening of coal at mines; to secure the more efficient collection of wages; establishing free employment agencies; to punish the obtaining of labor under false pretenses; for the prohibition of all detective agencies not under the direct control of legal authority, and for the prohibition of all private armed forces; for more efficient inspection of metalliferous mines, and giving the inspector power to enforce its provisions; giving the right of redemption from the foreclosure of trust deeds, and a constitutional amendment securing the initiative and referendum in our system of enacting laws.

In reference to legislative candidates this resolution was adopted:

Resolved, That we recommend that the legislative committees of our organizations prepare bills for acts covering our demands and present the same to all candidates for our votes; and that we will support none who will not pledge themselves to vote for such measures without amendment or evasion, and condemn all who have or will obtain their election through false pretenses and pledges.

Woman Suffrage.—The question of adopting an amendment to the State Constitution extending to women the right of suffrage on equal terms with men was submitted to voters at the November elections, with a result in its favor by a majority of about 5,000. The Republicans and Populists divided the State at the local elections.

COMMERCE AND NAVIGATION OF THE UNITED STATES. The total value of the foreign trade of the United States for the fiscal year ending June 30, 1893, was \$1,714,006,116. This was \$143,660,794 less than that of the previous year—the greatest in the history of the country—and \$15,830,890 less than that of 1891, but it exceeded by \$66,927,028 that of 1890, which was greater than the commerce of any preceding year. The total value of the merchandise imported during the fiscal year of 1893 was \$896,400,923; while that of the domestic and foreign exports was \$847,665,194, leaving a balance adverse to the United States of \$18,735,729, against a favorable balance of \$202,873,666 in 1892, and of \$39,564,614 in the preceding year. Including gold and silver coin and bullion the total imports for 1893 were \$910,768,555, against \$897,067,003 in 1892; while the total exports for 1893 were \$907,063,357, against \$1,113,284,064 in 1892.

Imports.—The values of the principal articles and classes of articles exempt from duty imported into the United States during the twelve months ending June 30, 1893, compared with the values for the preceding year, are shown in the following table:

ARTICLES FREE OF DUTY.	1892.	1893.
Animals.....	\$1,673,098	\$1,423,739
Artisan, produce of U. S. returned.....	4,847,970	4,068,835
Art works.....	804,049	473,846
Asphaltum.....	367,269	240,996
Bark, hemlock.....	284,846	248,749
Basting cloth.....	279,680	281,438
Books, maps, engravings, etc.....	1,880,488	2,077,269
Alumina.....	1,029,146	1,129,486
Apoc. or crude tartar.....	2,318,585	2,341,075
Chinese bark.....	891,245	197,884
Corkwood.....	66,698	88,671
Logwood and other dye woods.....	1,572,891	1,397,766

ARTICLES FREE OF DUTY.	1892.	1893.
Gums.....	\$6,030,546	\$4,916,888
Indigo.....	1,122,507	8,387,811
Lacerte root.....	1,064,026	1,008,716
Chloride of lime.....	1,730,440	2,218,131
Miscellaneous.....	436,431	847,069
Opium, crude.....	1,020,000	1,194,884
Potash, all salts of.....	2,000,608	1,781,588
Quinia, salts of.....	712,73	879,189
Soda, nitrate of.....	2,776,816	2,002,713
Sulphur, crude.....	2,724,606	2,002,464
Vanilla beans.....	362,706	709,389
All other chemicals and drugs.....	4,512,000	4,909,784
Chicory root, raw, unground.....	364,179	134,979

Sugar, cane and other.....	90,761,813	102,106,687
Tea.....	14,078,922	13,691,400
Jute and jute butts.....	8,881,174	4,467,633
Manilla hemp.....	6,073,979	6,073,979
Stool grass.....	8,107,000	6,008,664
All other vegetable fibers.....	1,097,049	1,307,288
Cair yarn.....	161,446	234,234
Tin.....	6,007,700	12,835,009
Wood.....	8,000,000	6,476,529
Rice from Hawaiian Islands.....	867,888	848,000
All other free articles.....	3,161,148	11,004,000
Total free of duty.....	\$657,999,006	\$644,844,311

The imports of animals in the above list show a decrease of \$250,088 as compared with the previous year, the entire falling off being in the item of horses, the decrease in the number of which was 608, or more than 18 per cent. Other articles and classes of articles which showed a falling off in comparison with 1892 were: Crude asphaltum, decreasing \$146,603; hemlock bark, \$7,907; cochineal, \$103,520; logwood, \$14,710; crude camphor, \$1,086; shellac, \$104,602; brimstone, \$218,942; vanilla beans, \$89,761; coffee, \$50,132,624; rough diamonds, etc., \$80,001; crude phosphates and other fertilizers, \$209,783; cocoanuts, \$65,065; currants, \$23,582; dates, \$57,719; skins other than goat, \$548,219; crude India rubber, \$1,906,977; molasses, \$880,410; shot-gun barrels, unfinished, \$52,809; essential oils, \$69,185; and tea, \$515,740. Rice from Hawaii, which is admitted free under the reciprocity treaty with those islands, shows an

increase in quantity of 984,100 pounds, but a decreased value of \$17,973.

Articles and classes of articles on the free list which show an increase in value over 1892 are: Productions of the United States returned, \$301,135; productions of American artists, \$122,878; books, maps, etc., \$196,921; chemicals, drugs and dyes, \$325,457; indigo, \$1,865,004; licorice root, \$37,688; chloride of lime, \$373,481; mineral waters, \$110,809; crude opium, \$157,621; the various salts of potash, \$392,905; salts of quinia, \$7,121; nitrate of soda, \$85,899; crude cocoa, \$796,760; cork wood, \$273,050; raw cotton, \$1,471,278; bananas, \$360,555; other fruits and nuts, \$162,450; sago, tapioca, etc., \$70,139; guano, \$10,436; undressed furs, \$696,744; hair, \$320,234; straw, chip, grass, palm leaf, etc., for hats and bonnets, \$365,282; goat skins, \$905,861; personal effects of immigrants, etc., \$570,774; crude gutta-percha, \$40,554; needles for hand sewing and darning, \$32,193; ivory, \$190,400; vegetable ivory, \$159,641; floor matting from round or split straw, including Chinese, \$27,633; fixed or expressed oils, \$336,132; gold-bearing ores, \$645,695; silver-bearing ores, \$1,443,986; crude paper stock, \$324,035; unmanufactured platinum, \$134,240; plumbago, \$139,661; seeds, \$610,504; silk cocoons, raw and waste silk, \$4,777,661; unground spices, \$261,915; beet sugar, \$4,765,339; and cane and other sugar, \$6,347,275. Among the imports of unmanufactured textile grasses and fibersistle or Tampico fiber and jute and jute butts showed a decrease of \$3,679 and \$553,246 respectively, but the entire list shows a net increase of \$2,328,796, while coir yarn increased \$62,805. Imports of tin in bars, blocks, pigs, etc., increased \$3,691,129; and unmanufactured wood, \$1,072,898; while the unenumerated free articles increased \$1,843,380. Except for the great decrease in coffee, the free imports would have exceeded those of 1892.

The following table gives the values of the principal articles and classes of articles subject to duty imported during the fiscal year ending June 30, 1893, compared with the values for the preceding year:

DUTIABLE ARTICLES.	1892.	1893.
Animals.....	\$2,575,818	\$3,216,475
Art works.....	2,080,599	2,866,765
Books, maps, engravings, etc.....	2,115,417	2,117,480
Brass, and manufactures of.....	242,564	249,092
Barley.....	1,592,040	921,605
Wheat.....	1,955,835	707,038

The imports for 1893 exceeded those of the preceding year by \$38,998,460, the aggregate increase being in the list of articles subject to duty, which increase amounted to \$52,453,907, while the total value of free imports showed a

decrease of \$13,455,447. The increase in the volume of dutiable imports was largely in articles of dress and luxury. The total imports of cotton manufactures were \$33,560,293, an increase of \$5,236,452. The imports of silk manufactures amounted to \$38,958,928, an increase of \$7,786,034, and the increase in the imports of woolen cloths and dress goods was \$2,806,645; in kid and other leather gloves, \$1,095,496; in champagne and other sparkling wines, \$1,007,238; in jewelry and precious stones, \$2,892,270; in fruits and nuts, \$2,866,867; and in tobacco for cigar wrappers, \$3,423,963. But there was also an unusually heavy importation of tin andterne plates and taggers tin, the increase in which amounted to \$5,250,078; of potatoes, which increased \$1,880,583; and of manufactures of flax and hemp, which increased \$1,837,477. Other dutiable imports which increased in 1893 were: Cattle, increase in number, 1,083; horses, increase, 1,985; sheep, increase, 78,054; and all other animals, including live poultry; the entire list of animals showing an augmentation in value of \$640,662. Paintings and stationary increased \$336,166; books, maps, etc., \$2,013; brass and its manufactures, \$6,528; bristles and brushes, \$69,383; buttons, \$93,236; chemicals, drugs, medicines, and dyes, \$1,838,357; kaolin and other clays, or earthen, \$112,001; clocks and watches, and parts of, \$67,444; and coffee, under the reciprocity clause of the tariff act of 1890, which makes it the duty of the President to suspend the free introduction of sugar, coffee, hides, etc., from any country that imposes unfair duties on the products of the United States, increased \$2,576,252. Imports of copper and its manufactures increased \$62,833; earthen, stone, and china ware, \$820,833; feathers, \$13,158; fish, \$356,723; hair and its manufactures, \$48,113; hay, \$249,604; hides and skins under the provision of suspension in the reciprocity clause of the tariff act, \$1,135,036; hops, \$201,706; manufactured gutta-percha, \$19,897; railroad iron and steel, \$12,440; iron and steel hoops and bands, \$71,984; sheet, plate, and taggers iron or steel, \$1,119,520; wire, \$76,464; chains, \$2,639; cutlery, \$213,496; machinery, \$477,645; lead and its manufactures, \$2,139,246; leather, \$1,469,565; leather manufactures other than gloves, \$122,613; malt liquors, \$230,410; marble and stone and their manufactures, \$352,128; metal compositions and manufactures not elsewhere specified, \$616,065; animal, mineral, and vegetable oils, \$402,403; paints and colors, \$94,709; paper and its manufactures, 538,677; perfumes and toilet preparations, \$75,508; pipes and smokers' articles, \$19,525; meat and dairy products, \$328,497; soap, \$39,493; distilled spirits, \$129,209; sugar, above No. 16. Dutch standard, \$734,357; leaf tobacco other than for cigar wrappers, \$946,054; toys, \$407,487; vegetables, \$322,879; still wines, \$253,612; wood, unmanufactured, \$6,757; wood pulp, \$1,088,741; other manufactures of wood, \$1,137,765; raw wools, \$1,376,072; zinc or spelter, \$15,180; and all articles not enumerated, \$848,916.

The dutiable imports which showed a decrease were: Breadstuffs, \$2,018,711; cement, which showed an increase in quantity of 50,169.114 pounds, but a diminution of value of \$94,635;

bituminous coal, \$758,877; copper ore, \$264,301; eggs, \$129,267; artificial feathers and flowers, \$214,253; raw flax, \$81,335; and glass and glassware, \$737,223, the falling off being chiefly in silvered plate glass; India-rubber manufactures decreased \$33,145; iron ore, \$1,349,664, or more than one half; pig iron, \$312,608; scrap iron and steel, \$266,993; bar iron, \$132,897; steel blooms, ingots, etc., \$78,433; firearms, \$326,235; other manufactures of iron and steel, \$77,113; barley malt, \$1,737; bronze manufactures, \$72,509; musical instruments, \$36,619; rice, \$222,759; salt, \$21,408; seeds, \$118,331; spices, \$9,730; confectionery, \$44,255; manufactured tobacco, \$9,345; ready-made clothing, \$302,716; and shawls, yarns, and other manufactures of wool not specified, \$135,221.

The value of the merchandise imported direct from foreign countries was \$815,059,709, an increase of \$29,663,945 over 1892; and the value of that coming through exterior ports without appraisement, \$51,341,213, an increase of \$9,334,515. The value of the merchandise entered for immediate consumption was \$758,003,562, and of that entered for warehouse, \$108,397,360. The value of the imported merchandise remaining in warehouse June 30, 1893, was \$40,432,825, against \$29,575,072 in 1892.

Exports.—The values of the articles and classes of articles of domestic production exported during the year ending June 30, 1893, compared with the values for the preceding year, are given in the following table:

ARTICLES.	1892.	1893.
Agricultural implements	\$2,794,968	\$4,657,888
Animals	36,498,291	27,597,985
Art works	422,238	210,892
Bark for tanning	229,708	232,266
Blacking	221,116	241,996
Bones, hoofs, horns, etc.	318,689	319,548
Books, maps, and engravings ..	1,948,925	1,808,873
Brass, and manufactures of ..	323,756	519,485

Zinc ore	114,689	5,990
Zinc, manufactures of	765,567	610,709
All other unmanufactured articles	1,084,243	902,773
All other manufactured articles	1,852,357	2,008,879
Total domestic exports	\$1,015,732,011	\$891,030,735

The total domestic exports for 1893 were \$184,701,226 less than those for 1892; yet, notwithstanding this great falling off, they exceeded the exports of 1889 and every preceding year, with the single exception of 1881. The decline first showed itself in July, 1892, the opening month of the fiscal year of 1893, and continued without break through the first eleven months. In June an increase in the exports of iron and steel, leather, and tobacco brought the figures for that month above those of the corresponding month in 1892 by \$300,011. The decrease in the exports for 1893 is to be found chiefly in the items breadstuffs and raw cotton, the aggregate decline in which reached \$168,740,259. Of breadstuffs and feed, as well as cotton, the crops

grown in the United States in 1892 were much lighter than those of 1891. The total wheat crop of 1891 amounted in round numbers to 612,000,000 bushels, whereas in 1892 it was 520,000,000 bushels; the corn crop in 1891 was over 2,000,000,000 bushels, and in 1892 it was 1,675,000,000; the crop of oats in 1891 was 650,000,000 bushels, and 615,000,000 in 1892; the rye crop of 1891 was 33,000,000 bushels, and that of 1892 31,000,000 bushels; and the potato crop of 1891 reached 240,000,000 bushels, against 160,000,000 in 1892. The crop of cotton grown in 1891 amounted to 9,000,000 bales, but only 7,750,000 bales were produced in 1892.

The values of the breadstuffs exported during the past three years are given in the following table:

KINDS.	1891.	1892.	1893.
Barley	\$699,308	\$1,751,445	\$1,468,543
Bread and biscuits	588,947	775,596	752,353
Corn	17,682,687	41,590,460	24,537,511
Cornmeal	946,977	919,961	793,081
Oats	405,708	8,543,559	951,990
Oatmeal	221,316	555,937	160,660
Rye	912,161	11,432,190	1,002,796
Rye flour	18,185	22,461	10,290
Wheat	51,430,373	161,399,133	93,534,970
Wheat flour	54,705,616	75,262,388	75,494,547
All other	1,080,638	1,711,108	1,555,383
Total	\$128,121,656	\$299,263,117	\$200,312,654

Every item set forth above, except wheat flour, which increased \$132,064, shows a decline in the value exported in 1893, as compared with that in 1892. Barley and bread and biscuit show an increase in quantity of 235,192 bushels and 134,343 pounds respectively, but a decline in their respective values of \$232,603 and \$23,243. All others show a decrease in quantity as well as in value. The heaviest decrease is in wheat, amounting to 40,159,242 bushels, and in value \$67,864,162; and corn comes next, with a decrease of 29,414,575 bushels and \$17,002,949. Rye decreased 10,564,258 bushels and \$10,429,364; oats, 7,044,435 bushels and \$2,890,639; oatmeal, \$395,297; corn meal, \$126,880; rye flour, \$12,171; and unenumerated articles in the bread-stuff class, \$155,220. Cotton showed a decrease of 1,460,191 bales or 723,104,685 pounds in quantity, and \$69,689,796 in value. Other articles and classes of articles which decreased were: Cattle, 107,513 in number and \$9,066,667 in value; mules, 331 in number and \$28,313 in value; sheep, 9,700 in number and \$34,711 in value. Horses, while showing a decrease of 259 in number, had an increased value of \$107,419; and hogs, with a decrease in number of 4,588, showed an increased value of \$33,081. Paintings and statuary decreased \$211,346; tan bark, \$7,439; books, maps, etc., \$134,355; brass and its manufactures, \$9,321; broom corn, \$55,028; candles, \$10,530; carriages and horse cars, \$338,369; railroad cars, with a number increased 121, \$350,394; acids, \$16,216; potash and pearl-ash, \$67,791; ginseng, \$10,601, with an increase in quantity of 22,289 pounds; sundry roots, herbs, and barks decreased \$4,029; clocks, and parts of, \$58,450; bituminous coal, notwithstanding an increase of 73,060 tons, decreased \$79,964; copper ore decreased 1,715 tons and \$1,445,439 in value; copper ingots, bars, etc., 18,811,273 pounds, and \$2,746,839 in value; uncolored cot-

ton cloths, 42,162,865 yards, \$2,367,641; earthen and stone ware, \$16,390; cured codfish, haddock, hake, and pollock increased 417,749 pounds, but declined in value \$36,724; pickled mackerel decreased 1,035 barrels, and in value \$13,628; pickled herring, 838 barrels, \$2,821; other pickled fish, 6,527 barrels, \$18,800; salmon, \$29,450; oysters, \$119,192; other shellfish, \$106,236; other fish, \$54,751; flax, hemp, and jute bags, \$47,023; cordage, \$230,225; other manufactures of hemp, etc., \$88,735; dried apples decreased 18,075,244 pounds, and in value \$806,017; apples, 530,729 barrels, \$1,309,989; canned fruits, \$421,160; other fruits, \$214,041; glucose, \$68,563; grease and other soap stock, \$230,875; gunpowder, \$2,729; hay, \$63,198; honey, \$62,933; ice, \$12,112; printers' and other inks, \$27,406; scientific instruments, including telegraph, telephone, and other electric apparatus, etc., \$42,496; bar iron decreased 86,745 pounds, and in value \$12,042; castings, \$218,305; firearms, \$130,357; steel ingots, bars, and rods, 301,952 pounds, \$3,180; wrought nails and tacks increased 244,234 pounds, but decreased in value \$2,146; printing presses decreased \$208,415; sewing machines, \$657,546; fire engines, \$6,306; stoves and ranges, \$13,578; jewelry and manufactures of gold and silver, \$144,295; patent leather, \$3,951; sole leather, \$591,492; boots and shoes, \$324,220; harness and saddles, \$68,723; matches, \$5,692; in naval stores, rosin, spirits of turpentine, and turpentine and pitch showed a considerable increase in quantity, while tar alone slightly decreased, but the aggregate value of the class decreased \$702,632; oil cake and meal decreased 23,982,652 pounds, and in value \$24,431; lard oil decreased 420,763 gallons, and in value \$159,988; sperm oil, 25,551 gallons, \$41,796; other fish oils, 738,477 gallons, \$208,254; other animal oils, 66,688 gallons, \$37,844; crude mineral oils increased from 103,592,767 gallons in 1892 to 111,703,508, but decreased in value \$534,449; refined illuminating oil increased from 564,896,658 to 642,239,816 gallons, but decreased in value \$1,821,820; lubricating and heavy paraffin oil decreased from 33,591,076 gallons in 1892 to 32,432,857, and in value \$464,458; tar and residuum from distillation decreased 888 barrels, and in value \$4,999; naphthas and lighter products of mineral oils increased 4,576,027 gallons, and in value \$161,798, but the entire list of manufactured products showed a net decrease of \$2,129,485. Cotton-seed oil decreased from 13,859,278 gallons in 1892 to 9,462,074, and decreased in value \$1,054,729; paints and painters' colors decreased \$9,549; perfumery and cosmetics, \$59,665; plated ware, \$47,462. In the class provisions, which comprises the meat and dairy products, canned beef decreased from 87,028,064 pounds, valued at \$7,876,454, in 1892, to 79,069,493 pounds, valued at \$7,222,824, in 1893; fresh beef, from 220,554,617 pounds, valued at \$18,053,732, to 206,294,724 pounds, valued at \$17,754,041; salted or pickled beef, from 70,204,736 pounds, value \$3,987,829, to 58,423,963 pounds, value \$3,185,321; other cured beef, from 953,712 pounds, value \$92,524, to 898,920 pounds, value \$87,776; and tallow from 89,780,010 pounds, value \$4,425,630, to 61,819,153 pounds, valued at \$3,129,059. Among hog products, exports of bacon decreased from 507,-

919,830 pounds, valued at \$39,334,933, in 1892, to 391,758,175 pounds, valued at \$35,781,470, in 1893; salted pork decreased from 80,336,481 pounds, value \$4,792,049, to 52,459,722 pounds, value \$4,116,946; lard decreased in quantity from 460,045,776 pounds in 1892, to 365,693,501 in 1893, but showed an increased value in 1893 of \$1,442,872; hams showed an increase from 76,856,559 pounds, value \$7,757,717, in 1892, to 82,178,154 pounds, value \$9,933,098, in 1893; and fresh pork increased from 377,746 pounds, value \$30,246, to 912,644 pounds, value \$79,317. Shipments of poultry and game increased \$4,150; and other meat products, not specified, increased \$25,261. Of the dairy products exported, butter decreased from 15,047,246 pounds in 1892, value \$2,445,878, to 8,920,107 pounds, value \$1,672,690; and cheese, from 82,100,221 pounds, value \$7,676,657, to 81,350,923 pounds, value \$7,624,648; while milk showed an increase of \$37,797 in value. In the exports classed as seeds, clover decreased from 19,532,411 pounds in 1892, value \$1,636,671, to 8,189,553 pounds in 1893, value \$988,029; cotton seed, from 12,149,261 pounds, value \$86,549, to 4,519,827 pounds, value \$35,809; flaxseed or linseed, from 3,613,187 bushels, value \$3,915,547, to 1,837,370 bushels, value \$2,195,374; timothy decreased in quantity from 10,313,074 pounds in 1892, to 7,077,131 pounds in 1893, but the value increased from \$381,651 in 1892 to \$504,987 in 1893; while other seeds showed an increase in value of \$37,716. The amount of soap exported decreased in quantity 2,888,056 pounds, and in value \$55,974. Under the head of distilled spirits, alcohol decreased from 1,440,219 proof gallons in 1892, value \$475,937, to 162,181 proof gallons in 1893, value \$52,328; brandy, from 216,696 proof gallons, value \$178,294, to 128,518 proof gallons, value \$90,781; rum, from 778,718 proof gallons, value \$921,913, to 647,415 proof gallons, value \$778,006. Exports of molasses and sirup decreased 969,928 gallons in quantity, and in value \$64,745; tin manufactures decreased \$1,672; cigars decreased \$19,549, and cigarettes increased \$133,060, while the entire list of tobacco manufactures exported showed a net decrease of \$18,825. Toys decreased \$14,979; trunks and traveling bags, \$24,469; varnish, from 215,266 gallons, value \$293,059, to 210,067 gallons, value \$285,400. The aggregate value of the vegetables exported in 1893 was practically unchanged from the previous year, though there was a decrease of 248,059 bushels in beans and peas, and an increase of 288,698 in potatoes. The steam-vessel tonnage sold to foreigners amounted to 321 tons, value \$92,375, in 1893, against 1,510 tons, value \$246,200, in 1892; the sailing-vessel tonnage amounted to 3,181 tons, value \$31,757, against 1,065 tons, value \$11,685, in 1892. Exports of beeswax showed a decrease of \$9,850; of wine, a decrease of \$17,483; of raw wool, a decrease in quantity of 110,598 pounds, and in value of \$15,856. Of the exports of woolen manufactures, carpets and certain unenumerated articles show an increase, but flannels and blankets and wearing apparel declined, and the net decrease in the list is \$41,682. Zinc ore decreased \$108,649, and manufactured zinc, \$154,858. All other unmanufactured articles not enumerated decreased from \$1,034,242 in 1892 to \$902,773, in 1893.

The only articles or classes of articles which exhibited any conspicuous increase in the quantity and value exported during the fiscal year of 1893 were agricultural implements, anthracite coal, fertilizers, iron and steel manufactures, leaf tobacco, oleomargarine, musical instruments, and sausage casings. Among agricultural implements, reapers and mowers, as in previous years, take the lead, showing an increase over 1892 of \$500,959; plows and cultivators increased \$397,735; and other implements, \$114,736. The exports of anthracite coal were 1,073,111 tons, value \$4,854,604, against 808,277 tons, value \$3,419,660, in 1892. The quantity of fertilizers was 460,062 tons, value \$3,927,343, against 251,104 tons, value \$2,657,120, in 1892. Of the exports of iron and steel, pig iron increased from 15,940 tons, value \$289,915, in 1892, to 20,068 tons, value \$335,839, in 1893; band and scroll iron increased \$3,722; car wheels, \$3,175; cutlery, \$7,685; locks, hinges, and other builders hardware, from \$2,809,888 to \$2,648,919; machinery, from \$10,229,293 to \$10,467,091; cut nails and spikes, from 12,197,669 pounds, value \$273,191, to 15,604,347 pounds, value \$330,554; iron plates, from 472,401 pounds, value \$16,641, to 2,838,660 pounds, value \$65,768; steel plates, from 243,616 pounds, value \$8,048, to 654,614 pounds, value \$20,459; iron rails, from 277 tons, value \$3,007, to 409 tons, value \$11,113; steel rails, from 7,983 tons, value \$259,531, to 15,289 tons, value \$471,230; saws and tools, from \$1,900,444 to \$1,902,433; scales and balances, from \$325,417 to \$406,430; locomotive engines, from 197, value \$1,717,715, to 195, value \$1,794,709; stationary engines, from 860, value \$567,485, to 401, value \$607,758; wire, from 26,059,010 pounds, value \$852,659, to 42,798,043 pounds, value \$1,189,219; and unenumerated manufactures of iron and steel, from \$3,877,676 to \$4,896,401. Leaf tobacco and stems and trimmings increased from 255,432,077 pounds, value \$20,670,045, in 1892, to 266,083,083 pounds, value \$22,891,899, in 1893. In the exports of musical instruments, organs increased from 11,856, value \$772,582, to 12,518, value \$897,870; pianofortes, from 858, value \$246,425, to 2,066, value \$76,447; and all other instruments and parts, from \$145,649 to \$165,790. Exports of oleomargarine increased in the item of imitation butter from 1,610,837 pounds, value \$195,587, to 3,479,323 pounds, value \$416,386; and in the oil, from 91,581,708 pounds, value \$9,011,899, to 113,939,363 pounds, value \$11,207,250. Exports of sausage casings increased in value from \$878,675 to \$1,409,280. Other articles which showed an increase in the quantity exported in 1893 were: Blacking, \$20,880; bones, hoofs, horns, etc., \$101,209; building bricks, from 4,728,000, value \$34,288, to 10,625,000, value \$77,846; fire bricks, from the value of \$53,414 to \$118,312; brooms and brushes, \$80,233; dyes and dye stuffs, from \$597,016 to \$679,373; proprietary medicines, from \$1,842,889 to \$1,866,061; all chemicals, drugs, etc., not specified, from \$3,044,631 to \$3,097,952; watches, and parts of, from \$208,743 to \$241,758; ground or prepared coffee, cocoa, etc., \$22,641; manufactures of copper not elsewhere specified, from \$292,043 to \$338,063; colored cotton cloths, from 40,815,450 yards to 43,016,108 yards; cotton clothing, \$19,254;

all other cotton manufactures, \$618,863; china ware, from \$13,824 to \$19,589; eggs, from 143,489 dozen to 183,063 dozen; dried herring, from 3,279,263 pounds, value \$82,772, to 4,085,378 pounds, value \$93,412; other cured fish, not specified, increased \$2,905; canned salmon increased from 18,215,025 pounds, value \$1,738,465, to 22,062,073 pounds, value \$2,279,625; other canned fish, from \$146,067 to \$166,902; flax, hemp, and jute twine, from \$621,479 to \$767,545; preserved fruits other than canned, from \$214,738 to \$224,381; nuts, from \$60,684 to \$94,902; furs and fur skins, \$113,240; glass and glassware, \$31,525; glue, from 580,815 pounds, value \$66,408, to 736,446 pounds, value \$74,722; explosives other than gunpowder, from \$752,079 to \$755,966; hair and its manufactures, \$89,479; hides and skins, \$273,108; hops, while decreasing in quantity from 12,604,686 pounds in 1892, to 11,367,030 in 1893, showed an increase in value of \$275,865; India-rubber boots and shoes increased from 231,105 pairs, value \$188,570, to 410,950 pairs, value \$252,391; other manufactures of India rubber and gutta-percha increased from \$1,232,497 to \$1,357,015; lamps and other lighting apparatus increased \$23,054; lead and its manufactures, \$150,865; buff, grain, split, and other finished upper leather, from \$3,880,475 to \$4,440,552; all leather not specified, from \$605,094 to \$817,409; leather manufactures not elsewhere specified, from \$400,175 to \$443,570; lime and cement increased \$51,176; malt liquors, \$7,604; marble and stone manufactures increased \$148,973; linseed oil increased from 112,886 gallons, value \$54,020, to 128,936 gallons, value \$54,356; oil of peppermint increased from 54,987 pounds, value \$156,418, to 99,629 pounds, value \$267,422; other essential oils, from \$68,501 to \$79,920; and all other vegetable oils not specified, from \$73,731 to \$236,101; gold and silver bearing ores increased \$186,199; paper hangings increased from \$61,360 to \$71,106; writing paper and envelopes, from \$99,870 to 114,016; and other paper and its manufactures, from \$1,221,021 to \$1,355,764; paraffin and paraffin wax increased from 64,998,867 pounds to 82,675,140 pounds; quicksilver from 306,047 pounds to 424,613 pounds; silk manufactures exported increased \$9,523; spermaceti and spermaceti wax, \$14,170; Bourbon whisky increased from 744,172 proof gallons, value \$684,330, to 1,550,425 proof gallons, value \$1,461,013; rye whisky, from 128,273 proof gallons, value \$135,045, to 142,646 proof gallons, value \$179,534; and all distilled spirits not elsewhere specified from 47,724 proof gallons, value \$25,598, to 296,708 proof gallons, value \$162,445; starch increased from 20,081,027 pounds to 21,938,456 pounds; stationary other than of paper increased \$5,149; stereotype and electrotype plates, \$14,810; straw and palm-leaf manufactures, \$89,950; brown sugar increased from 245,783 pounds, value \$8,682, to 359,455 pounds, value \$13,175; refined sugar from 14,604,608 pounds, value \$665,477, to 20,386,672 pounds, value \$963,123; and candy and confectionery, from \$204,609 to \$384,607; vinegar increased from 74,890 gallons to 86,936 gallons; and whalebone, from 82,797 pounds to 148,130 pounds. The exports of wood and its manufactures show a net increase of \$875,868. Fire-

wood increased from 423 cords, value \$1,604, to 1,920 cords, value \$5,877; shooks, from \$781,537 to \$941,008; staves and headings, from \$2,311,716 to \$2,499,520; all other lumber not specified, from \$1,051,397 to \$1,443,539; hewn timber, from 6,736,446 cubic feet, value \$983,574, to 7,836,921 cubic feet, value \$1,188,353; logs and other timber, from \$1,923,604 to \$2,270,072; moldings and other house finishings, from \$202,589 to \$208,002; household furniture, from \$3,090,146 to \$3,112,291; and all other manufactures of wood not specified, from \$1,827,470 to \$1,917,451. Exports of boards, deals, and planks increased in quantity from 592,596 thousand feet in 1892 to 629,355 thousand feet in 1893, but the value fell off from \$9,672,599 to \$9,642,599; joists and scantling decreased in quantity 2,656 thousand feet, and in value \$57,488; hoops and hoop poles decreased from \$88,222 to \$40,350; laths fell off more than one half, both in quantity and value; palings, pickets, etc., decreased \$2,405; shingles, \$15,430; sawed timber, from 235,550 thousand feet, value \$2,673,154, to 214,198 thousand feet, value \$2,320,123; doors, sash, and blinds, from \$295,918 to \$273,455; barrels and hogsheads, from \$290,118 to \$208,002; and wooden ware, from \$356,553 to \$328,817. Exports of all manufactured articles not specified increased from \$1,852,857 in 1892 to \$2,008,879 in 1893.

The total value of the foreign merchandise exported from the United States during the fiscal year of 1893 was \$16,634,409, of which \$10,780,369 represent the dutiable and \$5,854,040 the free merchandise. In 1892 the articles subject to duty amounted to \$9,990,002, and those free of duty to \$4,556,185, a total value of \$14,546,113. The foreign goods exported from warehouse amounted to \$10,500,666 in 1893, and \$9,972,567 in 1892.

Movement of Specie.—The following table shows by months the imports and exports of gold and silver coin and bullion for the year ending June 30, 1893, and for the preceding year:

MONTHS.	1892.		1893.	
	Imports.	Exports.	Imports.	Exports.
July.....	\$2,964,390	\$3,528,408	\$1,950,432	\$12,816,628
August.....	3,055,523	3,221,651	1,998,785	9,411,552
September.....	9,093,833	3,579,968	3,758,081	7,399,814
October.....	19,320,974	4,040,840	6,613,288	3,991,679
November.....	11,070,238	4,991,862	5,298,426	5,089,864
December.....	8,099,505	8,049,526	3,363,067	17,569,924
January.....	1,667,631	2,596,064	3,815,928	16,610,888
February.....	4,162,837	9,034,484	8,370,516	17,850,591
March.....	2,865,760	3,728,928	7,558,502	11,118,698
April.....	1,669,339	9,694,058	1,710,092	91,481,660
May.....	2,054,098	5,733,891	3,480,759	19,979,807
June.....	2,651,426	20,552,068	2,595,792	6,727,620
Total.....	\$69,654,540	\$93,005,886	\$44,867,683	\$149,413,168

The total imports of coin and bullion for the fiscal year of 1893 fell \$25,286,907 below those of 1892, while the exports of 1893 exceeded those of the previous year \$66,412,277. In other words, the net export of gold in 1893 was greater by \$91,699,184 than that of 1892. In October and November, 1892, which belong to the fiscal year of 1893, the flow of specie was toward the United States, the imports of those two months exceeding the exports \$2,881,178; but in the month following a drain began upon

our specie resources, which continued almost without abatement to the end of the fiscal year. In December the net shipments of specie were \$14,224,857, against a balance of over \$5,000,000 on the other side for the corresponding month of the previous year. In January the export of specie was a little lighter, but the net outflow increased. It continued about the same in February, decreased to \$3,260,191 in March, and reached its acme of \$19,771,768 in April. At this time the stringency in money in New York, and the high rates which prevailed, began to attract foreign capital, and the imports of specie increased in May and June, while the exports declined \$18,000,000 in the latter month. The specie imported in 1893 comprised \$21,174,381 in gold, of which \$3,136,744 were bullion, \$6,074,899 domestic coin, and \$11,962,738 foreign coin; and \$23,193,252 in silver, of which \$4,978,400 were bullion, \$599,189 domestic coin, and \$17,615,663 foreign coin. The exports were \$125,627,407 in domestic coin and bullion, and \$23,790,756 in foreign. The domestic exports consisted of: Gold, \$181,835, in bars of the United States mint or assay office, \$92,231 in other bullion, and \$101,844,087 in coin; and of silver, \$67,655 in bars, \$23,397,091 in other bullion, and \$94,608 in coin. The exports of foreign specie consisted of \$6,612,691 in gold coin, and \$17,187,065 in silver coin. In 1892 the specie exports comprised: Domestic gold, \$48,321,351; domestic silver, \$10,765,067; foreign gold, \$6,873,976, of which \$22,637 were bullion; and foreign silver, \$16,045,492, of which \$11,689 were bullion. The increased export in 1893 consisted almost entirely of American gold and silver.

Navigation.—The following table shows by months the number of entries at United States ports of American and foreign vessels in the foreign trade of the United States, and the tonnage during the fiscal year ending June 30, 1893:

MONTHS.	AMERICAN VESSELS.		FOREIGN VESSELS.	
	No.	Tons.	No.	Tons.
July.....	1,371	439,885	2,658	1,442,722
August.....	1,438	492,922	2,617	1,521,141
September.....	1,111	348,864	2,161	1,356,470
October.....	1,042	371,908	2,190	1,308,573
November.....	897	362,459	1,885	1,430,819
December.....	466	230,122	1,110	1,111,504
January.....	386	243,114	850	1,047,309
February.....	523	242,387	741	890,005
March.....	438	297,352	897	1,045,891
April.....	616	334,408	1,314	1,109,096
May.....	1,175	457,377	2,162	1,244,558
June.....	1,585	592,466	2,576	1,411,709
Total.....	10,673	4,858,656	21,076	15,222,023
Total previous year.	10,912	4,469,955	22,292	16,543,490
Decrease.....	234	111,269	1,156	1,321,376

The total number of the entries at the ports on the Gulf coast from United States ports north of Cape Sable, Florida, was 581, and the total tonnage 926,732 tons. Of these entries 810 were of American steam vessels, with 668,879 tons; 151 American sailing vessels, with 76,116 tons; 115 foreign steam vessels, with 176,654 tons; and 5 foreign sailing vessels, with 5,083 tons.

The clearances from United States ports of vessels in the foreign trade of the United States, and the tonnage, during the fiscal year ending June 30, 1893, are shown by the following table:

MONTH.	AMERICAN VESSELS.		FOREIGN VESSELS.		YEAR ENDING JUNE 30.	In cars, etc.	In American vessels.	In foreign vessels.
	No.	Tons.	No.	Tons.				
July.....	1,300	467,920	2,577	1,419,100	1899.....	\$202,417,200	\$197,171,200
August.....	1,204	427,000	2,579	1,400,618	1900.....	279,000,000	187,000,000

The total number of clearances from ports on the Gulf coast for United States ports north of Cape Sable was 563, with a total of 961,002 tons. These comprised 201 American steam vessels, with 644,018 tons; 117 American sailing vessels, with 97,183 tons; 147 foreign steam vessels, with 215,046 tons; and 6 foreign sailing vessels, with 5,649 tons.

The volume of foreign trade for the year was less by \$143,000,794 than that of the preceding year, and a corresponding decrease occurred in the entries and clearances, both as to the number of vessels and the amount of tonnage.

The following table shows the values of the imports of the United States carried in cars and other land vehicles, in American vessels, and in foreign vessels, from 1859 to 1890, inclusive, embracing merchandise, coin, and bullion to and including 1879, and merchandise thereafter:

YEAR ENDING JUNE 30.	In cars, etc.	In American vessels.	In foreign vessels.
1859.....	\$910,138,430	\$123,644,708
1860.....	920,104,350	184,001,300
1861.....	901,244,000	184,100,000
1862.....	92,274,100	118,407,000
1863.....	109,744,300	148,175,300

1889.....	100,000,000	200,000,000
1890.....	100,000,000	200,000,000

The total value of the imports and exports of the United States in the fiscal year of 1890 was \$663,537,502, of which amount 66.9 per cent. was carried in American vessels. In 1860 the trade amounted to \$763,200,550, of which American vessels carried 66.5 per cent. In 1861, the first year of the civil war, the trade decreased to \$564,000,000, and the percentage carried in American vessels was 63.3. In 1862, owing principally to the blockade of Southern ports, there was a further decline of about \$150,000,000 in the volume of trade, and the percentage carried in American vessels dropped to 50. From that time forward there was a steady increase in the amount of imports and exports, but a rapid and almost uninterrupted decline in the percentage carried in American vessels. This percentage dropped to 41.4 in 1863; 37.6 in 1864; and was 27.7 in 1865. After the close of the war the volume of trade still further increased, and there was an increase for a few years in the percentage carried in American vessels. This was 32.3 in 1866, 33.9 in 1867, 35.1 in 1868, 30.1 in 1869, 35.6 in 1870. From this it dropped to 31.9 in 1871, 29.2 in 1872, 26.4 in 1873, 27.3 in 1874, 26.1 in 1875, 27.7 in 1876, 26.9 in 1877, 26.3 in 1878, 23 in 1879, 17.4 in 1880, 16.5 in 1881, 15.6 in 1882, 16 in 1883, 17.2 in 1884, 15.3 in 1885, 15.3 in 1886, 14.3 in 1887, 14 in 1888, 14.3 in 1889, 12.9 in 1890, 12.5 in 1891, 12.3 in 1892, and 12.3 in 1893.

CONGO FREE STATE, a sovereign monarchical state created in Central Africa by the general act of the International Conference of the Congo, signed at Berlin, Feb. 20, 1885, which declares the perpetual neutrality of its territories. Leopold II, King of the Belgians, assumed the sovereignty personally and independently of the Belgian Government after obtaining the consent of the Belgian Legislature to the personal union, and was proclaimed Sovereign of the Independent

ent State of the Congo at Banana, July 13, 1885. The frontiers have since been more exactly defined by conventions with France and Portugal, and extended north of the Congo by treaties with native chiefs. The sovereign in his will, dated Aug. 2, 1889, bequeathes all his rights of sovereignty over the Congo State to Belgium, and a convention between Belgium and the Independent State of the Congo, concluded on July 3, 1890, assures to Belgium the right to annex the Free State, after the lapse of ten years, with all the property, rights, advantages, and obligations appertaining to the sovereignty. By a codicil, dated July 21, 1890, attached to the testament, the territories of the State are declared inalienable, and the convention was ratified by the Belgian chambers, July 25, 1890. At the International Conference for the Suppression of the Slave Trade which met at Brussels in 1890, the powers revoked the condition of the general act which declared free trade throughout the basin of the Congo, and empowered the Government to levy certain duties on imports.

The Congo is an international river, free to the flags of all nations. The Free State possesses the territory on the north bank of the Congo from its mouth to Manjanga, above which the north bank, up to the mouth of the Mobangi, belongs to France. The south bank is Portuguese territory as far as Nokki, just above which the navigation of the Congo is interrupted by rapids which extend for over 200 miles from Vivi to Stanley Pool. A railroad from Vivi to Leopoldville, on Stanley Pool, has been begun. From Nokki the boundary of the Free State runs due east to the Kwango, follows the course of that river up to 8° of south latitude, runs east for 150 miles, then north to 7°, east again to the Kassai, and follows that river southward up to its source, about 24° of east longitude from Greenwich. From that point eastward to Lake Tanganyika the Free State is continuous with the British sphere in South Africa, and the boundary has not been settled, although by the convention of May, 1891, between Portugal and the Independent State of the Congo it runs eastward from the source of the Kassai to Lake Bangweolo. The eastern frontier, dividing the Congo State from British South Africa, is not determined. Farther north, Lake Tanganyika and a line from the northern extremity of the lake to Mfumbiro divides it from German East Africa, and from that point northward the thirtieth meridian of east longitude divides it from the British sphere in East Africa. Westward from that meridian to the boundary of the French Congo, on the Mobangi, the Free State is bounded on the north by the northeastern watershed of the Congo. The total area of the Congo State is roughly estimated at 900,000 square miles, and the population at from 14,000,000 to 17,000,000. The capital is Boma, on the lower Congo. There were 774 resident Europeans at the beginning of 1891, of whom 388 were Belgians.

The heads of departments in the Central Government at Brussels, which is presided over by the sovereign, were in the beginning of 1893 as follow: Foreign Affairs, Posts, and Justice, E. de Grelle Rogier; Finance and Domains, C. Janssen; the Interior, Public Forces, and Marine; E. van Eetvelde. The local government was

composed of the Vice-Governor-General, Major Charles Wagis, the governor-generalship being vacant; State Inspectors, A. C. van Gele and Capt. Baert; the Directors of Finance and Justice, A. Bolle and Dr. F. Fuchs; the Commander of the Public Forces, Capt. van der Mensbrugghe; and the commissaries of the 11 administrative districts of Banana, Boma, Matadi, the Cataracts, Stanley Pool, Kassai, the Equator, the Ubanji and Welle, the Aruwimi and Welle, Stanley Falls, the Lualaba, and East Kwango. The public forces numbered 8,792 native troops, divided into 8 companies commanded by Europeans. A decree, issued on July 30, 1891, authorizes an annual conscription of the native Africans between the ages of fourteen and thirty. The Government in 1892 had 5 steamers on the lower and 11 on the upper Congo.

The public revenue is derived from an annual subsidy, formerly of 2,000,000 francs and afterward of 1,000,000 francs, granted by the sovereign out of his private means, an advance of 2,000,000 francs a year from 1890 from the Belgian treasury, and taxes, duties, license fees, and receipts from sales and leases of public lands. The budget for 1891 estimates the receipts, over and above the 3,000,000 francs contributed by the King of the Belgians and the Belgian Government, at 1,554,932 francs, of which 790,966 francs are derived from customs, 193,667 francs from licenses, 255,838 francs from other local sources, and 874,461 francs remained unexpended from the Belgian advance for 1890. The principal estimated expenditures were 2,271,628 francs for the public forces, 829,198 francs for the marine, 648,201 francs for civil administration in Africa, 187,045 francs for the civil service in Europe, and 372,790 francs for caravans, etc. The budget for 1892 was 4,731,981 francs; for 1893, 5,440,681 francs. On July 25, 1892, a decree was issued by the sovereign declaring that the right of hunting elephants is interdicted throughout the territories of the State, except by special permission. Another decree prohibited all private trade with natives in caoutchouc. The latter decree, in answer to the protests of the mercantile community in Africa, was afterward modified so as to allow rubber to be gathered and sold to traders, subject to a duty of 25 centimes per kilo, except in the forests of the north, in the basins of the Welle, the Mbomu, the Aruwimi, the Himbiri, and some other rivers. But it is forbidden to cut the plants that produce the caoutchouc.

The total imports in 1891 were valued at 10,535,619 francs, and the exports at 5,353,519 francs. The principal exports were ivory, 3,818,000 francs; caoutchouc, 2,320,000 francs; palm nuts, 1,864,000 francs; coffee, 1,643,000 francs; palm oil, 1,227,000 francs. During 1891 the number of vessels entered at the ports of Banana and Boma was 893, of 247,689 tons.

Expedition to the Upper Welle.—On Feb. 3, 1891, Capt. Van Kerckhoven, state inspector, set out from Leopoldville with two steamers containing the first part of an expedition consisting of 600 black soldiers armed with Albini rifles, 18 officers, as many under officers, and 2 surgeons, with auxiliaries armed with muskets and a huge body of followers, as was necessary for the transport of the stores and material for such an expedition, which included a Krupp

cannon, a Hotchkiss rapid-fire gun, and 4 other guns. The purpose of the expedition was to traverse the region of the Welle from Yakoma to the Monbuttu country, conclude treaties with the rulers, and put the tribes in a condition to defend themselves against both the Arab slavers and the Mahdists, who were extending their conquests from the Soudan. Before setting out, Capt. Van Kerckhoven went to Stanley Falls to secure the loyal support of Rashid, the vali who had succeeded Tippoo Tib. Lieut. Fievezi, commandant of the post of Basoko, opened the line of communications from the Congo to the Itimbiri and Welle, and made sure of the friendly attitude of the powerful Sultan of Djabbir. Capt. Ponthier preceded the expedition to open this route, reaching the confluence of the Bomokandi and the Welle. Itembo, at the head of navigation on the Itimbiri, was fortified so as to serve as a base of supplies. A second advance guard, under Lieut. Milz, proceeded northward toward the sultanate of Senno. The expedition made good progress, and the diplomatic tact of the leader and the imposing display of military force not only secured a peaceful passage, but persuaded the native rulers to accept the protection and alliance of the Congo State. The Arabs disputed the way, and there were frequent bloody encounters with them. In April, 1892, the expedition was heard from as having reached the Monbuttu country, on the confines of the Free State's territory. A few months later there were rumors that it had broken the power of the dervishes on the upper Nile and established a station at Wadelai, or, according to other accounts, even at Lado, in the abandoned Equatorial Province of Egypt. The Congo Government had approached the British Minister of Foreign Affairs and had obtained his assent to a proposition that the expedition should occupy the Nile province provisionally in furtherance of its mission to check the slave trade. Lord Salisbury may have thought that there was little prospect of the establishment of Belgian stations on the upper Nile, and that any success that the expedition could attain in rallying the populations against the slave raiders and damming back the power of the Khalifa would further the British policy in East Africa and help to conserve British interests in Uganda. There were reports that Capt. Van Kerckhoven had established himself at Lado; that the Khalifa had sent a force under the Emir Abugingeh; that the latter had been induced to desert the dervish cause and join in an anti-Mahdist movement that had broken out in southern Kordofan. Either a better knowledge of the rebellious mood of the Shilluks, Denkaas, and other warlike tribes on the Nile, who were likely to join hands with the whites and favor their establishment on the Nile and their advance northward, or some other reason, impelled Lord Salisbury to veto the permission granted to the Congo Government by the President of the British East Africa Company, to which he had previously given his assent. He refused to listen to any compromise that would allow the Congo forces to set foot within the English sphere, and Lord Rosebery maintained the same attitude. It was evident that any occupation of the Nile region by the Congo State forces would give a colorable legal title to sovereign rights,

because the Congo Free State was not a party to the Anglo-Italian and Anglo-German arrangements that conceded it to Great Britain, and international law, as defined in Anglo-German and other treaties respecting the coast of Africa and unclaimed countries in general, requires that there must be effective occupation to establish territorial rights. From Lado, or whatever point he reached in the Nile region, Capt. Van Kerckhoven was eventually compelled to retreat. While returning, he was killed, on Aug. 10, 1892, by the accidental discharge of a rifle. His party of 20 whites was much reduced by deaths, and the troops suffered losses in many conflicts with the Soudanese, the Niamniam, and the Monbuttus. Yet the powerful chiefs of the north-east—Bangasso, Djabbir, Semio, and others—remained loyal to the Independent State, and the league against the slave-traders was organized by the survivors of the expedition. Capt. Baert, who was sent to succeed Capt. Van Kerckhoven, was stopped by hostile Niamniam on Bamokandi river, but worsted them after a severe encounter, and succeeded in joining Capt. Delanghe, who took command after the death of Van Kerckhoven. With the consent of the native chiefs, who have considerable armies organized in military fashion, the country was divided into military districts placed under the command of Belgian officers.

Antislavery Posts at Tanganyika.—The west shore of Lake Tanganyika was intrusted to the action of the Algerian missionaries by the Independent State of the Congo after the Congress of Berlin in 1885. It was thus that the post of Mpala, founded for the International African Association by Capt. Storms, in 1883, became an antislavery center. Capt. Joubert, an old soldier of the Papal Zouaves, organized a little army recruited from pupils of the Carmelite mission and liberated slaves, and carried on a constant war with the Arab raiders. Many chiefs of natives tribes sought protection against the slavers. The latter redoubled their attacks, and in a battle which took place on June 4, 1890, when a series of sanguinary encounters had decimated the force and left it with not more than 100 rifles in good order, the post was saved by a storm that scattered the enemy's boats.

The Belgian Antislavery Society fitted out an expedition under Capt. Jacques, which arrived at Rumbi, one of Joubert's stations, on Sept. 27, 1891. Jacques, who took the chief command, extended the field of operations, founding the post of Albertville, north of Mpala, on Dec. 30, 1891, as a barrier against Arab incursions. The Arab chiefs collected their forces and hurled them against the two posts, and after each repulse returned in stronger numbers. In answer to the call for re-enforcements the Antislavery Society fitted out a third expedition, which left Amsterdam on April 2, 1892, under the command of Lieut. Long, and in the spring of 1893 a fourth, under Capt. Descamps, who took a large supply of arms and ammunition and stores of victuals. This last expedition took the route of the Zambesi, reaching it by way of the Cape of Good Hope, and passing through Nyassaland with the assistance of the British African Lakes Company to Karenga, north of Lake Nyassa, which is a month's journey from the

Belgian stations on Lake Tanganyika. This new route is less subject to delays than the one from Bagamoyo. Lieut. Long could not come to the relief of Capt. Jacques till February, 1893. War between the Germans and the natives kept him back, and when peace was concluded it was impossible to find porters. Meanwhile, Capt. Jacques was hard pressed by the Arabs. On Sept. 7, 1892, he attacked the fortified camp that they had established near his post, but was compelled to retreat for lack of ammunition. Before the arrival, in August, of Delcommune's party, the chief Arab slave-trader and military chieftain, who operated in this region—Rumaliza, of Ujiji—held his little force closely invested in Albertville, with the intention of starving it out. The siege was raised when Lieut. Long arrived, and the Arabs retired after their *boma* or fort was taken and destroyed, although they greatly outnumbered the Belgian force. Rumaliza was acting in concert with Moharra and all the Arab chiefs to the west and north in an effort to sweep the Belgians from the center of Africa, and it was the success of the arms of the Congo State in the Congo region that caused him finally to desist, and saved the anti-slavery settlements from extinction.

Katanga Expeditions.—Four expeditions operated between 1890 and 1893 in the vast tract lying between the lakes of Tanganyika, Moero, and Bangweolo, with the object of opening its rich resources to Belgian enterprise and planting there the flag of the Free State. This region, situated at the southeastern extremity of the treaty limits of the Congo State, is popularly known as Katanga, from one of the tribes inhabiting it which had subjugated several others. The expeditions were sent out by the Katanga Company, which had received a concession for the commercial exploitation of this particular region, and were led by Lieut. Paul Le Marinel, Alexandre Delcommune, Capt. Lucien Bia, and Capt. Stairs. Lieut. Le Marinel left the fortified camp of Lusambo, on the Sankuru, on Dec. 29, 1890. Delcommune entered the country by way of the Lomami, departing from Congo Lutita on May 18, 1891; Capt. Bia advanced from Lusambo on Nov. 11, 1891; and Capt. Stairs, coming from the east coast, set out from Mpala, on Lake Tanganyika at the end of the same month. The country through which they passed has been turned into a desert by Arab slave raids, which have compelled the people, instead of living in little communities of a thousand persons or so, to collect in huge villages containing 9,000 or 10,000, separated by wide stretches of deserted waste. Delcommune lost half his 200 porters before he reached Lupongo, the first of these settlements, and after replacing them he left 50 more dead on the road in the next week. The famished party refreshed themselves with hippopotamus meat when they reached the Lomami. In a battle with a caravan of Arabs, who were encouraged by the brother of Msiri, the tyrant of Uganda, Dr. Briart, the surgeon, was killed, and henceforth they had to fight their way to Bunkeia, Msiri's capital, where they arrived on Oct. 6, 1891. A Swedish officer, Lieut. Hakansson, who usually commanded the military operations, was killed in an encounter with the natives. Msiri,

a political ally of the Arabs, who respected his dominions because they could not cope with his formidable forces, received the expedition with politic friendliness, and gave permission to explore his dominions, as he had the pioneer expedition of Lieut. Le Marinel, which made its entry into the King's capital on April 18, and departed on June 11, 1891, leaving Lieut. Legat and a small force at the fortified camp that was established at Lafoi, near Bunkeia. Capt. Bia reached Bunkeia on Feb. 4, 1892, and there met the party of Capt. Stairs. A few days before Capt. Bodson and King Msiri had both been killed in an affray regarding the recognition of the flag of the Free State, and Capt. Stairs had taken possession of the country and received the submission of Msiri's vassals, and of his son, who was installed as King of Katanga. Stairs sickened and died on his return trip to the Zanzibar coast, and his expedition suffered terribly from famine. Bia also fell a victim to the deadly climate, and the expedition was brought back to Europe by Lieut. Franquei. Delcommune made an extensive exploration of Katanga, and visited the copper mines of Katabi. Msiri tried to drag him into a war with the Bassanga, the most numerous and warlike tribe in his dominions, but Delcommune refused, and even obtained an escort from the old tyrant. In the vicinity of Ntenke the band of 600 persons suffered from starvation, and was reduced to 200 before it reached the village of Mussima, where food was obtained. Reaching the banks of the Lualaba on Dec. 20, 1891, they made canoes in which to descend the river, but were obliged to leave it at Nzilo, where the river contracts and descends in a torrent broken by cataracts through a narrow gorge for 48 miles. They dragged their boats for several miles over the land, and then famine again began to thin their ranks, compelling them to retrace their steps to Bunkeia in order to take the route to Tanganyika. They reached Bunkeia on June 8, 1892, and made their way to the shore of Lake Tanganyika by a northeasterly route, crossing the Luapala where it emerges from Lake Moero. This lake is only an expansion of the Luapala, which is found to be the main branch of the Congo. When Delcommune reached Rumbi, now called Baudouinvillie, he learned from Capt. Joubert that Capt. Jacques was besieged by Arabs at Albertville, and hastened to his relief. From there he descended the Lukuga to the Lualaba and explored Lake Landji. Instead of descending the Lualaba to Nyangwe and Riba Riba, where the expedition would have been annihilated by the Arabs, he made his way across the country to Lusambo, for he had been warned of the Arab revolt by Mfimi, a son of Msiri. Dhanis had crossed the Lomami and occupied the country between that river and the Lualaba, and both Bia and Delcommune were able to leave men and arms to strengthen his force.

War with the Congo Arabs.—After the massacre of Hodister and his companions in 1892, and the general revolt of the Arabs of the upper Congo region, the Free State authorities placed in the field one of the strongest military forces they had ever collected, for the purpose of re-establishing their power and punishing the rebels. The expedition, which was commanded by

Lieut. Dhannis, numbered 450 soldiers of the Congo State, and was joined by 7,000 native auxiliaries. The Arab rebels occupied the country from the fortified post at Basoko, at the junction of the Congo and the Aruwimi, southward to the fort at Lusambo, on the upper Sankuru, and Albertville, on Lake Tanganyika. The aged Tippoo Tib, who had retired, leaving his son Sefu bin Mohammed in his place as vali at Stanley Falls, wrote to assure the Government of his loyalty; and Sefu and Rashid, Tippoo Tib's nephew and deputy, who commanded at Kassongo, his chief place in the Manyema district, for some time after the massacre of the Hodister expedition by the Arab chief of Nyangwe, Muini Moharra, continued to act in harmony with the State authorities, and when Lieut. Dhannis prepared to move upon the enemy he expected that their forces would co-operate with him. Instead of that, they were drawn into the rebellion, and the Free State found itself at war with the united Arab power in Central Africa. The Belgian officers at Kassongo—Lippens and De Bruyn—were murdered. Arab forces attacked Albertville, Basoko, and Lusambo, and were repelled at each point. Sefu, in his camp at Stanley Falls, had expressed horror at the acts of Muini Moharra, whom he promised to bring speedily to terms, saying that he would join Dhannis in Lusambo with a large force. On his march through the rebellious districts on the Lomami he was joined by the other Arab chiefs, and advanced against Lusambo, supported by Moharra with a large army. Dhannis, however, learned in time his treacherous purpose, and obtained in haste the aid of Gongo Lutete, a powerful negro chief on the upper Lomami, and of the latter's principal vassal, Lupungu. The Arabs blocked the entrance to the Lomami at its junction with the Congo, and threatened to invade the possessions of Gongo Lutete, destroy the fortified camp at Lusambo, and advance upon Lulualberg and the commercial stations on the Kassai. The Arab army numbered about 10,000 rifles—a far greater force than Dhannis could muster—but the Belgian officer relied on his trained soldiers and his Krupp gun, and was not afraid to go out to meet the invaders. He attacked Sefu's army, forming the advance guard, near Gino Muisso, on Nov. 22, 1892. The battle lasted several hours and was fiercely fought. The Arabs were routed before Moharra and the main body came up, and these were involved in the disorderly retreat across the Lomami. The Arabs lost 1,100 men and left 603 rifles in the hands of the Belgians. After this victory the negroes, who before had feared to take up arms against their cruel oppressors, flocked to the banner of the Free State. More than 20,000 joined Dhannis, ready to carry the war into Manyema. Dhannis and his negro allies marched as rapidly as the conditions of transport and subsistence would permit upon the Arab strongholds of Kassongo and Nyangwe, thoroughly occupying the country as they advanced, first between the Sankuru and the Lomami, and then between the Lomami and the Lualaba. On Jan. 9 Lieut. Dhannis attacked the main body of the Arabs in an entrenched position at Goia Kapaka, and by shelling their camp brought on a general engagement and won another complete victory. Muini Moharra was killed and Sefu put to flight. He

made another stand at Angoi, between the Lomami and the Lualaba, and after a third defeat retired toward Nyangwe, which was strongly fortified on the river bank to prevent a passage. The strong positions on the left bank were also occupied by the Arabs, and fortified for the purpose of defending the approaches to the river. They made several attacks on the camp of the Congo troops, and one day attacked in force, and were badly beaten and driven across the Lualaba. Lieut. Dhannis then encamped before Nyangwe, Jan. 29, and besieged it for several weeks. After several bombardments, he crossed, on March 4, in canoes that the natives had brought up, and after a brisk fight, which lasted several hours, the Arabs fled in the direction of Kassongo, and the Belgians took possession of the city. A part of the Arab forces had retired northward with Sefu, and when the Congo troops entered Kassongo they found it deserted. A junction was made with Capt. Jacques, lest the remnant of Moharra's army that passed eastward, joining Rumaliza, might attempt to storm his fortifications at Albertville.

In the north, Lieut. Chaltin, commandant at Basoko, who had been operating with success against slave-raiders on the Aruwimi with the aid of the Mabenja negroes before the friendly Arabs revolted on the Congo, co-operated with Commandant Tobbak, of Stanley Falls, as soon as Rashid's people, who remained quiet till long after Sefu took the field with Moharra, took up arms against the Free State. They occupied in force the strong Arab fortress of Issanghi, at the mouth of the Lomami, and threatened Basoko, hoping to block the water communications and prevent the sending of assistance to the forces that were opposed to Moharra and Sefu. From this post they were dislodged by Chaltin, who converted it into a station of the Free State. He set out in the beginning of May, 1893, from Bena Kamba, on the Lomami, for the purpose of capturing the great Arab town of Riba Riba, on the Lualaba, north of Nyangwe. The Arabs met him at a river 14 miles from the place, and attempted to contest the passage. He was unable to procure boats, but finally dislodged the Arabs with his artillery, and constructed a raft, on which he crossed. After several days of fighting the expedition entered Riba Riba, which the enemy had left in ruins, abandoning it at the approach of the conquerors, after taking all that was valuable that could be carried, setting fire to the houses and destroying all the plantations, but leaving in their hasty retreat a quantity of arms and powder. Lieut. Chaltin suspected that the defeated Arabs would attack Stanley Falls, which had not previously been threatened, for Rashid continued to protest his loyalty and submission to the Congo State, and represented that the war in the south was due to the lamentable blunder of the whites in espousing the cause of Gongo Lutete, whose country Sefu had invaded in order to punish him as a false vassal, who had stolen merchandise that was confided to his care and rebelled against his chief. Chaltin's apprehensions were well founded. He arrived at Stanley Falls on May 15, while Commandant Tobbak was engaged in a battle against overwhelming odds, and put the assailants to flight, killing 200, and captur-

ing a quantity of munitions and several hundred prisoners. Sefu and Rashid, who had joined forces here, retreated to the fort at Kibonge, which was strong enough to offer a serious resistance. Soon afterward Capt. Ponthier reached Stanley Falls with 500 men and several cannon. He relieved Capt. Tobbak of the command, and at the end of June set out in canoes with 800 men and a Krupp gun and easily reduced Kibonge. By this victory the entire country involved in the Arab insurrection was cleared of the enemy.

In connection with the Arab revolt the Congo State had serious complaints to make of violations of the general act of the Brussels Conference by one or more of the signatory powers. Among the arms left on the battlefield by the Arabs at the various engagements on the Sankuru, the Lomami, and the Lualaba were many breech-loading rifles. The spoils taken at Stanley Falls included 100 kegs of powder. The Arabs in their slave raids are known to be extremely wasteful of gunpowder, and yet seem always to have had a never-failing supply. These munitions could only reach them by way of German East Africa or British Nyassaland, or through the Portuguese possessions on either the east or the west coast; and such importations could not take place without the connivance or extreme remissness of the European customs authorities, although the Antislavery Conference imposed on the governments the duty of taking all necessary measures to insure the fulfillment of the prohibition against the importation, sale, and transport of firearms and ammunition, as well as to prevent the entry or exit thereof by their inland frontiers or the passage thereof to regions where the slave trade is rife.

Boundary Questions.—The French and the Congo Government have both sent expeditions to occupy the region of the upper Welle, and a sharp dispute arose regarding their conflicting claims, which the Congo Government proposed to refer to arbitration in accordance with the terms of the Berlin general act. In January, 1893, M. Ribot, receding from some of the French demands, proposed to the Comte de Grelle Rogier, the Congo plenipotentiary, an acceptable compromise. According to this arrangement, the Mobangi or Ubangi and the Welle form the boundary up to the confluence of the Welle and the Mbomu, and then the latter river up to the point where the Shinko, an important tributary, flows into it, in about 6° of north latitude and 24° of east longitude; and east of that all the territory south of the Shinko, up to its course in the Bahr-el-Gazal territory, was conceded to the Congo State. From this arrangement M. Ribot afterward receded, and his successor was still more unwilling to acknowledge any Belgian rights beyond the Welle or north of 4° of north latitude.

The delimitation of the frontier in Lunda, west of the Kasai, the only part of the Portuguese boundary that remained undetermined, was carried out by the Rev. G. Grenfell, commissioner for the Independent State, and Col. Sarmiento, acting for Portugal. They began their operations on the spot on Dec. 20, 1892, and the convention was signed at Lisbon on May 25, 1893.

CONGREGATIONALISTS. The "Congregational Yearbook" for 1893 gives statistics of the Congregational churches in the United States of which the summaries are as follow: Number of churches, 5,140; of ministers, 5,008; of members, 542,725; of members of Sunday schools, 644,782, with an average attendance of 397,201; of Young People's Societies of Christian Endeavor, 3,195, with 157,678 members; number of additions during the year by confession of faith, 81,582; number of baptisms, 14,040 of adults and 10,357 of infants; number of families, 864,350. Amount of benevolent contributions, so far as reported: For foreign missions, \$441,948; for education, \$252,699; for church building, \$187,770; for home missions, \$593,974; for American Missionary Association, \$148,805; for Sunday schools, \$54,974; for the New West Educational Commission, \$47,091; for ministerial aid, \$26,326; for other purposes, \$948,805; benevolent contributions of the Sunday schools, \$148,376. Of the churches, 3,723 are returned as "supplied with pastors" and 1,417 as "vacant"; of the ministers, 3,279 are in pastoral work, and 1,724 "without charge." The 7 theological seminaries—at Andover, Mass., Bangor, Me., Chicago, Ill., Hartford, Conn., Oberlin, Ohio, Oakland, Cal. (Pacific), and New Haven, Conn. (Yale)—return 52 professors, 38 instructors or lecturers, 11 resident licentiates or fellows, 29 advanced or graduate students, and 545 undergraduate students. Of 195 students in the Chicago Seminary, 68 are marked special, of whom 11 were in the German, 17 in the Dano-Norwegian, and 40 in the Swedish departments.

The total receipts in all departments of the American College and Education Society for the three years ending in 1892 were \$414,045; of this sum, \$152,941 were for the young men, and \$261,104 were for the colleges. The amount received for the colleges during the previous three years was \$162,727; so that an increase is shown for the last three years of \$98,377.

The New West Education Commission returned, July 1, 1892, 28 schools of all grades, with 68 teachers and 2,812 pupils; of whom 742 were Mormons, 585 "apostates," and 287 Mexicans; with 21 Sabbath schools, having 2,000 pupils. This society was to be united with the College and Education Society, under the name of the American Education Society.

The American Congregational Association returned the value of its Congregational House, Boston, in 1892, as \$501,000; its income for the year was \$23,104; and its indebtedness was \$165,000. The library contained 31,800 volumes, of which nearly 1,000 had been added during the past year 57,448 pamphlets, and 87,567 unbound numbers of periodicals. The chief specialty of the library is the early Congregational literature of New England, with its sources in the mother country; and it collects portraits, town histories, biographical sketches, etc.

The total income of the Congregational Sunday School and Publishing Society for 1892 was \$80,249, of which \$67,316 was available for immediate use.

Congregational Church Building Society.—The fortieth annual meeting of the Congregational Church Building Society (formerly Ameri-

can Congregational Union) was held in New York, Jan. 12. Vice-President A. S. Hatch presided. The trustees reported that the receipts of the society for the year had been \$168,450, of which \$18,670 had been contributed through the Women's Home Missionary Unions, \$540 through 43 Young People's Societies of Christian Endeavor, and \$1,059 through 111 Sunday schools. Loans and grants had been voted to 188 churches, and parsonage loans to 58 churches. By paying \$71,645 directly from the church-building funds, property worth \$361,591 had been secured; and by paying out \$20,060 from the Parsonage Loan fund, parsonage property valued at \$48,230. Thirty-five churches aided in building houses of worship had closed their accounts with the society by paying the balance of the grant or loan; making a total of 351 out of the 2,294 churches which had been aided that had discharged their obligations. Certain officers of the society were authorized to act as a committee of conference to decide upon the expediency of undertaking building enterprises in cases where there may be doubt of financial ability, or in which questions of denominational comity or multiplication of churches may be involved.

Congregational Home Missionary Society.

—The sixty-seventh annual meeting of the American Home Missionary Society was held at Saratoga Springs, N. Y., May 30. The receipts for the year had been \$775,262, of which \$526,582 were from contributions and legacies, and \$211,500 were collected and expended on the field. Two thousand and two missionaries had been employed in 47 States and Territories, of whom 1,169 were pastors or stated supplies of single congregations, 599 had ministered to two or three congregations each, and 257 had labored over still wider fields. They had supplied fully, or by preaching at stated intervals, 3,841 congregations and missionary districts. Four missionaries had served congregations of colored people, and 196 had preached in foreign languages—8 to Welsh congregations, 50 to German, 81 to Scandinavian, 22 to Bohemian, 4 to Polish, 15 to French, 2 each to Mexican, Italian, Spanish, and Finnish, 3 to Danish, 2 to Armenian congregations, and 1 to a congregation of Jews. The organization of 265 new Sunday schools, was reported, and 2,270 Sunday schools, with 159,420 pupils, were under the care of the missionaries. Seven thousand two hundred and forty-nine members had been added to the churches on confession of faith. One hundred and forty churches had been organized in connection with the labors of the missionaries, and 75 churches had become self-supporting. One hundred and fifty-three houses of worship had been completed, 34 were in course of erection, 217 had been materially repaired or improved, 4 chapels had been built, and 110 parsonages provided; and 122 men in connection with the missionary churches were preparing for the ministry. A special report on the work done among foreigners gave the following results: German work, 91 churches, with a membership of over 4,000, in 18 States, mostly west of the Mississippi; Slavic, 6 Bohemian churches, 350 members, in Ohio, Illinois, Wisconsin, Minnesota, etc., 1 Polish church in Detroit, 1 Slovak or Hungarian Slav church at Maddock, Pa., and a Magyar work at South Norwalk

and Bridgeport, Conn.; Scandinavian, over 100 churches, with a membership of more than 4,000 scattered over the whole country, from Maine to California. There were also mentioned 130 Churches of Welshmen in Ohio and Pennsylvania, 6 churches of French Canadians in New England, a Spanish church in New York city, besides earnest calls for work among Italians, Armenians, and others. The Woman's Department, organized in 1883, had contributed \$51,000 to the resources of the society, making the whole amount of its contributions since 1886, when they were first reported, \$280,000. Packages of "family supplies" had been sent out through the medium of officers of the society, amounting in value to \$46,597. A committee appointed in 1892 to examine into the relations between the national society and its auxiliaries and report what changes might be needed to render them more harmonious, reported a plan for the allotment of funds, which was approved. The name of the society was changed to Congregational Home Missionary Society; the changes in the constitution necessary to make it conformable to the new name were directed to be made, and the executive committee was instructed to take the steps required to secure legal sanction for the change.

American Board.—The eighty-third annual meeting of the American Board of Commissioners for Foreign Missions was held in Worcester, Mass., beginning Oct. 10. The Rev. R. S. Storrs, D. D., presided. The Prudential Committee reported that the total receipts for the year had been \$641,421, of which \$483,188 had been from donations, \$146,759 from legacies, and the rest from other sources. Of the donations, \$205,663 had been received from the three Woman's boards, and \$14,000 from the Societies of Christian Endeavor. The sum of \$30,865 had been appropriated for the two new missions in East Central and West Central Africa, and \$7,000 from the small remnant of the Swett bequest to the missions in China and Japan. The expenditures had amounted to \$768,333; and for the first time in sixteen years, or since 1877, a large debt was reported at the end of the year. The general summary of the missions for 1893 furnishes the following figures:

Missions.—Number of missions, 20; stations, 96; out stations, 1,128; places for stated preaching, 1,928; average congregations, 69,357.

Laborers employed.—Ordained missionaries (10 being physicians), 183; male physicians not ordained (besides 6 women), 12; other male assistants, 6; women—6 of them physicians (wives, 185; unmarried, 171)—356; whole number of laborers sent from this country, 557. Native pastors, 219; native preachers and catechists, 562; native school teachers, 1,462; other native laborers, 495. Total of native laborers, 2,788; total of American and native laborers, 3,295.

The Churches.—Number of churches, 442; church members, 41,566; added during the year, 3,570; whole number from the first, as nearly as can be learned, 125,593.

Educational Department.—Theological seminaries and station classes, 17; pupils, 228; colleges and high schools, 65; pupils in the above, 3,744; boarding schools for girls, 63; pupils in boarding schools for girls, 3,118; common schools,

1,019; pupils in common schools, 40,615; whole number under instruction, 48,585; native contributions, so far as reported, \$112,507.

Among the special facts of interest noticed in the survey of the condition and growth of the missions in the several fields it is observed that the social and intellectual progress of Bulgaria, as compared with the situation twenty years ago, under Turkish rule, attracts the attention of all thoughtful observers, and is justly recognized as due to Robert College and to the missionaries of the board. In India, according to the testimony of thoughtful observers, a great change of sentiment is in progress, and there is a readiness on the part of the people to listen to the gospel such as has never before been shown. In Japan, the earnest manner in which the native Christians have taken up the support of their own institutions and have entered into the evangelistic work is remarked. Missionary operations in Micronesia, after having been carried on for forty years with great benefit to the islanders, were now interfered with by the aggressions of the Germans in the Marshall Islands and of the Spaniards in the Caroline Islands. Remonstrances had been addressed by the Government to Spain, and amends were promised for the injurious treatment by that country of the missionaries and their property on Ponape; but as yet no relief had been obtained against the attacks of the Germans upon the native pastors and churches in the Marshall Islands. Yet the churches and schools in the Marshall Islands were well maintained, the number of communicants had been materially increased, and the quality of Christian life was improving. The work was prospering in the African missions. In Asiatic Turkey, interference of the Government with missionary work was complained of, with arrests and exile of teachers, and the burning of the new building for the girls' school at Marsovan, all showing, the report says, "that it is the settled purpose of the Ottoman Government to cripple the schools and churches which have been established by our missions, and eventually to drive out the missionaries themselves."

A committee of eleven, appointed at the preceding annual meeting to consider the relation of the board to the churches, and the question of increasing the number of corporate members, reported, recommending that a plan for securing a certain portion of its new members through the nomination of specified organizations of Congregational churches, temporarily adopted at the previous meeting, be continued for the next two years, and advising that the limit of corporate membership be fixed at the number of 850, and that, in addition to the vacancies regularly occurring, 25 persons be nominated and appointed for the next four years, beginning with 1894; also, that the by-laws be amended to correspond with this recommendation. The report was adopted. A number of memorials and resolutions relating to the subjects of enlarging the Prudential Committee, the appointment of missionaries, and other matters, were referred to a special committee of fifteen, which reported, recommending the appointment of an assistant secretary; the enlargement of the Prudential Committee at once to fifteen members, including the president and vice-president of the board; also,

That, beginning at the annual meeting of 1894, the members of the Prudential Committee shall be elected in three classes, one class to serve three years, one class two years, one class one year; that at the expiration of these terms members shall be chosen in classes for terms of three years each. It is further recommended that no member who has served three full successive terms shall be eligible for re-election till after a year has passed.

That the Prudential Committee be requested to secure the necessary legal authority, through a change in the charter, to carry the above vote into effect; together with the resolution,

That this board, in response to the expressed wish of its missionaries in Japan, and in recognition of the successful labors of the Rev. William H. Noyes in that empire, requests the Prudential Committee to offer him an appointment as a missionary of the board. The board declares that this action is not to be understood as in any way modifying its former utterances on the subject of future probation.

The recommendations and resolution were adopted.

In explanation of the course the board and he had pursued with reference to the appointment of the Rev. Mr. Noyes as a missionary, President Storrs said, in an address to the meeting:

Six years ago, when . . . you elected me to the presidency of this institution, I said that I could accept it only on the condition that I could find some way in which we all might walk and work together as Christian brethren, trying to advance the kingdom of the Lord on earth. That way I outlined in the letter of acceptance which I wrote a short time afterward, and which the board did me the honor to adopt as a practical basis of administration two years later, at the meeting in New York. In that letter of acceptance there was not a hair-breadth of compromise on the doctrinal position of the board. A certain hypothesis, which had been presented as a tolerable hypothesis, was regarded by me, as it was by many others, and as it still is by me, as a dangerous dream of the human mind, unauthorized by the Scriptures, and perhaps damaging to the souls of men. But I made the distinction, which I have made many times in the examination of candidates for license or candidates for ordination or installation, between that which a man thinks more or less loosely and the man himself, or a doctrine positively, and centrally held by him. . . . I said in the letter to which I have referred that I thought that a just distinction, and that we were to estimate carefully and critically the spiritual force of any tendency which might appear in the candidate toward a doctrine which we might not indorse. As I understand it, the board itself has adopted and applied precisely that principle in the action which it took this morning. It recognizes that a man may be entangled in statements made by himself which he is not ready to repudiate, feeling, perhaps, that it would be unjust to his self-respect to do so, but which do not represent a part of his working theology. And so it was said that it does not change in any degree the doctrinal basis of the board, but it believes, or hopes—certainly, I think, believes—that this man, whose work has been seen and known of men in Japan, who is commended to the board by all the missionaries working in that empire connected with us, will work precisely as I said at Chicago last year, as if he knew that that hypothesis which has interested his mind was not a reality, but a dream. The board has exercised this generous confidence in him. I trust, and I surely hope, that the result will justify this expectation. It has not changed in any degree the doctrinal basis of the board, but it has given to this brother, laboring afar from us and commending himself thus far by his work, the opportunity to labor in its service and under its commission while he continues to labor in faithfulness and with zeal. This is what the board has done, and nothing else.

I believe firmly in the correctness and wisdom of each of the minutes adopted by the Prudential Committee in April and in June. I ought to, for I had some hand in shaping each of those minutes. I believe that we desired—I know we did—to appoint Mr. Noyes, as we stated in the first minute, and gave grounds upon which we could make the appointment. I believed, when certain declarations came from him to us, that it was not within the province of the committee to complete the appointment, but that it must be referred to the board. I reaffirm both the positions in those minutes, and nothing has been done which is inconsistent with them. The board has only exercised its authority, which it had not delegated to the committee, but which was perfectly within its own power and hand.

The Rev. E. K. Alden, D. D., the Rev. A. C. Thompson, D. D., and Elbridge Torrey, having declined re-election upon the Prudential Committee, a minute was adopted testifying to their high character and to the value of their services. Pledges were made to further the liquidation of the debt of the board, and a special committee was appointed to make an appeal to the churches for its immediate relief. A petition was telegraphed to Congress that the "Geary" anti-Chinese law be so amended that "its objectionable features imperiling the interests of all American subjects in China be eliminated."

American Missionary Association.—The forty-seventh annual meeting of the American Missionary Association was held at Elgin, Ill., Oct. 24 to 26. The Rev. Dr. Merrill E. Gates presided. The receipts for the year had been \$340,728, and the expenditures \$380,739. The educational work in the South included 78 schools, of which 5 were chartered colleges, 29 normal schools, and 43 schools of lower grades, with 389 instructors and 12,609 pupils. Among the most important and promising of these schools were the mountain schools specially provided for the people of the mountain districts of Kentucky and Tennessee. Twenty new churches had been formed, 14 of them in the mountain region. Assistance in the support of their pastor for the coming year had been pledged to a colony of Waldensians from Italy settled in Burke County, North Carolina. The whole number of churches in the South under the care of the association was 152, with 8,988 members, and 15,331 pupils in Sunday schools. Missionary work among the Indians was carried on in 12 schools, in which 858 pupils were enrolled, with 90 missionaries and teachers, and 1,300 pupils in Sunday schools, while 301 members had been added during the year to the Indian churches. The work among the Chinese included 21 schools, with 40 teachers and 1,215 pupils. A new feature had been introduced into it in the shape of an effort to reach the Chinese women in San Francisco, Cal., by means of woman missionaries and physicians. The following resolutions were adopted concerning the Chinese exclusion law:

Whereas, The law known as the Geary Act is in contravention of sacred promises made by the United States to China; and

Whereas, It distinguishes among immigrants to our country in a way utterly inconsistent with the vital principles of our nation and the inalienable rights of man; and

Whereas, It has been justly characterized by members of the highest tribunal of justice in our Government as "inhuman and brutal"; therefore be it

Resolved, That the American Missionary Association, the organ of the Congregational churches of the United States, in one great department of their missionary operations, and representing undoubtedly the sentiment of these churches, respectfully protests against this law and asks for its repeal.

Resolved, That the officers of this association are instructed to bring this, its action, to the attention of Congress as promptly and effectively as possible.

Forty State organizations of the Woman's Bureau were co-operating with the association, and had sent contributions to the treasury of \$16,324, besides helping in other ways.

Congregational Union of England and Wales.—The sixty-first annual assembly of the Congregational Union of England and Wales was held in London, May 7. The Rev. G. S. Barrett, editor of the "Congregational Hymnal," was chosen chairman for the year. The annual report gave prominence to the question of the amalgamation of the Congregational societies. A tentative report had been submitted to the General Committee setting forth certain conclusions and making important suggestions. The committee recommended that it be laid before the committees of the different societies, and they be invited to communicate their views preparatory to a final report to be laid before the assembly in October. The committee had conditionally expressed its readiness to take into consideration a scheme for aiding ministers in time of sickness. A report had been submitted by a subcommittee, appointed to consider certain questions raised by the International Council, suggesting that it was a matter for consideration whether a joint permanent council, representing the Congregational Union, the Colonial Missionary Society, and the London Missionary Society, might not be appointed by annual vote to consider all questions arising in connection with the churches and populations, so as to be able to present their claims and report actual work done to the churches throughout the Congregational Union. The secretary of the Union had visited 90 churches and attended the sessions of 8 county unions. The assembly, by resolution, expressed its surprise and indignation that an endeavor had been made by the School Board of London to disturb the scheme of biblical and religious teaching, which was accepted as a practical compromise by the first board, and which had "worked successfully for twenty-two years"; declared that no attempt to enforce any definition of the word "Christian" could be made "without imposing a new religious test and consequent professional disability upon many excellent teachers"; and deprecated the introduction into any popular council of theological discussions and definitions. The Council on Secondary Education reported that it had issued a calendar of the public schools maintained by Congregationalists, and a wider appreciation of the inefficiency of these institutions was believed to have been already called into existence. It was hoped that, without injury to private establishments, something had been done to counteract the unjust and unintelligent impression that a secondary education could not be had in England apart from clerical and conformist influences. A report on the drift toward dogmatic teaching in schools, reviewing certain discussions and acts which had occurred, presented in

an appendix the facts on the present conditions of religious freedom at the seven great public schools and on regulations as to the conscience clause; and expressed the conclusion that though there was a determined attempt further to anglicize the religious teaching at the public schools, the difficulties in this way have only been brought into greater prominence, and that the discussion made it clear that the schools in question were not really at present tending toward ecclesiasticism, but "rather toward catholicity in its true sense." The assembly recommended that, in view of the leakage of members by emigration to the British colonies, pastors send details of expected removals to the office of the Colonial Missionary Society for transmittal to ministers in the colonies, that they may look after the persons on arrival. A special representative committee was appointed to consider the subject of Church extension in England and Wales and report upon it as soon as possible. The introduction of the Welsh Suspensory bill was welcomed as a preliminary to the disestablishment of the Church of England in Wales and an affirmation of the principle of religious equality. The introduction by the Government of the Local Veto bill was approved as a recognition of the principle of popular control over the liquor traffic. A special committee was appointed, in which each college should be equally represented, to consider how the colleges may be adapted more fully to the needs of the time either by consolidation or by extension by development of internal conditions and by intercollegiate and interdenominational relationships, the committee to confer with the governing body of each college and report.

At the autumnal meeting of the Union, Oct. 16, a committee was appointed to confer with the council of the Church Aid Society concerning the desirability, or otherwise, of its amalgamation with the Union; of establishing a sustentation fund; or, if these be deemed impracticable, of modifying the constitution of the Church Aid Society according to such suggestions as may have been or may be made. The Christian sympathy of the assembly was expressed with the persecuted Stundists and other Christians in Russia, as well as with all who in other lands are suffering for the gospel's sake. The resolution also expressed the deep concern of the assembly at the "intolerant spirit displayed by some European governments toward those who, though compelled by conscience to separate themselves from the national Church of the country, are yet known to be peaceable and law-abiding citizens." A resolution was passed regretting the unsettled condition of questions affecting the relations of capital and labor; lamenting the widespread distress resulting from strikes and lockouts in the colliery and other trades, and bearing testimony "to the ethical principle that the rights of humanity must always take precedence of those of property"; declaring "that alike mining royalties and profits made out of the labors of men receiving wages inadequate for the support of themselves and their families are obviously inconsistent with righteousness and fraternity"; and recommending the submitting "of all labor disputes to settlement by impartial tribunals." Another reso-

lution called upon the Government to enforce at once upon all administrators of English law in India an absolute obedience to the will of the Imperial Parliament, and suggesting that "the only effective measure of enforcing the law was by penal legislation." The approval of the Union was given to what had already been done by the Government in the direction of disestablishment in Wales and Scotland, and the trust was expressed that that policy might be pressed forward, at the earliest practicable period, "not only that justice may be done to the inhabitants of those countries, but that the time may be hastened when in England also, and throughout the empire, all Christian churches may be self-sustained and self-governed communities."

Meetings of the National Council of Congregational Guilds and Young People's Meetings were held in connection with the assembly.

Tercentenary of Congregational Martyrs.

—The tercentenary of the martyrdom of Henry Barrowe, John Greenwood (executed at Tyburn, April 6, 1593) and John Penry (executed May 29 of the same year) was celebrated in Hyde Park, London, near the Reformers' Tree, April 8. The procession marched behind a banner bearing the inscription, "In memory of Barrow, Greenwood, and Penry, who died in the cause of liberty three hundred years ago." Mr. T. E. Ellis, M. P., presided, and addresses were made by him, Dr. Clifford, the Rev. Hugh Price Hughes, the Rev. P. Williams, and the Rev. Sylvester Horne; and a resolution was adopted, That we who are here assembled (representing the free Churches of London) gratefully commemorate the heroic martyrs of our faith who died in vindication of our religious privileges three hundred years ago; that we recognize, with devout thankfulness to God, the blessings won for all the people by their fidelity; and that we solemnly pledge ourselves strenuously to maintain the heritage committed unto us and steadfastly to labor for the perfecting of religious liberty, the spread of religious truth, and the promotion of Christian righteousness and brotherhood among our fellow-men.

The celebrations were continued at the autumnal meetings of the Congregational Union in October, when addresses were delivered on "The Principles for which the Separatists contended," by the Rev. Dr. Albert Goodrich; "The Effects of their Testimony on the National Life," by the Rev. Dr. Robert Bruce; "The Spiritual Development of Congregationalism," by the Rev. Samuel Pearson; and "The Relation of Congregational Principles to the Life and Controversies of To-day," by the Rev. Alfred Rowland. The meetings were closed with a united thanksgiving meeting of free Churchmen, Oct. 17, when addresses were delivered by the Rev. J. G. Rogers, Congregationalist; the Rev. C. H. Kelly, Wesleyan; the Rev. T. M. Morris, President of the Baptist Union, and the Rev. J. B. Meharry, Presbyterian.

Home Missions.—In the home mission stations of England and Wales during the financial year 1892-'93, 927 churches and missions were aided by grants to the extent of £22,710, in addition to £95,531 raised locally. These churches have supported 549 pastors and evangelists; they have 33,728 communicants, an increase for the year of 1,213. The places thus aided afford accommodation for 222,290 persons.

London Missionary Society.—The annual meeting of the London Missionary Society was held in London, May 7. The balance sheet showed that while the society had begun the year with a balance of £9,000 in hand, it had closed it with a debt of £13,000. The expenditures had risen from £112,496 in 1892 to £137,048. Thirty-eight missionaries had been added to the staff of the society, and in two years the number had increased from 196 to 245, or, including the wives of missionaries, to 391.

Union of Churches in Scotland.—Joint meetings of the Committees of the Evangelical Union and of the Congregational Union of Scotland were held in Edinburgh in March to consider the question of the amalgamation of the two bodies. A resolution was unanimously adopted declaring such a union desirable, and asserting that there were no real difficulties in the way. Special committees were appointed to draw up a theological basis of agreement, and also to draft plans for the union and working of the various denominational societies.

CONGRESS OF THE UNITED STATES. The second session of the Fifty-second Congress began on Monday, Dec. 5, 1892. On the next day the President's annual message was read, as follows:

To the Senate and House of Representatives:

In submitting my annual message to Congress, I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people.

The total wealth of the country in 1860 was \$16,159,616,068. In 1890 it amounted to \$62,610,000,000, an increase of 287 per cent.

The total mileage of railways in the United States in 1860 was 30,628; in 1890 it was 167,741, an increase of 443 per cent.; and it is estimated that there will be about 4,000 miles of track added by the close of the year 1892.

The official returns of the eleventh census and those of the tenth census for 75 leading cities furnish the basis for the following comparisons:

In 1880 the capital invested in manufacturing was \$1,232,839,670.

In 1890 the capital invested in manufacturing was \$2,900,735,884.

In 1880 the number of employees was 1,301,388.

In 1890 the number of employees was 2,251,134.

In 1880 the wages earned were \$501,965,778.

In 1890 the wages earned were \$1,221,170,454.

In 1880 the value of the product was \$2,711,579,899.

In 1890 the value of the product was \$4,860,286,837.

I am informed by the Superintendent of the Census that the omission of certain industries in 1880, which were included in 1890, accounts in part for the remarkable increase thus shown. But, after making full allowance for differences of method and deducting the returns for all industries not included in the census of 1880, there remain in the reports from these 75 cities an increase in the capital employed of \$1,522,745,604; in the value of the product of \$2,024,236,166; in wages earned of \$677,943,929, and in the number of wage earners employed of 856,029. The wage earnings not only show an increased aggregate, but an increase *per capita* from \$386 in 1880 to \$547 in 1890, or 41.71 per cent.

The new industrial plants established since Oct. 6, 1890, and up to Oct. 22, 1892, as partially reported

in the "American Economist," number 345, and the extension of existing plants 108; the new capital invested amounts to \$40,449,030, and the number of additional employees to 87,285.

The "Textile World" for July, 1892, states that during the first six months of the present calendar year 135 new factories were built, of which 40 are cotton mills, 48 knitting mills, 26 woolen mills, 15 silk mills, 4 plush mills, and 2 linen mills. Of the 40 cotton mills 21 have been built in the Southern States. Mr. A. B. Shepperson, of the New York Cotton Exchange, estimates the number of working spindles in the United States on Sept. 1, 1892, at 15,200,000, an increase of 660,000 over the year 1891. The consumption of cotton by American mills in 1891 was 2,396,000 bales, and in 1892 2,584,000 bales, an increase of 188,000 bales. From the year 1869 to 1892, inclusive, there has been an increase in the consumption of cotton in Europe of 92 per cent., while during the same period the increased consumption in the United States has been about 150 per cent.

The report of Ira Ayer, special agent of the Treasury Department, shows that at the date of Sept. 30, 1892, there were 32 companies manufacturing tin andterne plate in the United States and 14 companies building new works for such manufacture. The estimated investment in buildings and plants at the close of the fiscal year, June 30, 1893, if existing conditions were to be continued, was \$5,000,000, and the estimated rate of production 200,000,000 pounds per annum. The actual production for the quarter ending Sept. 30, 1892, was 10,952,725 pounds.

The report of Labor Commissioner Peck, of New York, shows that during the year 1891, in about 6,000 manufacturing establishments in that State embraced within the special inquiry made by him, and representing 67 different industries, there was a net increase over the year 1890 of \$31,315,130.68 in the value of the product, and of \$6,377,925.09 in the amount of wages paid. The report of the commissioner of labor for the State of Massachusetts shows that 2,745 industries in that State paid \$129,416,248 in wages during the year 1891, against \$126,030,303 in 1890, an increase of \$3,335,945, and that there was an increase of \$9,932,490 in the amount of capital and of 7,346 in the number of persons employed in the same period.

During the last six months of the year 1891 and the first six months of 1892 the total production of pig iron was 9,710,819 tons, as against 9,202,703 tons in the year 1890, which was the largest annual production ever attained. For the same twelve months of 1891-'92 the production of Bessemer ingots was 3,878,581 tons, an increase of 189,710 gross tons over the previously unprecedented yearly production of 3,688,871 gross tons in 1890. The production of Bessemer steel rails for the first six months of 1892 was 772,436 gross tons, as against 702,080 gross tons during the last six months of the year 1891.

The total value of our foreign trade (exports and imports of merchandise) during the last fiscal year was \$1,857,680,610, an increase of \$128,283,804 over the previous fiscal year. The average annual value of our imports and exports of merchandise for the ten fiscal years prior to 1891 was \$1,457,322,019. It will be observed that our foreign trade for 1892 exceeded this annual average value by \$400,358,591, an increase of 27.47 per cent. The significance and value of this increase are shown by the fact that the excess in the trade of 1892 over 1891 was wholly in the value of exports, for there was a decrease in the value of imports of \$17,513,754.

The value of our exports during the fiscal year 1892 reached the highest figure in the history of the Government, amounting to \$1,030,378,148, exceeding by \$145,797,338 the exports of 1891, and exceeding the value of the imports by \$202,875,686. A comparison of the value of our exports for 1892 with the annual average for the ten years prior to 1891 shows an excess of \$265,142,651, or of 34.65 per cent. The value of our imports of merchandise for 1892, which was

\$829,402,462, also exceeded the annual average value of the ten years prior to 1891 by \$185,215,940. During the fiscal year 1892 the value of imports free of duty amounted to \$457,999,658, the largest aggregate in the history of our commerce. The value of the imports of merchandise entered free of duty in 1892 was 55.25 per cent. of the total value of imports, as compared with 48.35 per cent. in 1891 and 38.66 per cent. in 1890.

In our coastwise trade a most encouraging development is in progress, there having been in the last four years an increase of 16 per cent. In internal commerce the statistics show that no such period of prosperity has ever before existed. The freight carried in the coastwise trade of the Great Lakes in 1890 aggregated 23,295,959 tons. On the Mississippi, Missouri, and Ohio rivers and tributaries in the same year the traffic aggregated 29,405,046 tons, and the total vessel tonnage passing through the Detroit river during that year was 21,684,000 tons. The vessel tonnage entered and cleared in the foreign trade of London during 1890 amounted to 13,480,767 tons, and of Liverpool 10,941,800 tons, a total for these two great shipping ports of 24,422,568 tons, only slightly in excess of the vessel tonnage passing through the Detroit river. And it should be said that the season for the Detroit river was but two hundred and twenty-eight days, while, of course, in London and Liverpool the season was for the entire year. The vessel tonnage passing through the St. Mary's Canal for the fiscal year 1892 amounted to 9,828,874 tons, and the freight tonnage of the Detroit river is estimated for that year at 25,000,000 tons, against 23,209,619 tons in 1891. The aggregate traffic on our railroads for the year 1891 amounted to 704,398,609 tons of freight, compared with 691,844,487 tons in 1890, an increase of 18,054,172 tons.

Another indication of the general prosperity of the country is found in the fact that the number of depositors in savings banks increased from 693,870 in 1880 to 4,258,893 in 1890, an increase of 513 per cent., and the amount of deposits from \$149,277,504 in 1880 to \$1,524,844,506 in 1890, an increase of 921 per cent. In 1891 the amount of deposits in savings banks was \$1,623,079,749. It is estimated that 90 per cent. of these deposits represent the savings of wage earners. The bank clearances for nine months ending Sept. 30, 1891, amounted to \$41,049,390,808. For the same months in 1892 they amounted to \$45,189,601,947, an excess for the nine months of \$4,140,311,139.

There never has been a time in our history when work was so abundant or when wages were as high, whether measured by the currency in which they are paid or by their power to supply the necessities and comforts of life. It is true that the market prices of cotton and wheat have been low. It is one of the unfavorable incidents of agriculture that the farmer can not produce upon orders. He must sow and reap in ignorance of the aggregate production of the year, and is peculiarly subject to the depreciation which follows overproduction. But, while the fact I have stated is true as to the crops mentioned, the general average of prices has been such as to give to agriculture a fair participation in the general prosperity. The value of our total farm products has increased from \$1,363,646,866 in 1880 to \$4,500,000,000 in 1891, as estimated by statisticians, an increase of 230 per cent. The number of hogs, Jan. 1, 1891, was 50,625,104, and their value \$210,198,925; on Jan. 1, 1892, the number was 52,898,019, and the value \$241,081,415. On Jan. 1, 1891, the number of cattle was 86,875,648, and the value \$544,127,908; on Jan. 1, 1892, the number was 87,651,239, and the value \$570,749,155.

If any are discontented with their state here: if any believe that wages or prices, the returns for honest toil, are inadequate, they should not fail to remember that there is no other country in the world where the conditions that seem to them hard would not be accepted as highly prosperous. The English agriculturist would be glad to exchange the returns of his labor for those of the American farmer, and

the Manchester workmen their wages for those of their fellows at Fall River.

I believe that the protective system, which has now for something more than thirty years continuously prevailed in our legislation, has been a mighty instrument for the development of our national wealth and a most powerful agency in protecting the homes of our workmen from the invasion of want. I have felt a most solicitous interest to preserve to our working people rates of wages that would not only give daily bread, but supply a comfortable margin for those home attractions and family comforts and enjoyments without which life is neither hopeful nor sweet. They are American citizens—a part of the great people for whom our Constitution and Government were framed and instituted—and it can not be a perversion of that Constitution to so legislate as to preserve in their homes the comfort, independence, loyalty, and sense of interest in the Government which are essential to good citizenship in peace, and which will bring this stalwart throng, as in 1861, to the defense of the flag when it is assailed.

It is not my purpose to renew here the argument in favor of a protective tariff. The result of the recent election must be accepted as having introduced a new policy. We must assume that the present tariff, constructed upon the lines of protection, is to be repealed, and that there is to be substituted for it a tariff law constructed solely with reference to revenue; that no duty is to be higher because the increase will keep open an American mill or keep up the wages of an American workman, but that in every case such a rate of duty is to be imposed as will bring to the Treasury of the United States the largest returns of revenue. The contention has not been between schedules, but between principles, and it would be offensive to suggest that the prevailing party will not carry into legislation the principles advocated by it and the pledges given to the people. The tariff bills passed by the House of Representatives at the last session were, as I suppose—even in the opinion of their promoters—inadequate, and justified only by the fact that the Senate and House of Representatives were not in accord, and that a general revision could not therefore be undertaken.

I recommend that the whole subject of tariff revision be left to the incoming Congress. It is matter of regret that this work must be delayed for at least three months; for the threat of great tariff changes introduces so much uncertainty that an amount, not easily estimated, of business inaction and of diminished production will necessarily result. It is possible also that this uncertainty may result in decreased revenues from customs duties, for our merchants will make cautious orders for foreign goods in view of the prospect of tariff reductions and the uncertainty as to when they will take effect. Those who have advocated a protective tariff can well afford to have their disastrous forecasts of a change of policy disappointed.

If a system of customs duties can be framed that will set the idle wheels and looms of Europe in motion and crowd our warehouses with foreign-made goods, and at the same time keep our own mills busy; that will give us an increased participation in the "markets of the world" of greater value than the home market we surrender; that will give increased work to foreign workmen upon products to be consumed by our people without diminishing the amount of work to be done here; that will enable the American manufacturer to pay to his workmen from 50 to 100 per cent. more in wages than is paid in the foreign mill and yet to compete in our market and in foreign markets with the foreign producer; that will further reduce the cost of articles of wear and food without reducing the wages of those who produce them; that can be celebrated, after its effects have been realized, as its expectation has been, in European as well as in American cities, the authors and promoters of it will be entitled to the highest praise. We have had in our history several experi-

onces of the contrasted effects of a revenue and of a protective tariff; but this generation has not felt them, and the experience of one generation is not highly instructive to the next. The friends of the protective system, with undiminished confidence in the principles they have advocated, will await the results of the new experiment.

The strained and too often disturbed relations existing between the employees and the employers in our great manufacturing establishments have not been favorable to a calm consideration by the wage earner of the effect upon wages of the protective system. The facts that his wages were the highest paid in like callings in the world and that a maintenance of this rate of wages, in the absence of protective duties upon the product of his labor, was impossible, were obscured by the passion evoked by these contests. He may now be able to review the question in the light of his personal experience under the operation of a tariff for revenue only. If that experience shall demonstrate that present rates of wages are thereby maintained or increased, either absolutely or in their purchasing power, and that the aggregate volume of work to be done in this country is increased, or even maintained, so that there are more or as many days' work in a year as at good or better wages for the American workman as has been the case under the protective system, every one will rejoice.

A general process of wage reduction can not be contemplated by any patriotic citizen without the gravest apprehension. It may be, indeed I believe is, possible for the American manufacturer to compete successfully with his foreign rival in many branches of production without the defense of protective duties if the pay rolls are equalized; but the conflict that stands between the producer and that result and the distress of our working people when it is attained are not pleasant to contemplate. The Society of the Unemployed, now holding its frequent and threatening parades in the streets of foreign cities, should not be allowed to acquire an American domicile.

The reports of the heads of the several executive departments which are herewith submitted have very naturally included a *résumé* of the whole work of the administration with the transactions of the last fiscal year. The attention not only of Congress but of the country is again invited to the methods of administration which have been pursued and to the results which have been attained. Public revenues amounting to \$1,414,079,292.28 have been collected and disbursed without loss from misappropriation, without a single defalcation of such importance as to attract the public attention, and at a diminished per cent. of cost for collection. The public business has been transacted not only with fidelity, but progressively, and with a view to giving to the people in the fullest possible degree the benefits of a service established and maintained for their protection and comfort.

Our relations with other nations are now undisturbed by any serious controversy. The complicated and threatening differences with Germany and England relating to Samoan affairs, with England in relation to the seal fisheries in the Bering Sea, and with Chili growing out of the Baltimore affair have been adjusted.

There have been negotiated and concluded, under section 3 of the tariff law, commercial agreements relating to reciprocal trade with the following countries: Brazil, Dominican Republic, Spain for Cuba and Puerto Rico, Guatemala, Salvador, the German Empire, Great Britain for certain West Indian colonies and British Guiana, Nicaragua, Honduras, and Austria-Hungary.

Of these, those with Guatemala, Salvador, the German Empire, Great Britain, Nicaragua, Honduras, and Austria-Hungary have been concluded since my last annual message. Under these trade arrangements a free or favored admission has been secured in every case for an important list of American products. Especial care has been taken to secure markets for farm

products in order to relieve that great underlying industry of the depression which the lack of an adequate foreign market for our surplus often brings. An opening has also been made for manufactured products that will undoubtedly, if this policy is maintained, greatly augment our export trade. The full benefits of these arrangements can not be realized instantly. New lines of trade are to be opened. The commercial traveler must survey the field. The manufacturer must adapt his goods to the new markets and facilities for exchange must be established. This work has been well begun, our merchants and manufacturers having entered the new fields with courage and enterprise. In the case of food products, and especially with Cuba, the trade did not need to wait, and the immediate results have been most gratifying. If this policy and these trade arrangements can be continued in force and aided by the establishment of American steamship lines, I do not doubt that we shall, within a short period, secure fully one third of the total trade of the countries of Central and South America, which now amounts to about \$600,000,000 annually. In 1885 we had only 8 per cent. of this trade.

The following statistics show the increase in our trade with the countries with which we have reciprocal trade agreements from the date when such agreements went into effect up to Sept. 30, 1892, the increase being in some almost wholly and in others in an important degree the result of these agreements.

The domestic exports to Germany and Austria-Hungary have increased in value from \$47,673,756 to \$57,998,064, an increase of \$10,319,308, or 21.63 per cent. With American countries the value of our exports has increased from \$44,160,285 to \$54,618,598, an increase of \$10,453,313, or 23.67 per cent. The total increase in the value of exports to all the countries with which we have reciprocity agreements has been \$20,772,621. This increase is chiefly in wheat, flour, meat, and dairy products, and in manufactures of iron and steel and lumber. There has been a large increase in the value of imports from all these countries since the commercial agreements went into effect, amounting to \$74,294,525, but it has been entirely in imports from the American countries, consisting mostly of sugar, coffee, India rubber, and crude drugs. The alarmed attention of our European competitors for the South American market has been attracted to this new American policy, and to our acquisition and their loss of South American trade.

A treaty providing for the arbitration of the dispute between Great Britain and the United States as to the killing of seals in the Bering Sea was concluded on the 29th of February last. This treaty was accompanied by an agreement prohibiting pelagic sealing pending the arbitration, and a vigorous effort was made during this season to drive out all poaching sealers from the Bering Sea. Six naval vessels, 3 revenue cutters, and 1 vessel from the Fish Commission, all under the command of Commander Evans, of the navy, were sent into the sea, which was systematically patrolled. Some seizures were made, and it is believed that the catch in the Bering Sea by poachers amounted to less than 500 seals. It is true, however, that in the north Pacific, while the seal herds were on their way to the passes between the Aleutian Islands, a very large number, probably 85,000, were taken. The existing statutes of the United States do not restrain our citizens from taking seals in the Pacific Ocean, and perhaps should not, unless the prohibition can be extended to the citizens of other nations. I recommend that power be given to the President, by proclamation, to prohibit the taking of seals in the north Pacific by American vessels, in case, either as the result of the findings of the tribunal of arbitration, or otherwise, the restraints can be applied to the vessels of all countries. The case of the United States for the tribunal of arbitration has been prepared with great care and industry by the Hon. John W. Foster, and the counsel who represent this Government express confidence that a result substantially establishing our claims and preserving this

great industry for the benefit of all nations will be attained.

During the past year a suggestion was received through the British minister that the Canadian Government would like to confer as to the possibility of enlarging, upon terms of mutual advantage, the commercial exchanges of Canada and of the United States, and a conference was held at Washington, with Mr. Blaine acting for this Government, and the British minister at this capital and three members of the Dominion Cabinet acting as commissioners on the part of Great Britain. The conference developed the fact that the Canadian Government was only prepared to offer to the United States, in exchange for the concessions asked, the admission of natural products. The statement was frankly made that favored rates could not be given to the United States as against the mother country. This admission, which was foreseen, necessarily terminated the conference upon this question. The benefits of an exchange of natural products would be almost wholly with the people of Canada. Some other topics of interest were considered in the conference, and have resulted in the making of a convention for examining the Alaskan boundary and the waters of Passamaquoddy Bay adjacent to Eastport, Me., and in the initiation of an arrangement for the protection of fish life in the coterminous and neighboring waters of our northern border.

The controversy as to tolls upon the Welland Canal, which was presented to Congress at the last session by special message, having failed of adjustment, I felt constrained to exercise the authority conferred by the act of July 26, 1892, and to proclaim a suspension of the free use of St. Mary's Falls Canal to cargoes in transit to ports in Canada. The Secretary of the Treasury established such tolls as were thought to be equivalent to the exactions unjustly levied upon our commerce in the Canadian canals.

If, as we must suppose, the political relations of Canada and the disposition of the Canadian Government are to remain unchanged, a somewhat radical revision of our trade relations should, I think, be made. Our relations must continue to be intimate, and they should be friendly. I regret to say, however, that in many of the controversies, notably those as to the fisheries on the Atlantic, the sealing interests on the Pacific, and the canal tolls, our negotiations with Great Britain have continuously been thwarted or retarded by unreasonable and unfriendly objections and protests from Canada. In the matter of the canal tolls our treaty rights were flagrantly disregarded. It is hardly too much to say that the Canadian Pacific and other railway lines which parallel our northern boundary are sustained by commerce having either its origin or terminus, or both, in the United States. Canadian railroads compete with those of the United States for our traffic, and without the restraints of our interstate-commerce act. Their cars pass almost without detention into and out of our territory.

The Canadian Pacific Railway brought into the United States from China and Japan, *via* British Columbia, during the year ended June 30, 1892, 23,239,689 pounds of freight, and it carried from the United States, to be shipped to China and Japan, *via* British Columbia, 24,068,346 pounds of freight. There were also shipped from the United States over this road from Eastern ports of the United States to our Pacific ports during the same year 13,912,073 pounds of freight, and there were received over this road at the United States Eastern ports from ports on the Pacific coast 13,293,815 pounds of freight. Mr. Joseph Nimmo, Jr., former Chief of the Bureau of Statistics, when before the Senate Select Committee on Relations with Canada, April 28, 1890, said that "the value of goods thus transported between different points in the United States across Canadian territory probably amounts to \$100,000,000 a year."

There is no disposition on the part of the people or Government of the United States to interfere in the smallest degree with the political relations of Canada. That question is wholly with her own people. It is

time for us, however, to consider whether, if the present state of things and trend of things is to continue, our interchanges upon lines of land transportation should not be put upon a different basis, and our entire independence of Canadian canals and of the St. Lawrence as an outlet to the sea secured by the construction of an American canal around the falls of Niagara and the opening of ship communication between the Great Lakes and one of our own seaports. We should not hesitate to avail ourselves of our great natural trade advantages. We should withdraw the support which is given to the railroads and steamship lines of Canada by a traffic that properly belongs to us, and no longer furnish the earnings which lighten the otherwise crushing weight of the enormous public subsidies that have been given to them. The subject of the power of the Treasury to deal with this matter without further legislation has been under consideration, but circumstances have postponed a conclusion. It is probable that a consideration of the propriety of a modification or abrogation of the article of the Treaty of Washington relating to the transit of goods in bond is involved in any complete solution of the question.

Congress at the last session was kept advised of the progress of the serious and, for a time, threatening differences between the United States and Chili. It gives me now great gratification to report that the Chilean Government, in a most friendly and honorable spirit, has tendered and paid as an indemnity to the families of the sailors of the Baltimore who were killed and to those who were injured in the outbreak in the city of Valparaiso the sum of \$75,000. This has been accepted, not only as an indemnity for a wrong done, but as a most gratifying evidence that the Government of Chili rightly appreciates the disposition of this Government to act in a spirit of the most absolute fairness and friendliness in our intercourse with that brave people. A further and conclusive evidence of the mutual respect and confidence now existing is furnished by the fact that a convention submitting to arbitration the mutual claims of the citizens of the respective governments has been agreed upon. Some of these claims have been pending for many years, and have been the occasion of much unsatisfactory diplomatic correspondence.

I have endeavored in every way to assure our sister republics of Central and South America that the United States Government and its people have only the most friendly disposition toward them all. We do not covet their territory. We have no disposition to be oppressive or exacting in our dealings with any of them, even the weakest. Our interests and our hopes for them all lie in the direction of stable governments by their people and of the largest development of their great commercial resources. The mutual benefits of enlarged commercial exchanges and of a more familiar and friendly intercourse between our peoples we do desire, and in this have sought their friendly co-operation.

I have believed, however, while holding these sentiments in the greatest sincerity, that we must insist upon a just responsibility for any injuries inflicted upon our official representatives or upon our citizens. This insistence, kindly and justly, but firmly made, will, I believe, promote peace and mutual respect.

Our relations with Hawaii have been such as to attract an increased interest, and must continue to do so. I deem it of great importance that the projected submarine cable, a survey for which has been made, should be promoted. Both for naval and commercial uses we should have quick communication with Honolulu. We should before this have availed ourselves of the concession, made many years ago to this Government, for a harbor and naval station at Pearl River. Many evidences of the friendliness of the Hawaiian Government have been given in the past, and it is gratifying to believe that the advantage and necessity of a continuance of very close relations is appreciated.

The friendly act of this Government in expressing

to the Government of Italy its reprobation and abhorrence by the lynching of Italian subjects in New Orleans by the payment of 125,000 francs, or \$24,380.90, was accepted by the King of Italy with every manifestation of gracious appreciation, and the incident has been highly promotive of mutual respect and good will.

In consequence of the action of the French Government in proclaiming a protectorate over certain tribal districts of the west coast of Africa eastward of the San Pedro river, which has long been regarded as the southeastern boundary of Liberia, I have felt constrained to make protest against this encroachment upon the territory of a republic which was founded by citizens of the United States, and toward which this country has for many years held the intimate relation of a friendly counselor.

The recent disturbances of the public peace by lawless foreign marauders on the Mexican frontier have afforded this Government an opportunity to testify its good will for Mexico and its earnest purpose to fulfill the obligations of international friendship by pursuing and dispersing the evil doers. The work of relocating the boundary of the treaty of Guadalupe Hidalgo, westward from El Paso, is progressing favorably.

Our intercourse with Spain continues on a friendly footing. I regret, however, not to be able to report as yet the adjustment of the claims of the American missionaries arising from the disorders at Ponape, in the Caroline Islands, but I anticipate a satisfactory adjustment in view of renewed and urgent representations to the Government at Madrid.

The treatment of the religious and educational establishments of American citizens in Turkey has of late called for a more than usual share of attention. A tendency to curtail the toleration which has so beneficially prevailed is discernible, and has called forth the earnest remonstrances of this Government. Harassing regulations in regard to schools and churches have been attempted in certain localities, but not without due protest and the assertion of the inherent and conventional rights of our countrymen. Violations of domicile and search of the persons and effects of citizens of the United States by apparently irresponsible officials in the Asiatic *vilayets* have from time to time been reported. An aggravated instance of injury to the property of an American missionary at Bourdour, in the province of Konia, called for than urgent claim for reparation, which I am pleased to say was promptly heeded by the Government of the Porte. Interference with the trading ventures of our citizens in Asia Minor is also reported, and the lack of consular representation in that region is a serious drawback to instant and effective protection. I can not believe that these incidents represent a settled policy, and shall not cease to urge the adoption of proper remedies.

International copyright has been extended to Italy by proclamation in conformity with the act of March 3, 1891, upon assurance being given that Italian law permits to citizens of the United States the benefit of copyright on substantially the same basis as to subjects of Italy. By a special convention, proclaimed Jan. 15, 1892, reciprocal provisions of copyright have been applied between the United States and Germany. Negotiations are in progress with other countries to the same end.

I repeat with great earnestness the recommendation which I have made in several previous messages that prompt and adequate support be given to the American company engaged in the construction of the Nicaragua Ship Canal. It is impossible to overstate the value from every standpoint of this great enterprise, and I hope that there may be time, even in this Congress, to give to it an impetus that will insure the early completion of the canal, and secure to the United States its proper relation to it when completed.

The Congress has been already advised that the invitations of this Government for the assembling

of an international monetary conference to consider the question of an enlarged use of silver were accepted by the nations to which they were addressed. The conference assembled at Brussels on the 22d of November, and has entered upon the consideration of this great question. I have not doubted, and have taken occasion to express that belief as well in the invitations issued for this conference as in my public messages, that the free coinage of silver upon an agreed international ratio would greatly promote the interests of our people and equally those of other nations. It is too early to predict what results may be accomplished by the conference. If any temporary check or delay intervenes, I believe that very soon commercial conditions will compel the now reluctant governments to unite with us in this movement to secure the enlargement of the volume of coined money needed for the transaction of the business of the world.

The report of the Secretary of the Treasury will attract especial interest in view of the many misleading statements that have been made as to the state of the public revenues. Three preliminary facts should not only be stated, but emphasized, before looking into details: First, that the public debt has been reduced since March 4, 1889, \$259,074,200, and the annual interest charge \$11,684,469; second, that there have been paid out for pensions during this administration up to Nov. 1, 1892, \$432,564,178.70, an excess of \$114,466,386.09 over the sum expended during the period from March 1, 1885, to March 1, 1889; and, third, that under the existing tariff up to Dec. 1 about \$93,000,000 of revenue, which would have been collected upon imported sugars if the duty had been maintained, has gone into the pockets of the people and not into the public treasury, as before. If there are any who still think that the surplus should have been kept out of circulation by boarding it in the Treasury, or deposited in favored banks without interest while the Government continued to pay to these very banks interest upon the bonds deposited as security for the deposits, or who think that the extended pension legislation was a public robbery, or that the duties upon sugar should have been maintained, I am content to leave the argument where it now rests, while we wait to see whether these criticisms will take the form of legislation.

The revenues for the fiscal year ending June 30, 1893, from all sources were \$435,868,260.22, and the expenditures for all purposes were \$415,953,806.56, leaving a balance of \$9,914,453.66. There were paid during the year upon the public debt \$40,570,467.98. The surplus in the Treasury and the bank redemption fund, passed by the act of July 14, 1890, to the general fund, furnished in large part the cash available and used for the payments made upon the public debt. Compared with the year 1891, our receipts from customs duties fell off \$42,069,241.08, while our receipts from internal revenue increased \$8,284,833.13, leaving the net loss of revenue from these principal sources \$33,784,417.95. The net loss of revenue from all sources was \$32,675,972.81.

The revenues, estimated and actual, for the fiscal year ending June 30, 1893, are placed by the Secretary at \$463,336,350.44, and the expenditures at \$461,336,350.44, showing a surplus of receipts over expenditures of \$2,000,000. The cash balance in the Treasury at the end of the fiscal year, it is estimated, will be \$20,992,377.03.

So far as these figures are based upon estimates of receipts and expenditures for the remaining months of the current fiscal year, there are not only the usual elements of uncertainty, but some added elements. New revenue legislation, or even the expectation of it, may seriously reduce the public revenues during the period of uncertainty and during the process of business adjustment to the new conditions when they become known. But the Secretary has very wisely refrained from guessing as to the effect of possible changes in our revenue laws, since the scope of those changes and the time of their taking effect can not in

any degree be forecast or foretold by him. His estimates must be based upon existing laws and upon a continuance of existing business conditions, except so far as these conditions may be affected by causes other than new legislation.

The estimated receipts for the fiscal year ending June 30, 1894, are \$490,121,865.28, and the estimated appropriations \$457,261,335.38, leaving an estimated surplus of receipts over expenditures of \$32,860,530.05. This does not include any payment to the sinking fund. In the recommendation of the Secretary that the sinking-fund law be repealed I concur. The redemption of bonds since the passage of the law to June 30, 1892, has already exceeded the requirements by the sum of \$990,510,681.49. The retirement of bonds in the future before maturity should be a matter of convenience, not of compulsion. We should not collect revenue for that purpose, but only use any casual surplus. To the balance of \$32,860,530.05 of receipts over expenditures for the year 1894 should be added the estimated surplus at the beginning of the year, \$20,992,377.03; and from this aggregate there must be deducted, as stated by the Secretary, about \$44,000,000 of estimated unexpended appropriations.

The public confidence in the purpose and ability of the Government to maintain the parity of all of our money issues, whether coin or paper, must remain unshaken. The demand for gold in Europe and the consequent calls upon us are in a considerable degree the result of the efforts of some of the European governments to increase their gold reserves, and these efforts should be met by appropriate legislation on our part. The conditions that have created this drain of the Treasury gold are in an important degree political, and not commercial. In view of the fact that a general revision of our revenue laws in the near future seems to be probable, it would be better that any changes should be a part of that revision rather than of a temporary nature.

During the last fiscal year the Secretary purchased, under the act of July 14, 1890, 54,355,748 ounces of silver, and issued in payment therefor \$51,108,608 in notes. The total purchases since the passage of the act have been 120,479,981 ounces, and the aggregate of notes issued \$116,783,590. The average price paid for silver during the year was 94 cents per ounce, the highest price being \$1.024, July 1, 1891, and the lowest 83 cents, March 21, 1892. In view of the fact that the monetary conference is now sitting and that no conclusion has yet been reached, I withhold any recommendation as to legislation upon this subject.

The report of the Secretary of War brings again to the attention of Congress some important suggestions as to the reorganization of the infantry and artillery arms of the service, which his predecessors have before urgently presented. Our army is small, but its organization should all the more be put upon the most approved modern basis. The conditions upon what we have called the "frontier" have heretofore required the maintenance of many small posts, but now the policy of concentration is obviously the right one. The new posts should have the proper strategic relations to the only "frontiers" we now have, those of the seacoast and of our northern and part of our southern boundary. I do not think that any question of advantage to localities or to States should determine the location of the new posts. The reorganization and enlargement of the Bureau of Military Information which the Secretary has effected is a work the usefulness of which will become every year more apparent. The work of building heavy guns and the construction of coast defenses has been well begun, and should be carried on without check.

The report of the Attorney-General is by law submitted directly to Congress, but I can not refrain from saying that he has conducted the increasing work of the Department of Justice with great professional skill. He has in several directions secured from the courts decisions giving increased protection to the officers of the United States, and bringing some classes of crime that escaped local cognizance and

punishment into the tribunals of the United States, where they could be tried with impartiality.

The numerous applications for Executive clemency presented in behalf of persons convicted in United States courts and given penitentiary sentences have called my attention to a fact referred to by the Attorney-General in his report, namely, that a time allowance for good behavior for such prisoners is prescribed by the Federal statutes only where the State in which the penitentiary is located has made no such provision. Prisoners are given the benefit of the provisions of the State law regulating the penitentiary to which they may be sent. These are various, some perhaps too liberal and some perhaps too illiberal. The result is that a sentence for five years means one thing if the prisoner is sent to one State for confinement, and quite a different thing if he is sent to another. I recommend that a uniform credit for good behavior be prescribed by Congress.

I have before expressed my concurrence in the recommendation of the Attorney-General that degrees of murder should be recognized in the Federal statutes, as they are, I believe, in all the States. These grades are founded on correct distinctions in crime. The recognition of them would enable the courts to exercise some discretion in apportioning punishment, and would greatly relieve the Executive of what is coming to be a very heavy burden—the examination of these cases on application for commutation.

The aggregate of claims pending against the Government in the Court of Claims is enormous. Claims to the amount of nearly \$400,000,000 for the taking of or injury to the property of persons claiming to be loyal during the war are now before that court for examination. When to these are added the Indian depredation claims and the French spoliation claims, an aggregate is reached that is indeed startling. In the defense of all these cases the Government is at great disadvantage. The claimants have preserved their evidence, whereas the agents of the Government are sent into the field to rummage for what they can find. This difficulty is peculiarly great where the fact to be established is the disloyalty of the claimant during the war. If this great threat against our revenues is to have no other check, certainly Congress should supply the Department of Justice with appropriations sufficiently liberal to secure the best legal talent in the defense of these claims and to pursue its vague search for evidence effectively.

The report of the Postmaster-General shows a most gratifying increase and a most efficient and progressive management of the great business of that department. The remarkable increase in revenues, in the number of post-offices, and in the miles of mail carriage furnishes further evidence of the high state of prosperity which our people are enjoying. New offices mean new hamlets and towns; new routes mean the extension of our border settlements, and increased revenues mean an active commerce. The Postmaster-General reviews the whole period of his administration of the office and brings some of his statistics down to the month of November last. The postal revenues have increased during the last year nearly \$5,000,000. The deficit for the year ending June 30, 1892, is \$848,341 less than the deficiency of the preceding year. The deficiency of the present fiscal year, it is estimated, will be reduced to \$1,552,423, which will not only be extinguished during the next fiscal year, but a surplus of nearly \$1,000,000 should then be shown. In these calculations the payments to be made under the contracts for ocean mail service have not been included.

There have been added 1,590 new mail routes during the year, with a mileage of 8,563 miles; and the total number of new miles of mail trips added during the year is nearly 17,000,000. The number of miles of mail journeys added during the last four years is about 76,000,000, this addition being 21,000,000 miles more than were in operation in the whole country in 1861.

The number of post-offices has been increased by

2,790 during the year, and during the past four years and up to Oct. 29 last the total increase in the number of offices has been nearly 9,000. The number of free-delivery offices has been nearly doubled in the last four years, and the number of money-order offices more than doubled within that time.

For the three years ending June 30, 1892, the postal revenue amounted to \$197,744,359, which was an increase of \$52,263,150 over the revenue for the three years ending June 30, 1888, the increase during the last three years being more than three and a half times as great as the increase during the years ending June 30, 1888. No such increase as that shown for these three years has ever previously appeared in the revenues of the department. The Postmaster-General has extended to the post-offices in the larger cities the merit system of promotion, introduced by my direction into the departments here, and it has resulted there, as in the departments, in a larger volume of work, and that better done.

Ever since our merchant marine was driven from the sea by the rebel cruisers during the war of the rebellion, the United States has been paying an enormous annual tribute to foreign countries in the shape of freight and passage money. Our grain and meats have been taken at our docks and our large imports there laid down by foreign shipmasters. An increasing torrent of American travel to Europe has contributed a vast sum annually to the dividends of foreign shipowners. The balance of trade shown by the books of our customhouses has been very largely reduced and in many years altogether extinguished by this constant drain. In the year 1892 only 12.3 per cent. of our imports were brought in American vessels. These great foreign steamships maintained by our traffic are many of them under contracts with their respective governments, by which in time of war they will become a part of their armed naval establishments. Profiting by our commerce in peace, they will become the most formidable destroyers of our commerce in time of war. I have felt and have before expressed the feeling that this condition of things was both intolerable and disgraceful. A wholesome change of policy and one having in it much promise, as it seems to me, was begun by the law of March 3, 1891. Under this law contracts have been made by the Postmaster-General for 11 mail routes. The expenditure involved by these contracts for the next fiscal year approximates \$954,123.33. As one of the results already reached, 16 American steamships of an aggregate tonnage of 57,400 tons, costing \$7,400,000, have been built or contracted to be built in American shipyards.

The estimated tonnage of all steamships required under existing contracts is 165,802, and when the full service required by these contracts is established there will be 41 mail steamers under the American flag, with the probability of further necessary additions in the Brazilian and Argentine service. The contracts recently let for transatlantic service will result in the construction of 5 ships of 10,000 tons each, costing 9 or 10 million dollars, and will add, with the "City of New York" and "City of Paris," to which the Treasury Department was authorized by legislation at the last session to give American registry, 7 of the swiftest vessels upon the sea to our naval reserve. The contracts made with the lines sailing to Central and South American ports have increased the frequency and shortened the time of the trips, added new ports of call, and sustained some lines that otherwise would almost certainly have been withdrawn. The service to Buenos Ayres is the first to the Argentine Republic under the American flag. The service to Southampton, Boulogne, and Antwerp is also new, and is to be begun with the steamships "City of New York" and "City of Paris" in February next.

I earnestly urge a continuance of the policy inaugurated by this legislation, and that the appropriations required to meet the obligations of the Government under the contracts may be made promptly, so

that the lines that have entered into these engagements may not be embarrassed. We have had, by reason of connections with the transcontinental railway lines constructed through our own territory, some advantages in the ocean trade of the Pacific that we did not possess on the Atlantic. The construction of the Canadian Pacific Railway and the establishment under large subventions from Canada and England of fast steamship service from Vancouver with Japan and China seriously threaten our shipping interests in the Pacific. This line of English steamers receives, as is stated by the Commissioner of Navigation, a direct subsidy of \$400,000 annually, or \$80,767 per trip for 13 voyages, in addition to some further aid from the admiralty in connection with contracts under which the vessels may be used for naval purposes. The competing American Pacific mail line, under the act of March 3, 1891, receives only \$6,389 per round trip.

Efforts have been making within the last year, as I am informed, to establish under conditions a line between Vancouver and some Australian port, with a view of seizing there a trade in which we have had a large interest. The Commissioner of Navigation states that a very large per cent. of our imports from Asia are now brought to us by English steamships and their connecting railways in Canada. With a view of promoting this trade, especially in tea, Canada has imposed a discriminating duty of 10 per cent. upon tea and coffee brought into the Dominion from the United States. If this unequal contest between American lines without subsidy, or with diminished subsidies, and the English Canadian line to which I have referred is to continue, I think we should at least see that the facilities for customs entry and transportation across our territory are not such as to make the Canadian route a favored one, and that the discrimination as to duties, to which I have referred, is met by a like discrimination as to the importation of these articles from Canada.

No subject, I think, more nearly touches the pride, the power, and the prosperity of our country than this of the development of our merchant marine upon the sea. If we could enter into conference with other competitors and all would agree to withhold Government aid, we could perhaps take our chances with the rest, but our great competitors have established and maintained their lines by Government subsidies until they now have practically excluded us from participation. In my opinion no choice is left to us but to pursue, moderately at least, the same lines.

The report of the Secretary of the Navy exhibits great progress in the construction of our new navy. When the present Secretary entered upon his duties only 3 modern steel vessels were in commission. The vessels since put in commission and to be put in commission during the winter will make a total of 19 during his administration of the department. During the current year 10 war vessels and 3 navy tugs have been launched, and during the four years 25 vessels will have been launched. Two other large ships and a torpedo boat are under contract and work upon them well advanced, and the 4 monitors are awaiting only the arrival of their armor, which has been unexpectedly delayed, or they would have been before this in commission.

Contracts have been let during this administration, under the appropriations for the increase of the navy, including new vessels and their appurtenances, to the amount of \$85,000,000, and there has been expended during the same period for labor at navy yards upon similar work \$8,000,000, without the smallest scandal or charge of fraud or partiality. The enthusiasm and interest of our naval officers, both of the staff and line, have been greatly kindled. They have responded magnificently to the confidence of Congress, and have demonstrated to the world an unexcelled capacity in construction, in ordnance, and in everything involved in the building, equipping, and sailing of great war ships.

At the beginning of Secretary Tracy's administra-

tion several difficult problems remained to be grappled with and solved before the efficiency in action of our ships could be secured. It is believed that, as the result of new processes in the construction of armor plate, our later ships will be clothed with defensive plates of higher resisting power than are found on any war vessels afloat. We were without torpedoes. Tests have been made to ascertain the relative efficiency of different constructions, a torpedo has been adopted, and the work of construction is now being carried on successfully. We were without armor-piercing shells, and without a shop instructed and equipped for the construction of them. We are now making what is believed to be a projectile superior to any before in use. A smokeless powder has been developed, and a slow-burning powder for guns of large caliber. A high explosive, capable of use in shells fired from service guns, has been found, and the manufacture of gun cotton has been developed so that the question of supply is no longer in doubt.

The development of a naval militia, which has been organized in eight States and brought into cordial and co-operative relations with the navy, is another important achievement. There are now enlisted in these organizations 1,800 men, and they are likely to be greatly extended. I recommend such legislation and appropriations as will encourage and develop this movement. The recommendations of the Secretary will, I do not doubt, receive the friendly consideration of Congress, for he has enjoyed, as he has deserved, the confidence of all those interested in the development of our navy, without any division upon partisan lines. I earnestly express the hope that a work which has made such noble progress may not now be stayed. The wholesome influence for peace and the increased sense of security which our citizens domiciled in other lands feel when these magnificent ships under the American flag appear is already most gratefully apparent. The ships from our navy which will appear in the great naval parade next April in the harbor of New York will be a convincing demonstration to the world that the United States is again a naval power.

The work of the Interior Department, always very burdensome, has been larger than ever before during the administration of Secretary Noble. The disability pension law, the taking of the eleventh census, the opening of vast areas of Indian lands to settlement, the organization of Oklahoma, and the negotiations for the cession of Indian lands furnish some of the particulars of the increased work; and the results achieved testify to the ability, fidelity, and industry of the head of the department and his efficient assistants.

Several important agreements for the cession of Indian lands negotiated by the commission appointed under the act of March 2, 1889, are awaiting the action of Congress. Perhaps the most important of these is that for the cession of the Cherokee Strip. This region has been the source of great vexation to the Executive Department, and of great friction and unrest between the settlers who desire to occupy it and the Indians who assert title. The agreement which has been made by the commission is perhaps the most satisfactory that could have been reached. It will be noticed that it is conditioned upon its ratification by Congress before March 4, 1893. The Secretary of the Interior, who has given the subject very careful thought, recommends the ratification of the agreement, and I am inclined to follow his recommendation. Certain it is that some action by which this controversy shall be brought to an end and these lands opened to settlement is urgent.

The form of government provided by Congress on May 17, 1884, for Alaska was, in its frame and purpose, temporary. The increase of population and the development of some important mining and commercial interests make it imperative that the law should be revised and better provision made for the arrest and punishment of criminals.

The report of the Secretary shows a very gratifying state of facts as to the condition of the General Land Office. The work of issuing agricultural patents, which seemed to be hopelessly in arrear when the present Secretary undertook the duties of his office, has been so expedited that the bureau is now upon current business. The relief thus afforded to honest and worthy settlers upon the public lands, by giving to them an assured title to their entries, has been of incalculable benefit in developing the new States and the Territories.

The Court of Private Land Claims established by Congress for the promotion of this policy of speedily settling contested land titles is making satisfactory progress in its work, and when the work is completed a great impetus will be given to the development of those regions where unsettled claims under Mexican grants have so long exercised their repressive influence. When to these results are added the enormous cessions of Indian lands which have been opened to settlement, aggregating during this administration nearly 26,000,000 acres, and the agreements negotiated and now pending in Congress for ratification by which about 10,000,000 additional acres will be opened to settlement, it will be seen how much has been accomplished.

The work in the Indian Bureau, in the execution of the policy of recent legislation, has been largely directed to two chief purposes: First, the allotment of lands in severalty to the Indians and the cession to the United States of the surplus lands, and, secondly, to the work of educating the Indian for his own protection in his closer contact with the white man and for the intelligent exercise of his new citizenship. Allotments have been made and patents issued to 5,900 Indians under the present Secretary and commissioner, and 7,600 additional allotments have been made for which patents are now in process of preparation. The school attendance of Indian children has been increased during that time over 13 per cent, the enrollment for 1892 being nearly 20,000. A uniform system of school text-books and of study has been adopted, and the work in these national schools brought as near as may be to the basis of the free common schools of the States. These schools can be transferred and merged into the common-school systems of the States when the Indian has fully assumed his new relation to the organized civil community in which he resides, and the new States are able to assume the burden.

I have several times been called upon to remove Indian agents appointed by me, and have done so promptly upon every sustained complaint of unfitness or misconduct. I believe, however, that the Indian service at the agencies has been improved, and is now administered on the whole with a good degree of efficiency. If any legislation is possible by which the selection of Indian agents can be wholly removed from all partisan suggestions or considerations, I am sure it would be a great relief to the Executive and a great benefit to the service. The appropriation for the subsistence of the Cheyenne and Arapahoe Indians made at the last session of Congress was inadequate. This smaller appropriation was estimated for by the commissioner upon the theory that the large fund belonging to the tribe in the public Treasury could be and ought to be used for their support. In view, however, of the pending depredation claims against this fund and other considerations, the Secretary of the Interior on the 12th of April last submitted a supplemental estimate for \$50,000. This appropriation was not made, as it should have been, and the oversight ought to be remedied at the earliest possible date.

In a special message to this Congress at the last session I stated the reasons why I had not approved the deed for the release to the United States by the Choc-taws and Chickasaws of the lands formerly embraced in the Cheyenne and Arapahoe Reservation and remaining after allotments to that tribe. A resolution of the Senate expressing the opinion of that body that,

notwithstanding the facts stated in my special message, the deed should be approved and the money, \$2,991,450, paid over, was presented to me May 10, 1892. My special message was intended to call the attention of Congress to the subject, and in view of the fact that it is conceded that the appropriation proceeded upon a false basis as to the amount of lands to be paid for, and is by \$50,000 in excess of the amount they are entitled to (even if their claim to the land is given full recognition at the rate agreed upon), I have not felt willing to approve the deed, and shall not do so, at least until both Houses of Congress have acted upon the subject. It has been informally proposed by the claimants to release this sum of \$50,000, but I have no power to demand or accept such a release, and such an agreement would be without consideration and void.

I desire further to call the attention of Congress to the fact that the recent agreement concluded with the Kiowas and Comanches relates to lands which were a part of the "leased district," and to which the claim of the Choctaws and Chickasaws is precisely that recognized by Congress in the legislation I have referred to. The surplus lands to which this claim would attach in the Kiowa and Comanche Reservation is 2,500,000 acres, and at the same rate the Government will be called upon to pay to the Choctaws and Chickasaws for these lands \$3,125,000. This sum will be further augmented, especially if the title of the Indians to the tract now Grier County, Texas, is established. The duty devolved upon me in this connection was simply to pass upon the form of the deed, but as in my opinion the facts mentioned in my special message were not adequately brought to the attention of Congress in connection with the legislation, I have felt that I would not be justified in acting without some new expression of the legislative will.

The report of the Commissioner of Pensions, to which extended notice is given by the Secretary of the Interior in his report, will attract great attention. Judged by the aggregate amount of work done, the last year has been the greatest in the history of the office. I believe that the organization of the office is efficient, and that the work has been done with fidelity. The passage of what is known as the disability bill has, as was foreseen, very largely increased the annual disbursements to the disabled veterans of the civil war. The estimate for this fiscal year was \$144,956,000, and that amount was appropriated. A deficiency amounting to \$10,508,621 must be provided for at this session. The estimate for pensions for the fiscal year ending June 30, 1894, is \$165,000,000. The Commissioner of Pensions believes that, if the present legislation and methods are maintained and further additions to the pension laws are not made, the maximum expenditure for pensions will be reached June 30, 1894, and will be at the highest point \$188,000,000 per annum.

I adhere to the views expressed in previous messages, that the care of the disabled soldiers of the war of the rebellion is a matter of national concern and duty. Perhaps no emotion cools sooner than that of gratitude, but I can not believe that this process has yet reached a point with our people that would sustain the policy of remitting the care of these disabled veterans to the inadequate agencies provided by local laws. The parade on the 20th of September last, upon the streets of this capital, of 60,000 of the surviving Union veterans of the war of the rebellion was a most touching and thrilling episode, and the rich and gracious welcome extended to them by the District of Columbia, and the applause that greeted their progress from tens of thousands of people from all the States, did much to revive the glorious recollections of the grand review, when these men and many thousand others now in their graves were welcomed with grateful joy as victors in a struggle in which the national unity, honor, and wealth were all at issue.

In my last annual message I called attention to the fact that some legislative action was necessary in order to protect the interests of the Government in its rela-

tions with the Union Pacific Railway. The Commissioner of Railroads has submitted a very full report, giving exact information as to the debt, the liens upon the company's property, and its resources. We must deal with the question as we find it, and take that course which will, under existing conditions, best secure the interests of the United States. I recommended in my last annual message that a commission be appointed to deal with this question, and I renew that recommendation, and suggest that the commission be given full power.

The report of the Secretary of Agriculture contains not only a most interesting statement of the progressive and valuable work done under the administration of Secretary Rusk, but many suggestions for the enlarged usefulness of this important department. In the successful effort to break down the restrictions to the free introduction of our meat products in the countries of Europe, the Secretary has been untiring from the first, stimulating and aiding all other Government officers, at home and abroad, whose official duties enabled them to participate in the work. The total trade in hog products with Europe in May, 1892, amounted to 82,000,000 pounds, against 46,900,000 in the same month of 1891; in June, 1892, the exports aggregated 86,700,000 pounds, against 46,500,000 pounds in the same month of the previous year; in July there was an increase of 41 per cent., and in August of 55 per cent., over the corresponding months of 1891.

Over 40,000,000 pounds of inspected pork have been exported since the law was put into operation, and a comparison of the four months of May, June, July, and August, 1892, with the same months of 1891 shows an increase in the number of pounds of our export of pork products of 62 per cent., and an increase in value of 66½ per cent. The exports of dressed beef increased from 137,900,000 pounds in 1889 to 220,500,000 pounds in 1892, or about 60 per cent. During the past year there have been exported 394,607 head of live cattle, as against 205,786 exported in 1889. This increased exportation has been largely promoted by the inspection authorized by law and the faithful efforts of the Secretary and his efficient subordinates to make that inspection thorough and to carefully exclude from all cargoes diseased or suspected cattle. The requirement of the English regulations that live cattle arriving from the United States must be slaughtered at the docks had its origin in the claim that pleuropneumonia existed among American cattle, and that the existence of the disease could only certainly be determined by a post-mortem inspection.

The Department of Agriculture has labored with great energy and faithfulness to extirpate this disease, and on the 26th day of September last a public announcement was made by the Secretary that the disease no longer existed anywhere within the United States. He is entirely satisfied, after the most searching inquiry, that this statement was justified, and that by a continuance of the inspection and quarantine now required of cattle brought into this country the disease can be prevented from again getting any foothold. The value to the cattle industry of the United States of this achievement can hardly be estimated. We can not, perhaps, at once insist that this evidence shall be accepted as satisfactory by other countries; but if the present exemption from the disease is maintained, and the inspection of our cattle arriving at foreign ports, in which our own veterinarians participate, confirms it, we may justly expect that the requirement that our cattle shall be slaughtered at the docks will be revoked, as the sanitary restrictions upon our pork products have been. If our cattle can be taken alive to the interior the trade will be enormously increased.

Agricultural products constituted 78.1 per cent of our unprecedented exports for the fiscal year which closed June 30, 1892, the total exports being \$1,030,278,030, and the value of the agricultural products \$793,717,676, which exceeds by more than \$150,000,000 the shipment of agricultural products in any previous year.

An interesting and a promising work for the benefit of the American farmer has been begun through agents of the Agricultural Department in Europe, and consists in efforts to introduce the various products of Indian corn as articles of human food. The high price of rye offered a favorable opportunity for the experiment in Germany of combining corn meal with rye to produce a cheaper bread. A fair degree of success has been attained, and some mills for grinding corn for food have been introduced. The Secretary is of the opinion that this new use of the products of corn has already stimulated exportations, and that, if diligently prosecuted, large and important markets can presently be opened for this great American product.

The suggestions of the Secretary for an enlargement of the work of the Department are commended to your favorable consideration. It may, I think, be said without challenge that in no corresponding period has so much been done as during the last four years for the benefit of American agriculture.

The subject of quarantine regulations, inspection, and control was brought suddenly to my attention, by the arrival at our ports in August last of vessels infected with cholera. Quarantine regulations should be uniform at all our ports. Under the Constitution they are plainly within the exclusive Federal jurisdiction when and so far as Congress shall legislate. In my opinion the whole subject should be taken into national control, and adequate power given to the Executive to protect our people against plague invasions. On the 1st of September last I approved regulations establishing a twenty-day quarantine for all vessels bringing immigrants from foreign ports. This order will be continued in force. Some loss and suffering have resulted to passengers, but a due care for the homes of our people justifies in such cases the utmost precaution. There is danger that with the coming of spring cholera will again appear, and a liberal appropriation should be made at this session to enable our quarantine and port officers to exclude the deadly plague.

But the most careful and stringent quarantine regulations may not be sufficient absolutely to exclude the disease. The progress of medical and sanitary science has been such, however, that if approved precautions are taken at once to put all of our cities and towns in the best sanitary condition, and provision is made for isolating any sporadic cases, and for a thorough disinfection, an epidemic can, I am sure, be avoided. This work appertains to the local authorities, and the responsibility and the penalty will be appalling if it is neglected or unduly delayed.

We are peculiarly subject in our great ports to the spread of infectious diseases by reason of the fact that unrestricted immigration brings to us out of European cities, in the overcrowded steerages of great steamships, a large number of persons whose surroundings make them the easy victims of the plague. This consideration, as well as those affecting the political, moral, and industrial interests of our country, lead me to renew the suggestion that admission to our country and to the high privileges of its citizenship should be more restricted and more careful. We have, I think, a right, and owe a duty to our own people, and especially to our working people, not only to keep out the vicious, the ignorant, the civil disturber, the pauper, and the contract laborer, but to check the too great flow of immigration now coming by further limitations.

The report of the World's Columbian Exposition has not yet been submitted. That of the Board of Management of the Government exhibit has been received, and is herewith transmitted. The work of construction and of preparation for the opening of the Exposition in May next has progressed most satisfactorily, and upon a scale of liberality and magnificence that will worthily sustain the honor of the United States.

The District of Columbia is left, by a decision of the Supreme Court of the District, without any law

regulating the liquor traffic. An old statute of the Legislature of the District, relating to the licensing of various vocations, has hitherto been treated by the commissioners as giving them power to grant or refuse licenses to sell intoxicating liquors, and as subjecting those who sold without license to penalties; but in May last the Supreme Court of the District held against this view of the powers of the commissioners. It is of urgent importance, therefore, that Congress should supply, either by direct enactment or by conferring discretionary powers upon the commissioners, proper limitations and restraints upon the liquor traffic in the District. The District has suffered in its reputation by many crimes of violence, a large per cent. of them resulting from drunkenness and the liquor traffic. The capital of the nation should be freed from this reproach by the enactment of stringent restrictions and limitations upon the traffic.

In renewing the recommendation which I have made in three preceding annual messages, that Congress should legislate for the protection of railroad employees against the dangers incident to the old and inadequate methods of braking and coupling which are still in use upon freight trains, I do so with the hope that this Congress may take action upon the subject. Statistics furnished by the Interstate Commerce Commission show that during the year ending June 30, 1891, there were 47 different styles of car couplers reported to be in use, and that during the same period there were 2,660 employees killed and 26,140 injured. Nearly 16 per cent. of the deaths occurred in the coupling and uncoupling of cars, and over 36 per cent. of the injuries had the same origin.

The Civil Service Commission ask for an increased appropriation for needed clerical assistance, which I think should be given. I extended the classified service, March 1, 1892, to include physicians, superintendents, assistant superintendents, school teachers, and matrons in the Indian service, and have had under consideration the subject of some further extensions, but have not as yet fully determined the lines upon which extensions can most properly and usefully be made.

I have, in each of the three annual messages which it has been my duty to submit to Congress, called attention to the evils and dangers connected with our election methods and practices as they are related to the choice of officers of the National Government. In my last annual message I endeavored to invoke serious attention to the evils of unfair apportionments for Congress. I can not close this message without again calling attention to these grave and threatening evils. I had hoped that it was possible to secure a nonpartisan inquiry, by means of a commission, into evils the existence of which is known to all, and that out of this might grow legislation from which all thought of partisan advantage should be eliminated and only the higher thought appear of maintaining the freedom and purity of the ballot and the equality of the elector, without the guarantee of which the Government could never have been formed, and without the continuance of which it can not continue to exist in peace and prosperity.

It is time that mutual charges of unfairness and fraud between the great parties should cease, and that the sincerity of those who profess a desire for pure and honest elections should be brought to the test of their willingness to free our legislation and our election methods from everything that tends to impair the public confidence in the announced result. The necessity for an inquiry, and for legislation by Congress, upon this subject is emphasized by the fact that the tendency of the legislation in some States in recent years has in some important particulars been away from and not toward free and fair elections and equal apportionments. Is it not time that we should come together upon the high plane of patriotism while we devise methods that shall secure the right of every man qualified by law to cast a free ballot, and give to every such ballot an equal value in

choosing our public officers, and in directing the policy of the Government?

Lawlessness is not less such, but more, where it usurps the functions of the peace officer and of the courts. The frequent lynching of colored people accused of crime is without the excuse which has sometimes been urged by mobs for a failure to pursue the appointed methods for the punishment of crime, that the accused have an undue influence over courts and juries. Such acts are a reproach to the community where they occur, and so far as they can be made the subject of Federal jurisdiction the strongest repressive legislation is demanded. A public sentiment that will sustain the officers of the law in resisting mobs and in protecting accused persons in their custody should be promoted by every possible means. The officer who gives his life in the brave discharge of this duty is worthy of special honor. No lesson needs to be so urgently impressed upon our people as this, that no worthy end or cause can be promoted by lawlessness.

This exhibit of the work of the Executive Departments is submitted to Congress and to the public in the hope that there will be found in it a due sense of responsibility and an earnest purpose to maintain the national honor and to promote the happiness and prosperity of all our people. And this brief exhibit of the growth and prosperity of the country will give us a level from which to note the increase or decadence that new legislative policies may bring to us. There is no reason why the national influence, power, and prosperity should not observe the same rates of increase that have characterized the past thirty years. We carry the great impulse and increase of these years into the future. There is no reason why in many lines of production we should not surpass all other nations as we have already done in some. There are no near frontiers to our possible development. Retrogression would be a crime. **BENJ. HARRISON.**

EXECUTIVE MANSION, Dec. 6, 1893.

Counting the Electoral Vote.—The Senate and the House of Representatives adopted the following concurrent resolution in regard to the counting of the electoral votes for President and Vice-President:

Resolved by the House of Representatives (the Senate concurring), That the two Houses of Congress shall assemble in the hall of the House of Representatives on Wednesday, the 8th day of February, 1893, at 1 o'clock in the afternoon, pursuant to the requirement of the Constitution and laws relating to the election of President and Vice-President of the United States, and the President of the Senate shall be the presiding officer; that two persons be appointed tellers on the part of the Senate and two on the part of the House of Representatives, to make a list of the votes as they shall be declared; that the result shall be delivered to the President of the Senate, who shall announce the state of the vote and the persons elected to the two Houses assembled as aforesaid, which shall be deemed a declaration of the persons elected President and Vice-President of the United States, and, together with a list of the votes, be entered on the journals of the two Houses.

On the appointed day (Feb. 8, 1893) both Houses of Congress met in joint session, Vice-President Morton in the chair; tellers were appointed, and the electoral certificates from the several States were read without objection. The following report of the result was made:

The undersigned, Eugene Hale and Joseph C. S. Blackburn, tellers on the part of the Senate, and J. Logan Chipman and Henry Cabot Lodge, tellers on the part of the House of Representatives, report the following as the result of the ascertainment and counting of the electoral vote for President and Vice-President of the United States for the term beginning March 4, 1893:

STATES.	FOR PRESIDENT.				FOR VICE-PRESIDENT.	
	Grover Cleveland, of New York.	Benjamin Harrison, of Indiana.	James B. Weaver, of Iowa.	Adlai E. Stevenson, of Illinois.	Whitelaw Reid, of New York.	James G. Field, of Virginia.

Vice-President Morton said: "The state of the vote for President of the United States, as delivered to the President of the Senate, is as follows:

"The whole number of the electors appointed to vote for President of the United States is 444, of which a majority is 223.

"Grover Cleveland, of the State of New York, has received for President of the United States 277 votes.

"Benjamin Harrison, of the State of Indiana, has received 145 votes; and

"James B. Weaver, of the State of Iowa, has received 22 votes.

"The state of the vote for Vice-President of the United States, as delivered to the President of the Senate, is as follows:

"The whole number of the electors appointed to vote for Vice-President of the United States is 444, of which a majority is 223.

"Adlai E. Stevenson, of the State of Illinois, has received 277 votes.

"Whitelaw Reid, of the State of New York, has received 145 votes; and

"James G. Field, of the State of Virginia, has received 22 votes.

"This announcement of the state of the vote by the President of the Senate is, by law, a sufficient declaration that Grover Cleveland, of the State of New York, is elected President of the United States, and that Adlai E. Stevenson, of the State of Illinois, is elected Vice-President of the United States, each for the term beginning March 4, 1893, and will be entered, together with a list of the votes, on the Journals of the Senate and House of Representatives."

Silver Purchase.—Pursuant to notice, Mr. Catchings, of Mississippi, called up, Feb. 9, 1893, in the House of Representatives, the following resolution from the Committee on Rules:

Resolved, That immediately upon the adoption of this resolution the House proceed to consider H. R. 10143, "A bill to increase the circulation of national banks, and for other purposes," and if such bill shall not be disposed of on said day then the consideration thereof shall be continued during the next legislative day.

The purpose of this resolution was to bring to an immediate decision the fate of this measure, which involved a change of policy in regard to silver.

Mr. Bacon, of New York, said in support of the resolution:

"The House is well informed of the nature of this bill as it has come from the Committee on Banking and Currency. The importance of the questions which it involves and the serious situation of the country it is intended to relieve are also well known to the members of the House, and will not be a subject by me of extended remarks at this time. Suffice it to say that the intent of this bill, the purpose for which it has been brought into this House by the committee, is that, either by its provisions as they came from the committee or by such amendment of them as the House may make, a condition of things which all people agree in deploring may be ended.

"The main purpose of the bill; the main purpose for pressing its consideration; the main purpose for demanding a vote upon it, is that the purchase of silver bullion and the storing of it in the vaults of the Treasury as a commodity and in metallic form and without coinage shall stop.

"Now, Mr. Speaker, the rule as it has been reported by the committee is in the form which the Committee on Rules has invariably used in this Congress for the purpose of bringing before the House important questions; and that form of rule has invariably been found ineffectual to enable this House to vote upon such measures and to determine such questions in the face of a decided and determined opposition, even from a small minority.

"The lessons which we ought to learn from what has occurred during this session of the House upon the bankruptcy bill and upon other measures which have received from the Committee on Rules the right of way for consideration here, are not to be overlooked. There remains no phase of this silver question which needs discussion in this House. There is no view of the subject which has not been exploited. There is no addition which needs to be made to the arguments on either side of the questions involved at this time, save only a fair and candid state-

ment of the condition of the Treasury as the result of the policy which we have been pursuing. Consideration and argument, therefore, upon this bill at this time will serve no useful purpose unless this House shall come to a vote.

"If gentlemen in this House, the majority of them, are fixed and settled in their opinions that some other measure than the bill reported by the Committee on Banking and Currency ought to take the place of the existing law on the statute book and this vexed question be settled so far as this House is concerned, the opportunity is given to them by amendment to this bill. But when that right is exhausted, when this bill and its amendments are ready to be voted upon, this House ought to vote upon them; members ought to discharge their responsibility to this House and to their country by standing in their places here and recording their votes upon this proposition. And no matter what may be done elsewhere, no matter what duty others may shirk, let us perform our duty, and it will put the responsibility then upon others who shirk it. We shall not have failed in the performance of our duties."

Mr. Bland, of Missouri, said in opposition to the resolution:

"Mr. Speaker, it will be a curious thing for the country and the members of this House to observe the vote upon this *clôture* resolution, to ascertain how many men upon this side of the House who last summer, when the free-coinage bill was up for consideration in the interest of the people, planted themselves upon the high horse of Democratic principle, declaring they would not vote for *clôture*. It will be interesting, I say, to ascertain how many of those gentlemen are going to come down from their high horse to-day and vote *clôture*, in the interest of Wall Street, to demonetize silver.

"We will watch the roll to see how a gentleman can in one instance raise himself above the people in professed democracy and vote in favor of Wall Street, and yet forsake his avowed principles when it comes to a bill of this character. What is this bill, Mr. Speaker? The gentleman talks about coining silver. Why does he not report a bill to coin all the silver purchased, instead of a bill to stop the purchases and the coinage both?

"A bill, sir, professing to carry out the Democratic platform—a platform which demanded the repeal of the 'Sherman law,' a misnomer, for Sherman never liked the bill himself, and is now trying to have it repealed, which is one good reason why this side of the House especially ought to stand by it and sustain it. That part of it which may be in the interest of stock-gambling and bond-bulling in Wall Street must come here with a *clôture* rule.

"But what becomes of the rest of it? The free-coinage proposition in that platform is utterly ignored; the people's voice is not heard in the introduction of that bill. The measure is a monstrosity, yielding to the national banks further privileges, increasing their circulation in the interest of the bondholders, to defeat the monetization of silver in behalf of the gold gamblers and speculators.

"It is hardly susceptible of amendment, Mr. Speaker. We will meet them on that proposi-

tion. When we want silver legislation in the interest of the people we will take action upon it here, and not at the dictation of the gold speculators. When the Democratic party in the last campaign, and especially gentlemen on this side presenting this bill now, went before the people, they said that the free coinage of silver and the silver question was nothing in comparison to the tariff question. That was the overshadowing, paramount issue which the people had to face.

"But as soon as the election is over we hear nothing of the Committee on Ways and Means. They have absolutely subsided. The tariff question is relegated to the rear in this body. If we do that, we will have betrayed every promise made to the American people in that campaign on the tariff and silver question, and up to this moment, sir, in this House, the people of this country will have been deceived in the last election.

"I defy you to undertake to demonetize silver again in this country and go back to the infamous legislation of 1873. The Democratic party for the last twenty years has denounced that as the most infamous piece of legislation that was ever accomplished in American history, and here it is calmly and coolly proposed in a Democratic House that we shall demonetize, go back to that act of 1873, wipe out the silver legislation—all laws which recognize that metal as money in this country—and ratify and confirm the most villainous and tyrannical piece of legislation that was ever enacted in the history of the American Government.

"Mr. Speaker, I wish to say that the so-called Sherman law puts in circulation about \$50,000,000 annually, or over \$4,000,000 every month, in the way of legal-tender Treasury notes issued in the purchase monthly of 4,500,000 ounces of silver bullion. This to some extent meets the wants of increased population and needs of business. To repeal the law and stop there would mean a practical contraction of the currency to the amount of \$50,000,000 annually.

"This would cause prices to fall and make times still harder, especially in all our agricultural districts. This will not do as the first step in Democratic reform, for this would be to reform backward. It is no answer to say that gold would come here to supply currency demands, for we all know there is no gold to bring here without bringing on a panic in the gold-using countries.

"Besides, the countries now using gold are those where all or nearly all our exports go. The more we drain those people of their gold the lower of necessity will prices go in those countries; so that when we sell them our wheat, corn, pork, beef, and cotton we must expect them to pay us less than they give us now. Certainly those things are at this time much lower than they should be, and so low that the producing of them yields but little profit. The Democratic party can not afford to so legislate as to cause prices here and abroad to fall.

"The people who sent us here did not think they were voting for such a thing as that, but, on the contrary, they were aiming to improve matters in this direction and not to make them worse."

Mr. Reed, of Maine, advocated taking up the

subject in the House and passing a measure repealing the Sherman act. He said:

"Mr. Speaker, I was not aware until the session opened this morning that there was to be any preliminary debate on this question, and therefore I shall not be able to express myself with that accuracy which ought to be used upon an occasion so important as this. However, I have no doubt that what I say will be received with indulgence by the House under these circumstances. Questions of finance are always exceedingly difficult, and on such topics no wise man indulges himself much in prophetic utterances. We may, however, safely deal with some portions of the past.

"The so-called Sherman act was a compromise measure, intended to stay for the time being a strong feeling which existed on the part of a good many citizens of this country in favor of the free coinage of silver. The friends of the free coinage of silver thought that the result of the Sherman act would be to bring silver to par. If it could have done that, the problem which had convulsed this country for a long time would have been solved and finished and relegated to the past. Other people supported the Sherman act because they were afraid that the public mind was in such condition, owing to various circumstances too numerous to describe now, that there was danger of our going even to the extent of free coinage. Nobody ever regarded that act as anything but a measure passed for the time being, as, indeed, all legislation upon complex human affairs must be.

"We have now come to a change of conditions, or perhaps, to speak more accurately, of apparent conditions; and to my mind the Sherman act stands in unfortunate case for two different reasons. It seems to be to-day one of the obstacles which prevent bimetallicism all over the world. I think almost every reasonable man, who has not talked so much about this question that he has ceased to think, believes that whenever bimetallicism is sustained it must be upon the shoulders of the whole world. Nations which are monometallic are naturally now desirous of not changing their condition. They feel that perhaps the United States will undertake to shoulder the whole load. Therefore, it seems to me that the present condition of things is in our way in the negotiations we are making for the purpose of reaching a bimetallic standard all over the world, which we desire, both silver men and those who are denounced as 'gold bugs.'

"On the other hand, the constant increase of our currency, more than was contemplated at the time of the passage of the Sherman act, so called, together with the efflux of gold from this country, is producing another kind of fear—a fear in regard to the basis upon which our financial affairs are to be conducted. I do not fully share that fear myself. I think that the efflux of gold is in all probability the result of causes other than the Sherman act, although the possibility of the indefinite continuance of the Sherman act may have some influence upon the subject.

"We are now to perform an act which is to have in all human probability (for we might as well talk plainly and openly about this business as about all other matters of legislation)—we

are now about to perform an act which will have a certain moral influence, though probably not a legislative influence; because there is another body whose rules are such that deliberation goes on until deliberation ceases to be an absolute and unqualified advantage to the community. Hence, what we do to-day may not have a final legislative result; yet it may have a moral result; and I think it will, whatever may be the outcome. If the motion for the previous question is voted down, it will show to the community that we are ready—that people of both parties are ready—to take this question into careful consideration, and to do any acts in the future which may be necessary to preserve this country upon a sound currency basis.

"For my part, as an individual, I do not need such an assurance. I have no doubt now, and I never had any doubt, that this country will remain upon a sound currency basis, and that whenever any danger actually arises and is imminent the wisdom and good sense of the people will be equal to it. If the motion for the previous question shall be sustained, I think nevertheless the vote of this House will show, when analyzed, that there is really a feeling of willingness to meet the crisis whenever it shall come. And whenever we do get fairly at it, I hope for my part (and I am speaking only as an individual) that it will result finally in the establishment of such a banking system as will remove our currency question from the domain of active politics, and that we shall have a sound business system, carried out on sound business principles and automatic in its character. That I believe the wisdom of Congress will be equal to whenever the proper time shall arrive."

Mr. Catchings, at the close of the debate of an hour allowed on resolutions, reported from the Committee on Rules, called for the previous question; and it was ordered by a vote of 152 yeas to 143 nays, not voting 34. Those who voted in the affirmative were the opponents of the repeal of the purchase clause of the Sherman act and the advocates of silver coinage. Following is the vote:

YEAS—Abbott, Alderson, Allen, Antony, Arnold, Babbitt, Bailey, Baker, Bankhead, Bartine, Beeman, Belknap, Beltzhoover, Blanchard, Bland, Blount, Boatner, Bowers, Breckinridge of Arkansas, Bretz, Broderick, Brookshire, Brown of Indiana, Bryan, Buchanan of Virginia, Bullock, Bunn, Burrows, Butler, Bynum, Caminetti, Capehart, Clark of Wyoming, Clarke of Alabama, Clover, Cobb of Alabama, Compton, Cooper, Cowles, Cox of Tennessee, Crain, Crawford, Culberson, Davis, DeArmond, Dockery, DOLLIVER, Dungan, Edmunds, Ellis, Enloe, Epea, Everett, Flick, Funston, Fyan, Gantz, Grady, Halvorson, Hatch, Haugen, Heard, Henderson of North Carolina, Hermann, Hilborn, Holman, Hooker of Mississippi, Hooker of New York, Hopkins of Pennsylvania, Hopkins of Illinois, Houk of Tennessee, Hull, Johnston of North Dakota, Johnstone of South Carolina, Jolley, Jones, Kem, Kendall, Kribbs, Kyle, Lane, Latham, Lawson of Virginia, Lawson of Georgia, Lester of Virginia, Lester of Georgia, Lewis, Lind, Livingston, Long, Loud, Mallory, Mansur, Martin, McCreary, McKeighan, McMillin, McRae, Montgomery, Moore, Moses, Norton, Oates, O'Donnell, O'Ferrall, Otis, Owens, Parrett, Patterson of Tennessee, Patton, Paynter, Pearson, Peel, Perkins, Pickler, Pierce, Post, Price, Quackenbush, Richardson, Robertson of Louisiana, Sayers, Shell, Shively, Simpson, Smith, Snodgrass, Stephenson, Stewart of Texas, Stockdale, Stone

of Kentucky, Sweet, Tarsney, Taylor of Illinois, Taylor of Tennessee, V. A. Taylor, Terry, Tillman, Townsend, Tucker, Turner, Turpin, Watson, Weaver, Wheeler of Alabama, White, Williams of North Carolina, Williams of Illinois, Wilson of Kentucky, Wilson of Missouri, Winn, Wise—152.

NAYS—Amernan, Andrew, Bacon, Barwig, Bentley, Bergen, Bingham, Boutelle, Bowman, Brawley, Breckinridge of Kentucky, Brickner, Brosius, Brown of Maryland, Brunner, Buchanan of New Jersey, Bunting, Busey, Bushnell, Cadmus, Caldwell, Campbell, Caruth, Castle, Catchings, Cate, Chipman, Clancy, Cobb of Missouri, Coburn, Cockran, Cogswell, Coolidge, Coombs, Covert, Cox of New York, Crosby, Cummings, Curtis, Cutting, Dalzell, Daniell, De Forest, Dickerson, Dingley, Doan, Dunphy, Durbin, Elliott, English, Enoch, Fellows, Fitch, Fowler, Geary, Geissenhainer, Gorman, Greenleaf, Grout, Hall, Hallowell, Hamilton, Hare, Harmer, Harries, Harter, Hayes of Iowa, Haynes of Ohio, Hemphill, Herbert, Hitt, Hoar, Houk of Ohio, Johnson of Indiana, Johnson of Ohio, Ketcham, Kilgore, Lagan, Lapham, Layton, Little, Lodge, Lynch, Magner, McAleer, McClellan, McGann, McKaig, McKinney, Meyer, Miller, Milliken, Mitchell, Morse, Mutchler, Newberry, Ohliger, O'Neil of Massachusetts, O'Neill of Pennsylvania, Outhwaite, Payne, Pendleton, Powers, Raines, Randall, Rayner, Reed, Keyburn, Robinson of Pennsylvania, Rockwell, Rusk, Russell, Scott, Seull, Seerley, Shouk, Snow, Sperry, Springer, Stahlnecker, Stevens, Steward of Illinois, C. W. Stone, W. A. Stone, Storer, Stout, Stump, J. D. Taylor, Tracey, Van Horn, Walker, Warner, Washington, Waugh, Weadock, Wheeler of Michigan, Wike, Wilcox, Williams of Massachusetts, Wilson of Washington, Wilson of West Virginia, Wolverton, Youmans—143.

NOT VOTING—Alexander, Atkinson, Belden, Branch, Byrns, Cable, Causey, Cheatham, Dixon, Donovan, Fithian, Forman, Forney, Gillespie, Goodnight, Griswold, Henderson of Iowa, Henderson of Illinois, Huff, Lockwood, McLaurin, Meredith, O'Neill of Missouri, Page, Pattison of Ohio, Ray, Reilly, Rife, Sanford, Sipe, E. B. Taylor, Wadsworth, Whiting, Wright—34.

So the previous question was ordered—the question of agreeing to the resolution submitted by the Committee on Rules; and Mr. Cox, of Tennessee, moved to recommit to the committee without instructions. The motion was carried by a vote of 153 to 83.

On Jan. 17, 1893, a bill for the repeal of the purchase clause of the Sherman act was reported from the Finance Committee of the Senate with an amendment. The bill was as follows:

Be it enacted, etc., That so much of the act entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," approved July 14, 1890, as directs the Secretary of the Treasury to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, and to issue in payment for such purchases of silver bullion Treasury notes of the United States, is hereby repealed, to take effect on the 1st day of January, 1894: *Provided*, That this act shall not in any way affect or impair or change the legal qualities, redemption, or use of the Treasury notes issued under said act.

The proposed amendment was as follows:

SEC. 2.—That upon any deposit already or hereafter made of any United States bonds bearing interest in the manner required by law, any national banking association having made or making the same shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations, in blank, registered, and countersigned as provided by law, not exceeding in the whole amount the par value of the bonds deposited: *Provided*, That at no time

shall the total amount of such notes issued to any such association exceed the amount at such time actually paid in of its capital stock.

On Feb. 6, Senator Hill, of New York, called up this measure for action, and in support of it he delivered a carefully prepared argument. Among other things he said:

"Gold is not purchased by the Government. It has free coinage into full legal-tender money for the people who bring it, and no matter how much. If melted, it has free recoinage into the same amount of full legal-tender money again, without loss.

"Those great populations which now as ever maintain the free coinage of silver, do not purchase silver in our fashion, by government. It is coined for the people, whoever brings it and no matter how much, just as gold-coining nations deal with gold. If the silver is melted for other uses, it loses nothing of its value, for it is assured of recoinage into the same amount of full legal tender money again without loss.

"Is it not clear, then, that our silver purchases are the polar opposite of free silver coinage? But they are worse than opposite; they are effective contraries to free bimetallic coinage whatever their amount and whether minted or not.

"If minted, as by the Bland-Allison law, they make a local accumulation of nonexportable money.

"If they are not minted, but measure Treasury note issues, as by the Sherman law, they likewise make an accumulation of nonexportable money. Too great accumulation of such money must surely extrude gold, which is now our only exportable money.

"Silver purchased, even if coined, monetizes no unpurchased silver, and if not coined monetizes none at all.

"Free coinage of silver is not the purchase of an ounce of silver. Nor is free coinage of gold the purchase of any gold. The function of free coinage is to effect the monetization of all, but not by the purchase of any.

"Now, there is about the same aggregate of gold money as of silver money in existence. The free coinage of silver has never ceased, and will not cease, so far as human beings can now foresee. The free coinage of gold has never ceased, and will not cease.

"Nations may shift and change. This mint may be closed to gold, as the mints of India once, or that mint may be closed to silver, as the mint of Germany was.

"But what ceased on the earth in 1873 was not free gold coinage, was not free silver coinage.

"What ceased in 1873 was free bimetallic coinage, to wit, the free coinage of silver and the free coinage of gold at the same mint in a rated parity.

"The two free coinages, elsewhere going on separately, lost their virtual conjunction due to the two free coinages which till then had gone on actually conjoined in one mint and one law.

"Lost thereby was the parity of gold and silver.

"A specified weight of gold, having free coinage into one monetary unit, no longer retained its former stable equivalence with 15½ times its

weight of silver having free coinage elsewhere into another national monetary unit.

"If the monetary unit had been bimetallic, thereafter the parity of the franc in silver and the franc in gold, the parity of the silver dollar and the gold dollar was but a local parity, lost in the crucible.

"Silver purchases have not so much as even a tendency to lay the foundations of universal parity between the silver dollar and the gold dollar; for their renewed parity is impossible except, as before, concurrently with the parity of all gold and all silver, which parity not only depends upon the monetization of each by the offer of free coinage to each, which has always gone on somewhere, but also upon the rated parity of both by the free coinage of both at a fixed weight ratio, to wit, upon free bimetallic coinage which ceased in 1873.

"What earthly relation has the purchase of silver to its parity with gold?

"What earthly relation has the purchase of gold to its parity with silver?

"The two halves of the money of the world, the gold half and the silver half, together constitute the great money measure of mankind (though now for nineteen years dislocated by the novel absence of free bimetallic coinage)—the one great bimetallic money measure standing over against the total inventory of their wealth.

"So that if all silver were put out of existence and the gold doubled, the money measure would be the same, the convenience of it vastly less. Subdivisional small payments would everywhere require paper certificates. But free coinage of all gold would constitute the whole of the yellow money metal the perfect money measure for mankind. All might not be brought for coinage. All could be. All would be taken out of the category of commodities and raised to the uniform level of the monetization.

"Now, what could gold purchases do, gold being the sole money metal, except transfer ownership?

"So if all gold were put out of existence and the silver doubled, again the money measure would be the same and the convenience less. But free coinage of all silver would constitute the whole of that white metal the still perfect money measure of mankind. All would never be brought for coinage. All could be. Enough would be brought for all payments to be made, and standard bullion would be as precious as the same weight of coin, for all would be taken out of the category of commodities and raised to the uniform level of monetization.

"What now could silver purchases do, silver being the sole money metal, except transfer ownership?

"Instead of \$8,000,000,000 of gold with no silver, and instead of \$8,000,000,000 of silver with no gold, mankind has a better, a bimetallic money; in round numbers, say \$4,000,000,000 of silver and \$4,000,000,000 of gold—a bimetallic money, although for the moment lacking their ancient legal correlation.

"What now is it conceivable that gold purchases or silver purchases can do, by transfer of ownership, more than in the monometallic cases I have imagined, when the money of mankind is bimetallic?

"How can purchases of one money metal repair the lack of legal correlation of the two money metals? Whence could come a rated parity of both save by competent conjoined free coinage of both, to wit, free bimetallic coinage?"

"Excepting a comparatively small amount in the arts and industries, all this gold is in monetary use and has free coinage somewhere. Likewise all this silver is in monetary use, and has free coinage somewhere.

"Wherever free coinage of either metal exists, the metal of the coin loses nothing in the crucible. It can be recoined into the same money with no loss. This is just as true of silver as of gold, under free-coinage *régimes*. Liquid in the crucible or solid in the coin, the weight and worth of the money metal remain identical.

"But what have silver purchases to do with that effect of free coinage?"

"Nothing.

"What have silver purchases to do with that effect of free bimetallic coinage, which, besides establishing equality in crucible or coin for each of the two metals separately, also in all payments, establishes, at a ratio of weight, parity for both?"

"Nothing.

"It is for these reasons that I would respectfully ask the Senators of the silver-producing States to consider whether a just view of the particular interest of their constituents, whom they so loyally represent, will not be soonest reached among all who do not mine silver, by the disassociation of that money-metal output from every Government relation first, and, finally, from every Government relation except that which, as with gold, should alone subsist in the United States, namely, free bimetallic coinage."

Mr. Hill's motion to take up the bill for consideration was put to a vote and defeated, as follows:

YEAS—Brice, Caffery, Davis, Dawes, Dixon, Faulkner, Frye, Gallinger, Gibson, Gorman, Hale, Hawley, Hill, Hoar, McPherson, Mills, Morrill, Palmer, Proctor, Sherman, Vest, Vilas, White—23.

NAYS—Bate, Berry, Blackburn, Blodgett, Call, Carey, Cockrell, Coke, Cullom, Daniel, Dolph, Dubois, Felton, George, Gordon, Hansbrough, Harris, Hutton, Irby, Jones of Nevada, Kyle, McMillan, Manderson, Mitchell, Morgan, Pasco, Peffer, Perkins, Pettigrew, Platt, Power, Pugh, Ransom, Shoup, Squire, Stewart, Stockbridge, Teller, Turpie, Vance, Voorhees, Wolcott—42.

NOT VOTING—Aldrich, Allen, Allison, Butler, Camden, Cameron, Casey, Chandler, Colquitt, Gray, Higgins, Hiscok, Jones of Arkansas, Paddock, Quay, Sanders, Sawyer, Stanford, Walthall, Warren, Washburn, Wilson—22.

And so the measure fell by the way in both Houses of Congress.

Mexican-War Pensions.—The Senate passed at the first session the following bill increasing the rate of pensions for certain persons who had served in the war with Mexico:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to increase the pension of every pensioner who is now on the rolls at \$4 per month on account of services in the Mexican War, and who is wholly disabled for manual labor and is in such destitute circumstances that \$8 per month are insufficient to provide him the necessities of life, to \$12 per month.

Dec. 19, 1892, Mr. Wilson, of Missouri, moved, in the House of Representatives, that the rules be suspended and the following substitute for the Senate bill be passed:

Strike out all after the enacting clause and insert:

"That the Secretary of the Interior be, and he is hereby, authorized and directed to increase to the sum of \$12 per month the pension of every pensioner, including widows and the officers and enlisted men of Powell's Battalion of Missouri Mounted Volunteers, who is now on the rolls or entitled to be pensioned at \$8 per month under the act of Congress entitled 'An Act granting pensions to the soldiers and sailors of the Mexican War, and for other purposes,' approved Jan. 29, 1887, and the act of Congress entitled 'An Act granting pensions to Powell's Battalion of Missouri Mounted Volunteers,' approved March 3, 1891: *Provided*, That the increase of pension provided herein shall begin from and after the date of the passage of this act."

Mr. Wilson said, in answer to an inquiry as to the increased expenditure which such a measure would entail, by reading from the report of the Committee on Pensions: "From figures submitted to your committee by the Commissioner of Pensions, it appears that the number of survivors of said war now on the pension roll is 15,398, and the number of widows 7,286, making a total of 22,684. If all of these pensioners were to receive an increase of \$4 per month pension, the aggregate additional expenditures for the first year would be \$1,088,832; but, as is well known, the beneficiaries are all now greatly advanced in years, and the number of pensioners is being rapidly reduced by death, so that if this bill becomes a law the annual cost will not be so great as to add to any very appreciable extent to the pension expenditure."

In explanation of the peculiar character of the proposed amendment, Mr. Wilson said, in answer to a question from Mr. Dingley, of Maine:

"The gentleman from Maine will perhaps remember that the act granting a pension to Powell's battalion was passed on March 3, 1891. This battalion was raised for service in the Mexican War, and were *en route* to the scene of war when they were stopped on the way, and orders were issued countermanding the original order sending them to the seat of war, and they were sent out on the plains to replace the regulars who were operating there against the Indians. This battalion was sent out on what was known as the Oregon trail, and were there engaged while the regulars were sent to Mexico."

Mr. Heard, of Missouri, added a word on this curious topic:

"If my colleague will allow me a moment, I will state for the information of the gentleman from Maine, and any one else who has any difficulty in his mind upon this subject, that there were several other military organizations which were in exactly the same condition as these Mexican troops. Morgan's Iowa battalion, for instance, enlisted just like this Missouri battalion for service in the Mexican War, but in place of being sent into Mexico they were sent out on the frontier to hold the forts, while the regulars, who had been performing this service before, were sent into Mexico.

"The gentleman will remember the language of the general act provided for pensioning the Mexican volunteers who had served for sixty

days, I think it was, in the actual operations of war or *en route* to the seat of war. That language, however, did not embrace this Missouri battalion, nor would it have embraced the battalion of Iowa troops. It was necessary, therefore, to supplement this act by the provision which my colleague from Missouri has submitted to bring these soldiers within the purview of the general pension law granting pensions to the Mexican soldiers.

"Now, the soldiers of Powell's battalion and Morgan's battalion, and a half dozen other organizations of the same kind, were not actually sent to the seat of war. They enlisted for the purpose of going into Mexico, but in place of being sent there their services were used on the frontiers, to replace the regulars who were sent in their stead into Mexico; and we have been granting special pensions from time to time for all of these people."

As the amendment was received with strong marks of disfavor, Mr. Wilson withdrew it by unanimous consent, and asked for a vote on the bill as it came from the Senate. The rules were suspended, and the measure was passed by a vote of 172 yeas to 8 nays, 149 Representatives not voting:

YEAS—Alexander, Amerman, Arnold, Atkinson, Babbitt, Baker, Bartine, Barwig, Beeman, Belknap, Beltzhoover, Bland, Boatner, Bowers, Branch, Brawley, Bretz, Brickner, Broderick, Brookshire, Brosius, Brunner, Bryan, Bullock, Bunn, Busey, Butler, Byrns, Causey, Clark of Wyoming, Clover, Cobb of Alabama, Cobb of Missouri, Coburn, Cockran, Covert, Cox of Tennessee, Crain of Texas, Crawford, Crosby, Culbertson, Cummings, Curtis, Cutting, Daniell, Davis, De Armond, Dingley, Dixon, Donovan, Durborow, English, Enloe, Enochs, Epes, Everett, Fellows, Forney, Fowler, Funston, Fyan, Geary, Gorman, Grady, Greenleaf, Hallowell, Halvorson, Hare, Harner, Harries, Hatch, Haugen, Haynes of Ohio, Heard, Hemphill, Hermann, Hilborn, Holman, Hooker of Mississippi, Hopkins of Pennsylvania, Huff, Hull, Johnson of North Dakota, Johnstone of South Carolina, Jolley, Kem, Kribbs, Lanham, Lawson of Virginia, Layton, Lind, Livingston, Lockwood, Long, Loud, Lynch, Mallory, Martin, McKaig, McKinney, McLaurin, McMillin, McKee, Meyer, Miller, Milliken, Mitchell, Moore, Mutschler, Oates, O'Donnell, O'Ferrall, Ohliger, O'Neill of Pennsylvania, O'Neill of Missouri, Otis, Outhwaite, Page of Rhode Island, Parrett, Patterson of Tennessee, Patton, Payne, Paynter, Pearson, Peel, Perkins, Pickler, Post, Powers, Raines, Randall, Reburn, Richardson, Scull, Shonk, Simpson, Smith, Sperry, Springer, Stephenson, Steward of Illinois, Stewart of Texas, Stockdale, W. A. Stone, Stone of Kentucky, Stout, Sweet, Taraney, Taylor of Illinois, E. B. Taylor, J. D. Taylor, Terry, Tillman, Tracey, Tucker, Turner, Turpin, Van Horn, Wadsworth, Watson, Waugh, Wheeler of Alabama, Wike, Wilcox, Williams of North Carolina, Williams of Illinois, Wilson of Washington, Wilson of Missouri, Winn, Wolvorton, Wright, Youmans—172.

NAYS—Andrew, Bankhead, Breckinridge of Arkansas, Dickerson, Herbert, Hoar, Pierce, Snodgrass—8.

NOR VOTING—Abbott, Alderson, Allen, Antony, Bacon, Bailey, Belden, Bentley, Bergen, Bingham, Blanchard, Blount, Boutelle, Bowman, Breckinridge of Kentucky, Brown of Indiana, Brown of Maryland, Buchanan of New Jersey, Buchanan of Virginia, Bunting, Burrows, Bushnell, Bynum, Cable, Cadmus, Caldwell, Caminetti, Campbell, Capehart, Caruth, Castle, Catchings, Cate, Cheatham, Chipman, Clancy, Clarke of Alabama, Cogswell, Compton, Coolidge, Coombs, Cooper, Cowles, Cox of New York, Datzell, De Forest, Doan, Dockery, Dolliver, Dungan, Dun-

phy, Edmunds, Elliott, Ellis, Fitch, Fithian, Flick, Forman, Gantz, Geismenhainer, Gillespie, Goodnight, Griswold, Grout, Hall, Hamilton, Harter, Hayes of Iowa, Henderson of Iowa, Henderson of North Carolina, Henderson of Illinois, Hitt, Hooker of New York, Hopkins of Illinois, Houk of Ohio, Houk of Tennessee, Johnson of Indiana, Johnson of Ohio, Jones, Kendall, Ketcham, Kilgore, Kyle, Lagan, Lane, Lapham, Lawson of Georgia, Lester of Virginia, Lester of Georgia, Lewis, Little, Lodge, Magner, Mansur, McAleer, McClellan, McCreary, McGann, McKeighan, Meredith, Montgomery, Morse, Moses, Newberry, Norton, O'Neil of Massachusetts, Owens, Pattison of Ohio, Pendleton, Price, Quackenbush, Ray, Rayner, Reed, Reilly, Rife, Robertson of Louisiana, Robinson of Pennsylvania, Rockwell, Ruak, Russell, Sanford, Sayer, Scott, Seerley, Shell, Shively, Sipe, Snow, Stahlnecker, Stevens, C. W. Stone, Storer, Stump, Taylor of Tennessee, V. A. Taylor, Townsend, Walker, Warner, Washington, Weadock, Wever, Wheeler of Michigan, White, Whiting, Williams of Massachusetts, Wilson of Kentucky, Wilson of West Virginia, Wise—149.

Jan. 8, 1893, the President approved the measure.

Issue of Bonds.—One of the most interesting contests in this session of Congress was that arising out of an amendment to the Sundry Civil Appropriation bill proposed by Mr. Sherman, of Ohio, when the House measure was under consideration in the Senate. The amendment was as follows:

To enable the Secretary of the Treasury to provide for and maintain the redemption of United States notes according to the provisions of the act approved Jan. 14, 1875, entitled "An Act to provide for the resumption of specie payments," \$50,000; and, at the discretion of the Secretary, he is authorized to issue, sell, and dispose of, at not less than par in coin, either of the description of bonds authorized in said act, or bonds of the United States bearing not to exceed 3 per cent. interest, payable semiannually and redeemable at the pleasure of the United States after five years from their date with like qualities, privileges, and exemptions provided in said act for the bonds therein authorized, to the extent necessary to carry said resumption act into full effect, and to use the proceeds thereof for the purposes provided in said act and none other.

This provision for an issue of bonds brought on in the Senate a general discussion of the financial situation with a renewal of the old controversy in regard to silver. Feb. 18, 1893, the Senate, after rejecting various proposed modifications, adopted the amendment by the following vote:

YEAS—Aldrich, Allison, Brico, Caffery, Chandler, Cullom, Davis, Dixon, Felton, Frye, Gorman, Gray, Hale, Hansbrough, Harris, Hawley, Higgins, Hiseock, Hoar, McMillan, McPherson, Morrill, Perkins, Sawyer, Sherman, Stockbridge, Vilas, Voorhees, Washburn, White—80.

NAYS—Bate, Call, Cockrell, Coke, George, Gordon, Jones of Nevada, Kyle, Mitchell, Peffer, Power, Pugh, Shoup, Stewart, Teller, Vest—16.

NOR VOTING—Allen, Berry, Blackburn, Blodgett, Butler, Camden, Cameron, Carey, Casey, Colquitt, Daniel, Daves, Dolph, Dubois, Faulkner, Gallinger, Gibson, Hill, Hunton, Irby, Jones of Arkansas, Manderson, Mills, Morgan, Paddock, Palmer, Pasco, Pettigrew, Platt, Proctor, Quay, Ransom, Sanders, Squire, Stanford, Turpie, Vance, Walthall, Warren, Wilson, Wolcott—41.

The House non-concurred in the Senate amendments to this appropriation bill, and the Senate finally receded from this amendment. Mr. Sher-

man said on that occasion, March 1, in explanation of the measure :

"Mr. President, the resumption act referred to in the amendment contains an important stipulation, which I ask the Secretary to read. Let the clause of the resumption act which enables the Secretary to maintain specie payments be read :

To enable the Secretary of the Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues, from time to time, in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July 14, 1870, entitled "An Act to authorize the refunding of the national debt," with like qualities, privileges, and exemptions, to the extent necessary to carry this act into full effect, and to use the proceeds thereof for the purposes aforesaid.

"I wish also to have read to the Senate the character and description of bonds authorized to be issued under what is called the refunding act referred to in the resumption act :

That the Secretary of the Treasury is hereby authorized to issue, in a sum or sums not exceeding in the aggregate \$200,000,000, coupon or registered bonds of the United States, in such form as he may prescribe, and of denominations of \$50, or some multiple of that sum, redeemable in coin of the present standard value, at the pleasure of the United States after ten years from the date of their issue, and bearing interest, payable semiannually in such coin, at the rate of 5 per cent. per annum ; also, a sum or sums not exceeding in the aggregate \$300,000,000 of like bonds the same in all respects, but payable at the pleasure of the United States, after fifteen years from the date of their issue, and bearing interest at the rate of 4½ per cent. per annum ; also, a sum or sums not exceeding in the aggregate \$1,000,000,000 of like bonds, the same in all respects, but payable at the pleasure of the United States after thirty years from the date of their issue, and bearing interest at the rate of 4 per cent. per annum.

"It is apparent from these laws, which are fundamental in their character, that the Secretary has imposed upon him not merely the privilege but the duty of maintaining or providing for the resumption of specie payments and the maintenance of the specie standard in gold and silver coin. He is also authorized by a subsequent act, which I do not care to have read because it is not necessary, to maintain \$100,000,000 in gold in the nature of a redemption fund, or rather that was the minimum limit provided in the law.

"Mr. President, in order to perform this grave duty the Secretary of the Treasury was authorized, at his discretion, whenever necessary—and the whole matter was left to the Secretary of the Treasury—in order to obtain the coin required, to issue a bond bearing 4 per cent. interest running for thirty years, or a bond bearing 4½ per cent. interest running fifteen years, or a bond bearing 5 per cent. interest running ten years.

"It has been feared—I do not say that there has been occasion for this fear—that the Secretary of the Treasury can not maintain the necessary resumption fund ; that he may have to resort to the credit of the Government, upon which all the greenback issues of the United States notes and bonds are founded ; that he might have to resort to the sale of bonds to obtain money in order

to maintain the parity of the different forms of money in this country and the redemption or payment in coin when demanded of the obligations of the United States, especially the United States notes, commonly called greenbacks.

"When I came, in examining this question, to see whether or not the law enacted in 1875 was applicable to the condition of affairs in 1893, it was apparent to me, as it must have been to every man, however ignorant he might be of the principles of finance, that the conditions of our country were such that we would not be justified by public opinion or by the interests of our people to sell a bond bearing 4 or 4½ or 5 per cent. interest.

"There was some doubt, in fact, whether a 5-per-cent. or 4½-per-cent. bond could be issued, because the general theory and habit of the Government has been, when a particular class or description of bonds is issued, though the bonds may be sold at different dates, to have them all dated on the date of the first issue. Though many of the 4-per-cent. bonds now outstanding were issued in 1880 and 1881, yet they all bear the date 1877, because that was the year of the first issue, and they are maintained as of that date. When issued the coupons are cut off up to the date of issue, so that the bond shall bear interest only from the date of issue.

"There are difficulties, therefore, which will fall upon the Secretary of the Treasury when he comes to exercise this power in issuing this class of bonds, first, because they bear too high a rate of interest, and next, because they run too long. The experience of our country shows that the right to redeem bonds within a short period of time is one of the most important and valuable properties which can be given to a bond. I, for one, with my experience and knowledge of these subjects, would not now be willing to issue any bond running more than five or ten years at any rate of interest and then redeemable at the pleasure of the United States, because we know that by changing circumstances we may reduce the rate of interest and borrow money at a less rate than the rate of interest we were obliged to pay at the time of borrowing the principal or issuing the bonds.

"Then there was another trouble. If the Secretary of the Treasury was called upon to issue 4-per-cent. bonds, if he should date them as of the date of 1877, they would mature in 1907. So that with this, the most favorable bond he could issue, he would have to issue a bond running for fourteen years and bearing interest at 4 per cent.

"Therefore it was manifest to me, as it would be manifest to any one who would look at the question without any feeling about it at all, that if we could borrow money at 3 per cent. on bonds running for five years or for a short period of time, always reserving our right to redeem these bonds within a short period, it would save a vast sum to the people of the United States, at least one fourth of the interest on the bonds, and we would save more by the right to redeem them if a favorable turn in the market should enable us to do so."

Mr. Wolcott, of Colorado, said in criticism of the Sherman amendment :

"Mr. President, it is very apparent that the

purpose of the Senator from Ohio in taking the time of the Senate this afternoon was that he might give voice officially to the fact which has generally been understood through both Houses of Congress that both political parties, as represented by the present Secretary of the Treasury and the Secretary of the Treasury to be, have coincided in the desire for the passage of the amendment, which was to permit the Secretary of the Treasury to add to the public debt of the United States and to sell more bonds.

"I think the announcement of that fact was a wise announcement. I think it is proper for the country to know that the incoming Administration as well as the Administration now going out are in agreement upon the proposition that the people should be further burdened with a public debt, upon a silly proposition to sell bonds the proceeds of which were to draw no interest and were to go into the Treasury, and the only effect of which was to make a gold scare in New York, and depress the market for bonds and for securities.

"Beyond that point, Mr. President, I am sorry the Senator from Ohio went. In the first place, referring not alone to the remarks of the Senator from Ohio, I think any one who at this stage of the session makes an extended financial speech, when everybody knows that this amendment is to be voted out and we are only going through the formality of submitting it to the Senate, is not regardless of public interests and the demands of public business."

Safety of Life on Railroads.—During the first session of Congress the House of Representatives passed a bill "to promote the safety of employees and travelers upon railroads by compelling common carriers engaged in interstate commerce to equip their cars with automatic couplers and continuous brakes and their locomotives with driving-wheel brakes." In the Senate the following substitute for the House bill was adopted:

Be it enacted, etc., That from and after the 1st day of January, 1898, it shall be unlawful for any common carrier engaged in interstate commerce by railroad to use on its line any locomotive engine in moving interstate traffic not equipped with a power driving-wheel brake and appliances for operating the train-brake system, or to run any train in such traffic after said date that has not a sufficient number of cars in it so equipped with power or train brakes that the engineer on the locomotive drawing such train can control its speed without requiring brakemen to use the common hand brake for that purpose.

SEC. 2. That on and after the 1st day of January, 1898, it shall be unlawful for any such common carrier to haul or permit to be hauled or used on its line any car used in moving interstate traffic not equipped with couplers coupling automatically by impact, and which can be uncoupled without the necessity of men going between the ends of the cars.

SEC. 3. That when any person, firm, company, or corporation engaged in interstate commerce by railroad shall have equipped a sufficient number of its cars so as to comply with the provisions of section 1 of this act, it may lawfully refuse to receive from connecting lines of roads or shippers any cars not equipped sufficiently, in accordance with the first section of this act, with such power or train brakes as will work and readily interchange with the brakes in use on its own cars, as required by this act.

SEC. 4. That from and after the 1st day of July, 1895, until otherwise ordered by the Interstate Com-

merce Commission, it shall be unlawful for any railroad company to use any car in interstate commerce that is not provided with secure grab irons or hand holds in the ends and sides of each car for greater security to men in coupling and uncoupling cars.

SEC. 5. That within ninety days from the passage of this act the American Railway Association is authorized hereby to designate to the Interstate Commerce Commission the standard height of drawbars for freight cars, measured perpendicular from the level of the tops of the rails to the centers of the drawbars, for each of the several gauges of railroads in use in the United States, and shall fix a maximum variation from such standard height to be allowed between the drawbars of empty and loaded cars. Upon their determination being certified to the Interstate Commerce Commission, said commission shall at once give notice of the standard fixed upon to all common carriers, owners, or lessees engaged in interstate commerce in the United States by such means as the commission may deem proper. But should said association fail to determine a standard as above provided, it shall be the duty of the Interstate Commerce Commission to do so, before July 1, 1894, and immediately to give notice thereof as aforesaid. And after July 1, 1895, no cars, either loaded or unloaded, shall be used in interstate traffic which do not comply with the standard above provided for.

SEC. 6. That any such common carrier using any locomotive engine, running any train, or hauling or permitting to be hauled or used on its line any car in violation of any of the provisions of this act, shall be liable to a penalty of \$100 for each and every such violation, to be recovered in a suit or suits to be brought by the United States district attorney in the district court of the United States having jurisdiction in the locality where such violation shall have been committed, and it shall be the duty of such district attorney to bring such suits upon duly verified information being lodged with him of such violation having occurred. And it shall also be the duty of the Interstate Commerce Commission to lodge with the proper district attorneys information of any such violations as may come to its knowledge: *Provided,* That nothing in this act contained shall apply to trains composed of four-wheel cars or to locomotives used in hauling such trains.

SEC. 7. That the Interstate Commerce Commission may from time to time upon full hearing and for good cause extend the period within which any common carrier shall comply with the provisions of this act.

SEC. 8. That any employee of any such common carrier who may be injured by any locomotive, car, or train contrary to the provision of this act shall not be deemed thereby to have assumed the risk thereby occasioned, although continuing in the employment of such carrier after the unlawful use of such locomotive, car, or train had been brought to his knowledge.

It passed the Senate Feb. 11, 1893, by the following vote, after an earnest discussion:

YEAS—Allison, Berry, Caffery, Call, Carey, Chandler, Cockrell, Coke, Cullom, Davis, Dawes, Dolph, Dubois, Felton, Frye, Gallinger, Gray, Hansbrough, Hawley, Hoar, Jones of Nevada, Kyle, McMillan, McPherson, Morrill, Palmer, Pasco, Pepper, Perkins, Proctor, Fugh, Sherman, Squire, Teller, Turpie, Vilas, Voorhees, Washburn, White—39.

NAYS—Blodgett, Brice, Daniel George, Gorman, Harris, Morgan, Sawyer, Stewart, Vance—10.

NOT VOTING—Aldrich, Allen, Bate, Blackburn, Butler, Camden, Cameron, Casey, Colquitt, Dixon, Faulkner, Gibson, Gordon, Hale, Higgins, Hill, Hisecock, Hutton, Irby, Jones of Arkansas, Manderson, Mills, Mitchell, Paddock, Pettigrew, Platt, Power, Quay, Ransom, Sanders, Shoup, Stanford, Stockbridge, Vest, Walthall, Warren, Wilson, Wolcott—38.

In presenting the measure, Mr. Cullom, of Illinois, said in support of it:

"Mr. President, it does not seem to me that the Senate can afford, with due deference to public judgment and the performance of its own duty, to neglect this subject any longer. The Senator from Maryland and every other member of the Committee on Interstate Commerce know that I have at no time been disposed to crowd legislation beyond what seemed to be absolutely necessary, and I have sometimes felt that I was almost negligent in my duty as chairman of the committee in not pressing legislation earlier than I have done.

"But when a bill has been introduced upon this subject, or any vital amendment to the interstate commerce act has been referred to the committee, the committee has been disposed to hear everybody interested, so as to be sure and make no mistake in what it undertook to do, and that it should not inflict a wrong upon anybody in connection with the railroad service.

"So this subject has been before the Interstate Commerce Committee I think for three or four years, and from time to time we have heard gentlemen representing railroads and representing the employees of railroads, and we have felt a degree of uncertainty heretofore (at least before the last session of Congress) in regard to the matter. We felt that we were not prepared to formally recommend any legislation on the subject lest we might recommend something that Congress ought not to do.

"In the meantime the President of the United States has been calling upon Congress to act. In the meantime, as I said the other day, railroad commissioners of States have been calling upon us to act. In the meantime the labor organizations whose members have had the work to do in the conduct of the railroads have been calling upon us to act. But there was such a diversity of judgment as to the kind of action we ought to take that we thought we were justified in letting the matter wait for the development of further information on the subject.

"However, during the last session of Congress the Senate committee acted, and acted upon the House bill which is now before us, and reported a substitute for that House bill, which, I may say frankly, is more liberal to the common carriers of the country than the House bill itself. The desire of the committee, so far as I know, has been that something should be done upon this question that would give the common carriers or railroads of the country to understand that they must put these devices or some devices upon their cars and their locomotives to give greater security to the lives of the men who are operating the railroads.

"I may read from the messages of the President. Beginning in 1889, he says, in his first annual message:

The attention of the Interstate Commerce Commission has been called to the urgent need of congressional legislation for the better protection of the lives and limbs of those engaged in operating the great interstate freight lines of the country, and especially of the yardmen and brakemen, etc.

"This is only a paragraph of what he said in his first message.

"The honorable Senator from Maryland raises

the question that Congress has nothing to do with the subject. There has not seemed to be any question in the minds of the people, in the minds of the State Railroad Commissioners, in the minds of the Interstate Commerce Commissioners, or in the mind of the President as to the power of Congress to legislate upon this subject, requiring such devices upon locomotives and cars used in interstate commerce as shall as far as possible result in the protection of the lives and limbs of those who are operating them.

"The President, in his second annual message, submitted in December, 1890, again called the attention of Congress to the necessity for greater uniformity in safety appliances in the following words:

It may still be possible for this Congress to inaugurate, by suitable legislation, a movement looking to uniformity and increased safety in the use of couplers and brakes upon freight trains engaged in interstate commerce. The chief difficulty in the way is to secure agreement as to the best appliances, simplicity, effectiveness, and cost being considered, etc.

"Then afterward the President sent another message, and finally in the last message which he sent Congress the recommendation was renewed.

"Still the Senate of the United States, I may say because perhaps the bill was in the control of the Interstate Commerce Committee, has taken no action. We have let it rest and continue to rest, hoping that we might arrive at something that would be certain to result in the very best possible interest of the men operating the roads. In the meantime the national conventions took up the subject. I do not refer to it myself for the purpose of making this a party discussion, but to show that the Senate itself ought to take some action if it has any regard for pledges to the country as Democrats and Republicans. Let us see what the national conventions say. Take the Republican platform adopted at Minneapolis:

We favor efficient legislation by Congress to protect the life and limbs of employees of transportation companies engaged in carrying on interstate commerce, and recommend legislation by the respective States that will protect employees engaged in State commerce, in mining and manufacturing.

"Then the Democratic convention at Chicago adopted the following:

SEC. 19.—We favor legislation by Congress and State legislatures to protect the lives and limbs of railway employees and those of other hazardous transportation companies, and denounce the inactivity of the Republican party, and particularly the Republican Senate, for causing the defeat of measures beneficial and protective to this class of wage workers."

There was a strong fight against the measure in the House of Representatives, and in the course of it Mr. Washington, of Tennessee, presented the case for the railroads as follows:

"My time is so short I will not discuss the legal aspect and the grave constitutional questions involved in this sort of legislation. They have already been briefly commented upon; but, sir, if Congress has the right to prescribe the coupler and brake which shall go upon a freight car, it has the same right and the power to prescribe in every detail and particular the construction of that car, the material of which

it shall be composed, and even the color which it shall be painted. If this legislation is constitutional and right, then the door is open wide for absolute control of all private enterprise by Congress, and it is but a short step to Government ownership of all the instruments of interstate commerce and travel. Then centralization and imperialism will be at hand.

"This bill, sir, proceeds on the theory that if the couplers and brakes now in use on freight trains are substituted by those described in this bill, that all killing and maiming of trainmen would cease. That conclusion is erroneous and is based purely on assumption. Indeed, the very contrary has been asserted by many of the witnesses who testified before the committee. Practical trainmen of long experience stated that the automatic impact couplers now in use were more dangerous, more disastrous to life and limb than the old link-and-pin coupler.

"How many gentlemen on this floor know what shape or type of coupler this bill proposes to force the railroads to adopt? I hold in my hand a model of what is known as 'an impact automatic coupler.' This is the 'Buckeye coupler,' many of which are in use by the Baltimore and Ohio Railroad. Here is another model, 'the Janney,' which is being tried by the Pennsylvania Railroad.

"Sir, neither of these couplers is perfect; both have their good points and their weak or bad points, and so with every automatic coupler thus far invented. If by law you compel the railroads to adopt one or the other of these as they now are, and to expend \$80,000,000 or \$100,000,000 in applying them to their freight cars, you at once petrify, as it were, this improvement. You paralyze invention and stop experiment. As it is to-day, in the absence of legislation the railroads are spending vast sums of money every year experimenting with these devices—searching for a perfect practical coupler and air brake; and as soon as it has been found and the fact established by use, every railroad will adopt it, without any law. Did it require congressional enactment to compel the equipment of passenger cars with patent automatic couplers and buffers, with air brakes, and vestibule arrangements, by which the whole train, for all practical purposes, is one car?

"Sir, this bill requires of the roads a physical impossibility. It compels them to adopt and conform the drawbars on all their cars to a uniform height by January, 1895, and allows until January, 1898, to change the couplers.

"The drawbar and the coupler are one and the same thing. They are interchangeable terms for that appliance by which one car is attached to another and the train is drawn. To raise or lower the drawbar you must raise or lower the entire coupler. To do this requires a great change in the rods and beams under every car. In many cases it would compel such considerable alterations in the trucks as to require that they should be made over. In many cars of a capacity to carry a load of 20,000 to 40,000 pounds the trucks are so low and the structure of the car is such that the drawbar or coupler could not be raised to conform to the standard of a car having a capacity to carry a load of 100,000 pounds.

"There are many coal and ore cars, such as the hopper cars used by the Baltimore and Ohio Railroad, where the construction is such that the coupler, which is higher than the present standard of 33 inches, can not be lowered. For this reason much of the freight equipment of the country would have to be abandoned, would be worthless, because under the bill, unless they conformed to the standard of height prescribed for drawbars, these cars could not be used in interstate commerce.

"The estimate, therefore, of \$100 each on 1,000,000 freight cars, amounting to \$100,000,000, does not begin to fully measure the financial cost of this piece of experimental legislation to the railroads of the country.

"I said this bill would require the roads to perform an impossible task. I have been positively informed by reliable authority that in the eighteen months within which this bill requires all drawbars to be changed to a standard height that it would be absolutely beyond the power of the Baltimore and Ohio Company to so modify its 29,000 freight cars if it stopped all its traffic, ceased all other kinds of repairs, and devoted all the men and machinery in its vast shops simply to changing the height of the drawbars. If such would be the case on one of the great trunk lines, what would be the condition of the smaller and weaker roads in the South and West?

"Sir, I am further informed that it would be impossible for the railroad companies to change their equipment by Jan. 1, 1898, and adopt the appliances required by this act within the five years allowed. To illustrate again: Twenty-nine thousand freight cars are owned by the Baltimore and Ohio Railroad Company; 3,000 are equipped with automatic couplers; to equip the remainder, as provided by this act, with automatic couplers and brakes, will require an expenditure of over \$4,000,000. On the Baltimore and Ohio the number of cars per year to be thus equipped would be practically 6,000 over and above the new cars to be supplied each year. It is not possible to take 6,000 cars each year out of the service of that road for the purpose of having them equipped with automatic couplers and automatic brakes, and at the same time transact its business; this is simply a physical impossibility.

"What is true of the Baltimore and Ohio Railroad Company is true of every railroad in the United States, unless possibly the Pennsylvania Railroad, which has a larger proportion of its equipment already adjusted to automatic couplers and brakes."

The final vote in the House to suspend the rules and concur in the Senate amendments was taken Feb. 27, and was as follows:

YEAS—Abbott, Amerman, Arnold, Babbitt, Baker, Barwig, Belden, Belknap, Beltzhoover, Bland, Bou-telle, Bowers, Bretz, Broderick, Brookshire, Brosius, Brown of Indiana, Brunner, Bryan, Burrows, Busey, Bushnell, Butler, Bynum, Cable, Cadmus, Caldwell, Caminetti, Campbell, Capehart, Castle, Cate, Chip-man, Clancy, Clark of Wyoming, Clover, Coburn, Cogswell, Coolidge, Coombs, Cooper, Covert, Crain, Crosby, Cummings, Curtis, Dalzell, Daniell, Davis, De Armond, De Forest, Dingley, Doan, Dookery, Dol-liver, Donovan, Durbin, Enoch, Fithian, Flick, Forman, Funston, Fyan, Gantz, Geissenhainer, Gorm-man, Griswold, Grout, Halvorson, Hare, Harmer, Har-

ter, Hatch, Haugen, Haynes of Ohio, Heard, Hemphill, Henderson of Iowa, Hermann, Hilborn, Hitt, Holman, Hooker of New York, Hopkins of Pennsylvania, Hopkins of Illinois, Houk of Ohio, Huff, Hull, Johnson of Indiana, Johnson of North Dakota, Jolley, Jones, Kenn, Kribbs, Kyle, Lane, Lanham, Lapham, Lawson of Virginia, Lawson of Georgia, Layton, Lewis, Lind, Lockwood, Lodge, Loud, Lynch, Magner, Mallory, Mansur, Martin, McClellan, McGann, McKaig, McKeighan, McKinney, McLaurin, McKee, Mitchell, Moore, Morse, Norton, O'Donnell, O'Neil of Massachusetts, O'Neil of Missouri, Otis, Outhwaite, Page, Patterson of Tennessee, Patton, Payne, Paynter, Pearson, Perkins, Pickler, Post, Price, Quackenbush, Raines, Randall, Ray, Rayner, Robertson of Louisiana, Sayers, Scott, Shively, Simpson, Sipe, Smith, Sperry, Springer, Stahlnecker, Stephenson, Steward of Illinois, C. W. Stone, W. A. Stone, Storer, Stout, Sweet, Taylor of Illinois, J. D. Taylor, V. A. Taylor, Terry, Tillman, Townsend, Van Horn, Walker, Warner, Watson, Waugh, Weadock, Weaver, Wheeler of Michigan, White, Whiting, Wike, Willcox, Williams of Massachusetts, Williams of Illinois, Wilson of Washington, Wilson of Missouri, Winn, Wise, Wright, Youmans—185.

NAVE—Allen, Antony, Bacon, Bailey, Bankhead, Bartine, Blanchard, Blount, Bowman, Branch, Brawley, Breckinridge of Arkansas, Breckinridge of Kentucky, Brown of Maryland, Buchanan of Virginia, Bullock, Bunn, Caruth, Catchings, Clarke of Alabama, Cobb of Alabama, Cobb of Missouri, Compton, Cox of Tennessee, Crawford, Culberson, Dickerson, Dungan, Edmunds, Elliott, Ellis, English, Enloe, Epes, Everett, Fellows, Forney, Geary, Grady, Greenleaf, Hallowell, Hamilton, Hayes of Iowa, Henderson of North Carolina, Herbert, Hooker of Mississippi, Houk of Tennessee, Johnson of Ohio, Kilgore, Lester of Virginia, Lester of Georgia, Livingston, Long, McAleer, McCreary, McMillin, Meredith, Miller, Montgomery, Moses, Mutchler, Oates, Ohlinger, O'Neill of Pennsylvania, Owens, Peel, Pendleton, Pierce, Richardson, Rife, Robinson of Pennsylvania, Rusk, Scull, Shell, Snodgrass, Stone of Kentucky, Tucker, Turner, Turpin, Washington, Wheeler of Alabama, Williams of North Carolina, Wilson of Kentucky, Wolverton—84.

NOT VOTING—Alderson, Alexander, Andrew, Atkinson, Beeman, Bentley, Bergen, Bingham, Boatner, Brickner, Buchanan of New Jersey, Bunting, Byrns, Causey, Cheatham, Cockran, Cowles, Cox of New York, Cutting, Dixon, Dunphy, Fitch, Fowler, Gillespie, Goodnight, Hall, Harries, Henderson of Illinois, Hoar, Johnstone of South Carolina, Kendall, Ketcham, Lagan, Little, Meyer, Milliken, Newberry, O'Ferrall, Parrett, Pattison of Ohio, Powers, Reed, Reilly, Reyburn, Rockwell, Russell, Sanford, Seerley, Shonk, Snow, Stevens, Stewart of Texas, Stockdale, Stump, Tarsney, Taylor of Tennessee, E. B. Taylor, Tracey, Wadsworth, Wilson of West Virginia—60.

The President approved the measure, March 2, 1893.

National Quarantine.—A bill was reported in the House of Representatives for the better protection of commerce and for the general welfare by the establishment of a national quarantine. In presenting the measure Mr. Rayner, of Maryland, said, Jan. 21, 1893:

"I think we are all agreed upon the proposition that something should be done, if possible, to avoid the threatened presence of pestilence upon our shores during the coming summer, and that while we are providing for temporary security we ought to adopt some permanent plan to protect us in the future from the continual danger to which otherwise we should be exposed.

"It is needless for me to state to the House that it would be impossible to estimate the sacri-

fices we would incur and the losses which would be inflicted upon us if this deadly scourge that has lately depopulated one of the greatest commercial centers of Europe should gain an entrance upon our territory. War or famine would prove far less destructive because against war we could defend ourselves, and against famine we might seek deliverance through the relief and benevolence of mankind.

"I do not wish to create any false apprehensions upon this subject, but with the tide of immigration that is pouring in upon us at every port of entry, the highest authorities unite in predicting that it is almost impossible for us to evade or escape the threatened danger. If we adopt no preventive measures; if we look heedlessly on without any combined effort at resistance; if, with all its horrors staring us in the face, we defy it to approach us; if we are willing to take our chances and rely upon temporary devices and expedients when the emergency is upon us, then, Mr. Chairman, it will be a miracle if we escape, and I am almost tempted to say that it will be a just punishment if the danger overtakes us.

"I shall not consume the time of this House in discussing our constitutional power to pass a bill of this sort. The right to regulate commerce between the States and with foreign countries carries with it the fullest power that is necessary for this purpose. I believe not only in the power, but in the imperative duty of the Federal Government to assume jurisdiction over this matter; and I would, if I had my way—for I want to be very frank, and will say that this bill does not suit me, though I am willing to take it as compromise—if I had my own way I would curtail every unnecessary expense in order to provide for the creation, the equipment, and the maintenance of a board of maritime sanitation that would render the presence of this great calamity impossible in our midst. And if we are unwilling to do that, Mr. Chairman, I want to go a step further and say that I would be in favor of suspending all immigration from infected ports until the danger from infection is passed.

"There are two classes of immigrants coming to this country. The one class has been and will continue to be a benefit and a blessing to the country; the other is a detriment and an injury. This country was intended as an asylum for the downtrodden and the oppressed from every land who are in sympathy with our institutions. But it never was contemplated that our land should become a place of refuge for those who do not believe in any established institutions, who are the disciples of lawlessness, who have been educated in the schools of disorder and anarchy, and who come here simply because they believe that this being a free country, it will afford them a free opportunity to put their pernicious principles into successful execution.

"We may as well, Mr. Chairman, have plain, candid words on the subject; and I have no fear about expressing my exact convictions in reference thereto, because a number of these helpless wanderers whom despotism has lashed over every frontier in Europe and driven in on our shores have my warmest and deepest sympathy in their distress. Robbed of their birthright, unpro-

tected by law, punished and expatriated, they have been despoiled of their homes, forced from their sanctuaries, and sent as outlaws from place to place upon the face of the earth simply for committing the crime of worshiping God according to the traditions of their faith and the dictates of their own consciences.

"I believe, sir, that every civilized nation on the face of the globe ought to combine to demand of their persecutors that they shall be required to amend their code of religious intolerance, and become proselytes at the altar of reason and humanity, or that they shall be no longer tolerated or maintain friendly contact and intercourse with the free nations of the world. But as deeply and profoundly as I feel on this subject, I do not believe that we ought to become the receptacle for the conditions and the vice and the crimes that are turned in on us from the Continent of Europe.

"Last summer, as all will remember, a foreign steamship company sent one of its vessels from an infected port, and with a living sepulchre beneath her decks, with flying colors, entered the harbor of New York, utterly regardless of the sanitary laws of that Commonwealth and of the hundreds and thousands of human lives being imperiled at the port of destination. Had it not been for the heroic conduct of your sanitary officer in that city, there is no foretelling what disaster might have been inflicted on our population. The master of this ship was willing to tie his vessel to the dock and actually to distribute his cargo and steerage, not only in defiance of the laws of New York, but in disregard of the maritime code of nations.

"This instance, Mr. Chairman, only illustrates how utterly powerless even the great State of New York, with its vast municipal powers, would be to provide itself and the balance of the State from an invasion of this character."

In criticism of one of the provisions of the bill Mr. Mallory, of Florida, said:

"I am in full accord with the gentleman in the view that he takes as to most of this bill. I believe that there is an urgent necessity at this moment for Congress to take active and efficient measures for the purpose of preventing the invasion of an epidemic, and I think, sir, that this bill indicates that it has been most carefully considered and weighed well by those qualified to do so.

"So far as the question of maritime quarantine is concerned I am in favor of all of the features of this bill. I believe it is within the power of Congress, under that clause of the Constitution that gives it the right to regulate commerce, to enact all measures that are necessary for the purpose of preventing the importation of diseases to our shores and across our borders; and if this bill were confined to that alone, I would do all that my Chamber of Commerce and my city council have telegraphed me requesting me to do, namely, to cast my vote for the measure.

"But, sir, there is a feature in this bill which I do not think we should allow to pass without at least some criticism. I refer to a portion of the third section.

"Under that portion of the third section to which I refer the Secretary of the Treasury is given power to prescribe rules and regulations,

and State and municipal sanitary authorities are empowered to enforce them if they desire; but in the event of State and municipal sanitary authorities failing or refusing to enforce them, then the President is armed with power to appoint Federal officials for the purpose of carrying out those provisions.

"These provisions, Mr. Chairman, relate to inhibitions upon intercourse between the States. Now, I will go as far as any gentleman who professes to entertain democratic principles in giving the Federal Government ample power in this matter; but, sir, do what I could, I have failed, after a careful examination of the situation and into the judicial decisions bearing upon this point, to find any authority in Congress to say that a citizen of the State of New York, not engaged in commerce, not in any way connected with commerce, can have the heavy hand of the Federal Government laid upon his shoulder and be compelled to abide in the State of New York against his will.

"That is a power we all concede to the States. The State of New Jersey can inhibit the passage of a citizen of New York across the Hudson river. The State of Kentucky can prohibit the passage of a citizen of Ohio across the Ohio river. But, sir, I say there is nowhere in the Constitution nor in any of the decisions that have been rendered by the tribunals in this land upon this question that you can put your finger upon a single utterance or intimation that gives that power to the President or to Congress.

"That, Mr. Chairman, is my special objection to this bill. I appreciate, as I have said, the necessity of our entering upon legislation of this character at this time. I think there is no State in the Union that has had a sadder experience of the necessity of some general legislation of this character than the State which I have the honor in part to represent here.

"Year after year our shores have been invaded by pestilence. Year after year the Legislature has been battling with it, and passing law after law endeavoring to reach a point whereby the sanitary condition of our country could be preserved; and I, who figured somewhat in the legislation of those days, long since reached the conclusion that so far as American quarantine is concerned it is in the power of the United States Government to impose or establish rules and regulations as stringent as may be, and that in the end it will prove to be for the benefit of the community. But, sir, I think that before we endorse the principle that is embodied in this portion of the third section, to which I have referred, before we open the door to the exercise of Federal power any more than it has been, notwithstanding the fact that the appeal is a most urgent one, notwithstanding the fact that eloquence can be poured upon us and every argument that oratory can employ can be ably employed, I say that we will be recreant to our duty if we pass this bill in the form in which it is presented.

"Mr. Chairman, I believe that our powers are limited by the Constitution, and unless authority is granted either directly or by reasonably necessary implication, I for one, sir, shall not pass beyond what I believe to be the limitations prescribed in that instrument."

It passed the House Feb. 23, and it was reported to the Senate with an amendment substituting the Senate measure on the same subject which had been passed but not taken up in the House. Mr. Hill, of New York, said in opposition:

"I know the tendency nowadays is to apply to the General Government for every sort of relief. That tendency it is somewhat difficult to resist. It has exhibited itself to a very great extent during the past few months, and, indeed, ever since the cholera scare of last summer. People who knew very little about the subject and those who knew considerable all came to the idea that there must be a national quarantine, and this bill seems to be the result of that public sentiment which is declared to exist.

"In my judgment the bill is all proper enough wherein it seeks to supply a Federal quarantine in those ports where the States do not provide the facilities. In those States where there are no quarantine regulations, or where the States desire to surrender their privileges in maintaining them, I have no objection to the General Government interfering. I do not believe in the doctrine that the General Government should for any period of time, unlimited as this bill is, interfere with and supersede the State authorities in the maintenance of quarantine.

"I have examined somewhat the pending substitute. It seems to be framed substantially like the act of 1879, whereby a national board of health was created, except that this bill substitutes the Marine Hospital Service instead of the National Board of Health.

"Mr. President, I do not like the tendency of this sort of legislation. The State of New York has always been willing to maintain quarantine substantially at its own expense with such aid as the General Government in emergencies has seen fit to give it. It has satisfied the people of New York State. There has been no substantial complaint of it. Other States may desire the interference of the General Government, but it seems to me a proper amendment to the bill would be a provision whereby it should be provided that the States which desire Government interference might have it and the States that do not desire it may dispense with it."

Mr. Harris, of Tennessee, said in explanation:

"There is not one word in this bill that proposes to interfere with State quarantine or State health officers, except to aid them in the execution of their own rules. Where, in the opinion of the Federal authority, the rules and regulations of the State board are not sufficient to prevent the introduction of disease the Federal authority may make additional rules—not to repeal, not to revoke, not to modify or interfere in any way whatever with any existing rules. If you have incorporated into your rules a dozen requirements that a vessel which enters port shall conform to, and the Federal authority shall think that all of them together are not quite equal to prevent the introduction of disease, the Federal authority may make an additional rule, but not interfere with the rule of the State authority. It does not repeal, modify, or change the State rule in the least."

The measure passed the Senate Feb. 6 without a division, and was approved by the President Feb. 15. It is as follows:

Be it enacted, etc., That it shall be unlawful for any merchant ship or other vessel from any foreign port or place to enter any port of the United States except in accordance with the provisions of this act and with such rules and regulations of State and municipal health authorities as may be made in pursuance of, or consistent with, this act; and any such vessel which shall enter, or attempt to enter, a port of the United States in violation thereof shall forfeit to the United States a sum, to be awarded in the discretion of the court, not exceeding \$5,000, which shall be a lien upon said vessel, to be recovered by proceedings in the proper district court of the United States. In all such proceedings the United States district attorney for such district shall appear on behalf of the United States; and all such proceedings shall be conducted in accordance with the rules and laws governing cases of seizure of vessels for violation of the revenue laws of the United States.

SEC. 2.—That any vessel at any foreign port clearing for any port or place in the United States shall be required to obtain from the consul, vice-consul, or other consular officer of the United States at the port of departure, or from the medical officer where such officer has been detailed by the President for that purpose, a bill of health, in duplicate, in the form prescribed by the Secretary of the Treasury, setting forth the sanitary history and condition of said vessel, and that it has in all respects complied with the rules and regulations in such cases prescribed for securing the best sanitary condition of the said vessel, its cargo, passengers, and crew; and said consular or medical officer is required, before granting such duplicate bill of health, to be satisfied that the matters and things stated therein are true; and for his services in that behalf he shall be entitled to demand and receive such fees as shall by lawful regulation be allowed, to be accounted for as is required in other cases.

The President, in his discretion, is authorized to detail any medical officer of the Government to serve in the office of the consul at any foreign port for the purpose of furnishing information and making the inspection and giving the bills of health hereinbefore mentioned. Any vessel clearing and sailing from any such port without such bill of health, and entering any port of the United States, shall forfeit to the United States not more than \$5,000, the amount to be determined by the court, which shall be a lien on the same, to be recovered by proceedings in the proper district court of the United States. In all such proceedings the United States district attorney for such district shall appear on behalf of the United States; and all such proceedings shall be conducted in accordance with the rules and laws governing cases of seizure of vessels for violation of the revenue laws of the United States.

SEC. 3.—That the Supervising Surgeon-General of the Marine-Hospital Service shall, immediately after this act takes effect, examine the quarantine regulations of all State and municipal boards of health, and shall, under the direction of the Secretary of the Treasury, co-operate with and aid State and municipal boards of health in the execution and enforcement of the rules and regulations of such boards and in the execution and enforcement of the rules and regulations made by the Secretary of the Treasury to prevent the introduction of contagious or infectious diseases into the United States from foreign countries, and into one State or Territory or the District of Columbia from another State or Territory or the District of Columbia; and all rules and regulations made by the Secretary of the Treasury shall operate uniformly and in no manner discriminate against any port or place; and at such ports and places within the United States as have no quarantine regulations under State or municipal authority, where such regulations are, in the opinion of the Secretary of the Treasury, necessary to prevent the introduction of contagious or infectious diseases into the United States from foreign countries, or into one State or

Territory or the District of Columbia from another State or Territory or the District of Columbia, and at such ports and places within the United States where quarantine regulations exist under the authority of the State or municipality which, in the opinion of the Secretary of the Treasury, are not sufficient to prevent the introduction of such diseases into the United States, or into one State or Territory or the District of Columbia from another State or Territory or the District of Columbia, the Secretary of the Treasury shall, if in his judgment it is necessary and proper, make such additional rules and regulations as are necessary to prevent the introduction of such diseases into the United States from foreign countries, or into one State or Territory or the District of Columbia from another State or Territory or the District of Columbia, and when said rules and regulations have been made they shall be promulgated by the Secretary of the Treasury and enforced by the sanitary authorities of the States and municipalities, where the State or municipal health authorities will undertake to execute and enforce them; but if the State or municipal authorities shall fail or refuse to enforce said rules and regulations the President shall execute and enforce the same and adopt such measures as in his judgment shall be necessary to prevent the introduction or spread of such diseases, and may detail or appoint officers for that purpose. The Secretary of the Treasury shall make such rules and regulations as are necessary to be observed by vessels at the port of departure and on the voyage, where such vessels sail from any foreign port or place to any port or place in the United States, to secure the best sanitary condition of such vessel, her cargo, passengers, and crew; which shall be published and communicated to and enforced by the consular officers of the United States. None of the penalties herein imposed shall attach to any vessel or owner or officer thereof until a copy of this act, with the rules and regulations made in pursuance thereof, has been posted up in the office of the consul or other consular officer of the United States for ten days, in the port from which said vessel sailed; and the certificate of such consul or consular officer over his official signature shall be competent evidence of such posting in any court of the United States.

SEC. 4.—That it shall be the duty of the Supervising Surgeon-General of the Marine-Hospital Service, under the direction of the Secretary of the Treasury, to perform all the duties in respect to quarantine and quarantine regulations which are provided for by this act, and to obtain information of the sanitary condition of foreign ports and places from which contagious and infectious diseases are or may be imported into the United States, and to this end the consular officer of the United States at such ports and places as shall be designated by the Secretary of the Treasury shall make to the Secretary of the Treasury weekly reports of the sanitary condition of the ports and places at which they are respectively stationed, according to such forms as the Secretary of the Treasury shall prescribe; and the Secretary of the Treasury shall also obtain, through all sources accessible, including State and municipal and sanitary authorities throughout the United States, weekly reports of the sanitary condition of ports and places within the United States, and shall prepare, publish, and transmit to collectors of customs and to State and municipal health officers and other sanitarians weekly abstracts of the consular sanitary reports and other pertinent information received by him; and shall also, as far as he may be able, by means of the voluntary co-operation of State and municipal authorities, of public associations, and private persons, procure information relating to the climatic and other conditions affecting the public health, and shall make an annual report of his operations to Congress, with such recommendations as he may deem important to the public interests.

SEC. 5.—That the Secretary of the Treasury shall from time to time issue to the consular officers of the

United States and to the medical officers serving at any foreign port, and otherwise make publicly known, the rules and regulations made by him, to be used and complied with by vessels in foreign ports, for securing the best sanitary condition of such vessels, their cargoes, passengers, and crew, before their departure for any port in the United States, and in the course of the voyage; and all such other rules and regulations as shall be observed in the inspection of the same on the arrival thereof at any quarantine station at the port of destination, and for the disinfection and isolation of the same, and the treatment of cargo and persons on board, so as to prevent the introduction of cholera, yellow fever, or other contagious or infectious disease; and it shall not be lawful for any vessel to enter said port to discharge its cargo, or land its passengers, except upon a certificate of the health officer at such quarantine station certifying that said rules and regulations have in all respects been observed and complied with, as well on his part as on the part of the said vessel and its master, in respect to the same and to its cargo, passengers, and crew; and the master of every such vessel shall produce and deliver to the collector of customs at said port of entry, together with the other papers of the vessel, the said bills of health required to be obtained at the port of departure and the certificate herein required to be obtained from the health officer at the port of entry; and that the bills of health herein prescribed shall be considered as part of the ship's papers, and when duly certified to by the proper consular or other officer of the United States, over his official signature and seal, shall be accepted as evidence of the statements therein contained in any court of the United States.

SEC. 6.—That on the arrival of an infected vessel at any port not provided with proper facilities for treatment of the same, the Secretary of the Treasury may detain said vessel, at its own expense, to the nearest national or other quarantine station where accommodations and appliances are provided for the necessary disinfection and treatment of the vessel, passengers, and cargo; and after treatment of any infected vessel at a national quarantine station, and after certificate shall have been given by the United States quarantine officer at said station that the vessel, cargo, and passengers are each and all free from infectious disease, or danger of conveying the same, said vessel shall be admitted to entry to any port of the United States named within the certificate. But at any ports where sufficient quarantine provision has been made by State or local authorities the Secretary of the Treasury may direct vessels bound for said ports to undergo quarantine at said State or local station.

SEC. 7.—That whenever it shall be shown to the satisfaction of the President that by reason of the existence of cholera or other infectious or contagious diseases in a foreign country there is serious danger of the introduction of the same into the United States, and that notwithstanding the quarantine defense this danger is so increased by the introduction of persons or property from such country that a suspension of the right to introduce the same is demanded in the interest of the public health, the President shall have power to prohibit, in whole or in part, the introduction of persons and property from such countries or places as he shall designate, and for such period of time as he may deem necessary.

SEC. 8.—That whenever the proper authorities of a State shall surrender to the United States the use of the buildings and disinfecting apparatus at a State quarantine station, the Secretary of the Treasury shall be authorized to receive them and to pay a reasonable compensation to the State for their use.

SEC. 9.—That the act entitled "An Act to prevent the introduction of infectious and contagious diseases into the United States, and to establish a national board of health," approved March 3, 1879, be and the same is hereby repealed; and the Secretary of the Treasury is directed to obtain possession of any property, furniture, books, papers, or records belonging to

the United States, which are not in the possession of an officer of the Treasury Department which were formerly in the use of the National Board of Health or any officer or employee thereof.

Common Carriers.—On Dec. 15, 1892, the House of Representatives passed a bill "relating to contracts of common carriers and to certain obligations, duties, and rights in connection with the carriage of property." It was amended and passed the Senate Feb. 4, 1893, as follows:

SECTION 1.—That it shall not be lawful for the manager, agent, master, or owner of any vessel transporting merchandise or property from or between ports of the United States and foreign ports to insert in any bill of lading or shipping document any clause, covenant, or agreement whereby it, he, or they shall be relieved from liability for loss or damage arising from negligence, fault, or failure in proper loading, stowage, custody, care, or proper delivery of any and all lawful merchandise or property committed to its or their charge. Any and all words or clauses of such import inserted in bills of lading or shipping receipts shall be null and void and of no effect.

SEC. 2.—That it shall not be lawful for any vessel transporting merchandise or property from or between ports of the United States of America and foreign ports, her owner, master, agent, or manager, to insert in any bill of lading or shipping document any covenant or agreement whereby the obligations of the owner or owners of said vessel to exercise due diligence to properly equip, man, provision, and outfit said vessel, and to make said vessel seaworthy and capable of performing her intended voyage, or whereby the obligations of the master, officers, agents, or servants to carefully handle and stow her cargo and to care for and properly deliver same shall in any wise be lessened, weakened, or avoided.

SEC. 3.—That if the owner of any vessel transporting merchandise or property to or from any port in the United States of America shall exercise due diligence to make the said vessel in all respects seaworthy and properly manned, equipped, and supplied, neither the vessel, her owner or owners, charterers, agent, or master shall become or be held responsible for damage or loss resulting from faults or errors in navigation or in the management of said vessel; nor shall the vessel, her owner or owners, agent, or master be held liable for losses arising from dangers of the sea or other navigable waters, acts of God, or public enemies, or the inherent defect, quality, or vice of the thing carried, or from insufficiency of packing, or seizure under legal process, or for loss resulting from any act or omission of the shipper or owner of the goods, his agent or representative, or from saving or attempting to save life or property at sea, or from any deviation in rendering such service.

SEC. 4.—That it shall be the duty of the owner or owners, master, or agent of any vessel transporting merchandise or property from or between ports of the United States and foreign ports to issue to shippers of any lawful merchandise a bill of lading, or shipping documents, stating, among other things, the marks necessary for identification, number of packages, or quantity, stating whether it be carrier's or shipper's weight, and apparent order or condition of such merchandise or property delivered to and received by the owner, master, or agent of the vessel for transportation, and such document shall be prima facie evidence of the receipt of the merchandise therein described.

SEC. 5.—That for a violation of any of the provisions of this act the agent, owner, or master of the vessel guilty of such violation, and who refuses to issue on demand the bill of lading herein provided for, shall be liable to a fine not exceeding \$2,000. The amount of the fine and costs for such violation shall be a lien upon the vessel, whose agent, owner, or master is guilty of such violation, and such vessel may be libeled therefor in any district court of the United States, within whose jurisdiction the vessel may be found.

One half of such penalty shall go to the party injured by such violation, and the remainder to the Government of the United States.

SEC. 6.—That this act shall not be held to modify or repeal sections 4281, 4282, and 4283 of the Revised Statutes of the United States, or any other statute defining the liability of vessels, their owners, or representatives.

SEC. 7.—Sections 1 and 4 of this act shall not apply to the transportation of live animals.

SEC. 8.—That this act shall take effect from and after the 1st day of July, 1893.

The House concurred in the Senate amendments and the President approved, Feb. 13.

Miscellaneous.—Much of the attention of Congress was occupied by the Antioption bill, a measure defining "options" and futures, and imposing special taxes on dealers therein, and requiring such dealers and persons engaged in selling certain products to obtain license. The measure originated in the House of Representatives, and was passed by that body at the first session of Congress. It was amended and passed the Senate, but fell by the way, as the House refused to suspend the rules and concur.

The Senate ratified the French extradition treaty, Feb. 2, 1893, and the Russian extradition treaty, Feb. 23. The treaty for the annexation of Hawaii was not acted upon. An investigation of the expenditures of the Panama Canal Company in this country was ordered, but the committee intrusted with the matter ceased its inquiries at the most interesting point.

Bills were passed for payment of the claims of New York Indians; to facilitate the enforcement of the immigration and contract-labor laws; for a system of roads in the District of Columbia; to extend to the Northern Pacific Ocean the provisions of statutes for the protection of fur seals and other fur-bearing animals; to ratify and confirm an agreement with the Cherokee nation; to create the California Débris Commission and regulate hydraulic mining; providing for lighthouses and other aids to navigation; providing for fortifications.

Appropriations.—The appropriations made by the Fifty-second Congress at both sessions were as follow:

TITLE OF BILL.	First session, 1893.	Second session, 1894.
Agricultural.....	\$3,282,995 50	\$3,323,300 00
Army.....	24,308,499 82	24,225,639 78
Diplomatic and consular.....	1,614,045 00	1,558,045 00
District of Columbia.....	5,817,978 27	5,413,223 91
Fortification.....	2,784,276 00	2,310,065 00
Indian.....	7,664,047 84	7,551,646 63
Legislative, etc.....	21,900,182 97	21,892,402 33
Military Academy.....	438,917 33	482,566 12
Navy.....	22,542,335 00	22,104,231 33
Pension, including deficiencies.....	154,411,632 00	160,690,737 25
Post-office.....	80,881,276 73	83,307,700 00
River and harbor.....	21,154,218 00	
Sundry civil.....	27,665,076 93	41,701,311 15
Deficiencies, except for pensions.....	8,280,850 50	8,049,838 45
Total.....	\$382,527,385 89	\$408,253,567 69
Miscellaneous.....	2,208,292 82	500,000 00
Total regular annual appropriations.....	\$385,736,308 71	\$408,753,567 69
Permanent annual appropriations.....	121,868,890 00	115,468,973 92
Total by sessions.....	\$507,605,198 71	\$524,222,541 61
Total by Congress.....		\$1,026,592,049 73

Fifty-third Congress.—Special Session.
The Fifty-third Congress met in special session Aug. 7, 1893, in obedience to the following call from the President:

EXECUTIVE MANSION, WASHINGTON, June 30, 1893.

Whereas, the distrust and apprehension concerning the financial situation which pervade all business circles have already caused great loss and damage to our people and threaten to cripple our merchants, stop the wheels of manufacture, bring distress and privation to our farmers, and withhold from our workmen the wage of labor; and

Whereas, the present perilous condition is largely the result of a financial policy which the executive branch of the Government finds embodied in unwise laws which must be executed until repealed by Congress;

Now, therefore, I, Grover Cleveland, President of the United States, in performance of a constitutional duty, do, by this proclamation, declare that an extraordinary occasion requires the convening of both Houses of the Congress of the United States, at the Capitol, in the city of Washington, on the seventh day of August next, at 12 o'clock, noon, to the end that the people may be relieved through legislation from present and impending danger and distress.

All those entitled to act as members of the Fifty-third Congress are required to take notice of this proclamation, and attend at the time and place above stated.

Given under my hand and the seal of the United States, at the city of Washington, on the thirtieth day of June, in the year of our Lord one thousand eight hundred and ninety-three, and of the Independence of the United States the one hundred and seventeenth.

[L. S.]

GROVER CLEVELAND.

The Congress was composed as follows:

SENATE.

<i>Alabama.</i>	<i>Indiana.</i>
1897. James L. Pugh, D.	1897. Daniel W. Voorhees, D.
1895. John T. Morgan, D.	1899. David Turpie, D.
<i>Arkansas.</i>	<i>Iowa.</i>
1897. James K. Jones, D.	1897. William B. Allison, R.
1895. James H. Berry, D.	1895. James F. Wilson, R.
<i>California.</i>	<i>Kansas.</i>
.... George C. Perkins, R.	1897. William A. Peffer, P.
1899. Stephen W. White, D.	1895. John Martin, D.
<i>Colorado.</i>	<i>Kentucky.</i>
1897. Henry M. Teller, R.	1897. J. C. S. Blackburn, D.
1895. Edward O. Wolcott, R.	1895. William Lindsay, D.
<i>Connecticut.</i>	<i>Louisiana.</i>
1897. Orville H. Platt, R.	1897. Edward D. White, D.
1899. Joseph R. Hawley, R. Donelson, Caffery, D.
<i>Delaware.</i>	<i>Maine.</i>
1899. George Gray, D.	1899. Eugene Hale, R.
1895. Anthony Higgins, R.	1895. William P. Frye, R.
<i>Florida.</i>	<i>Maryland.</i>
1897. Wilkinson Call, D.	1897. Charles H. Gibson, D.
1899. Samuel Pasco, D.	1899. Arthur P. Gorman, D.
<i>Georgia.</i>	<i>Massachusetts.</i>
1897. John B. Gordon, D.	1899. Henry O. Lodge, R.
1895. Alfred H. Colquitt, D.	1895. George F. Hoar, R.
<i>Idaho.</i>	<i>Michigan.</i>
1897. Frederick T. Dubois, R.	1899. F. B. Stockbridge, R.
1895. George L. Shoup, R.	1895. James McMillan, R.
<i>Illinois.</i>	<i>Minnesota.</i>
1897. John M. Palmer, D.	1899. Cushman K. Davis, R.
1895. Shelby M. Cullum, R.	1895. Wm. D. Washburn, R.

Mississippi.

1899. James Z. George, D.
1895. K. C. Walthall, D.

Missouri.

1897. George G. Vest, D.
1899. Francis M. Cockrell, D.

Montana.

.... Lee Mantle, R.
1895. Thomas C. Power, R.

Nebraska.

1899. Wm. Vincent Allen, P.
1895. C. F. Manderson, R.

Nevada.

1897. John P. Jones, R.
1899. William M. Stewart, R.

New Hampshire.

1897. Jacob H. Gallinger, R.
1895. Wm. E. Chandler, R.

New Jersey.

1899. James Smith, Jr., D.
1895. John R. McPherson, D.

New York.

1897. David B. Hill, D.
1895. Edward Murphy, Jr., D.

North Carolina.

1897. Zebulon B. Vance, D.
1895. Matt W. Ransom, D.

North Dakota.

1897. H. C. Hansbrough, R.
1899. Wm. Nathaniel Booth, D.

Ohio.

1897. Calvin S. Brice, D.
1899. John Sherman, R.

Oregon.

1897. John H. Mitchell, R.
1895. Joseph N. Dolph, R.

Pennsylvania.

1897. J. D. Cameron, R.
1899. Matthew S. Quay, R.

Rhode Island.

1899. Nelson W. Aldrich, R.
1895. Nathan F. Dixon, R.

South Carolina.

1897. John L. M. Irby, D.
1895. Matthew C. Butler, D.

South Dakota.

1895. R. F. Pettigrew, R.
1897. James H. Kyle, P.

Tennessee.

1899. William B. Bates, D.
1895. Isham G. Harris, D.

Texas.

1899. Roger Q. Mills, D.
1895. Richard Coke, D.

Vermont.

1897. Justin S. Morrill, R.
1899. Redfield Proctor, R.

Virginia.

1899. John W. Daniel, D.
.... E. P. Hunton, D.

Washington.

.... John B. Allen, R.
1897. Watson C. Squire, R.

West Virginia.

1899. Charles J. Faulkner, D.
1895. Johnson N. Camden, D.

Wisconsin.

1897. William F. Vilas, D.
1899. John L. Mitchell, D.

Wyoming.

1895. Joseph M. Carey, R.
.... A. C. Beckwith, D.

After the Legislatures of Montana, Washington, and Wyoming had adjourned without electing Senators for the six years beginning March 4, 1893, Gov. Rickards, of Montana, appointed Lee Mantle, a Republican, to succeed Senator Sanders; Gov. McGraw, of Washington, appointed John B. Allen, a Republican, to succeed himself; and Gov. Osborne, of Wyoming, appointed A. C. Beckwith, a Democrat, to succeed Senator Warren.

On Aug. 23, 1893, the Senate decided that when a State legislature has the opportunity to elect and fails to elect, an appointment by a governor is void. So there were three vacancies in the Senate.

HOUSE OF REPRESENTATIVES.

<i>Alabama.</i>	<i>Arkansas.</i>

(Charles F. Crisp, of Georgia, was chosen Speaker of the House; James Kerr, clerk; H. W. Snow, sergeant-at-arms; A. B. Hurt, door-keeper; Lycurgus Dalton, postmaster; and Samuel W. Haddaway, chaplain.)

On Tuesday, Aug. 8, the President sent to the Congress the following message:

To the Congress of the United States:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they are solely charged, present evils may be mitigated and dangers threatening the future may be averted.

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our national resources; nor is it traceable to any afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial fear and distrust have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of the frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted.

Values supposed to be fixed are fast becoming conjectural, and loss and failure have involved every branch of business.

I believe these things are principally chargeable to congressional legislation touching the purchase and coinage of silver by the General Government.

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle between the advocates of free silver coinage and those intending to be more conservative.

Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver enforced under that statute were regarded by those interested in silver production as a certain guarantee of its increase in price.

The result, however, has been entirely different, for immediately following a spasmodic and slight rise, the price of silver began to fall after the passage of the act, and has since reached the lowest point ever known. This disappointing result has led to renewed and persistent effort in the direction of free silver coinage.

Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating, but the result to which its execution must inevitably lead is becoming palpable to all who give the least heed to financial subjects.

This law provides that in payment of the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly, there shall be issued Treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or upon such ratio as may be provided by law." This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed. Manifestly, a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

Up to the 15th day of July, 1893, these notes had been issued in payment of silver bullion purchased to the amount of more than \$147,000,000. While all but a very small quantity of this bullion remains uncoined and without usefulness in the Treasury, many

of the notes given in its purchase have been paid in gold. This is illustrated by the statement that between the 1st day of May, 1892, and the 15th day of July, 1893, the notes of this kind issued in payment for silver bullion amounted to a little more than \$54,000,000, and that during the same period about \$49,000,000 were paid by the Treasury in gold for the redemption of such notes.

The policy necessarily adopted of paying these notes in gold has not spared the gold reserve of \$100,000,000, long ago set aside by the Government for the redemption of other notes, for this fund has already been subjected to the payment of new obligations amounting to about \$150,000,000 on account of silver purchases, and has, as a consequence, for the first time since its creation, been encroached upon.

We have thus made the depletion of our gold easy, and have tempted other and more appreciative nations to add it to their stock. That the opportunity we have offered has not been neglected is shown by the large amounts of gold which have been recently drawn from our Treasury and exported to increase the financial strength of foreign nations. The excess of exports of gold over imports for the year ending June 30, 1893, amounted to more than \$87,500,000.

Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our Treasury decreased more than \$132,000,000, while during the same period the silver coin and bullion in the Treasury increased more than \$147,000,000. Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the silver purchase law now in force leads in the direction of the entire substitution of silver for the gold in the Government Treasury, and that this must be followed by the payment of all Government obligations in depreciated silver.

At this stage gold and silver must part company, and the Government must fail in its established policy to maintain the two metals on a parity with each other. Given over to the exclusive use of a currency greatly depreciated according to the standard of the commercial world, we could no longer claim a place among nations of the first class, nor could our Government claim a performance of its obligation, so far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through general international co-operation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement so long as we are willing to continue our attempt to accomplish the result single-handed.

The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises, while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners. Foreign investors, equally alert, not only decline to purchase American securities, but make haste to sacrifice those which they already have. It does not meet the situation to say that the apprehension in regard to the future of our finances is groundless and there is no room for lack of confidence in the purposes or power of the Government in the premises. The very existence of this apprehension and lack of confidence, however caused, is a menace which ought not for a moment to be disregarded. Possibly if the undertaking we have in hand were the maintenance of a specific known quantity of silver as the parity with gold, our ability to do so might be estimated and gauged, and perhaps, in view

of our unparalleled growth and resources, might be favorably passed upon; but when our avowed endeavor is to maintain such parity in regard to an amount of silver increasing at the rate of \$50,000,000 yearly, with no fixed termination to such increase, it can hardly be said that a problem is presented whose solution is free from doubt.

The people of the United States are entitled to a sound and stable currency, and to money recognized as such on every exchange and in every market of the world. This Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

This matter rises above the plane of party politics. It vitally concerns every business and calling and enters every household in the land. There is one important aspect of the subject which especially should never be overlooked. At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortune of others; the capitalist may protect himself by hoarding, or may even find profit in the fluctuation of values; but the wage earner, the first to be injured by a depreciated currency and the last to receive the benefit of its correction, is practically defenseless. He relies for work upon the ventures of confident and contented capital. This failing him, his condition is without alleviation, for he can neither prey on the misfortunes of others nor hoard his labor. One of the greatest statesmen our country has known, speaking more than fifty years ago, when a derangement of the currency had caused commercial distress, said: "The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters is the man who earns his daily bread by his daily toil."

These words are as pertinent now as on the day they were uttered, and ought to impressively remind us that a failure in the discharge of our duty at this time must especially injure those of our countrymen who labor, and who, because of their number and condition, are entitled to the most watchful care of their Government. It is of the utmost importance that such relief as Congress can afford in the existing situation be afforded at once. The maxim, "He gives twice who gives quickly," is directly applicable. It may be true that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing. We may hope, too, that calm counsels will prevail, and that neither the capitalists nor the wage earners will give way to unreasoning panic, and sacrifice their property or their interests under the influence of exaggerated fears. Nevertheless, every day's delay in removing one of the plain and principal causes of the present state of things enlarges the mischief already done and increases the responsibility of the Government for its existence. Whatever else the people have a right to expect from Congress, they may certainly demand that legislation condemned by the ordeal of three years' disastrous experience shall be removed from the statute books as soon as their representatives can legitimately deal with it.

It was my purpose to summon Congress in special session early in the coming September, that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demand, which so large a majority of the people, as shown by their suffrages, desire and expect, and to the accomplishment of which every effort of the present Administration is pledged. But while tariff reform has lost nothing of its immediate and permanent importance, and must in the near future engage the attention of Congress, it has seemed to me that the financial condition of the country should at once, and before other subjects, be considered by your honorable body.

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the

purchase of silver bullion, and that other legislative action may be taken to put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

GROVER CLEVELAND.

EXECUTIVE MANSION, Aug. 7, 1893.

The Sherman Act.—Congress got to work on the task before it—the settlement of the silver question—on Friday, Aug. 11, 1893, when Mr. Wilson, of West Virginia, offered in the House of Representatives the following bill:

An Act to repeal a part of an act, approved July 14, 1890, entitled "An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An Act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding one dollar for 371-25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law.

Mr. Bland, of Missouri, pursuant to an agreement between the advocates and the opponents of this measure, offered the following resolution providing for the method in which the House was to consider the bill:

Ordered by the House, That H. R. No. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 A. M. and continue until 5 P. M. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides as the Speaker may determine. The last three days of debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.

Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fail, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

On this resolution the previous question was called for, and it was adopted by a vote of 218 yeas to 100 nays; not voting, 36.

Mr. Bland then offered the following substitute:

A bill (H. R. 2) for the free coinage of silver, and for other purposes.

SECTION 1. *Be it enacted, etc.,* That from and after the passage of this act all holders of silver bullion to the amount of \$100 or more, of standard weight and fineness, shall be entitled to have the same coined at the mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act.

SEC. 2. That the silver dollar provided for in this act shall consist of 412½ grains of standard silver. Said dollars to be a legal tender for all debts, dues, and demands, both public and private.

SEC. 3. That the holder of the silver dollars herein provided for shall be entitled to deposit the same and to receive silver certificates in the manner now provided by law for the standard silver dollar.

SEC. 4. So much of the act of July 14, 1890, entitled "An Act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as requires the monthly purchase of 4,500,000 ounces of silver bullion, be, and the same is hereby, repealed.

Mr. Rayner, of Maryland, began the discussion by a speech in favor of the measure. He said:

"Now, with great regard and due respect to the views of those who differ from me, I desire to state my own position, and my own position alone, very frankly upon this subject.

I am in favor of an unqualified repeal of the purchasing clause of the Sherman act, without any conditions or provisos whatever. I am not in favor of purchasing another ounce of silver, or of coining another dollar of it, either at the present ratio or at any other ratio that we can practically determine upon. Now, in saying this, I desire to add that I have no hostility whatever to the use of silver upon a proper basis as circulating medium; but with all the careful consideration I have been able to devote to this subject, I am convinced beyond all doubt or question that its recognition by coinage, except upon international agreement, is a financial undertaking utterly impossible of accomplishment except at the risk of ruin and disaster.

"The proposition that I had had occasion to maintain in this House before, and that I again assert with all the emphasis I can, is, that in my humble judgment the present ratio is unjust and arbitrary, rendered so by conditions that did not exist at the time of the demonetization of silver, in 1873; and that it lies not within the power of this Government, strong as it is, to corner the silver product of the mines, to keep up the price upon a constantly declining market, to impress upon it a fictitious value, and by legislative decree compel the people to take it at a price in utter disproportion to the figure that it bears in every commercial center of the world.

"The universal experience of history, the action of every sound and solvent government, teach us that if we continue in this mad attempt to equalize that which is unequal, to appreciate a metal that is continually depreciating, to fix a standard for a coin that for over twenty years never has had a fixed value, but has fluctuated with every new acquisition from a premium in 1873 to a decline at this hour of almost one half of its coinage value.

"If this desperate system of finance, with nothing to justify it, with almost the whole intelligence of the country against it, with nothing in its track except disaster and ruin, is to pre-

vail, then, in my opinion, until the day of a better judgment shall come, we might as well retreat from the lofty position we have occupied in the confidence of mankind, and, descending, lock hands with every bankrupt government of the earth that believes in the manufacture of wealth at government mints, in cheap money, in broken contracts, and in repudiated debts, and so believing have by reason of their faith been excommunicated as heretics from the roll of civilized communities and banished from the field of honor.

"I am aware of the fact that many of my colleagues, for whose opinions I entertain the greatest respect, assert, and it has been freely charged, that the decline in the price of silver has been caused by its demonetization at the American mints, and by what is constantly called a "conspiracy" to destroy it as a circulating medium among the governments of Europe. I deny this proposition, and the statistics will not sustain it. It may be true that the free coinage of silver at the mints would tend for a time to keep up the fictitious standard of the coin, but the value of the bullion would always be controlled by the market price; it would fluctuate.

"Like every other commodity, it would be governed by the laws of supply and demand, and eventually, according to every principle of reason, according to every cardinal and accepted axiom of political economy, the coinage price would become the bullion price; the unit of value would be the market value; the money basis would be the basis of the cheaper metal; the dearer metal would leave the avenues of trade; inflation would give way to panic; private obligations would be nullified; public obligations would be discredited; and the honor of the nation would be impaired.

"Now, it is claimed that what we require in this country is a system of bimetallism, a bimetallic standard—that is to say, the free use of both gold and silver at the Government mints. But, Mr. Speaker, we will never have this until the commercial nations of the earth agree upon a proper ratio; and just so long as the Sherman act remains upon the statute book so long is an international ratio a financial impossibility. So long as we purchase silver and part with gold, so long will monetary conferences result in failure. When we cease purchasing silver and proclaim to the world that the gold dollar is the standard and the unit of American value, then we can bring our rivals to terms, because, in my opinion, there is not a sufficient amount of gold in existence to supply the demands of commerce and the necessities of the world's circulation.

"So long as the Treasury continues to act as a pawnbroker's shop for the benefit of the Colorado and Nevada mines, so long will Great Britain and Germany refuse to appreciate the collateral securities that we hold in our vaults; but when a silver certificate can be redeemed at par and a silver dollar is intrinsically worth the inscription that it bears, then we can proudly and defiantly meet them upon the field of finance without the slightest sacrifice of the stability of our currency or the slightest surrender of our honor as a nation.

"Now, let us look for one moment at our experience in attempting to keep up the price of

silver. What is the truth? Why, that silver, instead of rising, is lower to-day than it has ever been; and instead of the silver dollar being upon a parity with gold, the disparity between them is greater than it has ever been in the history of the world. Not only this, but the Government has lost nearly \$40,000,000 in its efforts to "corner" a declining market, and the Treasury to-day would not dare to risk the sale of its bullion silver.

"Not this alone, but with all our persistent efforts to force silver into circulation, the people have stubbornly refused to take it, so that to-day the overwhelming proportion of it is hidden in Government vaults. I believe that if the people appreciated the actual condition of the Treasury, and that there was not enough gold in the Treasury to redeem the smallest fraction of our outstanding notes, there would not be a single one of them that would be worth 60 cents upon the dollar. You ask me, then, what keeps up the parity between gold and silver? I think I can tell you. One thing, and one thing alone—the misplaced confidence of the people.

"When once that yields and the fuse is lighted, there will be no necessity for repealing the Sherman act; it will repeal itself immediately. Commercial ratios will take the place of legal ratios. Our equation of values will depart. The faithless union between gold and silver will be dissolved. Its spurious offspring will be excluded from the channels of legitimate circulation, and your silver certificates and Treasury notes, instead of passing by sleight of hand at par, will be exhibited as mementoes and souvenirs of the most grotesque system of finance that ever obtained among any intelligent people since the day when political economy first claimed recognition as a science, and the doctrine of fiat money was relegated to the bankrupt governments of the Orient and the revolutionary republics of Central and South America."

Aug. 12, Mr. Hendrix, of New York, said in support of the measure:

"I do not propose to take up any time in the discussion of financial theories; I am for practical, decisive action. Why, sir, the way primary principles of finance are brought up on this floor, thrashed over and over, and twisted one way and other, seems extraordinary to one who comes from the markets of the world. The experience of the world is all in one direction. The slow-moving finger of time has not changed its motion for a single second since 1798, when England made the change in her policy by subordinating silver to gold.

"Right along through the ages this process of monetary evolution has gone on. It is going on to-day, and we in this House can not stop it; we can not control it; it controls us. It is no new thing, sir, in the history of monetary evolution for the more desirable currency to dominate. When the Australian used to send stone slabs as the medium of exchange; when the Fiji Islander used red feathers for his currency; when the Roman used his oxen; when in the early ante-Roman days in Ireland female slaves were a medium of exchange—in the use of eggs, in the use of iron, in the use of tin, in the use of zinc, the process of evolution worked out the inferior and worked in the superior article. One

by one have these mediums of exchange been discarded and a higher level reached.

"The world has advanced step by step; and the preference of the world to-day, from barbaric Africa to highly civilized England or America, is, between silver and gold, for the more precious of the two metals. When you gentlemen begin to quarrel you must quarrel with the forces of evolution; do not quarrel with fifty unknown men, whose names are not in any directory, who can not be identified, but who are named *en masse* as being the men who are bringing about all this panic. Let us be perfectly fair with each other on this question. I do not assert here that the Sherman purchase law is the cause of all the woe from which this country is suffering at this moment. No intelligent man talking to intelligent men would undertake to make an assertion of that kind. The Sherman silver law was not responsible for the failure of that Federal bank in Australia in January, 1893, nor for the tumble there of fourteen great banks, nor for the rebounding force of the distress which has gone round the world since that time like a boulder bouncing down a mountain side.

"No; the wave of distress has encircled the globe. The Anglo-Saxon race has overdone the business. It has gone on conquering and populating the far-distant isles. In only one way can we fix the responsibility for the primal moving causes of this distress upon this country—that is, we have been guilty of such legislation here as turned from our shores the golden tide of foreign capital and forced it to go seeking a lodgment in bankrupt, insolvent, irresponsible, and unprosperous countries. In 1878 we began the series of errors, and we would have to-day the same condition under similar circumstances under the Bland-Allison act alone as we have under the Bland-Allison act with the Sherman act superimposed upon it. It is because we have been trying to set ourselves against the tide which is running around the world, the tide that makes toward one single standard—a tide which it is as useless for us to try to turn back as it was for old King Canute to attempt to turn back the ocean breakers from the foot of his throne when, seated on the beach, he ordered the waves to stop.

"My friends, this is, in my judgment, a golden opportunity for this country. You may legislate here as you please, but you might as well legislate against the heat of this August sun; you might as well legislate against the stars by night or the sunshine by day, as to legislate against the preference that is imbedded in the human mind, in human reason, and in human imagination. The world prefers gold. The instinct of every human being is toward it. It is the only metal that contains so much value in such a small body. It is the most portable of metals. While it shares with silver a great many of its features, and while in its onward and upward movement among the nations of the earth it has always had silver as a contestant, and they have traveled side by side, yet various processes have come into operation which have made them part company.

"How have those processes been brought about? Most naturally in the world. In a

policy which was entered upon the English statute books in 1816, and which therefore more frequently bears that date, gold was adopted as the single standard of value. Now look at the process as it has gone on from 1816 in England. What was the next step? For a great many years the Latin Union and Germany and ourselves, the large silver-using countries of India and the South American republics and Mexico, continued to use silver. For a great many years there was no considerable disturbance.

"Silver mining was not exploited to the high point of perfection that it is to-day, and the world's supply of silver was not so great as to cause unusual fluctuations. But when Bismarck thought that he could inflict a greater blow on his old enemy, France, than by the mere paying of the indemnity which he compelled them to pay to Germany for the Franco-Prussian War, he decided to make them pay it in gold, and to use that opportunity to put Germany upon a gold basis and bring together the various discordant and inharmonious systems of currency which the minor states had, and to put all squarely upon the gold basis. The consequence was that the old German thaler, which originated in that valley down in Bavaria which gives the name to our own dollar, came upon the markets of the world through the melting-pot, and they began to feel this extra and unexpected supply.

"The consequence was that silver showed weakness in the markets of the world, and in 1872, Germany having discarded silver in 1871, Norway, Sweden, Denmark, France, and Italy had to cave in at once and close their mints to the free coinage of silver. Now, what was the next step? Holland stood out until 1875, when she caved in. Russia stopped in 1876, except the coinage of some silver dollars for the Chinese trade. Belgium, Switzerland, and Greece stopped in 1878. Austria-Hungary stopped in 1879. Roumania stopped in 1890; and now the last tolling note of the funeral bell is ringing over the doom of silver as a money metal as India, the great sink for silver, shuts its mints to free coinage.

"And here this great and proud nation of people, who love their citizenship and their sovereignty as a people; this magnificent Christian nation, with its men and its women beyond any comparison in domestic spirit, in civic spirit, in social life, with any people on the face of the earth; this great nation, where over a greater area of territory than is known on the face of the earth elsewhere one language is spoken, where there is one set of laws and one system of political thought—this great arena of civilization and liberty is to be asked, alone among all the nations of the earth, to go down upon its knees worshipping, like a gibbering idiot, the idol that has been rejected by every other civilized country in God's world.

"I believe that within the next twenty years—and many gentlemen here will live to see that time—we shall see this whole free-silver craze laid out in the same graveyard along with slavery, along with repudiation, along with fiat money. The evolutionary processes of the world are against you, gentlemen. You may legislate 'until the cows come home,' but in the morn-

ing these evolutionary processes will have gained one night's work, and you will be called back here again and again, as you are called here now, to undo your work. You can not stop it. Gold is bound to be the ultimate redeemer of all the financial systems of first-class nations in this world, and no legislation short of the community of all the nations can stop it. Anybody who stands in the market places and sees the stream of prices as they go by must be forced to this conclusion. And you, gentlemen, are doing your constituents a great wrong—a wrong for which they ought never to forgive you—by continually embarrassing the financial system of this country by weak, lame, halting, sickly propositions, such as have been kicked out of the forum of civilized nations the world over."

Mr. Bland, in the course of his argument on the subject, Aug. 12, said:

"Many now born, by the time they are voters, will compose part of a nation containing perhaps 125,000,000 people, with unsurpassed energies, with a genius nowhere equaled, and with a vast territory upon which those energies and that genius can operate. But a short time ago, when you looked across the Alleghany mountains you beheld the Western wilderness roamed only by the savage and the wild beast. To-day it is teeming with its millions of civilized people, the great Mississippi valley, and when you cross the Mississippi you just begin to enter the great domain of this country of ours, for more than two thirds of it lies beyond the Father of Waters.

"And, Mr. Speaker, it is that two thirds of our territory, rich as it is in gold and silver, imbedded together in the same deposits, in the same mountains, so that you can not extract the one without extracting the other—it is that portion of our territory that would give us the money that we need, the money of the world, good money, hard money, Democratic money—a country that the civilized world must look to for its future monetary supply if it is to continue on what is called the hard-money basis. And yet we are to-day asked to do—what? To lay the blighting hand of confiscation upon the millions of people inhabiting that country, to turn them out as tramps upon the land, merely to satisfy the greed of English gold.

"Oh, my God, shall we do such a thing as that? Will you crush the people of your own land and send them abroad as tramps, will you kill and destroy your own industries, and especially the production of your precious metals that ought to be sent abroad everywhere—will you do this simply to satisfy the greed of Wall Street, the mere agent of Lombard Street in oppressing the people of Europe and of this country? It can not be done, it shall not be done! I speak for the great masses of the Mississippi valley, and those west of it, when I say you shall not do it!

"Any political party that undertakes to do it will, in God's name, be trampled, as it ought to be trampled, into the dust of condemnation now and in the future. Speaking as a Democrat, all my life battling for what I conceived to be Democracy and what I conceived to be right, I am yet an American above Democracy. I do not intend, we do not intend, that any party shall survive, if we can help it, that will lay the confiscating hand upon Americans in the interest of

England or of Europe. Now, mark it. This may be strong language, but heed it. The people mean it, and, my friends of Eastern Democracy, we bid farewell when you do that thing.

"Now, you can take your choice of sustaining America against England, American interests, and American laborers and producers, or you can go out of power. We have come to the parting of the ways. I do not pretend to speak for anybody but myself and my constituents, but I believe that I do speak for the great masses of the great Mississippi valley when I say that we will not submit to the domination of any political party, however much we may love it, that lays the sacrificing hand upon silver and will demonetize it in this country.

"For myself I will not support such a policy here or elsewhere, but will denounce it, and as a Democrat I will denounce it as un-Democratic and un-American, and will ask the people of this country to condemn it as they ought to have condemned the so-called Democrats engaged in it as the agents, the tools—I withdraw that word, but I will say as the representatives, unintentionally, of the money power and the moneyed interests, and not of the masses of the American people.

"Gentlemen, you can not hold the Democratic party together on that line. You can not pledge yourselves to bimetalism in your platform and ignore it in your legislation. We pledged ourselves in the first place to tariff reform, and the people had a right to expect us to deal with that first. In my part of the country we were told to let silver alone; that we already had a law on that subject. They said to us: 'Do not disturb that question, but take up the tariff; we are united on the tariff; let us take up the tariff and reform and reduce it; the tariff is doing us great injury, let us attend to that first.' We thought that declaration was sincere, and we thought the first thing to be taken up was the repeal of the McKinley bill.

"Well, now, my people of the Mississippi valley believed that you would let silver alone, that you would not try to demonetize it, that you would let it stand where it is; they believed the tariff would be considered first. But when you come to say that you are going to demonetize silver, let me tell you that this is a bigger question than the tariff or anything else. This battle of the standards is a world-wide question. The question is whether we are to be put upon a gold standard; and that question is one which in importance is away beyond the year by year regulation of your revenue.

"We voted the ticket in good faith; we expected that the platform would be carried out as was promised—that we would have tariff revision, and that when we came to the money question it would be regulated according to the Chicago platform; that we should have the free coinage of silver, which in itself would destroy this makeshift. But, lo and behold! we find that we were tricked, that we were deceived. And I use that language advisedly. I believe it was not intended by our Eastern Democratic friends that tariff reform should be considered first, but their main, if not their sole, object was to put their hands upon silver and demonetize it, and let tariff reform take care of itself afterward. And here we are, just in that situation. Reduce the tariff

25 per cent., yet make money in gold 25 per cent. more valuable, the tariff remains as great a burden as ever. It takes the same quantity of wheat, corn, pork, and cotton to pay it as before.

"Now, as I have already stated, the silver question, as now presented, is not the question we have had presented to us in the past. It is true that in what has been called the Bland coinage act we passed in this House a free coinage bill (I mean not in this particular body, but in the House of Representatives) by a large majority—by a two-thirds vote. But when it went to the Senate there was engrafted upon it a provision requiring the purchase of at least \$2,000,000 worth of silver each month, and not exceeding \$4,000,000 worth, and its coinage into standard silver dollars. That was a bullion purchase bill.

"But mark the distinction: It required every dollar of that bullion to be coined into money as fast as purchased; and it required the issue on that money of certificates redeemable in silver. To that extent the measure was in the line of bimetalism. The only difficulty was the limitation as to the amount. But the present law repealed that law. You do not propose now to put us back to where we were when you repealed that act, which was adopted as a compromise measure providing for the purchase of from \$2,000,000 to \$4,000,000 worth of silver per month.

"You propose to wipe out the act of repeal and to leave us—where? You propose to remit us to the demonetizing act of 1873, which in all my section of country the Democratic party on every stump has denounced as the monumental fraud of the nineteenth century. Here is a Democratic House proposing to go right back to that act. When you do so you will be guilty of a greater fraud than that act itself. I speak advisedly when I say that if the Democratic party, after all the pledges it has made in regard to silver in its platforms, national and State should take the country back to its condition under the act of 1873, you will have consummated the monumental fraud of the nineteenth century, because we never expected much from Mr. Sherman or his party; they never made many promises, as we have.

"If we now violate in the light of day every pledge that we have made, we shall be convicted of insincerity, of betraying the people who sent us here, of bowing our necks meekly to the yoke of Wall Street. If Democracy means anything, it is that those who come here from the people to represent them should carry out their pledges in good faith. It does not mean that we are to pass an act which (though some people say it will stop the panic) will put a yoke upon your constituencies for probably centuries to come."

Mr. Bryan, of Nebraska, Aug. 16, said in the course of one of the notable speeches of the session:

"I have read with care the message sent to us last week, and have considered it in the light of every reasonable construction of which it is capable. If I am able to understand its language, it points to the burial of silver, with no promise of resurrection. Its reasoning is in the direction of a single standard. It leads irresistibly to universal gold monometallism—to a realm over whose door is written, 'Abandon hope, all ye who enter here!' Before that door I stop,

appalled. Have gentlemen considered the effect of a single gold standard universally adopted? Let us not deceive ourselves with the hope that we can discard silver for gold, and that other nations will take it up and keep it as a part of the world's currency. When all the silver available for coinage could gain admission to some mints, and all the gold available for coinage would find a place for mintage, and some nation like France maintained the parity by means of bimetalism, it was of comparatively little importance whether a particular nation used silver or gold or both.

"Exchange did not fluctuate and trade could be carried on without inconvenience. But times have changed. One nation after another has closed its mints to silver, until the white metal has in European countries been made an outcast by legislation, and has shown a bullion value different from its coinage value. India, at last, guided by the misrepresentations of the metropolitan press, which proclaimed as certain what was never probable, has suspended free coinage, fearing that this country would stop the purchase of silver. If the United States, the greatest silver-producing nation, which now utilizes more than one third of the total annual product of the world, closes its mint to the coinage of silver, what assurance have we that it can retain its place as primary money in the commercial world?

"Is it not more reasonable to suppose that a further fall in the bullion value of silver will be followed by a demand for a limitation of the legal-tender qualities of the silver already in existence? That is already being urged by some. Is it not reasonable to suppose that our hostile action will lead to hostile action on the part of other nations? Every country must have money for its people, and if silver is abandoned and gold substituted it must be drawn from the world's already scanty supply. We hear much about a 'stable currency' and an 'honest dollar.' It is a significant fact that those who have spoken in favor of unconditional repeal have for the most part avoided a discussion of the effect of an appreciating standard. They take it for granted that a gold standard is not only an honest standard, but the only stable standard. I denounce that child of ignorance and avarice, the gold dollar under a universal gold standard, as the most dishonest dollar which we could employ.

"I stand upon the authority of every intelligent writer upon political economy when I assert that there is not and never has been an honest dollar. An honest dollar is a dollar absolutely stable in relation to all other things. Laughlin, in his work on Bimetalism, says:

Monometallists do not, as is often said, believe that gold remains absolutely stable in value. They hold that there is no such thing as a "standard of value" for future payments in either gold or silver, which remains absolutely invariable.

"He even suggests a multiple standard for long-time contracts. I quote his words:

As regards national debts, it is distinctly averred that neither gold nor silver forms a just measure of deferred payments, and that, if justice in long contracts is sought for, we should not seek it by the doubtful and untried expedient of international bi-

metallism, but by the clear and certain method of a multiple standard, a unit based upon the selling prices of a number of articles of general consumption. A long-time contract would thereby be paid at its maturity by the same purchasing power as was given in the beginning.

"Jevons, one of the most generally accepted of the writers in favor of a gold standard, admits the instability of a single standard, and in language very similar to that above quoted suggests the multiple standard as the most equitable if practicable. Chevalier, who wrote a book in 1858 to show the injustice of allowing a debtor to pay his debts in a cheap gold dollar, recognized the same fact, and said:

If the value of the metal declined, the creditor would suffer a loss upon the quantity he had received; if, on the contrary, it rose, the debtor would have to pay more than he calculated upon.

"I am on sound and scientific ground, therefore, when I say that a dollar approaches honesty as its purchasing power approaches stability. If I borrow a thousand dollars to-day, and next year pay the debt with a thousand dollars which will secure exactly as much of all things desirable as the one thousand which I borrowed, I have paid in honest dollars. If the money has increased or decreased in purchasing power, I have satisfied my debt with dishonest dollars. While the Government can say that a given weight of gold or silver shall constitute a dollar, and invest that dollar with legal-tender qualities, it can not fix the purchasing power of the dollar. That must depend upon the law of supply and demand, and it may be well to suggest that this Government never tried to fix the exchangeable value of a dollar until it began to limit the number of dollars coined.

"If the number of dollars increases more rapidly than the need for dollars—as it did after the gold discoveries of 1849—the exchangeable value of each dollar will fall and prices rise. If the demand for dollars increases faster than the number of dollars—as it did after 1800—the price of each dollar will rise and prices generally will fall. The relative value of the dollar may be changed by natural causes or by legislation. An increased supply—the demand remaining the same—or a decreased demand—the supply remaining the same—will reduce the exchangeable value of each dollar. Natural causes may act on both supply and demand; as, for instance, by increasing the product from the mines or increasing the amount consumed in the arts. Legislation acts directly on the demand, and thus affects the price, since the demand is one of the factors in fixing the price.

"If by legislative action the demand for silver is destroyed and the demand for gold is increased by making it the only standard, the exchangeable value of each unit of that standard, or dollar as we call it, will be increased. If the exchangeable value of the dollar is increased by legislation the debt of the debtor is increased, to his injury and to the advantage of the creditor. And let me suggest here, in reply to the gentleman from Massachusetts, who said that the money lender was entitled to the advantages derived from improved machinery and inventive genius, that he is mistaken. The laboring man and the producer are entitled to these benefits,

and the money lender by every law of justice ought to be content with a dollar equal in purchasing power to the dollar which he loaned; and any one desiring more than that desires a dishonest dollar, it matters not what name he may give to it. Take an illustration: John Doe, of Nebraska, has a farm worth \$2,000, and mortgages it to Richard Roe, of Massachusetts, for \$1,000. Suppose the value of the monetary unit is increased by legislation which creates a greater demand for gold. The debt is increased. If the increase amounts to 100 per cent. the Nebraska farmer finds the prices of the products have fallen one half and his land loses one half its value, unless the price is maintained by the increased population incident to a new country.

"The mortgage remains nominally the same, though the debt has actually become twice as great. Will he be deceived by the cry of 'honest dollar'? If he should loan a Nebraska neighbor a hog weighing 100 pounds and the next spring demand in return a hog weighing 200 pounds he would be called dishonest, even though he contended he was only demanding one hog—just the number he loaned. Society has become accustomed to some very nice distinctions. The poor man is called a socialist if he believes that the wealth of the rich should be divided among the poor, but the rich man is called a financier if he devises a plan by which the pittance of the poor can be converted to his use.

"The poor man who takes property by force is called a thief, but the creditor who can by legislation make a debtor pay a dollar twice as large as he borrowed is lauded as the friend of a sound currency. The man who wants the people to destroy the Government is an anarchist, but the man who wants the Government to destroy the people is a patriot.

"We have been called cranks and lunatics and idiots because we have warned our fellow-men against the inevitable and intolerable consequences which would follow the adoption of a gold standard by all the world. But who, I ask, can be silent in the presence of such impending calamities? The United States, England, France, and Germany own to-day about \$2,600,000,000 of the world's supply of gold coin, or about five sevenths of the total amount, and yet these four nations contain but a small fraction of the inhabitants of the globe. What will be the exchangeable value of a gold dollar when India's people, outnumbering alone the inhabitants of the four great nations named, reach out after their share of gold coin? What will be the final price of gold when all the nations of the Occident and Orient join in the scramble?

A distinguished advocate of the gold standard said recently, in substance: 'Wheat has now reached a point where the English can afford to buy it, and gold will soon return to relieve our financial embarrassment.' How delighted the farmer will be when he realizes what an opportunity he has to save his country! A nation in distress; banks failing; mines closed; laborers unemployed; enterprise at a standstill, and behold, the farmer, bowed with unceasing, even if unremunerative, toil, steps forth to save his country—by selling his wheat below the cost of production! And I am afraid he will even

now be censured for allowing the panic to go as far as it has before reducing his prices.

"It seems cruel that upon the growers of wheat and cotton—our staple exports—should be placed the burden of supplying us at whatever cost with the necessary gold, and yet the financier quoted has suggested the only means, except the issue of bonds, by which our stock of gold can be replenished. If it is difficult now to secure gold, what will be the condition when the demand is increased by its adoption as the world's only primary money? We would simply put gold on an auction block, with every nation as a bidder, and each ounce of the standard metal would be knocked down to the one offering the most of all other kinds of property. Every disturbance of finance in one country would communicate itself to every other, and in the misery which would follow it would be of little consolation to know that others were suffering as much as, or more than, we.

"I have only spoken of the immediate effects of the substitution of gold as the world's only money of ultimate redemption. The worst remains to be told. If, as in the resumption of specie payments in 1879, we could look forward to a time when the contraction would cease, the debtor might become a tenant upon his former estate, and the home owner assumes the rôle of the homeless with the sweet assurance that his children or his children's children might live to enjoy the blessings of a 'stable currency.' But, sir, the hapless and hopeless producer of wealth goes forth into a night illuminated by no star; he embarks upon a sea whose farther shore no mariner may find; he travels in a desert where the ever-retreating mirage makes his disappointment a thousandfold more keen. Let the world once commit its fortunes to the use of gold alone, and it must depend upon the annual increase of that metal to keep pace with the need for money.

"The director of the mint gives about \$130,000,000 as the world's production for last year. Something like one third is produced in connection with silver, and must be lost if silver mining is rendered unproductive. It is estimated that nearly two thirds of the annual product is used in the arts, and the amount so used is increasing. Where, then, is the supply to meet the increasing demands of an increasing population? Is there some new California or some undiscovered Australia yet to be explored?

"Is it not probable that the supply available for coinage will diminish rather than increase? Jacobs, in his work on the 'Precious Metals,' has calculated the appreciation of the monetary unit. He has shown that the almost imperceptible increase of 2 per cent. per year will amount to a total appreciation of 500 per cent. in a century. Or, to illustrate, that cotton at 10 cents to-day and wheat at 60 cents would mean cotton at 2 cents and wheat at 12 cents in one hundred years. A national, State, or municipal debt renewed from time to time would at the end of that period be six times as great as when contracted, although several times the amount would have been paid in interest.

"When one realizes the full significance of a constantly appreciating standard he can easily agree with Alison that the Dark Ages resulted

from a failure of the money supply. How can any one view with unconcern the attempt to turn back the tide of civilization by the complete debasement of one half of the world's money? When I point to the distress which, not suddenly, but gradually, is entering the habitations of our people; when I refer you to the census as conclusive evidence of the unequal distribution of wealth and of increasing tenancy among our people, of whom, in our cities, less than one fourth now own their homes; when I suggest the possibility of this condition continuing until, passed from a land of independent owners, we become a nation of landlords and tenants, you must tremble for civil liberty itself.

"Free government can not long survive when the thousands enjoy the wealth of the country and the millions share its poverty in common. Even now you hear among the rich an occasionally expressed contempt for popular government, and among the poor a protest against legislation which makes them 'toil that others may reap.' I appeal to you to restore justice and bring back prosperity while yet a peaceable solution can be secured. We mourn the lot of unhappy Ireland, whose alien owners drain it of its home-created wealth; but we may reach a condition, if present tendencies continue, when her position at this time will be an object of envy, and some poet may write of our cities as Goldsmith did of the 'Deserted Village':

While scourged by famine from a smiling land,
The mournful peasant leads his humble band,
And, while he sinks without one arm to save,
The country blooms—a garden and a grave.

Mr. Bryan summed up the party pledges on the subject as follows:

"Sirs, what will be the answer of the people whom you represent, who are wedded to the 'gold and silver coinage of the Constitution,' if you vote for unconditional repeal, and return to tell them that you were commended for the readiness with which you obeyed every order, but that Congress has decreed that one half of the people's metallic money shall be destroyed?

"They demand unconditional surrender, do they? Why, sirs, we are the ones to grant terms. Standing by the pledges of all the parties in this country, backed by the history of a hundred years, sustained by the most sacred interests of humanity itself, we demand an unconditional surrender of the principle of gold monometallism as the first condition of peace. You demand surrender! Ay, sirs, you may cry 'Peace! peace!' but there is no peace. Just so long as there are people here who would chain this country to a single gold standard, there is war—eternal war; and it might just as well be known now! I have said that we stand by the pledges of all platforms. Let me quote them:

"The Populist platform adopted by the national convention in 1892 contained these words:

We demand free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1.

"As the members of that party, both in the Senate and in the House, stand ready to carry out the pledge there made, no appeal to them is necessary.

"The Republican national platform adopted in 1888 contains this plank:

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

"The same party in 1892 adopted a platform containing the following language:

The American people from tradition and interest favor bimetallicism, and the Republican party demands the use of both gold and silver as standard money, such restrictions to be determined by contemplation of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be equal at all times.

The interests of the producers of the country, its farmers and its workmen, demand that every dollar, paper or gold, issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international parity of value between gold and silver for use as money throughout the world.

"Are the Republican members of this House ready to abandon the system which the American people favor 'from tradition and interest'? Having won a presidential election upon a platform which condemned 'the policy of the Democratic Administration in its efforts to demonetize silver,' are they ready to join in that demonetization? Having advocated the Sherman law because it gave an increased use of silver, are they ready to repeal it and make no provisions for silver at all? Are they willing to go before the country confessing that they secured the present law by sharp practice, and only adopted it as an ingenious device for preventing free coinage, to be repealed as soon as the hour of danger was passed?

"The Democratic platform of 1880 contained these words:

Honest money, consisting of gold and silver, and paper convertible into coin on demand.

"It would seem that at that time silver was honest money, although the bullion value was considerably below the coinage value.

"In 1884 the Democratic platform contained this plank:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

"It would seem that at that time silver was considered honest money.

"In 1888 the Democratic party did not express itself on the money question except by saying:

It renewed the pledge of its fidelity to Democratic faith, and reaffirms the platform adopted by its representatives in the convention of 1884.

"Since the platform of 1884 commended silver as an honest money, we must assume that the reaffirming of that platform declared anew that silver was honest money as late as 1888, although at that time its bullion value had fallen still more.

"The last utterance of a Democratic national convention upon this subject is contained in the platform adopted at Chicago in 1892. It is as follows:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of

the country, and to the coinage of both gold and silver without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

"Thus it will be seen that gold and silver have been indissolubly linked together in our platforms. Never in the history of the party has it taken a position in favor of a gold standard. On every vote taken in the House and Senate a majority of the party have been recorded not only in favor of bimetallicism, but for the free and unlimited coinage of gold and silver at the ratio of 16 to 1.

"The last platform pledges us to the use of both metals as standard money and to the free coinage of both metals at a fixed ratio. Does any one believe that Mr. Cleveland could have been elected President upon a platform declaring in favor of the unconditional repeal of the Sherman law? Can we go back to our people and tell them that, after denouncing for twenty years the crime of 1873, we have at last accepted it as a blessing? Shall bimetallicism receive its deathblow in the House of its friends, and in the very hall where innumerable vows have been registered in its defense? What faith can be placed in platforms if their pledges can be violated with impunity? Is it right to rise above the power which created us? Is it patriotic to refuse that legislation in favor of gold and silver which a majority of the people have always demanded? Is it necessary to betray all parties in order to treat this subject in a 'non-partisan' way?"

Mr. Grosvenor, of Ohio, though ready to support the measure, laid most of the business depression to the probability of changes in the tariff under the pledges made in the Democratic platform. He said:

"One by one the furnaces went out, one by one the mines closed up, one after another the factories shortened their time. Why did they do that? Was it a mere senseless stampede? Was it a Wall-Street panic? Was it an unintelligent curtailment of the business of the country? I say not. Where is there an intelligent man to-day, if he were a manufacturer, with this threat of the presence of the Democratic party in power, the menace of its presence, the threat of its mere existence under that platform, and confiding, as human nature does, in the belief that a great political party will do what it says it will do—a violent presumption, I will admit, in the present instance—what one of you at the head of an industrial institution would carry on your business?"

"Let me ask you now to put this question to your constituents: What one of you at the head of an institution that manufactured something, anything, any one of the great institutions of the country employing laboring men, would make anything if you did not have a contract for its

reception, and payment on reception? And you would not even dare do that for fear the party who contracted to buy would find himself unable to comply with the contract at the end. What one of you who was a merchant would dare to buy anything to-day; and if so, what? The merchants of the country are buying just what they are compelled to buy from day to day. The manufacturer is making to-day just what he has orders for from undoubtedly solvent persons who have ordered the goods; and this has worked a revolution from one end of the country to the other.

"Bear in mind, now, I am not discussing the tariff question. I am not here to have that controversy now. We shall have a great deal of that, or the Democratic party will go to protest for default of its promises, for the 'robber' is at our throat yet, and you are passing away a great deal of valuable time while the robber is taking your substance from you, according to your views of the case. But I am simply pointing out how true it is that it is an entire revolution in this great industrial system, and that it is not by any means the product of this Sherman law.

"Mr. Speaker, it is said by the distinguished gentleman from Missouri that the volume of money is affected by the opening of every new industrial enterprise. As I understood his language the other day, he said that the erection of every new industrial institution made an additional call for an increase in the volume of the currency. If that be true, and if there was a fairly adequate volume of currency last November, there ought to be an almighty surplus in the country now; for I take it that the logic of that argument goes both ways, and that if the opening of a new industrial pursuit makes a demand for money, the closing of one will likewise congest the money somewhere; and, therefore, rather than be trying to make more money, we ought to be operating upon the industrial organizations of the country.

"The Republican party will always be patriotic; and we have the strongest assurance that the Democratic party will be in the present instance, or they would not dare to launch an administration measure upon the country and challenge defeat, or battle for success, basing their hopes upon the Republican minority of this House, when that Republican minority have been treated as we have been treated here.

"And now, Mr. Speaker, I have a suggestion to make looking to the restoration of confidence in this country. The imperfect organization of the House has been such that I have not had an opportunity to present to the country my remedy; but as a part of my speech, in my time, I ask to have read at the desk of the clerk a joint resolution which, in my judgment, would have done more than any tampering with the currency of this country to have restored confidence if it could have been introduced and then triumphantly enacted."

The clerk read as follows:

[Fifty-third Congress, House of Representatives.]
Joint resolution declaring the intention of Congress in the matter of legislation touching the condition of the country.

Whereas the causes that have led to the present deplorable condition of the business of the country are

not known so definitely as to present an agreement of opinion, it is nevertheless universally agreed that one of the elements, which has become a potent factor, is the fear everywhere felt that Congress will change the tariff duties upon articles imported from abroad coming in direct competition with American products, and thus unfavorably affect home production; and

Whereas, the declaration of the platform of the Democratic convention of 1892 has caused fear in the country that the provisions of that platform would be carried into execution by Congress, and such fear has caused great reduction of production in all classes of manufacture, thereby throwing out of employment large numbers of workmen and causing a reduction in the wages of all who remain employed, whereby many workmen have become dependent upon charity for subsistence; and

Whereas, if this condition is not immediately checked and confidence be speedily restored, at least in some important measure, wider-spread demoralization in all branches of business will follow, with all the horrors of destitution, idleness, bankruptcy, and all the incidents of such conditions: Now, therefore, as one measure of relief, be it

Resolved, That it is not the intention of the Fifty-third Congress to make radical or important changes in the principles of tariff taxation, and it is hereby solemnly declared that Congress will not undertake a sweeping revision of the tariff laws, nor will it remove from American products, either of the farm, the mine, or the shop, that protection which now stands between the American producer and the foreign producer; and especially it is hereby declared that Congress will not remove from the products of agricultural industries the full measure of protection now afforded by law, to the end that wages may be maintained at the present rates and the producer be rewarded for his labor and capital by adequate prices.

"This declaration is demanded by the business interests of the whole country. This declaration by Congress would loosen the crippled wheels of industry. The cry comes up from all over the country, 'Let alone the tariff! let the McKinley law stand where it is!'"

Mr. Reed, of Maine, Aug. 26, in a speech in support of the measure, made this general statement as to the nature of the financial difficulty:

"Mr. Speaker, I am not certain of the wisdom of any member of this House, and least of all of my own. I am quite conscious also how difficult it is for anybody to know anything about currency in general, and how especially difficult it is to provide a remedy for a derangement of currency at any particular time. Nevertheless, while I have grave doubts of the wisdom of each individual, including myself, and no doubt whatever of the difficulty of the task, it is a comfort to me to fall back upon a well-established belief in the wisdom of all, even when shown by the decisions of the Congress of the United States.

"It may not be an absolutely righteous decision which we shall reach, nevertheless it is a comforting assurance to believe that that decision will be sufficient for the emergency, especially since it is accompanied by the certainty that no other wisdom is possible at the present time. Upon us and the people who are influencing our votes rests the decision of this and of other very important questions.

"Crises like the present are not uncommon in the history of the world; indeed, they seem to be essential to human progress, and to arise out of the characteristics of human nature itself.

Probably if wise men, now alive, had been consulted in the formation of the nature of mankind there would not have been these fluctuations which now disturb us, and which disfigure the history of the time. If we could have had that perfection of wisdom which is exhibited, so far as I have ever known, only in a greenback oration, we should have the human race proceeding on the upward grade steadily, without faltering and without relapse.

"But, unfortunately, human nature was not framed in that way. Instead of a continuous upward movement, always rising, always going forward, the movement of the human race seems to be a series of upward starts and of falls of almost proportionate length. The general progress has always been onward, but there have been many times when the movement has seemed to be to the rear.

"In the history of civilized nations these alternations have not been infrequent. The great rises and the great falls have extended over long periods of time. At intervals there have been minor falls as well as minor upliftings. We seem now to be at the beginning of one of those declines, the like of which happens after a long period. Unless all indications fail, we are in a situation very much like that which afflicted England in 1798 and in 1825, and which began to afflict us in the year 1873.

"After each long period of recuperation something starts the confidence of the human race in itself and the confidence of the nation in itself, and men feel a sudden courage to undertake all enterprises and to indulge in every effort tending to progress. Each one seems to encourage the other. Each enterprise seems to be an assistance to the other. The result is, that for a series of years prosperity seems to increase; men are busy, capital is busy, and prosperity without limit seems to be within the reach of the race and of the nation.

"Suddenly, from some cause entirely unanticipated, a doubt is cast upon the reality of the progress which has been made. Something awakens the element of caution in the race or nation, and, thereupon, rapidly and steadily, confidence disappears. Men feel that it is necessary to take an exact observation of the situation before resuming strenuous efforts. When that hour arrives there is no possibility of retreat or of change.

"The race or the nation has determined to examine into its condition, and the result is apparent disaster, misfortune, defeat, destruction of industries, and a general paralysis of business and of labor. There is a general liquidation of human affairs. Each man discovers what he is really worth, and the nation finds precisely what its absolute wants and needs are. If the period of prosperity could be expressed in a single word, that word would be confidence; and if the period of adversity, as we call it, could be expressed in a single word, that word would be distrust.

"During the period of progress, during the period of increased endeavor, where all capital is employed and every man is at work, confidence reigns supreme. Every man believes in his own success and in the success of his neighbor. Consequently, he is free to take goods and property at the general valuation; and the people who

sell property are ready to take the checks and instruments by which property is transferred. When the period of doubt sets in values become uncertain, because it is felt that a readjustment must be had. Checks and evidences of transfer are scrutinized with care, because men who were wealthy yesterday may be poor to-day.

"So, also, production ceases because the producer has great doubts whether the production of his mill or his workshop will be capable of sale, and, above all, whether he will gather in the proper payment. How far this element of distrust may go depends upon the seriousness of the previous inflation of values; and after a time, when men find precisely how they are situated themselves, and how their neighbors are placed, there begins slowly to revive the confidence which distinguished the former period, in small measure at first, and afterward in larger measure, until finally we reach another period, where confidence reigns and productiveness is at its utmost.

"This alternation between extreme production and production reduced to its lowest terms is something which the philanthropist may regard with horror, but which the man who has observed the history of the world is obliged to regard with tolerance. While these fluctuations occur often in the history of the human race, each one occurs from its own separate and special cause.

"In former times they used to be more especially confined to each particular country and were not simultaneous, but modern times have bound the earth together, so that it is impossible for even the greatest nation to disregard the other nations of the earth. The railroad has diminished distance and the telegraph has obliterated time. The ocean steamers plying between the different hemispheres, the trains of cars which sweep across the continents, have made business a far different thing from what it was in the earlier ages.

"Without undertaking to give the particulars of the change, it is enough to say that the world, which in the days of Magellan it required three years to circumnavigate, can be circumnavigated to-day in a period of two months. This binding together of the whole world by obliteration of time and distance has bound together the business of the world, and hence these periodic changes occur in greater or less measure throughout the world, not always exactly simultaneous, but always more or less sympathetic.

"Nevertheless, in each particular nation the cause is peculiar to itself. Each nation produces its own means of temporary prosperity; also its own causes for temporary depression. The fact that these depressions are nearly simultaneous does not in any way militate against the suggestions just made. If any one desires to notice the connection between the different countries he has only to go back to the crisis which occurred in the year 1890. It was found that there was a great scarcity of money in the United States, so great that under the influence of universal clamor more than forty millions of currency were let loose from the United States Treasury among the people of the United States.

"I do not think at the time that any one here fully comprehended the cause, although some

wise men had an inkling of it; but there was felt to be a constant drain of currency which was taking from us not only the money which we previously had in circulation, but the large sum which I have mentioned from the Treasury of the United States. When the course of events reached its end it was discovered that the great money center of the world—London, the capital of England—had been severely drained by a most tremendous set of enterprises in a distant nation of South America.

"The effect of that tremendous call upon the money center of Europe, which resulted in the shaking down of the house which was the synonym, especially in the United States of America, of credit, of enterprise, and of solidity—the house of Baring Brothers—drew upon the resources of the United States with a vigor that no one would have dared to prophesy a year before.

"But the United States at that time was sound in every way, and had not yielded to any disposition to inflation; consequently the storm was weathered, and we continued upon our career of prosperity and of labor. The country was prosperous because everybody was at work, because capital was thoroughly employed, and all the goods that were produced were consumed and were necessary for the wants of the people.

"In the year 1890, from a variety of circumstances which it is not necessary now to discuss—for the country cares very little to-day whether anybody was or was not to blame for the passage of the Sherman act—conspired to make the passage of that act an absolute necessity. The passage of that act pledged the United States to purchase every month, and issue its value in currency, 4,500,000 ounces of silver.

"At the time when that act was passed every patriot sincerely hoped that the expectation of the friends of silver, that that purchase would result in solving the problem of bimetalism for this country and placing silver on a par with gold, would be realized. That the friends of silver entertained that view I can not doubt, because it was expressed to me in terms of the utmost confidence. At the time, the passage of the act caused very little fear on the part even of the wisest; but a series of events, which are so fresh in the memory of every man who hears me that I need not recapitulate them, caused a drain of gold from the United States to England.

"That drain of gold sounded the alarm to the American people that the period of prosperity through which they had passed, and which was then in existence; which was shown by the employment of capital and the employment of labor, had reached a period of suspicion—a period always reached in such forward movements of the human race, and always to be anticipated, but never in reality anticipated. At no time when any nation in the world has been at one of these periods of prosperity have men in general suspected that the period of prosperity was about to close.

"Every man is in the whirl of ambitious effort, carried away by it, swept in the direction of it, and hence does not know what is about to happen. The stroke of the clock which shows that the time of settlement has arrived is always

a surprise; and, from the nature of things, and of human beings, always will be a surprise.

"Last May it became apparent that we had reached a period when a wise and judicious man would be careful to curtail the amount of his obligations. Some wise men had done so beforehand; other wise men had waited until that period. The banks then commenced to examine their collaterals, to call in their loans, and to put themselves in a position of safety, so far as possible. The first element of dissatisfaction and doubt which pressed itself upon the people was the fact that there was a continuous and unaccountable drain of gold.

"That drain of gold amounted, in round numbers, to a very great sum, so nearly equalling the amount of issue under the Sherman law that it seemed almost conclusive that the displacement of currency which was happening was on account of the issue under the Sherman law, because it seemed to be driving out the same proportion of gold which was the equivalent of its own amount. Whether that reasoning was sound or safe or correct is in no wise a matter of discussion. The fact that the feeling existed was sufficient for all the purposes of practical life.

"Men felt that it was absolutely necessary, even if that question was a question of doubt, so long as it was a question at all, that they should curtail their enterprises in the future, and that they should put themselves in order for a storm. Then followed what seems to be one of the characteristics of such a period—universal distrust. The first distrust arose from the doubt whether the United States was not rapidly approaching a system which would inevitably result in a silver standard and a lowering of the value of the dollar as compared with the gold standard, upon which the United States was then undertaking to base itself.

"This has nothing whatever to do with the question of the righteousness of the double standard or of the single standard. The United States at that moment was making gold its standard, and any question as to whether it was to fall or not to a silver standard was a question which instantly aroused the desire of the people to hoard, first gold, then, as the distrust spread, all kinds of money, for we not only began to doubt the Government of the United States and its policy, but also to doubt the solvency—not the present solvency, but the future solvency—of all the institutions of the country.

"When suspicion and doubt of that kind once enter the minds of 65,000,000 people there is no knowing where it will end. That it took serious possession of them is shown by the simple fact that out of the United States banking houses alone \$190,000,000 deposits were drawn by depositors from all parts of the country. How much was drawn out of State banks and out of trust companies, how much has been drawn out of savings banks, no one will ever probably know; but so much has been drawn, so much has been hoarded, so much has been kept out of circulation, that we are suffering to-day all the calamities of a restricted circulation in the midst of an abundant supply of money.

"This, then, at the present moment is the situation in which we find ourselves. I have, in thus narrating the outward circumstances

which have attended our present position, failed to state what is, after all, according to my judgment, the main underlying cause of the present condition of affairs. At the last election the Democratic party was brought into power by a curious combination of circumstances, as the result of a hundred causes—not with careful and candid deliberation, but as the result, in a large measure, of the apathy of the American people.

"The vote shows what I declare, and the recollection of every individual to whom I am speaking can be safely appealed to. While this thing has not been specially manifest during this discussion, while there has been little talk with regard to it, nevertheless, the consciousness of this fact underlies our entire situation. I do not intend in alluding to this fact to in any way refer to party politics. I do not undertake to raise any question as to whether the system of protection is a wise one or not. I do not undertake to dispute the proposition on the part of the Democracy that protection is a tax, wicked and iniquitous. For the purpose of discussion, and for that purpose only, I am quite free to admit that protection is a fraud, and that virtue resides only in a revenue tariff; but there remains, even if it be admitted that the propositions of the Democratic platform are righteous every one—there remains the fact that the system upon which the manufactures of this country have been regulated for thirty years is threatened with a total change; whether that change is to be for the better or not no man can know.

"What the Democratic party purpose to do with the power which is in their hands nobody can say. They do not even know themselves, and hence they are not able to impart it to others. For my part, I do not expect the Democratic party to be utterly bad. I do not believe they will be permitted to be so if they should so desire. Such is the restraining influence of the people, even after election, that I believe that through all the disguises, through all the masks which this election has thrown over the wishes of the people, nevertheless those wishes will be carried out. But at this present moment no man can know what will be the result of the action of this Congress upon the manufactures of this country.

"If the reformation of the tariff were in the hands even of its friends, if a change in the tariff were contemplated by those men who are in favor of the principle of protection, instead of in the hands of those who denounce it, I should feel entirely confident that business would be stagnant or remain at a standstill; but when this reformation of the tariff is in the hands of men opposed to the present system, those manufactures of the country which are built upon the present system must necessarily call a halt.

"If their goods which they manufacture are to be in competition with the manufactures of other lands, where the cost of production is upon a different basis, where labor is differently rewarded, as a matter of fact no manufacturer in this country will dare to manufacture goods until he knows the basis upon which his labor is to go into the production of his articles of sale. Until that question is settled you may be sure

that the manufacturers of this country will never dare to manufacture more than the absolute necessities of the people require.

"Prominent among the symptoms of the present condition of affairs is the closing of mills in all parts of the country. The currency question has something to do with that, but that which is of most importance is the uncertainty as to the basis upon which manufactures are to go on. Manufactures today are in no respect the subjects of chance or of miscalculation. All the elements of costs are so thoroughly understood, all the elements which enter into production are so thoroughly comprehended, that it is impossible for manufactures to go on, except upon the basis of small but sure profits.

"Unless the manufacturer can see his way directly to that, he has no object in running his mill; and unless in the future he can see that that mill can go on satisfactorily there is no object on earth for him to continue his manufactures and his organization. Therefore you may depend upon it that until the question is settled—until men know the terms upon which they are to employ labor, until they know the terms upon which they are to compete with foreign competitors—no loom will be in motion more than is necessary, and no wheel will turn except with the prospect of immediate profit.

"I will not undertake to dwell at this present time—for I do not want to confuse the issue—upon those unfortunate parts of the Democratic programme which are at present in abeyance, like the establishment of State banks and other financial measures, which we may possibly have to struggle with. I can characterize in a single phrase the cause of the present condition of affairs. It is the undiscoverable uncertainty of the future of both the currency questions and the questions of protection and revenue tariff.

"It will be seen from what I have said that I do not regard the Sherman act as in itself alone responsible for our present condition of affairs; that I believe that the causes of our present disaster underlie that; that the necessary stoppage of hundreds and thousands of mills all over this country is at the bottom of our disaster. Nevertheless, I do believe that the Sherman act and the accumulation of silver in the Treasury was the earliest indicator of the disaster which we are approaching, and that it has played a part not entirely unfortunate in warning us so that we can be saved from still further misfortune and doubt."

These extracts are given as representing the tone and temper of different elements in the House of Representatives, and not with the idea of summing up the debate, or summarizing the strongest arguments or the best speeches. That can hardly be done so long as the custom prevails of cumbering the record of Congress with long disquisitions that never were delivered. In a general way it may be said that the debate in the House was for the most part dull, and that the subject was so old and so often dealt with that there was little opportunity for originality in reasoning or for the presentation of new facts. In pursuance of the method of procedure already quoted, the House voted on the Wilson bill and several proposed amendments, Aug. 28.

The first amendment was as follows:

Provided, That all holders of silver bullion of the value of \$50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same for coinage at the mints of the United States, and to have the same coined into the legal-tender standard silver dollars of 412½ grains standard silver to the dollar, on the same terms and conditions on which gold bullion is now deposited and coined.

That silver certificates shall be issued on such dollars in the manner now provided by law for the issuing of certificates on standard silver dollars.

This amendment would fix the ratio between gold and silver at 16 to 1; and it was defeated by the following vote:

YEAS—Abbott, Aitken, Alexander, Allen, Arnold, Bailey, Baker of Kansas, Bankhead, Bell of Colorado, Bell of Texas, Black of Georgia, Blanchard, Bland, Boatner, Boen, Bower of North Carolina, Bowers of California, Branch, Bretz, Broderick, Brookshire, Bryan, Bunn, Burnes, Caminetti, Cannon of California, Capehart, Clark of Missouri, Cobb of Alabama, Cockrell, Coffeen, Conn, Cooper of Texas, Cox, Crawford, Culberson, Curtis of Kansas, Davis, De Armond, Denson, Dinsmore, Dockery, Donovan, Doolittle, Edmunds, Ellis of Kentucky, Enloe, Epea, Fithian, Funston, Fyan, Geary, Goodnight, Grady, Hall of Missouri, Harris, Hartman, Hatch, Heard, Henderson of North Carolina, Holman, Hooker of Mississippi, Hudson, Hunter, Hutcheson, Jones, Kem, Kilgore, Kyle, Lane, Latimer, Lawson, Lester, Livingston, Lucas, Maddox, Maguire, Marshall, McCulloch, McDearmon, McKeighan, McLaurin, McMillin, McRae, Meredith, Money, Montgomery, Morgan, Moses, Murray, Neill, Newlands, O'Ferrall, Paynter, Pence, Pendleton of Texas, Pickler, Post, Richardson of Michigan, Richardson of Tennessee, Robbins, Robertson of Louisiana, Sayers, Sibley, Simpson, Stallings, Stockdale, Stone of Kentucky, Strait, Swanson, Sweet, Talbert of South Carolina, Tarsney, Tate, Taylor of Indiana, Terry, Turpin, Tyler, Wheeler of Alabama, Whiting, Williams of Illinois, Williams of Mississippi, Wilson of Washington, Woodward—124.

NAYS—Adams, Alderson, Aldrich, Apsley, Avery, Babcock, Baker of New Hampshire, Baldwin, Barnes, Bartholdt, Bartlett, Barwig, Belden, Beltzhoover, Berry, Bingham, Black of Illinois, Blair, Boutelle, Brattan, Brawley, Breckinridge of Arkansas, Breckinridge of Kentucky, Brickner, Brosius, Brown, Burrows, Bynum, Cabaniss, Cadmus, Caldwell, Campbell, Cannon of Illinois, Caruth, Catchings, Causey, Chickering, Childs, Clancy, Clarke of Alabama, Cobb of Missouri, Cockran, Cogswell, Compton, Coombs, Cooper of Florida, Cooper of Indiana, Cooper of Wisconsin, Cornish, Cousins, Covert, Crain, Cummings, Curtis of New York, Dalzell, Daniels, Davey, De Forest, Dingley, Dolliver, Draper, Dunn, Dunphy, Durbin, Ellis of Oregon, English, Erdman, Everett, Fellows, Fielder, Fitch, Fletcher, Forman, Funk, Gardner, Gear, Geissenhainer, Gillett of New York, Gillett of Massachusetts, Goldzier, Gorman, Gresham, Grosvenor, Grout, Hager, Hainer, Haines, Hall of Minnesota, Hammond, Hare, Harner, Harter, Haugen, Hayes, Heiner, Henderson of Illinois, Henderson of Iowa, Hendrix, Hepburn, Hermann, Hicks, Hilborn, Hines, Hitt, Hooker of New York, Hopkins of Illinois, Hopkins of Pennsylvania, Houk of Ohio, Houk of Tennessee, Hulick, Hull, Ikrit, Johnson of Indiana, Johnson of North Dakota, Johnson of Ohio, Joy, Kiefer, Kribbs, Lacey, Lapham, Layton, Le Fever, Lilly, Linton, Lisle, Lockwood, Loud, Loudenslager, Lynch, Magner, Mahon, Mallory, Marsh, Martin of Indiana, Marvin of New York, McAleer, McCall, McCleary of Minnesota, McCreary of Kentucky, McDannold, McDowell, McEtrick, McGann, McKaig, McNagy, Meiklejohn, Mercer, Meyer, Milliken, Moon, Morse, Mutschler, Northway, Oates, O'Neill of Massachusetts, O'Neill of Pennsylvania, Outhwaite, Page, Paschal, Patterson, Payne, Pearson, Pendleton of

West Virginia, Perkins, Phillips, Pigott, Powers, Price, Randall, Ray, Rayner, Reed, Reilly, Reyburn, Richards, Ritchie, Robinson of Pennsylvania, Rusk, Russell of Connecticut, Russell of Georgia, Ryan, Schermerhorn, Scranton, Settle, Shaw, Sherman, Sickles, Sipe, Smith, Snodgrass, Somers, Sperry, Springer, Stephenson, Stevens, C. W. Stone, W. A. Stone, Storer, Strong, Talbott of Maryland, Tawney, Taylor of Tennessee, Thomas, Tracey, Tucker, Turner, Updegraff, Van Voorhis of New York, Van Voorhis of Ohio, Wadsworth, Walker, Wanger, Warner, Washington, Waugh, Weadock, Wells, Wever, Wheeler of Illinois, White, Wilson of Ohio, Wilson of West Virginia, Wise, Wolverton, Woomer, Wright of Massachusetts, Wright of Pennsylvania—227.

NOT VOTING—Graham, Shell—2.

The second amendment was in the following terms:

Provided, That all holders of silver bullion of the value of \$50 or more, and not too base for the operations of the mints, shall be entitled to deposit the same at the mints and to have the same coined into silver dollars containing 438.60 grains of standard silver to the dollar on the same terms and conditions as gold bullion is now deposited and coined. That said dollars shall be a legal tender for all debts and dues, both public and private, and silver certificates shall be issued on said dollars in like manner as silver certificates are now issued on standard silver dollars.

The clause in regard to legal-tender quality was necessary because the coin provided for would be a new dollar. This amendment meant a ratio of 17 to 1, and it was defeated by a vote of 101 yeas to 241 nays; not voting, 11.

The third amendment was identical in terms, except that it provided for the free coinage of a silver dollar of 464.40 grains, and so would establish the ratio of 18 to 1. It was defeated by a vote of 103 yeas to 238 nays; not voting, 12.

The fourth amendment was worded in the same way, save that it provided for the free coinage of a silver dollar of 490.20 grains, and so would establish a ratio of 19 to 1. It was defeated by a vote of 104 yeas to 238 nays; not voting, 11.

The fifth amendment provided for the free coinage of a silver dollar of legal-tender quality containing 516 grains, and so would establish a ratio of 20 to 1. It was defeated by a vote of 121 yeas to 222 nays; not voting, 10.

The sixth amendment provided for a return to the policy of what is known as the Bland act, and was as follows:

Provided, That the act of Feb. 28, 1878, entitled "An Act to authorize the coinage of the standard silver dollar and to restore its legal-tender character," requiring the purchase monthly of not less than two million and not more than four million dollars' worth of silver bullion and the coining of the same as fast as purchased into standard silver dollars, be, and the same is hereby, revived and re-enacted into full force and effect.

This amendment was defeated by the following vote:

YEAS—Abbott, Aitken, Alderson, Alexander, Allen, Arnold, Bailey, Baker of Kansas, Bankhead, Bell of Colorado, Bell of Texas, Black of Georgia, Blanchard, Bland, Boatner, Boen, Bower of North Carolina, Bowers of California, Branch, Bretz, Brookshire, Bryan, Bunn, Burnes, Caminetti, Cannon of California, Capehart, Clark of Missouri, Cobb of Alabama, Cockrell, Coffeen, Conn, Cooper of Texas, Cox, Crawford, Culberson, Davis, De Armond, Denson, Dinsmore, Dockery, Donovan, Doolittle, Edmunds, Ellis of Kentucky

Ellis of Oregon, Enloe, Epes, Fithian, Fyan, Goodnight, Grady, Hall of Missouri, Hare, Harris, Hartman, Hatch, Heard, Henderson of North Carolina, Hermann, Hilborn, Holman, Hooker of Mississippi, Hopkins of Pennsylvania, Hudson, Hunter, Hutcheson, Ikirt, Jones, Kem, Kilgore, Kyle, Lane, Latimer, Lawson, Lester, Linton, Livingston, Lucas, Maddox, Maguire, Marshall, McCreary of Kentucky, McCulloch, McDearmon, McKeighan, McLaurin, McMillin, McRae, Meredith, Money, Montgomery, Morgan, Moses, Murray, Neill, Oates, O'Ferrall, Paschal, Paynter, Pence, Pendleton of Texas, Pickler, Post, Price, Richardson of Michigan, Richardson of Tennessee, Ritchie, Robbins, Robertson of Louisiana, Russell of Georgia, Sayers, Sibley, Simpson, Snodgrass, Stallings, Stockdale, Stone of Kentucky, Straft, Swanson, Sweet, Talbert of South Carolina, Tarsney, Tate, Taylor of Indiana, Terry, Tucker, Turpin, Tyler, Weadock, Wheeler of Alabama, Whiting, Williams of Illinois, Williams of Mississippi, Wilson of Washington, Woodard—136.

Yea—Adams, Aldrich, Apsley, Avery, Babcock, Baker of New Hampshire, Baldwin, Barnes, Bartholdt, Bartlett, Barwig, Belden, Beltzhoover, Berry, Bingham, Black of Illinois, Blair, Boutelle, Brattan, Brawley, Breckinridge of Arkansas, Breckinridge of Kentucky, Brickner, Broderick, Brosius, Brown, Burrows, Bynum, Cabaniss, Cadmus, Caldwell, Campbell, Cannon of Illinois, Caruth, Catchings, Causey, Chickering, Childs, Clancy, Clarke of Alabama, Cobb of Missouri, Cockran, Cogswell, Compton, Coombs, Cooper of Florida, Cooper of Indiana, Cornish, Cousins, Covert, Crain, Cummings, Curtis of Kansas, Curtis of New York, Dalzell, Daniels, Davey, De Forest, Dingley, Dolliver, Draper, Dunn, Dunphy, Durborow, English, Erdman, Everett, Fellows, Fielder, Fitch, Fletcher, Forman, Funk, Funston, Gardner, Gear, Geary, Geissenhainer, Gillett of New York, Gillett of Massachusetts, Goldzier, Gorman, Gresham, Grosvonor, Grout, Hager, Hainer, Haines, Hall of Minnesota, Hammond, Harmer, Harter, Haugen, Hayes, Heiner, Henderson of Illinois, Henderson of Iowa, Hendrix, Hepburn, Hicks, Hines, Hitt, Hooker of New York, Hopkins of Illinois, Houk of Ohio, Houk of Tennessee, Hulick, Hull, Johnson of Indiana, Johnson of North Dakota, Johnson of Ohio, Joy, Kiefer, Kribbs, Lacey, Lapham, Layton, Le Fever, Lilly, Lisle, Lockwood, Loud, Loudenslager, Lynch, Magner, Mahon, Mallory, Marsh, Martin of Indiana, Marvin of New York, McAleer, McCall, McCleary of Minnesota, McDannold, McDowell, McEttrick, McGann, McKaig, McMillin, McNagny, Mercer, Meiklejohn, Meyer, Milliken, Moon, Morse, Mutchler, Northway, O'Neil of Massachusetts, O'Neill of Pennsylvania, Outhwaite, Page, Patterson, Payne, Pearson, Pendleton of West Virginia, Perkins, Phillips, Pigott, Powers, Randall, Ray, Rayner, Reed, Reilly, Reyburn, Richards of Ohio, Robinson of Pennsylvania, Rusk, Russell of Connecticut, Ryan, Schermerhorn, Scranton, Settle, Shaw, Sherman, Sickles, Sipe, Somers, Sperry, Springer, Stephenson, Stevens, Charles W. Stone, William A. Stone, Stone of Kentucky, Storer, Strong, Swanson, Talbott of Maryland, Tawney, Taylor of Indiana, Thomas, Tracey, Tucker, Turner, Turpin, Tyler, Updegraff, Van Voorhis of New York, Van Voorhis of Ohio, Wadsworth, Walker, Wanger, Warner, Washington, Waugh, Weadock, Wells, Wever, Wheeler of Illinois, White, Whiting, Wilson of Ohio, Wilson of West Virginia, Wise, Wolverton, Woomer, Wright of Massachusetts, Wright of Pennsylvania—239.

Not Voting—Cooper of Wisconsin, Graham, Newlands, Shell—4.

Mr. Wilson then demanded the previous question on the final passage of the bill, and the motion was carried by the following vote:

Yea—Adams, Alderson, Aldrich, Apsley, Avery, Babcock, Baker of New Hampshire, Baldwin, Barnes, Bartholdt, Bartlett, Barwig, Belden, Beltzhoover, Berry, Bingham, Black of Georgia, Black of Illinois, Blair, Boutelle, Brattan, Brawley, Breckinridge of Arkansas, Breckinridge of Kentucky, Bretz, Brickner,

Brookshire, Brosius, Brown, Bunn, Burrows, Bynum, Cabaniss, Cadmus, Caldwell, Campbell, Cannon of California, Caruth, Catchings, Causey, Chickering, Childs, Clancy, Clarke of Alabama, Cobb of Missouri, Cockran, Cogswell, Compton, Conn, Coombs, Cooper of Florida, Cooper of Indiana, Cornish, Cousins, Covert, Crain, Cummings, Curtis of New York, Dalzell, Daniels, Davey, De Forest, Dingley, Dolliver, Donovan, Doolittle, Draper, Dunn, Dunphy, Durborow, Edmunds, English, Erdman, Everett, Fellows, Fielder, Fitch, Fletcher, Forman, Funk, Gardner, Gear, Geary, Geissenhainer, Gillett of New York, Gillett of Massachusetts, Goldzier, Gorman, Gresham, Grosvonor, Grout, Haines, Hall of Minnesota, Hammond, Hare, Harmer, Harter, Haugen, Hayes, Heiner, Henderson of Illinois, Henderson of Iowa, Hendrix, Hicks, Hines, Hitt, Holman, Hooker of New York, Hopkins of Illinois, Houk of Ohio, Houk of Tennessee, Hulick, Hull, Hunter, Johnson of Indiana, Johnson of North Dakota, Johnson of Ohio, Joy, Kiefer, Kribbs, Lacey, Lapham, Lawson, Layton, LeFever, Lester, Lilly, Linton, Lisle, Lockwood, Loudenslager, Lynch, Magner, Mahon, Marshall, Martin of Indiana, Marvin of New York, McAleer, McCall, McCleary of Minnesota, McCreary of Kentucky, McDannold, McDowell, McEttrick, McGann, McKaig, McMillin, McNagny, Mercer, Meredith, Meyer, Milliken, Montgomery, Moon, Morse, Mutchler, Northway, Oates, O'Ferrall, O'Neil of Massachusetts, O'Neill of Pennsylvania, Outhwaite, Page, Paschal, Patterson, Payne, Paynter, Pearson, Pendleton of Texas, Pendleton of West Virginia, Perkins, Phillips, Pigott, Post, Powers, Price, Randall, Ray, Rayner, Reed, Reilly, Reyburn, Richards of Ohio, Richardson of Michigan, Ritchie, Robinson of Pennsylvania, Rusk, Russell of Connecticut, Russell of Georgia, Ryan, Schermerhorn, Scranton, Settle, Shaw, Sherman, Sickles, Sipe, Somers, Sperry, Springer, Stephenson, Stevens, Charles W. Stone, William A. Stone, Stone of Kentucky, Storer, Strong, Swanson, Talbott of Maryland, Tawney, Taylor of Indiana, Thomas, Tracey, Tucker, Turner, Turpin, Tyler, Updegraff, Van Voorhis of New York, Van Voorhis of Ohio, Wadsworth, Walker, Wanger, Warner, Washington, Waugh, Weadock, Wells, Wever, Wheeler of Illinois, White, Whiting, Wilson of Ohio, Wilson of West Virginia, Wise, Wolverton, Woomer, Wright of Massachusetts, Wright of Pennsylvania—239.

Nays—Abbott, Aitken, Alexander, Allen, Arnold, Bailey, Baker of Kansas, Bankhead, Bell of Colorado, Bell of Texas, Blanchard, Bland, Boen, Bower of North Carolina, Bowers of California, Branch, Broderick, Bryan, Burnes, Caminetti, Cannon of Illinois, Clark of Missouri, Cobb of Alabama, Coffeen, Cooper of Texas, Cox, Crawford, Culberson, Curtis of Kansas, Davis, De Armond, Denson, Dinamore, Dockery, Ellis of Kentucky, Ellis of Oregon, Enloe, Epes, Fithian, Funston, Fyan, Goodnight, Grady, Hager, Hainer, Hall of Missouri, Harris, Hartman, Hatch, Heard, Henderson of North Carolina, Hepburn, Hermann, Hilborn, Hooker of Mississippi, Hopkins of Pennsylvania, Hudson, Hutcheson, Ikirt, Jones, Kem, Kilgore, Kyle, Lane, Latimer, Livingston, Loud, Lucas, Maddox, Maguire, Mallory, Marsh, McCulloch, McDearmon, McKeighan, McLaurin, McRae, Meiklejohn, Money, Morgan, Moses, Murray, Neill, Newlands, Pence, Pickler, Richardson of Tennessee, Robbins, Robertson of Louisiana, Sayers, Sibley, Simpson, Smith, Snodgrass, Stallings, Stockdale, Straft, Sweet, Talbert of South Carolina, Tarsney, Tate, Taylor of Tennessee, Terry, Wheeler of Alabama, Williams of Illinois, Williams of Mississippi, Wilson of Washington, Woodard—108.

Not Voting—Boatner, Capehart, Cockrell, Cooper of Wisconsin, Graham, Shell—6.

The Democrats were pretty evenly divided between support of the measure and opposition to it; and the vote on the sixth amendment shows that only a minority of the majority party sustained the policy of the Administration.

Aug. 29, Mr. Voorhees, of Indiana, reported from the Finance Committee of the Senate the measure that had passed the House with the following amendment by way of substitute:

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An Act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding \$1 for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed. And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetalism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

Over the passage of this substitute, known as the Voorhees bill, there was one of the most notable struggles in the history of Congress. Its advocates were eager to bring on a vote, being confident that a majority of Senators were ready to support it, and its opponents were determined to discuss it at their leisure, and seemed disposed to prevent action by interminable debates. Under the rules of the Senate there was no method by which debate could be closed; and as time wore on there was a disposition to force an amendment to the rules. But such amendment was not feasible except through violation of the rules as a preliminary. It would be necessary for the presiding officer to compel a vote by refusing to recognize a Senator who rose to argue against a change. This course the Vice-President would not adopt. The delay became so discouraging to the friends of the measure that there was at one time a serious attempt at a compromise bill, and one was prepared by a committee with the approval, it was rumored, of the Secretary of the Treasury, and nearly all the Democratic Senators pledged themselves to support it. But the President refused to countenance the project for a compromise, and it was abandoned. A few able speeches were made in behalf of the Voorhees bill, but as the session dragged its slow length along the champions of the cause of free silver coinage were obliged to do most of the talking. They spoke long and well, but it would be idle to attempt any synopsis of the debate on the merits of the measure. The chief interest centered in the incidents of the contest and the controversies arising out of them. One of these was the inconsistency of certain Democratic Senators who had been ardent advocates of free silver; another was the alleged interference of the Executive for the purpose of controlling congressional action; and another was the respective rights of majorities and minorities in legislative bodies. The Democratic Senators in charge of the measure were

hampered by their own record in filibustering against the passage of what is commonly called the Force bill, in a previous Congress.

On Oct. 11, Mr. Voorhees, who had been threatening heroic methods for some time, undertook to hold the Senate in continuous session and compel a vote on the bill. Mr. Dubois, of Idaho, said in the way of warning:

"The statement of the Senator from Indiana means that the Senate is to be held in continuous session until the pending bill is brought to a vote in the Senate, or until it is demonstrated that it can not be brought to a vote.

"I feel that this is a fair statement, having in mind the notice served on the Senate last Saturday by the distinguished chairman of the Finance Committee, as well as the present attitude of the Senator and his supporters.

"I should be pleased to consider the situation in a dispassionate manner with those who are resorting to this unjust and unusual procedure. Let us be frank with each other in an honest presentation of facts in order to avert, if possible, the undignified and uncalled-for exhibition which we will afford the country.

"The question before us is far-reaching and most important. I think that I do not overstate when I say that its settlement for or against silver will more directly affect this country for good or bad than any legislation which has been before Congress for thirty years. It should be debated, then, with calmness and without prejudice. The reason of Senators should be appealed to. This legislation should not be rushed through by inhuman methods and brute force. There is no argument in that which will satisfy Senators or the country.

"You can not charge the opponents of the pending measure with having resorted to obstructive methods. It is true they have debated and discussed the question. You can not and will not charge them with having willfully wasted time for purposes of delay. I have been at some pains to examine the "Record," and find that while the 32 opponents of repeal have spoken, 22 of its champions have also spoken.

"I refer to carefully prepared and set speeches. There have been as many, if not more, interruptions and colloquies brought on by the friends than by the opponents of repeal. The friends of the pending bill have consumed about one third of the time of the Senate in discussing this measure. With this record all must admit that if there has been any delay it can not be laid at our doors alone. I desire to call attention to this pertinent fact, which is also taken from the "Record." During the past three weeks there have been numerous roll-calls to ascertain if a quorum was present. On many of those calls more Senators who are friendly to silver answered to their names than antisilver Senators. On no one of those calls did 32 anti-silver Senators respond. At any time the silver men could have stopped the business of the Senate by simply refraining from answering to their names. We have been more anxious to proceed than have our opponents, and have constantly furnished a quorum.

"I desire, too, to state the position of individual Senators on the pending bill so that the country may understand it. Any Senator may

verify my statement by checking up the Senate roll.

"There are 39 Senators who favor unconditional repeal; 38 Senators are opposed to unconditional repeal, and would so vote. Eight Senators are against free coinage and against unconditional repeal, and desire a compromise between the two which will furnish a constant and continued use of silver. Some of these eight have introduced amendments which they would prefer, but all of them are anxious to reach a basis of settlement on a compromise. I admit that most likely every one of these eight Senators would vote for unconditional repeal if forced to a vote. Their reasons are honorable and sufficient for themselves, and their motives are not questioned. They would much prefer not to be forced to vote on the pending bill, however.

"Another fact, which is important, must be patent to Senators. The country has been steadily drifting to the silver side. While the daily newspapers in the large cities and the bankers are abusive and intolerant and clamorous for repeal, the people are making their wishes known to Senators through public meetings, private communications, and country papers in such a manner as to make their influence felt.

"New York city has been most anxious for repeal, to judge from its press and the activity of its moneyed interests; yet the Republican State Convention, in its platform adopted last week, says not one word on the subject, but, on the contrary, favors bimetallism. They have no word of condemnation of our course, and none of praise for yours. It is significant, and I am very glad that the party to which I belong is coming so quickly and unmistakably to the support of silver and the people.

"I have gone thus somewhat into detail, showing the conditions which exist in the Senate and outside of it, to make plain the lack of cause, uselessness, and unfairness of resorting to the methods which you have apparently inaugurated.

"You know as well before you start in as you will when you emerge that you must fail. Conditions such as exist in the Senate preclude all hope of radical legislation. You are as likely to pass a free-coinage bill as you are to absolutely destroy silver. It looks as though you were trying to convince some one outside of this Chamber of something which you already know yourselves. Even if you accomplish that, the result will not justify the ordeal which you will compel Senators to undergo. There are distinguished Senators on this floor, now in the decline of life, who have served the republic with patriotism and honor for many years. Their brains are as clear and their convictions as strong as thirty years ago.

"In a combat where learning and ability is a factor, younger men would be at a disadvantage; but in a game of this sort, requiring nothing but physical strength, they are placed at tremendous if not dangerous odds. Unless the reasons are powerful you should not put these Senators (some of whom also are not well) to this test. They are entitled to our solicitude and care. They have our most profound respect and admiration. They merit this on account of their great abilities. If my friend, the distinguished Senator from Indiana, will pardon me, I class

him with the Senators I have just been describing; and I can not think he desires to subject himself or other Senators whom he sees around him to this hardship. His well-known kindness of heart precludes such a thought. He is impelled by that strong sense of duty which has always been his guide, and he himself no doubt will submit to this torture as long as nature holds out.

"Is there any sense in it or justification for it? We think not. We regard it as unusual and indefensible. We have never interposed any obstructions even to the long hours which the Senate has been keeping. We have maintained a quorum for you, and have offered no objection to your management of business. If you have concluded to abandon appeals to reason and judgment and to risk the settlement of this great question to the test of which side can stand the most punishment, we desire to give notice now that we shall protect our side in every way possible. We will insist that you furnish the quorum, and that you keep it constantly in the Chamber even if it necessitates innumerable roll-calls. We will not aid you in this or in anything else which will tend to prolong the struggle and the discomfort of all. The responsibility for what is to follow must rest with you, as well as its physical effect upon individual Senators."

This statement is quoted because it describes clearly the policy adopted by the opponents of repeal, and shows why that policy would be successful in breaking up a continuous session. Mr. Voorhees said in vindication of the expedient:

"The Senator from Idaho said it was unjust. Who makes it unjust? He speaks of it as inhuman. Well, I am not inhuman in my nature. It is not my disposition to hurt anybody. I would have let the fly out of the window as soon as Uncle Toby did, but I am here charged with a great duty, together with Senators around me. It is the duty of legislation. We must go forward. I would have been glad to have done so at an earlier period, but I had no rule to enable me, and whether young men or old men, we have to present the spectacle to the world of testing our physical endurance to get to a vote upon a question like this.

"Sir, this episode in our history will result in reforming the rules of this body. I am ready at the proper time (not in connection with heated discussion as we are in now) to vote for some measure by which a termination of debate can be reached. Otherwise this body will lose its proper influence and standing before the American people and before the world.

"Yes, I repeat, that this body must have rules by which to conclude discussion and reach a vote of a character higher, more reasonable, more sensible, and more decent than the rule under which we are acting now.

"I stand here asking the opponents of the bill whether they will name any day, and they will not; whether they will name any time, and they will not; and they will resort then to dilatory measures to prevent action being taken at all. Who is to quit? Who is to stop?

"Sir, I would rather be carried from this desk feet foremost and be laid to sleep at my dear

home in Terre Haute forever than to yield the principle that the majority has the right to govern. I stand here for the highest principle of free government known to men or known to history. We started in here some weeks ago to discuss the repeal of a bad measure of financial legislation. I have nothing to say on that question now, but we have reached a higher question than that. We have reached the principal question of free government. We have reached the greatest problem of free constitutional government. We have reached the question whether we have a Government that can administer itself by a lawful majority.

"Idle, rapid talk has taken place in the papers in regard to abolishing the Senate of the United States. The Senate of the United States can no more be abolished than the Constitution, for it is a great part thereof; but it can be governed by rules of its own making so as to make it a self-acting, a proper and a reasonable body of deliberation and legislation.

"I confess, sir, that when I confronted this question, when it fell to my fortune to manage the pending bill and I found how powerless I was, it almost paralyzed my energies of action. I found myself clothed with a mighty responsibility, a keen, eager, hungry expectation on the part of the public for speedy action, without any power at all to respond to it. Never, sir, do I desire to be placed in such an attitude again. Never do I desire any other man to be so placed, and he never shall be if by my agency a reform can take place in the rules of this body whereby a gentleman standing in the attitude I am here to-night shall be clothed with power, power under the rules, power under the Constitution, power under the laws, not lawless power but power regulated by law, to bring about a vote.

"Mr. President, I am tender of minorities; I would not injure the minority here, but shall the minority govern? Answer me, Shall the minority govern? Somebody has to rule. Somebody has to control this body. Shall it be the minority, or the majority?

"The Senator from Idaho signified that possibly they had a majority, and then I said, Let us ascertain that by a vote and we will submit to it gladly, willingly, if we are the minority; will you? No. Then the question comes whether or not we have a government at all. The question comes whether the Senate can be governed by a majority, or whether that vicious principle in government, the most vicious known in human history, that the few shall govern the many, shall obtain. Throughout my life, which in some of its parts has been a stormy one and is not now short, I have stood for the rule of the majority, and whatever the majority pronounces under the forms of law ought to be gracefully submitted to. I stand for that simply to-night.

"I stand here not talking of compromise, either. A great deal has been talked of compromise in the last week. I have not shared in it. There is a mighty principle involved in this question, and I am going to the end with it, so far as I am concerned. If I go down I will go down with my flag nailed to the masthead. If compromise is to take place, compromising on the principle that the minority has the right to dictate, it will be done by others, and not by me.

"Mr. President, one or two other things I might say; in fact, I will. I see myself criticised every day for the failure of the passage of the pending bill at an earlier period. If there is a Senator on either side of the Chamber, friend or foe of the measure, who knows how that could have been done, and he will arise and convince me of that, I will remain silent forever hereafter.

"I have been criticised for my bearing toward the opponents of the bill. I saw in one paper—from Boston, I think—that I should have denounced the Senators opposed to repeal as *feræ naturæ*, wild animals. Sir, I am proud of the fact that I have treated each representative of an American State as a Senator should be treated, so that when it is all over it will not be said that I have narrowed my mind by any unworthy passions, that I have not belittled the place I hold here by casting aspersions upon Senators who are sent here by States and are necessarily the peers of every other Senator. So far as I am concerned in this discussion and the struggle on which we now are entering, proceeding into the night, and to-morrow and to-morrow night, it will be conducted to the end upon the same principles of decorum, dignity, honor, and fairness which have thus far characterized it.

"I have no criticism to make of the bearing of Senators in opposition to the bill. The Senator from Idaho, in his well-turned sentences, said a while ago that when the roll was called at times here during the last two weeks there were more of them in attendance than on our side. That is true; but the reason why there was not more vigilance on this side was my knowledge of the fact that an agreement entered into with the Senator from Colorado, who sits here near me, was as binding as the laws of the Medes and Persians, and would not be broken. I knew that perfectly well.

"Now, a word in regard to criticism upon what is styled leadership. Sir, I assume no leadership. Providence and the kindness of my people at home have placed me where I am, and I have to do my duty; but in doing so, and in assuming the management of the bill, how is it to be done except under the rules of the Senate? The rules of the Senate are the emanations of the Constitution of the United States; they are provided for in the Constitution; and when each Senator takes an oath upon his admission here, he swears to support the Constitution, and consequently the rules and laws which govern this body. I have had it suggested to me frequently by letter and in the press to go outside of the rules, to appeal to the presiding officer of this body to sustain me in a motion not provided for in the list of motions, not provided for in the rules, to proceed to a vote. I would as soon think of committing open high treason, or private murder, as to commit such a crime. Perjury is an ugly thing to rest upon the human soul.

"And now, while on this point, allow me to say another thing. This debate seems very long to a certain class of people. It, indeed, seems long to us here because we have all been in it, and are tired. But you and I are aware, Mr. President, that there are instances in American history where debates have taken place in this body four times as long as this. When I am

criticised for allowing debate; when I am criticised for granting freedom of discussion that has run now to thirty-three days of actual occupancy—in regular order—on this bill, because that has been done it has struck a great many people that too much liberty has been given.

"Why, sir, the admission of States, great questions involving personal freedom, the right of habeas corpus, trial by jury, the reconstruction and preservation of States, have occupied this body time and again until the debate in this case would appear but a speck of time. The admission of California and the settlement of the Territorial questions therewith connected lasted nearly seven months, almost entirely occupying the time of the Senate. The admission of Missouri and the compromise attending it lasted nearly three months. Other instances I might cite without number.

"But we will derive a lesson, nevertheless, in connection with the present debate on account of this criticism, for it shows us that the question of money and financial stringency and crisis, trouble in monetary matters, are a far severer test to the patience of the people than even the loss of the great foundation principles of liberty or the exclusion of States from the Union.

"I must be pardoned for saying that this, I think, is about the first time certain moneyed classes and moneyed interests have ever taken notice of a long debate in the Senate because it touches them as it never has before. But taking it all together, I meet the situation with saying the best has been done which the rules permitted, so far as I know; and now, and in default of any answer when a vote can be reached, I invoke the spirit of wisdom, fairness, patience, and manhood on both sides, and we will proceed.

"Mr. President, I have not a doubt of the result. The majority can govern. The majority ought to govern. The majority must govern. It is the law of our being that it should be so. The spirit of this Government is on my side of this question. The spirit of liberty regulated by that law is that, with proper respect for the rights of a minority, the legally ascertained majority must and shall govern. I feel at this important hour that we have swept beyond the magnitude of the mere repeal of the Sherman act into the greater and higher question, Shall this Government be a government of majority, or shall a minority dictate? Shall the many govern, or shall the few?"

Mr. Allen, of Nebraska, talked for fourteen hours, making the longest congressional speech on record, and the task of occupying the attention of the Senate was then taken up by an unwearied filibustering associate. The opponents of repeal, whenever its advocates retired to take a rest in the cloak-rooms, called attention to the fact that there was no quorum, and demanded a call of the House. On such occasions they refused to vote, and the quorum had to be made up from the ranks of the majority. This tedious procedure wearied the Senators, and at 1.40 o'clock on the morning of Oct. 13 it was found impossible to compel the attendance of 43 Senators, and the Senate adjourned, closing the legislative day of Oct. 11.

Oct. 27, a vote was taken on an amendment to the Voorhees bill offered by Mr. Pepper, of Kansas.

It provided for striking out all of that bill after the repealing clause and adding the following sections:

SEC. 2. That any owner of gold bullion or silver bullion in condition fit for coinage, and of the coin value of \$50 or more, may deliver the same at any mint to the proper officers thereof, and it shall be formed into coins for the benefit of the depositor in the manner provided by the act of Congress approved Jan. 18, 1887, and in all respects according to the provisions of said act, all of which provisions, so far as the same are or may be applicable hereto, are hereby revived and re-enacted, except that the inscriptions and devices of coins of like denominations now current shall be placed on the coins authorized by this act, and double eagles may be coined, as provided in the act of Feb. 12, 1873.

SEC. 3. That all acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

SEC. 4. That this act shall take effect and be in force thirty days after its passage.

This amendment would make the proposed measure a free-coinage act. It was defeated by the following vote:

YEAS—Allen, Bate, Berry, Blackburn, Butler, Call, Coke, Daniel, Dubois, George, Harris, Irby, Jones of Arkansas, Jones of Nevada, Kyle, Martin, Pasco, Pepper, Power, Pugh, Roach, Shoup, Stewart, Teller, Vance, Vest, Walthall, Wolcott—28.

NAYS—Aldrich, Caffery, Camden, Carey, Cullom, Davis, Dixon, Dolph, Faulkner, Frye, Gallinger, Gibson, Gorman, Gray, Hale, Higgins, Hill, Hoar, Lindsay, Lodge, McMillan, McPherson, Manderson, Mitchell of Wisconsin, Morrill, Murphy, Palmer, Perkins, Proctor, Quay, Ransom, Sherman, Smith, Stockbridge, Turpie, Vilas, Voorhees, Washburn, White of Louisiana—39.

NOT VOTING—Allison, Brice, Cameron, Chandler, Cockrell, Colquitt, Gordon, Hansbrough, Hawley, Hunton, Mills, Mitchell of Oregon, Morgan, Pettigrew, Platt, Squire, White of California, Wilson—18.

The chief significance of this vote lay in the change of opinion on the part of certain Senators who had voted for free coinage within a year.

Oct. 30, the vote on the substitution and passage of the Voorhees bill was taken, and the measure was adopted by the following vote:

YEAS—Aldrich, Brice, Caffery, Camden, Carey, Cullom, Davis, Dixon, Dolph, Faulkner, Frye, Gallinger, Gibson, Gorman, Gray, Hale, Hawley, Higgins, Hill, Hoar, Hunton, Lindsay, Lodge, McMillan, McPherson, Manderson, Mills, Mitchell of Wisconsin, Morrill, Murphy, Platt, Proctor, Quay, Ransom, Sherman, Smith, Squire, Stockbridge, Turpie, Vilas, Voorhees, Washburn, White of Louisiana—43.

NAYS—Allen, Bate, Berry, Blackburn, Butler, Call, Cameron, Cockrell, Coke, Daniel, Dubois, George, Harris, Irby, Jones of Arkansas, Jones of Nevada, Kyle, Martin, Pasco, Pepper, Perkins, Pettigrew, Power, Pugh, Roach, Shoup, Stewart, Teller, Vance, Vest, Walthall, Wolcott—32.

NOT VOTING—Allison, Chandler, Colquitt, Gordon, Hansbrough, Mitchell of Oregon, Morgan, Palmer, White of California, Wilson—10.

On Nov. 1, the House of Representatives concurred in the Senate amendment, thus adopting the Voorhees bill instead of the Wilson bill. The vote on concurrence was as follows:

YEAS—Adams, Alderson, Aldrich, Apsley, Avery, Babcock, Baker of New Hampshire, Baldwin, Barnes, Bartlett, Barwig, Belden, Beltzhoover, Berry, Bingham, Black of Georgia, Black of Illinois, Blair, Brawley, Breckinridge of Arkansas, Bretz, Brickner, Brookshire, Brosius, Brown, Bunn, Bynum, Cabanis, Cadmus, Caldwell, Campbell, Cannon of California,

Caruth, Catchings, Causey, Chickering, Clancy, Cobb of Missouri, Cockran, Cogswell, Compton, Coombs, Cooper of Florida, Cooper of Indiana, Cooper of Wisconsin, Cornish, Covert, Crain, Cummings, Curtis of New York, Daniels, Davey, De Forest, Dingley, Donovan, Draper, Dunn, Dunphy, Durborow, Edmunds, English, Erdman, Everett, Fellows, Fielder, Fitch, Fletcher, Forman, Gardner, Geary, Geissenhainer, Gillet, of New York, Goldzier, Gorman, Gresham, Grout, Haines, Hall of Minnesota, Hammond, Harmer, Harter, Haugen, Henderson of Iowa, Hendrix, Hines, Hitt, Holman, Hopkins of Illinois, Houk of Ohio, Houk of Tennessee, Hunter, Johnson of Indiana, Johnson of North Dakota, Johnson of Ohio, Joy, Kiefer, Kribbs, Lapham, Layton, Le Fever, Lilly, Linton, Lisle, Lookwood, Loudenslager, Lynch, Magner, Mahon, Marshall, Martin of Indiana, Marvin of New York, McAleer, McCall, McCleary of Minnesota, McCreary of Kentucky, McDannold, McDowell, McEttrick, McGann, McKaig, McNaghy, Mercer, Meredith, Meyer, Milliken, Montgomery, Moon, Morse, Mutchler, Oates, O'Neil of Massachusetts, Outhwaite, Paschal, Patterson, Payne, Paynter, Pearson, Pendleton of West Virginia, Phillips, Pigott, Post, Powers, Price, Randall, Ray, Rayner, Reed, Reilly, Reyburn, Richards of Ohio, Richardson of Michigan, Ritchie, Rusk, Russell of Connecticut, Ryan, Sehermerhorn, Scranton, Settle, Shaw, Sherman, Sickles, Sipe, Somers, Sperry, Springer, Stevens, C. W. Stone, W. A. Stone, Stone of Kentucky, Storer, Swanson, Talbot of Maryland, Taylor of Indiana, Thomas, Tracey, Tucker, Turner, Turpin, Tyler, Van Voorhis of New York, Wanger, Warner, Washington, Waugh, Weadock, Wells, Wheeler of Illinois, White, Whiting, Wilson of West Virginia, Wolverton, Woomer, Wright of Pennsylvania—193.

AYE—Aitken, Alexander, Allen, Arnold, Bailey, Baker of Kansas, Bankhead, Bell of Colorado, Bell of Texas, Blanchard, Bland, Boatner, Boen, Bower of North Carolina, Branch, Broderick, Bryan, Burnes, Cannon of Illinois, Capehart, Clark of Missouri, Cobb of Alabama, Cockrell, Cooper of Texas, Cox, Crawford, Culberson, Curtis of Kansas, Davis, De Armond, Denson, Dinsmore, Dockery, Doolittle, Ellis of Oregon, Epea, Fithian, Funston, Fyan, Grady, Hainer, Hall of Missouri, Harris, Hartman, Heard, Henderson of North Carolina, Hermann, Hilborn, Hopkins of Pennsylvania, Hudson, Hutcheson, Ikert, Jones, Kem, Kilgore, Kyle, Lane, Latimer, Livingston, Lucas, Maddox, Maguire, Mallory, Marsh, McCulloch, McDearmon, McKeighan, McLaurin, McRae, Meiklejohn, Money, Morgan, Moses, Pence, Richardson of Tennessee, Robbins, Robertson of Louisiana, Sayers, Shell, Sibley, Smith, Snodgrass, Stallings, Stockdale, Strait, Sweet, Talbert, of South Carolina, Tarsney, Tate, Terry, Wheeler of Alabama, Williams of Illinois, Williams of Mississippi, Wilson of Washington—94.

NOT VOTING—Abbott, Bartholdt, Boutelle, Bowers of California, Brattan, Breckinridge of Kentucky, Burrows, Caminetti, Childs, Clarke of Alabama, Coffeen, Conn, Cousina, Dalzell, Dolliver, Ellis of Kentucky, Enloe, Funk, Gear, Gillett of Massachusetts, Goodnight, Graham, Grosvenor, Hager, Hare, Hatch, Hayes, Heiner, Henderson of Illinois, Hepburn, Hicks, Hooker of Mississippi, Hooker of New York, Hulick, Hull, Lacey, Lawson, Lester, Loud, McMillin, Murray, Neill, Newlands, Northway, O'Farrell, O'Neill of Pennsylvania, Page, Pendleton of Texas, Perkins, Pickler, Robinson of Pennsylvania, Russell of Georgia, Simpson, Stephenson, Strong, Tawney, Taylor of Tennessee, Updegraff, Van Voorhis of Ohio, Wadsworth, Walker, Weaver, Wilson of Ohio, Wise, Woodard, Wright of Massachusetts—66.

The President approved of the measure on the same day.

Chinese Exclusion.—Oct. 4, the following bill, to amend the Chinese Exclusion act of May 5, 1892, was reported in the House of Representatives:

A bill (H. R. 3687) to amend an act entitled "An Act to prohibit the coming of Chinese persons into the United States," approved May 5, 1892.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 6 of an act entitled "An Act to prohibit the coming of Chinese persons into the United States," approved May 5, 1892, is hereby amended, so as to read as follows:

"Sec. 6.—And it shall be the duty of all Chinese laborers within the limits of the United States who were entitled to remain in the United States before the passage of the act to which this is an amendment, to apply to the collector of internal revenue of their respective districts within six months after the passage of this act for a certificate of residence; and any Chinese laborer within the limits of the United States who shall neglect, fail, or refuse to comply with the provisions of this act, and the act to which this is an amendment, or who, after the expiration of said six months, shall be found within the jurisdiction of the United States without such certificate of residence, shall be deemed and adjudged to be unlawfully within the United States, and may be arrested by any United States customs official, collector of internal revenue or his deputies, United States marshal or his deputies, and taken before a United States judge, whose duty it shall be to order that he be deported from the United States, as provided in this act and in the act to which this is an amendment, unless he shall establish clearly to the satisfaction of said judge that by reason of accident, sickness, or other unavoidable cause, he has been unable to procure his certificate, and to the satisfaction of said United States judge, and by at least one credible witness other than Chinese, that he was a resident of the United States on the 5th of May, 1892; and if, upon the hearing, it shall appear that he is so entitled to a certificate, it shall be granted upon his paying the cost. Should it appear that said Chinaman had procured a certificate which had been lost or destroyed, he shall be detained and judgment suspended a reasonable time to enable him to procure a duplicate from the officer granting it, and in such cases the cost of said arrest and trial shall be in the discretion of the court; and any Chinese person, other than a Chinese laborer, having a right to be and remain in the United States, desiring such certificate as evidence of such right, may apply for and receive the same without charge; and that no proceedings for a violation of the provisions of said section 6 of said act of May 5, 1892, as originally enacted, shall hereafter be instituted, and that all proceedings for said violation now pending are hereby discontinued."

Provided, That no Chinese person heretofore convicted in any court of the States or Territories, or of the United States, of a felony shall be permitted to register under the provisions of this act; but all of such persons who are now subject to deportation for failure or refusal to comply with the act to which this is an amendment, shall be deported from the United States, as in said act, and as in this act provided, upon any appropriate proceedings now pending or which may be hereafter instituted."

SEC. 2.—The words "laborer" or "laborers," wherever used in this act, or in the act to which this is an amendment, shall be construed to mean both skilled and unskilled manual laborers, including Chinese employed in mining, fishing, huckstering, peddling, laundrymen, or those engaged in tanning, drying, or otherwise preserving shell or other fish for home consumption or exportation.

The term "merchant," as employed herein, and in the acts of which this is amendatory, shall have the following meaning and none other: A merchant is a person engaged in buying and selling merchandise at a fixed place of business, which business is conducted in his name, and who, during the time he claims to be engaged as a merchant, does not engage in the performance of any manual labor, except such as is necessary in the conduct of his business as such merchant.

Where an application is made by a Chinaman for entrance into the United States on the ground that he was formerly engaged in this country as a merchant, he shall establish by the testimony of two credible witnesses other than Chinese the fact that he conducted such business as hereinbefore defined for at least one year before his departure from the United States, and that during such year he was not engaged in the performance of any manual labor, except such as was necessary in the conduct of his business as such merchant, and in default of such proof shall be refused landing.

Such order of deportation shall be executed by the United States marshal of the district within which such order is made, and he shall execute the same with all convenient dispatch; and pending the execution of such order such Chinese person shall remain in the custody of the United States marshal, and shall not be admitted to bail.

The certificate herein provided for shall contain the photograph of the applicant, together with his name, local residence, and occupation; and a copy of such certificate, with a duplicate of such photograph attached, shall be filed in the office of the United States collector of internal revenue of the district in which such Chinaman makes application.

Such photographs in duplicate shall be furnished by each applicant in such form as may be prescribed by the Secretary of the Treasury.

Mr. McCreary, of Kentucky, said, in explanation of the measure:

"The pending bill was ordered to be reported by the Committee on Foreign Affairs, with but one dissenting member. It amends the Chinese exclusion act passed May 5, 1892, known as the Geary act, by extending the time from the passage of this bill six months, in which Chinese persons now in the United States may register and obtain certificates of residence. It also amends that act so as to require 'one creditable witness other than Chinese,' to prove that the applicant for a certificate was a resident of the United States on the 5th of May, 1892, instead of 'one credible white witness.' It also requires that the word 'laborer' or 'laborers,' wherever used in this act, or in the act to which this is an amendment, shall be construed to mean both skilled and unskilled manual laborers, including Chinese employed in mining, fishing, huckstering, peddling, laundrymen, or those engaged in taking, drying, or otherwise preserving shell or other fish for home consumption or exportation.

"The treaties between the United States and China, and the subsequent legislation adopted by Congress to prevent the immigration of Chinese laborers into this country, terminating in the exclusion act of May 5, 1892, are too well known to require lengthy discussion at this time. I will only refer briefly to the treaties and to the acts of Congress. The first treaty between the United States and the Empire of China was concluded on the 3d of July, 1844, and ratifications exchanged in December of the following year.

"The next treaty was negotiated with the Chinese Government in June, 1858, and ratifications exchanged in August of the following year. Both of these treaties were in the interests of peace, amity, and commerce between the two nations, and renewed the promise of protection to all citizens of the United States in China peaceably attending to their affairs, and stipulated for security to Christians in the profession of their religion; but neither the treaty

of 1844 nor that of 1858 referred to the emigration of the citizens and subjects of the two nations, respectively, from one country to the other.

"It was in 1868 that a new treaty was negotiated by Anson Burlingame and others, called a 'treaty concerning trade, consuls, religious toleration, and emigration.' This was the harbinger of a new era in the history of China, because it opened a country to free intercourse with other nations that had for ages been isolated and closed to all foreigners.

"I read Article VI of that treaty to show how broad and cordial our relations with China were at that time:

ARTICLE VI.—Citizens of the United States visiting or residing in China shall enjoy the same privileges, immunities, or exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation; and, reciprocally, Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions in respect to travel or residence as may there be enjoyed by the citizens or subjects of the most favored nation. But nothing herein contained shall be held to confer naturalization upon the citizens of the United States in China, nor upon the subjects of China in the United States.

"The large immigration of Chinese to our country which occurred after this treaty was made, their peculiar habits and their failure to assimilate with our people, the growing unpopularity of Chinese laborers, and the belief that their presence here was inimical to our institutions, led to the treaty concluded in 1880, known as 'the treaty regulating immigration into the United States.' It provides in its first article that whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country, or any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable, and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

"The second article of this treaty declares that—

Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States, shall be allowed to go and come of their own free will and accord, and shall be accorded all rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

"Soon after the ratification of this treaty, Congress, in 1882, enacted a law suspending for ten years the coming of Chinese laborers to the United States, and in 1884 this act was amended by imposing heavy penalties and punishments

on those who violated it. In 1888 a supplement to the act of 1882 was passed prohibiting Chinese laborers who had formerly resided in the United States, but who had departed, from returning to the United States.

"On the 5th of May, 1892, was passed 'the act to prohibit the coming of Chinese persons into the United States,' which the present bill seeks to amend.

"At that time, according to the census report of 1890, the Chinese population of the United States was 106,688. Of this number 95,477 were located in the Pacific States and Territories, and the residue were located in various cities of the United States. That act made it the duty of all Chinese laborers within the United States at the time of its passage to apply to the collector of internal revenue of their respective districts within one year after the passage of the act for a certificate of residence: and any Chinese laborer within the limits of the United States who failed to comply with the act, or who, after one year from the passage thereof, was found in the United States without such certificate of residence, was ordered to be arrested and deported from the United States.

"After the passage of the act of May 5, 1892, known as the Geary act, prominent representatives of Chinese persons in the United States employed Messrs. Choate, Carter, and Ashton, three able and experienced attorneys, to examine and render opinions on said act. Each of these attorneys rendered opinions in which they declared the act of May 5, 1892, repugnant to the Constitution of the United States. Their opinions were watched for with much interest by Chinese persons within the United States, and they exerted a great and controlling influence with them.

"Immediately after the expiration of the time allowed for registration by the exclusion act of 1892 there were three writs of *habeas corpus* granted by the circuit court of the United States for the southern district of New York, upon petitions of Chinese laborers arrested and held by the marshal of the district for not having certificates of residence under section 6 of said act. In each case the circuit court, after a hearing upon the writ of *habeas corpus* and the return of the marshal, dismissed the writs of *habeas corpus* and allowed an appeal. On appeals in these cases from the circuit court of the United States in and for the southern district of New York, five of the justices of the Supreme Court of the United States held (three of the justices dissenting and one being absent) that,

Upon careful consideration of the subject, the only conclusion which appears to us to be consistent with the principle of international law, and with the Constitution and laws of the United States, and with the previous decisions of this court, is that in each of these cases the judgment of the circuit court dismissing the writ of *habeas corpus* is right, and must be affirmed.

"This decision was not rendered until the 15th day of May, 1893, ten days after the time had expired in which Chinese persons could register and obtain certificates of residence.

"It seems just and fair that, as many Chinese persons were misled by the opinions rendered by Messrs. Choate, Carter, and Ashton, and failed to register and obtain certificates in the time

prescribed by law, and as the opinions of these eminent lawyers were sustained on the main question by the Chief Justice of the Supreme Court of the United States and two associate justices, the Chinese should have six months additional time in which to register and obtain certificates of residence.

"There is also another strong and convincing reason for the passage of this bill which concerns the United States. The report of the Secretary of the Treasury shows that 18,242 Chinese persons registered and obtained certificates of residence under the act of May 5, 1892, leaving 98,445 who failed to avail themselves of the privileges of said act. Assuming that about 10 per cent. of these will be entitled to exemption as teachers, students, merchants, and persons traveling for curiosity, there would remain about 85,000 that would be liable to deportation under the law.

"The Secretary of the Treasury says that he has but \$25,000 available of the fund for enforcing the deportation act of 1892; that the lowest cost for the transportation of Chinese from San Francisco to Hong-Kong is \$51 *per capita* for steerage passage, and the other expenses incident to arrest, trial, and inland transportation would average not less than \$35 more *per capita*. If, therefore, all Chinese persons within the United States who are required to register under the law and have failed to do so should be transported to China, the cost involved would amount to \$7,810,000. It will therefore be not only fair and just to Chinese persons, but wise economy to pass the pending bill and save millions of dollars for the United States."

The measure was sharply discussed in the House and in the Senate, and opposed by Pacific coast members of Congress. The main point of criticism was the neglect of the Administration in enforcing the Geary act. The bill passed the House Oct. 16, passed the Senate Nov. 3, and was approved by the President.

Miscellaneous.—The House of Representatives debated at great length and passed an important measure repealing the Federal Election laws, but it was not taken up in the Senate. The House also discussed fully a national bankruptcy law, and a bill to amend the naturalization laws. It passed a bill amending section 4131 of the Revised Statutes in regard to the registry of vessels; a bill requiring the judges of the courts of the United States to conform to the laws of the several States in delivering charges to juries; a bill providing for the printing, binding, and distribution of public documents; and a bill for a bridge across the Hudson river between New York and New Jersey. Both Houses passed an act in regard to timber culture, one in regard to mining claims, one increasing the number of army officers detailed to colleges, and several minor measures.

Adjournment.—Congress adjourned Nov. 3.

Committees.—The following are the standing and select committees of the Fifty-third Congress:

SENATE.—*Agriculture and Forestry.*—George, Bate, Ransom, Pepper, Roach, McMillan, Washburn, Proctor, Hansbrough.

Appropriations.—Cookrell, Call, Gorman, Blackburn, Brice, Allison, Hale, Cullom, Teller.

To audit and control the Contingent Expenses of the Senate.—White of Louisiana, Camden, Jones of Nevada.

Census.—Turpie, Berry, White of California, Murphy, Pepper, Hale, Stockbridge, Dixon, Hansbrough.

Civil Service and Retrenchment.—Call, Walthall, Gordon, Irby, Cockrell, Washburn, Morrill, Lodge, Perkins.

Claims.—Pasco, Daniel, Berry, Caffery, Allen, Mitchell of Oregon, Davis, Stewart, Pepper.

Coast Defenses.—Gordon, Irby, Mills, White of California, Smith, Squire, Dolph, Hawley, Higgins.

Commerce.—Ransom, Coke, Vest, Gorman, White of Louisiana, White of California, Murphy, Frye, Jones of Nevada, Dolph, Cullom, Washburn, Quay.

District of Columbia.—Harris, Faulkner, Gibson, Hunton, Smith, Martin, McMillan, Wolcott, Gallinger, Hansbrough, Proctor.

Education and Labor.—Kyle, George, Hunton, Caffery, Murphy, Carey, Washburn, Lodge, Perkins.

Engrossed Bills.—Allison, Cockrell, Martin.

Enrolled Bills.—Caffery, Mitchell of Wisconsin, Dubois.

Epidemic Diseases.—Jones of Nevada, Stockbridge, Gallinger, Quay, Harris, Irby, White of Louisiana.

To examine the Several Branches of the Civil Service.—Pepper, Gray, Vilas, Power, Gallinger.

Finance.—Voorhees, McPherson, Harris, Vance, Vest, Jones of Arkansas, Morrill, Sherman, Jones of Nevada, Allison, Aldrich.

Fisheries.—Coke, Call, Gibson, Hill, Mitchell of Wisconsin, Stockbridge, Squire, Power, Perkins.

Foreign Relations.—Morgan, Butler, Gray, Turpie, Daniel, Sherman, Frye, Dolph, Davis.

Immigration.—Hill, Voorhees, McPherson, Faulkner, Harris, Stewart, Chandler, Squire, Proctor, Dubois, Lodge.

Improvement of the Mississippi River and its Tributaries.—Bate, Walthall, Palmer, Pepper, Washburn, Pettigrew, Power.

Indian Affairs.—Jones of Arkansas, Morgan, Smith, Roach, Allen, Stewart, Platt, Stockbridge, Manderson, Pettigrew, Shoup.

Indian Depredations.—Lindsay, Faulkner, Kyle, White of Louisiana, Cockrell, Shoup, Chandler, Pettigrew, Perkins.

Interstate Commerce.—Butler, Gorman, Brice, White of Louisiana, Camden, Lindsay, Cullom, Wilson, Chandler, Wolcott, Higgins.

Irrigation and Reclamation of Arid Lands.—White of California, Jones of Arkansas, Kyle, Roach, Brice, Stewart, Dubois, Carey, Hansbrough.

Judiciary.—Pugh, Coke, George, Vilas, Hill, Lindsay, Hoar, Wilson, Teller, Platt, Mitchell of Oregon.

Library.—Mills, Voorhees, Wolcott.

Manufactures.—Gibson, Smith, Caffery, Higgins, Gallinger.

Military Affairs.—Walthall, Cockrell, Bate, Palmer, Mitchell of Wisconsin, Hawley, Cameron, Manderson, Davis.

Mines and Mining.—Stewart, Bate, Call, Irby, Mills, Jones of Nevada, Power, Shoup, Allison.

Naval Affairs.—McPherson, Butler, Blackburn, Gibson, Camden, Cameron, Hale, Stockbridge, Perkins.

Organization, Conduct, and Expenditures of the Executive Departments.—Smith, Cockrell, Hill, Walthall, Caffery, Wilson, Proctor, Dubois, Lodge.

Pacific Railroads.—Brice, Morgan, Faulkner, White of Louisiana, Murphy, Davis, Carey, Wolcott, McMillan.

Patents.—Gray, Kyle, Mills, Berry, Dixon, Platt, Wilson.

Pensions.—Palmer, Brice, Vilas, Camden, Caffery, Gorman, Shoup, Hansbrough, Gallinger, Hawley, Quay.

Post-Offices and Post Roads.—Colquitt, Vilas, Irby, Mills, Hunton, Hill, Mitchell of Oregon, McMillan, Wolcott, Dixon, Washburn.

Printing.—Gorman, Ransom, Manderson.

Private Lands Claims.—Hale, Teller, Dixon, Ransom, Colquitt, Pasco, Berry.

Privileges and Elections.—Vance, Gray, Pugh, Turpie, Palmer, Hoar, Mitchell of Oregon, Chandler, Higgins.

Public Buildings and Grounds.—Vest, Daniel, Pasco, Brice, Gordon, Morrill, Quay, Squire, Carey.

Public Lands.—Berry, Walthall, Pasco, Vilas, Martin, Allen, Dolph, Pettigrew, Carey, Power, Dubois.

Railroads.—Camden, Berry, Gordon, Palmer, Martin, Blackburn, Hawley, Stockbridge, Pettigrew, Power, Pepper.

Relations with Canada.—Murphy, Pugh, Colquitt, Hunton, Mitchell of Wisconsin, Hoar, Hale, Dolph, Higgins.

Revision of the Laws of the United States.—Daniel, Call, Lindsay, Wilson, Platt.

Revolutionary Claims.—Cameron, Frye, Aldrich, Coke, Pugh.

Rules.—Blackburn, Harris, Gorman, Aldrich, Manderson.

Territories.—Faulkner, Hill, Blackburn, Bate, Call, White of California, Platt, Davis, Carey, Shoup, Hansbrough.

Transportation Routes to the Seaboard.—Irby, George, Turpie, Gordon, Ransom, Gallinger, Squire, Mitchell of Oregon, Aldrich.

SELECT COMMITTEES.—Additional Accommodations for the Library of Congress.—Morrill, Dixon, Voorhees, Butler, Pugh.

Corporations in the District of Columbia.—Aldrich, McMillan, Gorman, Brice, Harris.

To Establish the University of the United States.—Hunton, Kyle, Vance, Jones of Arkansas, Turpie, Proctor, Sherman, Dolph, Washburn.

On the Five Civilized Tribes of Indians.—Teller, Platt, Butler, Pasco, Roach.

Forest Reservations.—Allen, Kyle, Morgan, Teller, Davis.

To inquire into all Claims of Citizens of the United States against the Government of Nicaragua.—Hawley, Stewart, Mitchell of Oregon, Morgan, Palmer.

To investigate the Condition of the Potomac River Front of Washington.—Frye, Sherman, McPherson, Ransom, Hunton, Perkins.

To investigate the Geological Survey.—Martin, Jones of Arkansas, Ransom, Wolcott, Carey.

To investigate Trespasses upon Indian Lands.—Roach, Butler, Higgins.

National Banks.—Mitchell of Wisconsin, Vance, Colquitt, Chandler, Manderson.

Quadro-Centennial.—Vilas, Colquitt, Vest, Gray, Daniel, Gibson, Voorhees, Lindsay, Pettigrew, Sherman, Cameron, Hawley, Wilson, Cullom.

Transportation and Sale of Meat Products.—Platt, Power, Vest, Coke, Allen.

Woman Suffrage.—Hoar, Quay, Vance, George, Blackburn, McPherson.

HOUSE OF REPRESENTATIVES.—Accounts.—Rusk, Paynter, Tate, Mutchler, Ikirt, Wells, Post, Wright of Massachusetts, and Marvin of New York.

Agriculture.—Hatch, Alexander, Shell, Forman, Moses, Capehart, Sibley, Marshall, Schermerhorn, Williams of Mississippi, Simpson, Funston, Waugh, Funk, Apsley, Hainer, Baker of New Hampshire, and Flynn.

Alcoholic Liquor Traffic.—English, Barwig, Reilly, Layton, Livingston, Cooper of Texas, McEtrick, Morse, Daniels, Hainer, and Kiefer.

Appropriations.—Sayers, Breckinridge of Kentucky, Dockery, Compton, O'Neil of Massachusetts, Livingston, Washington, Robertson of Louisiana, Brookshire, Williams of Illinois, Coombs, Henderson of Iowa, Cogswell, Bingham, Dingley, Grout, and Cannon of Illinois.

Banking and Currency.—Springer, Sperry, Cox, Cobb of Missouri, Culberson, Ellis of Kentucky, Cobb of Alabama, Warner, Johnson of Ohio, Black of Georgia, Hall of Missouri, Walker, Brosius, Henderson of Illinois, Russell of Connecticut, Haugen, and Johnson of Indiana.

Claims.—Bunn, Cox, Campbell, Russell of Georgia, Hutcheson, Richards, Mutchler, Clark of Missouri, Hammond, Loud, Cooper of Wisconsin, Settle, Heiner, Kiefer, and Cousins.

Coinage, Weights, and Measures.—Bland, Tracey, Kilgore, Epea, Stone of Kentucky, Allen, Bankhead, Rayner, Harter, Coffeen, McKeighan, Charles W. Stone, Johnson of North Dakota, Dingley, Sweet, Hager, Aldrich, and Rawlins.

District of Columbia.—Heard, Richardson of Tennessee, Rusk, Cobb of Alabama, Meredith, Cadmus, Abbott, Cooper of Indiana, Cooper of Florida, Harner, Post, Cogswell, Belden, Hilborn, and Babcock.

Education.—Enloe, Grady, Pearson, McLaurin, Arnold, Williams of Mississippi, Stallings, Haines, Weaver, Thomas, Van Voorhis of Ohio, Murray, and McCall.

Election of President and Vice-President and Representatives in Congress.—Fitch, Tucker, Crain, Compton, DeArmond, Donovan, Lawson, Stallings, Johnson of North Dakota, Curtis of New York, McDowell, Northway, and Haine.

Elections.—O'Ferrall, Brown, Paynter, Lockwood, Lawson, Hayes, Patterson, Denson, Woodard, Taylor of Tennessee, Waugh, Daniels, McCall, Thomas, and Wheeler of Illinois.

Expenditures in the Department of Agriculture.—Edmunds, Hall of Missouri, Cockrell, McDearmon, Kem, Hartman, and Funk.

Expenditures in the Department of Justice.—Dunphy, Clarke of Alabama, Brown, O'Neil of Massachusetts, Ritchie, Payne, and Keyburn.

Expenditures in the Interior Department.—Turner, Somers, Swanson, Talbot of South Carolina, Grout, Hopkins of Pennsylvania, and Bowers of California.

Expenditures in the Navy Department.—McMillin, Dockery, Abbott, Clancy, Milliken, Robinson of Pennsylvania, and Northway.

Expenditures in the Post-Office Department.—Oates, Paynter, Richards, Haines, Wright of Massachusetts, Ellis of Oregon, and Doolittle.

Expenditures on Public Buildings.—Crain, Cummings, Dunn, Boen, Moon, Gillet of New York, and Lilly.

Expenditures in the State Department.—Lester, Breckinridge of Kentucky, Covert, Alexander, Charles W. Stone, Caldwell, and Dolliver.

Expenditures in the Treasury Department.—Barwig, Hendrix, McNaghy, Sibley, William A. Stone, Wadsworth, and Grosvenor.

Expenditures in the War Department.—Montgomery, Bunn, Sickles, Black of Illinois, Hitt, Hooker of New York, and Loudenslager.

Foreign Affairs.—McCreary of Kentucky, Hooker of Mississippi, Fitch, Rayner, Geary, Price, Tucker, Dinsmore, Everett, Hitt, Harner, Storer, Blair, Draper, and Van Voorhis of New York.

Immigration and Naturalization.—Geissenhainer, Epea, Fyan, Brickner, Davey, Paschal, Maguire, Gillet of New York, Bartholdt, Wilson of Ohio, and McDowell.

Indian Affairs.—Holman, Allen, Turpin, Lynch, Hall of Minnesota, Maddox, Hunter, Pendleton of Texas, Bower of North Carolina, Kem, Wilson of Washington, Hopkins of Pennsylvania, Pickler, Sherman, Curtis of Kansas, and Smith of Arizona.

Interstate and Foreign Commerce.—Wise, Price, Brickner, Geary, Houk of Ohio, Mallory, Patterson, Caruth, Durborow, Brawley, Bartlett, O'Neill of Pennsylvania, Randall, Storer, Belden, Hepburn, and Fletcher.

Invalid Pensions.—Martin of Indiana, Fyan, Hare, McEttrick, Baldwin, Graham, McDannold, Erdman, Fielder, Taylor of Tennessee, Pickler, Lacey, Apsley, Meiklejohn, and Strong.

Irrigation of Arid Lands.—Cooper of Indiana, Lisle, Paschal, Maguire, Richardson of Michigan, Pence, Newlands, Sweet, Doolittle, Hartman, and Tawney.

Judiciary.—Culberson, Oates, Stockdale, Goodnight, Boatner, Layton, Wolvertson, Fellows, Lane,

Bailey, Terry, Ray, Powers, Broderick, William A. Stone, Updegraff, and Childs.

Labor.—McGann, Capehart, Dunn, Erdman, Wells, Ryan, Talbot of South Carolina, Pence, Apsley, McCleary of Minnesota, Phillips, Gardner, and Kiefer.

Levees and Improvements of Mississippi River.—Allen, Tracey, Stockdale, McDearmon, Johnson of Ohio, Sperry, Talbot of Maryland, Woodard, Ray, Haugen, Marsh, Joy, and Hicks.

Manufactures.—Page, Warner, Harter, Crawford, McLaurin, Gorman, Cornish, Conn, Chickering, Scranton, and Linton.

Merchant Marine and Fisheries.—Fithian, Magner, Berry, Robbins, Pigott, Cooper of Florida, Cornish, Bratton, Perkins, Gillett of Massachusetts, White, and Phillips.

Mileage.—Lynch, Strait, Pendleton of Texas, and Mahon.

Military Affairs.—Outhwaite, Wheeler of Alabama, Lapham, Gorman, Pendleton of West Virginia, Bretz, Sickles, Black of Illinois, Morgan, Bowers of California, Hull, Curtis of New York, Marsh, Gillett of Massachusetts, Wooster, and Joseph.

Militia.—Forman, Meyer, Haines, Baldwin, Bratton, Burnes, Cannon of California, Bell of Colorado, Wright of Massachusetts, Adams, Aitkin, Baker of New Hampshire, and Wright of Pennsylvania.

Mines and Mining.—Weadock, Sipe, Tate, Ikirt, Richardson of Michigan, McDannold, Cockrell, Baker of Kansas, Stephenson, Shaw, Newlands, Cousins, Lilly, and Rawlins.

Naval Affairs.—Cummings, Geissenhainer, Meyer, McAleer, Clancy, DeArmond, Money, Talbot of Maryland, Tyler, Boutelle, Dolliver, Wadsworth, Randall, Robinson of Pennsylvania, and Hulick.

Pacific Railroads.—Reilly, Snodgrass, Boatner, Caruth, Kyle, Lockwood, Weadock, Bell of Texas, Hendrix, Harris, Blair, Smith of Illinois, Powers, Hepburn, and Cooper of Wisconsin.

Patents.—Covert, Lapham, DeForest, Tate, Hutcheson, Strait, Robbins, Neill, Bowers of California, Draper, Hicks, Joy, and Hulick.

Pensions.—Moses, Henderson of North Carolina, Jones, Houk of Ohio, Snodgrass, Taylor of Indiana, Lisle, Clark of Missouri, Baker of Kansas, Loudenslager, Lucas, White, and Tawney.

Post-Office and Post Roads.—Henderson of North Carolina, Dunphy, Kyle, Hayes, Turpin, Sipe, Cabaniss, Burnes, Swanson, Caldwell, Wilson of Washington, Loud, Smith of Illinois, Houk of Tennessee, Gardner, and Flynn.

Private Land Claims.—Pendleton of West Virginia, Crawford, Edmunds, Fithian, Cockrell, Conn, English, Hudson, Bell of Colorado, Funston, Marvin, Lucas, Shaw, and Rawlins.

Public Buildings and Grounds.—Bankhead, Abbott, McKaig, Campbell, Bretz, Cadmus, Grady, Berry, Davey, Milliken, Sweet, Morse, Wright of Pennsylvania, Wever, and Mercer.

Public Lands.—McRae, Hare, Magner, Kribbs, Hall of Minnesota, Crawford, Gresham, Somers, Latimer, Davis, Lacey, Wanger, Moon, Meiklejohn, Ellis of Oregon, and Smith of Arizona.

Railways and Canals.—Catchings, Beltzhoover, Cobb of Missouri, Gresham, Ryan, Bower of North Carolina, Hudson, Cannon of California, Hull, Chickering, McCleary of Minnesota, Wanger, and Aitkin.

Reform in the Civil Service.—DeForest, Brawley, Meredith, Hooker of Mississippi, Branch, Everett, Hines, Taylor of Indiana, Hopkins of Illinois, Russell of Connecticut, Brosius, Sherman, and Van Voorhis of Ohio.

Revision of the Laws.—Ellis of Kentucky, Magner, Branch, Mallory, Neill, Pigott, Maguire, Maddox, Goldzier, Johnson of Indiana, Wheeler of Illinois, Hager, and Settle.

Rivers and Harbors.—Blanchard, Catchings, Lester, Clarke of Alabama, Jones, Page, Alderson, Causey, Caminetti, McCulloch, Barnes, Henderson of Illinois, Hermann, Stephenson, Hooker of New York, Grosvenor, and Reyburn.

Rules.—The Speaker, Catchings, Outhwaite, Reed, and Burrows.

Territories.—Wheeler of Alabama, Kilgore, Branch, Donovan, Kribbs, Arnold, Hunter, Simpson, Boen, Perkins, Scranton, Le Fever, Avery, Smith of Arizona, and Joseph.

Ventilation and Acoustics.—Shell, Durborow, Hammond, Graham, Walker, Heiner, and Linton.

War Claims.—Beltzhoover, Stone of Kentucky, Enloe, McLaurin, Cooper of Texas, Goldzier, McNaghy, Ritchie, Houk of Tennessee, Hermann, Mahon, Avery, and Wilson of Ohio.

Ways and Means.—Wilson of West Virginia, McMillin, Turner, Montgomery, Whiting, Cockran, Stevens, Bryan, Breckinridge of Arkansas, Bynum, Tarsney, Reed, Burrows, Payne, Dalzell, Hopkins of Illinois, and Gear.

JOINT COMMITTEES.—*Library.*—Fellows, O'Ferrall, and O'Neill of Pennsylvania.

Printing.—Richardson of Tennessee, McKaig, and Broderick.

Enrolled Bills.—Pearson, Russell of Georgia, Latimer, Hines, Hager, Adams, and Gillett of Massachusetts.

To inquire into the Status of Laws organising the Executive Departments.—Dockery, Richardson of Tennessee, and Dingley.

Disposition of Useless Papers in Executive Departments.—Henderson of North Carolina, and Caldwell.

CONNECTICUT, a New England State, one of the original thirteen; ratified the national Constitution Jan. 9, 1788; area, 4,990 square miles. The population, according to each decennial census, was 237,946 in 1790; 251,002 in 1800; 261,942 in 1810; 275,148 in 1820; 297,675 in 1830; 309,978 in 1840; 370,792 in 1850; 460,147 in 1860; 537,454 in 1870; 622,700 in 1880; and 748,258 in 1890. Capital, Hartford.

Government.—The following were the State officers during the year: Governor, Luzon B. Morris, Democrat; Lieutenant-Governor, Ernest Cady; Secretary of State, John J. Phelan; Treasurer, Marvin H. Sanger; Comptroller, Nicholas Staub; Secretary of State Board of Education, Charles D. Hine; Insurance Commissioner, Orsamus R. Fyler, succeeded by John S. Seymour, appointed March 6, who resigned and was in turn succeeded by Burton Mansfield, appointed April 11; Railroad Commissioners, William O. Seymour, George M. Woodruff, William H. Haywood, succeeded by Alexander C. Robertson; Chief Justice of the Supreme Court of Errors, Charles B. Andrews; Associate Justices, David Torrance, Elisha Carpenter, Augustus H. Fenn, appointed Feb. 1, and Simeon E. Baldwin, appointed Feb. 2. As Justice Carpenter will be disqualified from further service on account of age after Jan. 14, 1894, the General Assembly, anticipating the vacancy, appointed William Hammersley, on May 31, as his successor.

Finances.—The latest report of the State Treasurer, which covers the period from July 1, 1891, to Oct. 1, 1892, presents the following figures: Balance on July 1, 1891, \$984,076.10; total receipts for the period, \$2,159,289.25; total disbursements, \$2,218,947.91; balance on Oct. 1, 1892, \$924,417.44. The receipts were derived from the following sources: Tax on mutual insurance companies, \$252,663.18; tax on stock of nonresidents, \$91,143.53; savings-bank tax, \$420,833.82; tax on railroads, \$790,809.62; military commutation tax, \$126,531; tax on investments, \$108,438.95; collateral inheritance tax, \$177,662.97; tax on telegraph companies, \$10,-

904.51; received from Commissioner of Insurance, \$57,427.80; interest on cash balances in treasury, \$54,973.78; miscellaneous receipts, \$18,500.09. No *ad valorem* tax on property has been levied for several years, the income from the sources above mentioned being amply sufficient to meet the expenses of the State.

The State debt on Sept. 30, 1892, was \$3,240,200, none of which is payable until 1903. The last portion of the debt which the State had the option of paying before maturity was wiped out in July, 1892, by the call of the Treasurer for the redemption of \$200,000 of the bonds of 1887.

Legislative Sessions.—On Jan. 8 both Houses of the General Assembly of 1891 met for their final session, the Senate by adjournment from Dec. 19 previous, the Lower House by adjournment from Nov. 15. No business was transacted, and, after holding sessions extending over a period of two years, the legislators laid down their office without having succeeded in enacting a single law. The General Assembly elected in the preceding November began its work on Jan. 4, and continued in session through June 30. In consequence of the nonaction of its predecessor, there was nearly twice the usual amount of business awaiting its consideration. One of its earliest duties was the election of a successor to United States Senator Joseph R. Hawley. At a Republican caucus on Jan. 10 Senator Hawley was renominated on the sixth ballot, receiving 67 votes, ex-Gov. Morgan G. Bulkeley receiving 35, Samuel Fessenden 22, William E. Simonds 8, and William C. Case 6. The Democratic nominee was Carlos French. On the first joint ballot in the General Assembly, on Jan. 18, Senator Hawley was re-elected by a vote of 138 to 114 for Mr. French. One of the most striking results of the session was the adoption of a proposed constitutional amendment providing for the election of State officers by a plurality vote, Connecticut being one of the few remaining States where a majority of all the votes cast is necessary for an election. Another proposed amendment contemplates an increase in the number of State Senators—not to exceed 37. The county limitations are to be removed, allowing the senatorial districts to include towns in different counties. Towns may also be divided in order to equalize the districts. By another amendment the compensation of members of the General Assembly is to be limited to \$500, and the State is to provide transportation for each member to and from the sessions over the most convenient line of travel. The question of making radical changes in the Constitution, through the agency of a constitutional convention, was discussed at length, but the bill providing for a convention failed of adoption. Several plans were considered to obviate future trouble in the event of another contested State election, but no legislation resulted.

The Storrs Agricultural School was raised to the dignity of a college, and the moneys annually received from the United States in aid of agricultural colleges, which hitherto have been enjoyed by the Sheffield Scientific School of New Haven, were bestowed upon the new institution. Two normal schools were established in addition to the two already supported by the State, one at New Haven and the other at Bridgeport. The

sum of \$100,000 was appropriated for buildings. Towns and school districts having 10,000 or more inhabitants were required to establish and maintain evening schools for children over fourteen years of age, and towns of fewer than 10,000 inhabitants were permitted to maintain such schools if the inhabitants should so vote. Women were authorized to vote at any meeting held for choosing school officers or for any educational purpose.

Cities and towns were authorized to establish and maintain suitable plants for the manufacture of gas and electricity. In the matter of taxation, street railroads were subjected to the same law as steam railroads.

Claims of attorneys to the amount of \$25,000 were recognized for services in the legal contest over the State election of 1891, and the payment of salaries to the claimants as well as to the incumbents of certain of the State offices which were in dispute after that election was authorized.

Other acts of the session were as follow :

Establishing a commission for promotion of uniformity in State legislation.

Giving manufacturers and throwsters of cotton, woolen, and silk goods a lien thereon for labor and materials used in manufacturing or throwing.

Requiring hotels to be equipped with fire escapes.

Providing for the incorporation of Christian churches.

Providing for the inspection of steam boilers.

Providing for the organization of districts for any or all of the following purposes: To extinguish fires, to sprinkle streets, to light streets, to plant and care for shade and ornamental trees, to construct and maintain sidewalks, crosswalks, drains, and sewers, to appoint and employ watchmen or police officers.

Forbidding the employment of any person under sixteen years of age in running elevators.

Authorizing actions to quiet title to real estate.

To define and punish pool-selling.

To preserve shade and ornamental trees along highways.

To prohibit the killing or capturing of deer for ten years from Oct. 1, 1893.

Requiring all employers to furnish suitable seats for women and girls in their employ.

Authorizing corporations to issue preferred stock.

Authorizing cities to establish funds for the benefit of disabled policemen.

Establishing a State Board of Dental Commissioners, requiring all new dental practitioners to obtain a license from this board, and otherwise regulating the practice of dentistry.

Providing for the education of the blind.

Regulating and restricting the practice of medicine, surgery, and midwifery.

To protect unions and associations of workmen in the use of their labels and trade-marks.

To promote the establishment and improvement of public libraries and school libraries.

Revising the law governing the State militia.

Requiring every schoolhouse to be provided with a United States flag at public expense, and requiring suitable exercises to be held annually in each school with reference to the adoption of the flag.

Providing for the appointment of a commissioner on peach yellows, and prescribing his duties.

Prohibiting pharmacists from selling intoxicating liquors to be drunk on the premises.

Establishing a standard measure for charcoal.

Authorizing the organization of a naval battalion in connection with the Connecticut National Guard.

Enlarging the scope of investments by savings banks.

Providing that the infliction of the death penalty

shall be carried out only in the State Prison at Wethersfield, the warden, or, in case of his inability or absence, the deputy warden, to be the executioner.

Providing that no electric, cable, or horse railroad shall hereafter be conducted across the tracks of a steam railroad at grade, except upon the application to, and approval by, the railroad commissioners; nor shall any steam railroad cross any such electric, cable, or horse railroad at grade, except upon like application and approval.

The political complexion of each House of the General Assembly was as follows: Senate—Republicans 12, Democrats 12; House—Republicans 133, Democrats 118.

Education.—The following statistics from the latest report of the State Board of Education cover the school year 1890-'91: Children of school age, 161,241; enrolled in the public schools, 123,905; increase over previous year, 2,400; average daily attendance, 84,304; increase, 648; average school year, 182.28 days; number of schoolhouses, 1,650; value of school property, \$6,655,054; male teachers—in winter, 434, in summer, 341; female teachers—in winter, 2,866, in summer, 2,952; average monthly wages male teachers, \$77.11; average monthly wages female teachers, \$39.84. Sources of revenue: from permanent funds, \$164,531.38; from State taxes, \$241,861.50; from local taxes, \$1,527,110.19; from other sources, \$75,890.51; total revenue, \$2,009,333.58. Expenditures—for new buildings, \$307,830.92; for salaries of teachers and superintendents, \$1,560,608.31; for libraries and apparatus, \$15,121.33; for miscellaneous expenses, \$283,518.72; total expenses, \$2,167,079.18.

Charities.—At the State Insane Hospital there were 1,377 patients on July 1, 1890; 788 were admitted during the ensuing two years, and 659 were discharged, leaving 1,506 in confinement on July 1, 1892. The capacity of the present buildings has been much exceeded, and there are, besides, more than 200 insane persons in the almshouses awaiting admission to the institution.

At the School for Imbeciles there were 142 pupils in attendance during the year ending Oct. 1, 1892, and the State expended for them the sum of \$12,749.72.

State Prison.—This institution, at Wethersfield, contained 318 convicts on July 1, 1890; and during the two years following 241 convicts were received, and 262 discharged, leaving 297 remaining on July 1, 1892. The expenses during this period were \$86,515.08, and the income from prison labor and other sources \$71,552.01, making the net cost of the institution to the State only \$14,963.07. More than three fourths of the income is derived from shoe shops connected with the prison.

At the State Reform School there were 434 boys on July 1, 1891; 216 were received during the year ensuing, and 229 were discharged, leaving 421 on July 1, 1892. The cost of the institution to the State for the year was \$55,402.15. The Industrial School for Girls contained 218 pupils on July 1, 1890; 327 were admitted and 308 were discharged during the two years following, leaving 237 on July 1, 1892.

Savings Banks.—The total number of depositors in all the savings banks in the State, Oct. 1, 1892, was 331,061, the gain for the year being 13,136. The deposits amounted to \$180,-

686,729, the gain for the year being \$8,104,569.57. The average amount due depositors was \$394.75, being a gain of \$9.18 compared with Oct. 1, 1891. The largest amount due a single depositor was \$107,528.62. The number of accounts opened during the twelve months was 55,495, and the number closed 41,870. The income received during the year was \$7,006,823.57, the gain being \$357,314.95 as compared with Oct. 1, 1891. The dividends declared during the year amounted to \$4,918,576.77, the year's increase amounting to \$115,483.37. The amount deposited, including interest accredited during the year, was \$34,719,815.05, and the amount withdrawn aggregated \$26,615,245.48. The office expenses, including salaries, amounted to \$342,873.40. In all the banks the assets yielding no income amounted to only \$407,706.28.

Local Option.—Town elections were held throughout the State early in October, at which the question of license or no license for the year following was voted upon. The result is shown below in comparison with the vote in 1892:

COUNTRIES.	TOWNS VOTING LICENSE.		TOWNS VOTING NO LICENSE.

State Constitution.—The following is an extract from the message of Gov. Morris to the General Assembly in January:

"We are living under a Constitution which was adopted during the stagecoach era, when the people were generally engaged in agriculture, and the population of the State was much more evenly distributed among the several towns than at present. Their wants were similar, and the Constitution when adopted was suitable for their condition at that time. With the changes in pursuits and methods of business there has arisen great inequality in the population of the several towns. In some the population has decreased, in others it has largely increased, and different interests have arisen, so that the representation given to the several towns when the Constitution was adopted, and which was then substantially equal and just, has become very unequal and unjust. To illustrate this, if we refer to the population of the several towns of this State, as shown by the census of 1890, we shall find that towns having less than one seventh part of the population of the State elect a majority of the House of Representatives, and therefore have more political power than the remaining six sevenths. The mere statement of this fact alone would seem to be enough to prove the need of a constitutional revision."

COSTA RICA, a republic in Central America. The Constitution, as restored with modifications on April 26, 1882, vests the legislative power in a Chamber of Representatives, the members of which are elected, in the proportion of 1 to 8,000 inhabitants, by electors chosen by limited

suffrage for four years, one half being replaced every two years. In 1889 there were 540 electors and 26 Representatives. The President is elected for four years by the same electoral assembly. José Joaquín Rodríguez was elected President for the term ending May 8, 1894.

Area and Population.—The area is 20,790 square miles. The population, as determined by the census of Feb. 18, 1892, is 243,205. The number of marriages registered in 1891 was 1,000; of births, 7,684; of deaths, 8,489. In the same year the returns show a net immigration of 2,624 persons. These figures are manifestly wrong in regard to births and departures. The capital, San José, has about 24,000 inhabitants.

Commerce and Production.—The variety of soil and climate is such that almost all the vegetable products of the torrid and temperate regions can be grown. The chief culture is coffee, of which 368,673 quintals were produced in 1891. Bananas are exported in large quantities, to the value of 680,225 pesos in 1891. Other exports are hides and skins, dye woods, rubber, tobacco, sugar, coconuts, rice, bullion, and cacao. The total value of imports in 1892 was 8,351,029 pesos, and of exports, 8,484,115 pesos. The commercial relations are chiefly with the United States, Great Britain, Central American countries, and Germany.

Finances.—The revenue for 1892 was 5,808,474 pesos in paper, which is 25 per cent. or more below par, and the expenditure was 5,447,290 pesos. The principal sources of revenue are customs, yielding 2,154,308 pesos, and spirits and tobacco, yielding 2,143,088 pesos. The expenditure on public works was 590,250 pesos; on education, 495,224 pesos; on the army, numbering 600 men, 475,729 pesos; on the interior, 376,855 pesos; on finance and trade, 364,747 pesos; on police, 214,662 pesos.

The total debt in 1892 amounted to 21,675,643 pesos. The old sterling loans of 1871 and 1872, bearing 6 and 7 per cent. interest, and amounting with unpaid arrears to £2,199,512 in 1887, were compounded in 1888 for a new 5-per-cent. loan of £2,000,000, which was assumed by the Costa Rica Railroad Company. The railroad extends from Limón to Alajuela, 147 miles, and an extension to the Pacific coast is projected, of which the section from Punta Arenas, on the Pacific, to Esparza, 14 miles, is completed.

Revolutionary Conspiracy.—There was an attempt in March, 1893, to overthrow the Government, planned by José María Gutiérrez, the leader of a previous revolt, and other political exiles who had taken the benefit of an amnesty proclamation and returned to the country. The conspirators plotted to seize the military barracks and arsenal at San José and arm their followers with the weapons of the War Department. The President and Minister of War were apprised of the plot by an informer, but permitted the conspirators to proceed, in order to capture them in the act of treason. On the day fixed for the uprising some of the leaders were quietly arrested. Others were allowed to supply themselves with arms and ammunition from the Government stores, and then were surprised by the troops and sent to prison. In order to prevent further disturbances, martial law was proclaimed throughout the country.

CUBA AND PUERTO RICO, two islands of the West Indies, colonies of Spain.

Cuba.—This colony is administered by a Governor-General under the direction of the Spanish Minister of the Colonies, assisted by a Council of Government, the members of which are nominated by the Crown, and which has only advisory powers. The Governor-General may suspend at his discretion the operation of any law or decree of the home Government. Each of the 6 provinces sends 2, and the University of Havana and the Society of Friends of the Country each 1 Senator to the Cortes, and the provinces elect Deputies, 30 altogether, in proportion to their population. There is a governor in each province, and he is assisted by an elective provincial assembly, which has a slight control over local affairs. The area of Cuba is 34,233 square miles, exclusive of the Isle of Pines, which has 810 square miles, and other keys aggregating 970 square miles. The population in 1890, as officially estimated for electoral apportionment, was 1,631,687. The whites constitute 85 per cent. of the population, the remaining 15 per cent. including negroes and colored people of all kinds, with the Chinese, who numbered 43,811 in 1877. Negro slavery was abolished in 1886. Of the white population 35 per cent., and of the colored 12 per cent., can read and write. Havana, the capital, had at the census of 1887 a population of 198,271; Matanzas, 87,760; Santiago de Cuba, 71,307; Cienfuegos, 65,067. The army is limited in time of peace to 20,414 men. The militia, including a black battalion, numbered 63,115 men in 1892. The Governor-General, who is captain-general of the troops, is Alejandro Rodriguez Arias.

Finances.—The budget for 1892-'93 estimates the revenue at 21,946,356 pesos (1 peso = about 93 cents), of which 10,554,500 pesos are derived from customs, 5,936,456 pesos from direct and indirect taxes, 3,500,000 pesos from the lottery, 1,662,500 pesos from stamps, 250,000 pesos from Government property, and 42,900 pesos from various sources. The expenditure is estimated at 21,588,842 pesos, of which 10,304,367 pesos are for the general debt, 5,302,488 pesos for the army, 3,139,018 pesos for the interior, 1,069,525 pesos for marine purposes, 715,341 pesos for justice and worship, 568,236 pesos for financial purposes, and 469,867 pesos for construction and maintenance of public works. The public debt is estimated to amount to \$180,000,000.

Commerce and Production.—The largest commercial product of the island is sugar, of which 823,096 long tons were produced in 1891, against 675,233 tons (over 28 per cent. of the world's production of cane sugar) in 1890. The production of molasses was 67,000 tons in 1890, and 103,000 tons in 1891. About 300,000 bales of tobacco are produced annually. The island is rich in forests, and also in mineral products, of which iron, manganese, gold, and copper are mined. Asphalt abounds, and on the Isle of Pines fine variegated marble is quarried. The United States imports sugar, tobacco, fruit, and nuts from Cuba, and exports thither lard, flour, dairy products, iron and steel manufactures, wood manufactures and timber, and coal. The largest imports into Cuba are rice, lard, flour, and jerked beef.

Communications.—There are about 1,000 miles of railroads, and in 1885 a loan of about \$40,000,000 was authorized for the completion of the network. There are 2,810 miles of telegraphs.

Puerto Rico.—The island has an area of 3,550 square miles, and a population of 806,708, of which more than 800,000 are negroes. The Captain-General is assisted by a junta of military officers. There are 3,566 regular troops garrisoned in the island, and a man-of-war is maintained there. The budget for 1892-'93 estimates the revenue at 3,725,597 pesos, of which 2,430,000 pesos are derived from customs, 835,697 pesos from taxes, 285,900 pesos from stamps, 34,000 pesos from Government property, and 140,000 pesos from various sources. The expenditure is estimated at 3,850,185 pesos, of which 1,093,174 pesos are for the general debt, 945,910 pesos for the army, 710,950 pesos for the interior, 461,416 pesos for public works, 309,524 pesos for justice and worship, 208,515 pesos for financial and 111,646 pesos for marine purposes. In 1890, 1,294 vessels, of 1,257,174 tons, entered, and 1,274 vessels, of 1,231,189 tons, cleared Puerto Rico.

Commerce.—The principal articles of export in 1889 were: Coffee to the amount of 8,212,886 pesos; sugars, 3,730,586 pesos; tobacco, 1,292,030 pesos. The total imports in 1890 amounted to 18,230,385 pesos, and the exports to 10,710,519 pesos. The colony has about 470 miles of railroads.

Insurrectionary Outbreak.—The Cuban clubs in Central America, New York, Florida, and other parts of America were observed to be unusually active in the early part of 1893. The enrollment of these clubs, of about 60 members each, is over 5,000 in the United States alone. In April, 1892, the Cuban Revolutionary party was regularly organized by José Martí and other Cuban exiles, with a council of direction composed of Martí and other resolute men of the younger generation, having Gonzales de Quesada, of New York, for secretary, and Benjamin J. Guerra for treasurer. Behind the organization were all the surviving civil and military leaders of the Cuban revolution, ready to take an active part in another struggle for Cuban independence. There were 61 clubs in Key West, 15 in Tampa, 10 in New York city, 3 in Philadelphia, 2 in Ocala, and New Orleans, Jacksonville, Brooklyn, Boston, Chicago, Atlanta, and St. Augustine had each 1 club: while in Jamaica there were 6, in Mexico 2, in Hayti 1, and others in various parts of Spanish America. The Spanish Government, in the beginning of 1893, as a concession to the Autonomist demand for universal suffrage, carried a law through the Cortes granting the franchise to every male adult Cuban who pays a poll tax of 5 pesos. The Autonomists refused at first to accept the concession, but the leaders yielded under pressure, and resolved to have their party take part in the elections. The result was disappointing, and was attributed by them to official intimidation, corruption, and falsification of returns. From that time the Spanish agents in Central America and in the United States took note of certain signs of extraordinary activity in the circles of Cuban patriots. The Spanish Govern-

ment redoubled its watchfulness and made some increase in the forces in America. The United States Government, on receiving warnings from the Spanish legation, made preparations to patrol the Florida coasts with revenue cutters in order to prevent the departure of filibustering expeditions in violation of the neutrality laws. The Cuban Republican leaders avowed, as they have before, that they were able to give efficient financial support, and also to procure arms and supply men, when the Cubans should rise in a mass to throw off the Spanish yoke, but that no rising would take place until the country was ready for a general revolt and military preparations were made that would insure a successful campaign.

The exiled leaders were taken by surprise when Gen. Manuel Sartorius and his brother Ricardo collected a band in the province of Santiago de Cuba and proclaimed the revolution, and thought at first that the Government had astutely provoked a premature rising by prompting the provincial authorities to persecute these young Republican leaders, or that the latter had been carried away by their impetuosity. Their hope of a general popular revolt, well concerted and planned, was disappointed; but still, if the reports were true that bands were collecting in the districts of Manzanillo, Holguin, Guantanamo, and Las Tunas, and that the Spanish authorities had been taken unprepared and a revolutionary force of 1,500 or 2,000 men was already in possession of the mountainous districts of the eastern province, which had held out against the Spanish army during the whole period of the revolution of 1868-'78, then if Cuba was ripe for independence the co-operation of the exiles would be needed. It turned out that the movement was only the hasty and isolated act of a few individuals. The brothers Sartorius set out from the village of Puernio, near Holguin, on April 24, where they issued their pronunciamiento. Their band of 20 followers was joined by 18 men from Velasco on the following day, and as they marched toward Milas, on the north coast, the number was swelled to 300. Other bands took up arms in various places, but in a hesitating, desultory fashion, without a common plan or leadership. The executive committee of the Autonomist party passed resolutions condemning the outbreak and offering to give the party's moral support to the authorities. The Cuban Senators and Deputies in Madrid, including the Autonomists, expressed their

disapproval of the revolt to the Minister of the Colonies.

The Spanish Captain-General, on April 27, called a council of war, and dispatched troops at once to the rebellious district, and 2 war vessels to guard the coast and intercept the reinforcements and munitions that Sartorius seemed to be expecting from the United States. On April 28 the Governor-General issued a proclamation, in which he declared that, since bands had risen up against the integrity of the territory just when the country was making rapid progress in its material interests and its people were in full enjoyment of all the political rights possessed by any citizens of the Spanish nation, he was disposed to repress the criminal attempt and protect peaceful citizens at any cost, and therefore placed the province of Santiago de Cuba under martial law, but promised exemption from punishment to all rebels who surrendered themselves within eight days. The Government concentrated 4,000 troops in the disturbed district. Seven columns set out in pursuit of the insurgent bands, and strong bodies were kept under arms in Havana and other large places to guard against a spread of the insurrection to new centers. Closely pursued by the troops, the companies of the revolutionists dwindled, until none were left except the original band of Sartorius, reduced to 29 besides the 2 brothers. These finally surrendered on May 2 on the assurance of full pardon. The proclamation of a state of siege in Santiago was revoked on May 9.

Reform Project.—The Spanish Minister of the Colonies announced to the Spanish Cortes in the summer of 1893 a legislative project for Cuba that was designed to give partial satisfaction to the Home Rule party, which hopes to see an autonomous Parliament. The provincial councils, to which a semblance of legislative authority in local affairs was given, but no real control over financial expenditures or administrative acts, he proposes to abolish, in order to create one general legislative council for the whole colony, which shall have authority over the Cuban budget and be empowered to enact measures of administrative reform. Although its legislative power and initiative would be circumscribed, the planters, industrialists, and merchants of Cuba expressed their approval of the Government proposal, recognizing any step that brings the budget under control of Cuban representatives as an advance in the direction of legislative autonomy.

D

DELAWARE, a Middle Atlantic State, one of the original thirteen; ratified the Federal Constitution Dec. 7, 1787; area, 2,120 square miles. Population, by the census of 1890, 168,498. Capital, Dover.

Government.—The State officers during the year were: Governor, Robert J. Reynolds, Democrat; Secretary of State, David T. Marvel, till Jan. 31, when he resigned to accept the associate judgeship, and was succeeded by John D. Hawkins; Treasurer, Wilbur H. Burnite; Auditor,

John P. Dulaney; Attorney-General, John R. Nicholson; Insurance Commissioner, Isaac N. Fooks; Chancellor, James L. Walcott; Chief Justice of the Supreme Court, Joseph P. Comegys, until Jan. 20, when he retired from the bench; he died on Feb. 1; the Governor appointed as his successor Alfred P. Robinson, who lived but one month after taking the office, dying on Feb. 28; he was succeeded by Charles B. Lore; Associate Justices, Ignatius C. Grubb, Charles M. Cullen, and John W. Houston. Judge

Houston retired Jan. 23, and was succeeded by David T. Marvel, ex-Secretary of State. The bench is entirely Democratic. The resignations of Justices Comegys and Houston were in compliance with a joint resolution of the General Assembly, offering to retire them on pensions of \$2,000 a year for life. Judge Comegys was seventy-nine years of age, and had been Chief Justice since 1876. Judge Houston was seventy-eight, and had served since 1855.

Finances.—The following is from the report submitted by the Treasurer to the Legislature in January: Balance in treasury, Dec. 31, 1891, \$29,003.32; receipts from all sources, \$157,090.99; total, \$186,094.31. Total disbursements, \$180,655.26. School fund receipts, \$182,421.55. School fund disbursements, \$138,146.72. Sinking fund—receipts, \$6,078.80; disbursements, \$4,674.80. The report notes, among other things, that, since the appointment of State detectives, who are required to serve requisitions without charge beyond expenses incurred, the cost to the State for this service has been less than one fourth what it was before.

There has been an increase in the revenue derived from the taxation of banks and banking institutions. Changes made by the last General Assembly in the insurance laws have brought about a diminution of about \$3,000 in revenue from that source.

The total assets of the State, both general and school funds, aggregated on Dec. 31, 1892, \$875,092, besides cash on hand amounting to \$56,348.22; the total liabilities on the same date were \$684,750.

The following statistics are from a report of the Treasurer: State debt, less sinking fund, \$887,578; same (county debt), \$618,400; same (municipal), \$1,413,111; total debt, less sinking fund, \$2,919,084. Commercial failures for 1892 number 29; business concerns, 3,862; per cent. of failures, 0.54; liabilities, \$68,100. Deposits in savings banks (1891-'92), \$3,626,319; depositors, 17,318. Wilmington bank clearings, 1892, \$44,573,069.

Charities.—The name of "The Delaware State Hospital for the Insane" has been changed to "The Delaware State Hospital at Farnhurst." At the beginning of the second biennial period there were 162 patients in the hospital, 92 males and 70 females. To the present time 199 have been admitted, 127 males and 72 females, making the whole number under treatment 361, males 219 and females 142; 94 were discharged cured, 20 improved, 6 unimproved; 6 were not insane. There were 44 deaths. The whole number discharged was 170, leaving 191 in the hospital Dec. 1, 1892. The daily average population was 187. The expenditure for the two years covered by the last biennial report was about \$52,000.

Education.—School statistics as below were given in a report published in March: Estimate of children five to eighteen years, 40,400; enrolled in schools, 19,340; average daily attendance, 12,200; school days, 140; male teachers, 187; female, 291; salaries, \$120,000; total expenditure, \$197,398.

The Board of Education of Wilmington claims that the colored pupils in the public schools should be included in the census of school children required by the new school law,

to provide a basis for the apportionment of the State school fund. The State Treasurer and the Attorney-General deny the claim, on the ground that a law of the State directing the distribution of the fund, recognizes a distinct and separate fund for the support of colored schools in the county, and expressly excepts that fund from its operation. The courts will probably be called upon to decide the question.

The State College, at Newark, had 86 students in the last year, with an attendance of 79. The class graduated numbered 13. There are 10 or 12 instructors. It is conducted at an expense of about \$40,000 a year. Aside from an occasional appropriation for a new building or some extraordinary repairs from the State of Delaware, the college is supported entirely by the National Government, the revenue being derived from three separate funds, the original land grant of 1862, realizing \$4,980 per year; the Hatch Agricultural Experiment Station appropriation of \$15,000 annually; and the Morrill bill, from which \$14,400 is derived this year, making the total from the national Treasury this year \$34,380. In addition to this, \$25,000 was received this year from the State with which to erect the new recitation hall, making a total of State and Government aid for this year \$59,380. Sundry receipts in fees, etc., from the students increase the year's receipts to considerably over \$60,000. The report made at the meeting of the trustees in March showed, notwithstanding, a deficit in the funds of over \$5,000.

The total cost of the new recitation hall was \$25,075.30. In addition to this, \$1,525 was spent in the erection of a wood-working shop, \$612 for alterations to old building, and \$186.93 for sundries, making a total expenditure of \$25,399, or \$399 more than the State appropriation two years ago. Besides this, \$3,773.36 was spent for a new central steam-heating plant, and \$2,500 for an addition to the mechanical department.

The deficit was covered by an appropriation of \$6,000 made by the Legislature.

Of the money received by the college from the General Government, amounting to \$34,380 for the year ending June 30, \$15,000 is for the support and maintenance of the Agricultural Experiment Station. The agricultural course is not very popular, only 2 students having taken it during the year, but the officers of the station teach in the college, and the professors perform duties at the station. The station staff consists of a director and 5 officers. The Morrill fund can not legally be spent for anything aside from apparatus and instruction. Buildings, repairs, and land must be paid for by the State. Students are charged only \$15 a year if they are day scholars, and \$85 if they room in the dormitory, so that instruction is practically free to residents of the State.

In order to make the instruction in agriculture more available to the young farmers of the State, a course has been arranged for the first three months of the year, when they are most at leisure. Five hours a week will be given to the study of soils, farm management, implements, cultivation of crops, fertilizers, and plant structure; four hours to either horticulture or animal husbandry; and six hours to botany, plant diseases, entomology, and veterinary science. Eight

hours in addition will be given to practical work in shops or laboratories.

The professor in charge of the military department reported that the new military regulations were "adding greatly to the possibilities for which his department has been established by the Federal Government. There is a class of about 30 of the students now enrolled in the cadet corps. Among them are the best men in the college. The prospects are that at next graduation the class will show something of material advantage in exchange for the outlay of expense and labor exerted in this direction."

The State College for Colored Students had 17 pupils enrolled for the year, with an average attendance of 13. Besides the president, there is one professor and a teacher for manual training. A farm is connected with the college, which is profitably conducted. Owing to the low state of the finances, the spring term closed on May 15 instead of June 1. The last Legislature made an appropriation of \$1,000 to the college, and although it was represented that the needs of the college men were urgent, and that the appropriation should be made available at once, the resolution that passed provided that the amount appropriated should be paid half in July, 1893, and the remaining half in July, 1894, so that it is not available for present necessities. An appropriation from the United States Government is payable in August.

Water Ways.—An inland water way has been begun which is to extend from Lewes, on lower Delaware Bay, to Chincoteague Bay, on the eastern shore of Virginia. It will be 75 miles long. The appropriations amount to \$145,750. Of this sum, \$68,000 has been expended in making a cut between Indian River Bay and Assawaman. It took the whole of the first two appropriations to finish it. The cut was 20 feet wide at bottom and 4 feet deep. The next two appropriations, amounting to about \$75,000, it is proposed to apply to the dredging of a channel 20 feet wide and 4 feet deep from near Ocean City, Md., to Rehoboth Bay. The remainder of the sum will be applied to repairing the cut between Assawaman Bay and Indian River Bay. From Rehoboth the cut will be continued through the highland and marshes to Lewes, or as far as the appropriation will permit.

This inland water way, by producing a current through the bays, makes available an area of 40 square miles of oyster ground in Chincoteague Bay alone, while the bays to the north, including Indian River and Rehoboth, will add nearly as much more, making altogether 75 square miles, capable of accommodating, at present rate of planting, 40,000,000 bushels of oyster plant, worth at present price at landings \$20,000,000.

Other appropriations for river and harbor improvements include \$40,000 for Wilmington harbor, to deepen the channel; \$5,000 for Appoquinimink river, toward cutting a channel 8 feet deep at low water and 100 feet wide at the mouth and above, the whole cost of which improvement will be \$39,000; \$18,000 for improvement of Smyrna river, the estimated cost of which is \$90,000; \$12,000 for Mispillion river, estimated to cost in the end \$20,000; and \$7,000 for Murderkill river, on improvements estimated at \$47,000. The channel of Broad Creek river

is to be deepened from Bethel to Laurel, the work to cost about \$15,000.

Railroads.—Work was begun in October on the Wilmington and Chester Electric Railway, which is to give Wilmington direct communication with Philadelphia. It is expected to be in running order by midsummer. There will be a connecting link from the river front at Gordon Heights, and a track from Edgemoor.

The number of miles of railroad in operation in 1891 was 333; capital stock, \$7,857,858; funded debt, \$7,137,500; total investment, \$15,134,194; cost of equipment, \$112,847,873; passenger earnings, \$4,472,237; freight, \$11,481,018; net earnings, \$6,038,811; interest paid on bonds, \$4,006,577; dividend paid on stocks, \$485,547.

Agriculture.—The report of peaches shipped by way of the Pennsylvania Railroad this year was given as follows in September: The Pennsylvania Railroad has carried more peaches this year than in any year since 1875. The Delaware district has shipped more even than in that year. The quantity shipped from points on the Delaware division up to the end of the week ending Sept. 16 aggregated 3,720,000 baskets or 6,200 cars. On Aug. 30 321 cars were shipped. The number of baskets shipped to various cities is reported as follows: New York, 876,200 baskets; Philadelphia, 587,400; Boston, 244,800; Wilmington, 151,800; Pittsburg, 68,000; Cleveland, 49,200; Chester, 40,600; Buffalo, 47,400; Providence, 34,200.

The increase in the yield is perhaps proportionately greater even than appears, because, from careful estimates made in July, it seems that the number of trees on the Peninsula has decreased since 1890 by nearly 2,000,000. The number from which shipments were made by rail in 1890 was estimated at 7,911,248, and in 1893 at 6,010,691. Those along the water courses were estimated this year at about 1,500,000.

The strawberry crop was not as profitable as usual this year, owing not to lack of yield but to other causes. The first week the berries were injured by the incessant rains; the second week extreme heat caused the market to be overstocked. The prices were unusually low. "The 'nonreturnable' crate," says a newspaper correspondent, "has been a great loss to the berry growers this year, as a number have lost from 75 to 100 of the 'standard' crates, which represent an outlay of \$40 to \$50."

From a treasury report the statistics following are taken for 1893: Number of farm animals in the State—horses, 25,553, value, \$2,049,814; mules, 4,826, value, \$491,549; milch cows, 31,380, value, \$757,246; oxen, 27,941, value, \$635,396; sheep, 13,551, value, \$48,987; swine, 521,167, value, \$365,167.

Shipbuilding.—Of the 9 new-type boats built during 1892, 5 were done in Wilmington, three firms having been employed.

The State Line.—The boundary between Delaware and Pennsylvania, as newly surveyed, was adopted and fixed by resolution of the joint commission April 11, and the setting of the boundary stones was finished April 26. The new land assigned to Delaware includes a part of entry of considerable importance, known as "The Hook," from the name of the Pennsylvania

borough, Marcus Hook, to which it formerly belonged. The export is mainly crude and refined petroleum in bulk and barrels, large cargoes of which are carried away by British, Italian, German, and Spanish vessels.

Quarantine Station.—A commission was appointed in Pennsylvania to select the best available quarantine site, and the Governor of Delaware appointed a committee to confer with it. It was proposed to remove to the site selected the Pennsylvania Lazaretto from its location above Chester and provide a place for quarantining vessels liable to bring infectious diseases to the cities and towns upon the Delaware river and bay. Several possible sites were examined, and Reedy Island was finally chosen, and a disinfecting plant was placed there in the summer, on a wharf built out about 1,500 feet from the island.

Legislative.—The biennial session of the Legislature began Jan. 3 and ended May 5. Hon. George Gray was re-elected to the United States Senate. The most important work, perhaps, was the ratification of the constitutional amendment with respect to taking the sense of the people on the question of calling a constitutional convention. It is now in the power of the people to call a convention by their votes at any general election, and there is no doubt that at the election of 1894 a convention will be ordered.

A measure changing the method of appointment of the police commission of Wilmington met with great opposition from Republicans. It was designed to take from the mayor all participation in the appointments, and give them to persons selected by the Governor. The change was justified by reference to a scandal in which the chief, a captain, and a sergeant of police were involved, and which was secretly investigated by the mayor and a police commissioner with the result of acquittal of the chief. The bill passed in spite of the opposition, which was not entirely from Republicans, others opposing it on the ground that it interfered with the city's right to self-government. It named a new board of three, who are to hold office for two, four, and six years respectively. Their successors are to be appointed by the Governor for six-year terms, but the board may fill vacancies for unexpired terms. The commissioners must swear, among other things, that in every appointment or removal they will be guided by no cause other than fitness or unfitness, qualification or disqualification.

The inheritance-tax law, which was repealed by a former Legislature, was revived, including the collateral-inheritance-tax clauses.

The State registration law was amended in reference to the oath required of a man appointed an alternate registrar that he will not be a candidate at the election, although he is appointed six months before it. This oath is done away with, and the alternate registrar may resign his appointment to become a candidate.

A bill was passed in regard to Roman Catholic congregations, having for its object to relieve the bishop of personal responsibility in the management and control of church property, and to avoid the trouble and expense of administering upon such property in the event of the death of the bishop. At present such church property as comes under the control of a new bishop is forth-

with devised by him, by will, to be held by a third party in trust for his successor, in the event of his decease. This provision for an interregnum is obviated by the new law, which creates a corporation for each parish, the corporation being a continuing body.

The first step was taken toward an amendment to the Constitution vesting in the courts exclusive power of granting divorces, but for the causes and conditions prescribed by the Legislature. If all divorce cases were thus turned over to the courts the work of the Legislature would be materially lightened and the sessions might be shorter. No fewer than 50 divorces were granted at this session.

The Delaware Pneumatic Tube and Delivery Company was incorporated. Its capital stock is to be \$100,000, divided into 4,000 shares of \$25 each. This concern will carry parcels, liquids, etc., and, it is said, will ship peaches from Sussex County to Philadelphia at the rate of 5 cents a basket.

The liquor law was so amended as to allow retailers to sell liquor in quantities from one quart to one gallon to be drunk off the premises, and to sell in quantities less than one quart to be drunk on the premises.

New Castle County was authorized to issue bonds, \$100,000 to build a bridge at Washington Street, Wilmington, and \$60,000 to redeem outstanding county indebtedness.

A reapportionment of the school fund of the same county was provided for, which will give Wilmington about \$30,000 per annum for schools, instead of \$18,000, as at present.

The Wilmington municipal elections were transferred to the control of the State Board of Elections. This is to regulate the time and manner of city elections, and will allow each city council to select the clerk, bailiff, and other officials who are to serve under it.

Among other acts were the following:

Permitting persons accused of crime to testify in their own behalf.

Making it unlawful to use barbed wire in a division fence except by mutual consent of the owners of the property divided.

Incorporating the Humane Society of Delaware.

Appropriating \$6,000 for the support of Delaware College, and \$1,000 for the colored college.

Repealing all statutes relating to planting, propagating, dredging, tonging, or taking oysters from the natural beds in Delaware Bay.

Declaring Labor Day a legal holiday.

Making Saturday, from June to September inclusive, a legal half holiday for banking and trust company purposes.

Incorporating the Delaware Industrial School for Girls.

Providing protection for associations and unions of workmen and persons in their labels, trade-marks, and forms of advertising.

Repealing the law authorizing the levy courts to appropriate \$5 a year to every Sunday school.

Providing for more fully effecting the endowment and support of colleges for the benefit of agriculture and the mechanic arts.

To prevent the accomplishment of frauds upon the General Assembly by means of deception and tricky amendments or additions to acts.

Delaware at the World's Fair.—Considerable criticism was indulged in by people of the State during the summer on the building

and exhibit at the fair; but in view of the appropriation (\$20,000) a very fair showing appears to have been made. The State day was celebrated on Aug. 23, in connection with that of West Virginia, at Festival Hall. The badge bore the device of the famous "blue hen and her chickens." After the reception 500 baskets of Delaware peaches were distributed.

The Old Swedes' Church.—In June was celebrated the two hundred and fifty-fifth anniversary of the organization of this church, and the one hundred and ninety-fifth of the dedication of the building, the oldest church in the Eastern States. With the dying out of many of the families interested in the church, and the removal of others, the building was in danger of falling to decay. In view of this fact, and with the purpose of reviving interest in the preservation of the church, and also of benefitting the neighborhood, a fund has been raised for the purpose of erecting on the grounds a parish building, to be used by the Sunday schools of the church and as a club-room for young men of that part of the city.

DENMARK, a kingdom in northern Europe. The legislative authority is vested in the Rigsdag, composed of the Landsting and the Folkething. The former consists of 66 members, of whom 12 are life members appointed by the King, and the rest are elected by indirect vote of the people for eight years, one half of the members going out every four years. The Folkething is composed of 102 members, elected for three years by direct universal suffrage, the representation being 1 deputy to every 16,000 inhabitants. The sessions of the Rigsdag are held annually at Copenhagen.

The reigning sovereign is Christian IX, born April 8, 1818, who succeeded to the throne on the death of King Frederik VII, Nov. 15, 1863. The heir-apparent is Prince Frederik, born June 3, 1843. The Statsraadet, or State Council, was composed of the following members in the beginning of 1893: President of the Council and Minister of Finance, Jacob Broennum Scavenius Estrup, appointed June 11, 1875; Minister of the Interior, H. P. Ingerslev; Minister of Justice and for Iceland, J. M. V. Nellesmann; Minister of Foreign Affairs, Baron Reedtz-Thott; Minister of War, Gen. J. J. Bahnsen; Minister of Marine, Commander N. F. Ravn; Minister of Public Instruction and Ecclesiastical Affairs, A. H. Goos.

Area and Population.—The area of Denmark is 15,299 square miles, and the population, according to the census taken on Feb. 1, 1890, was 2,185,325. Of the total population, excluding the inhabitants of the Färøe Islands, 1,059,322 were males and 1,112,983 females. In 1890 there were 14,975 marriages, 68,111 births, and 43,112 deaths, the surplus of births being 24,999. In 1890, 10,298 persons emigrated, while in 1891 the number was 10,382, the United States being the place of destination in most cases. The principal cities are Copenhagen, with a population of 375,719, including the suburbs; Aarhus, with 33,308; and Odense, with 30,277.

Finance.—The revenue in 1891 was 56,811,602 kroner (1 krone = 27 cents), and the expenditure 66,287,089 kroner. For 1892 the figures were 54,683,727 and 58,578,341 kroner respectively.

The budget for 1893-'94 estimates the revenue at 55,531,618 kroner, of which 37,609,000 kroner are derived from customs, excise, and other indirect taxes, 9,763,500 kroner from direct taxes, 4,515,716 kroner from interest on assets of the Government, 1,814,671 kroner from receipts from property and the sinking fund, 1,000,000 kroner from profits of public lotteries, 767,406 kroner from profits of domains, 522,546 kroner from separate revenues, and 88,778 kroner from the revenue of the Färøe Islands. The expenditure is estimated at 54,228,658 kroner, of which 10,631,950 kroner is for the Ministry of War, 6,722,180 kroner for interest and expenses of the public debt, 6,690,726 kroner for the Ministry of Marine, 5,327,946 kroner for the Ministry of the Interior, 5,133,702 kroner for extraordinary state expenditure, 3,985,557 kroner for the Ministry of Justice, 3,625,449 kroner for the Ministry of Public Worship and Instruction, 3,516,304 kroner for the Ministry of Finance, 3,453,742 kroner for improvement of the state property and reduction of the debt, 3,310,967 kroner for pensions and the military invalid fund, 1,155,200 kroner for the civil list and appanages, 429,656 kroner for the Ministry of Foreign Affairs, 306,616 kroner for the Rigsdag and the Council of State, and 88,664 kroner for Iceland.

The public debt, on March 31, 1891, amounted to 186,610,992 kroner. Of this amount 10,294,250 kroner represented the foreign debt, bearing 4 per cent. interest. The internal debt bears mostly 3½ per cent. interest. The assets of the state, including the reserve fund, amounted to 68,826,059 kroner.

The Army.—Service in the army is compulsory, beginning with the age of twenty-two, when all able-bodied men are enrolled in the regular army and its reserve for a term of eight years; they form part of the extra reserve for another eight years. The soldiers have to undergo a drill, lasting six months for the infantry, five months for the field artillery and engineers, and nine months and two weeks for the cavalry. A second term of practice is provided for those who are not proficient after their first term has ended. Besides the preliminary training there is an annual drill lasting from four to six weeks. The annual conscription numbers 11,000 men. The army consists of 31 battalions of infantry, 5 regiments of cavalry, 2 regiments of field artillery, 2 battalions of fortress artillery, and 1 regiment of engineers. Besides these there are 11 reserve battalions of infantry, 4 batteries of field artillery, and 5 companies of fortress artillery. The strength of the army in 1892 was 1,201 officers and 41,749 men. The war strength of Denmark is about 60,000 men, not including the extra reserve, which is only to be called out in special emergencies, and numbers 16,500 officers and men.

The Navy.—The Danish navy consisted in 1892 of 1 sea-going armor-clad, 8 coast-defense armor-clads, 4 protected cruisers, 1 torpedo ship, 4 sea-going torpedo boats, 5 first-class torpedo boats, 10 second-class torpedo boats, 20 unarmored vessels of various kinds, and 16 transports. There are under construction 1 protected cruiser and 1 sea-going torpedo boat.

Commerce.—The value of imports in 1891 was 334,613,378 kroner, and that of the exports

249,033,125 kroner. Of the different classes of goods, articles of food rank highest, the imports amounting to 180,900,000 kroner, and the exports to 197,300,000 kroner; raw products come next, the figures being 108,800,000 kroner and 25,000,000 respectively; manufactured articles third, the imports amounting to 71,700,000 kroner, and the exports to 13,300,000 kroner; and lastly means of production, of which the imports were valued at 23,200,000 kroner, and the exports at 12,900,000 kroner. The following table shows the values in kroner of the principal classes of imports and exports for 1891:

CLASSES OF ARTICLES.	Imports.	Exports.
Pork, butter, eggs, lard.....	38,640,808	128,101,309
Cereals.....	42,423,268	17,499,693
Animals.....	6,098,370	45,669,690
Textile manufactures.....	39,573,377	5,190,353
Colonial goods.....	39,515,834	7,615,993
Metals and hardware.....	30,517,340	4,792,821
Coal.....	33,353,173	2,519,456
Wood and manufactures.....	17,665,900	8,331,253
Drinks.....	4,954,830	2,213,815

The trade with the principal foreign countries in 1891, in kroner, is set forth in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain.....	60,082,205	132,188,638
Germany.....	110,694,756	63,176,181
Sweden and Norway.....	52,907,841	81,381,904
Russia.....	85,748,394	2,730,607

Navigation.—During 1891 there were 58,516 vessels, of 2,629,603 tons, entered, of which 15,719 were coasting vessels, of 203,623 tons, 14,045 coasting steamers, of 336,944 tons, 16,700 ocean sailing vessels, of 183,479 tons, and 14,219 ocean steamers, of 1,404,529 tons. There were cleared 59,663 vessels, of 1,073,904 tons. The merchant marine, including the colonies, on Jan. 1, 1892, numbered 3,607 vessels, of 310,953 tons, of which 353 were steamers, of 117,054 tons.

Communications.—In 1891 there were 1,247 miles of railroads open for traffic, about 1,000 miles of which were owned by the State. Up to March 31, 1890, the Government had expended 164,141,474 kroner for the construction of its railroads.

In 1890 the post-office forwarded 50,871,000 letters and postal cards, and 4,796,000 samples and printed matter.

At the end of 1891 there were 3,674 miles of telegraph lines in Denmark, with 10,280 miles of wire. The Government owned 2,816 miles of lines. During 1891 there were 625,940 domestic, 1,002,637 international, and 37,560 official messages transmitted.

Dependencies.—The Danish colonies consist of Iceland, Greenland, and the Danish Antilles. (For the latter, see the article on the WEST INDIES in this volume.) Iceland has an area of 39,756 square miles, with a population in 1890 of 70,927. Greenland has an area of about 46,740 square miles, and a population of 10,516 inhabitants. The value of imports from Greenland

into Denmark in 1891 amounted to 502,013 kroner, and the exports from Denmark into Greenland to 417,554 kroner.

A new constitution for Iceland, establishing home rule in a fuller measure than before, was signed by the King on Jan. 5, 1893, and went into force on Aug. 1. Iceland will possess its own Legislature and administration for all local affairs. The legislative authority rests in the hands of the King and the Icelandic national representative body, the Althing, and the executive power in the hands of the King alone. Having no representation in the Danish Rigsdag, Iceland will contribute nothing to the revenues of the General Government. A secretary for Iceland in Copenhagen is responsible for the maintenance of the new constitution. The King nominates a governor for the northern island, and if the Althing complains of any acts of the governor the King will decide how he is to be brought to account. The Althing will henceforth consist of 2 houses—the upper house, composed of 6 members nominated by the Crown, and 6 chosen by the other house; the lower one, of 36 members, of whom 30 are elected by the people, and 6 are named by the King.

Politics and Legislation.—There were grounds for expecting in 1893 an amelioration of the abnormal situation that has existed for years in Denmark, where the Estrup ministry has governed unconstitutionally, levying imposts that are rejected by the Folkething, and applying a budget that receives the approval of only one of the chambers of the Rigsdag. The Opposition in Parliament seemed to have become less uncompromising, and the Cabinet appeared to show a more conciliatory disposition and a willingness to make concessions. The Moderate Liberals had separated from the Radicals and the Socialists, and in the last elections the Radicals had lost their majority. In the previous session the ministry had profited by this situation, and had carried various useful bills by the aid of the Moderates. One of the leaders of the Moderate group, Claus Berntsen, arranged a plan of reconciliation, by which the conflict of ten years would be ended with a bill of indemnity for the financial irregularities of the Cabinet. Other Liberals were less disposed to capitulate, and when they demanded reductions in the budget, notably in the military estimates, which the ministry would not accede to, the negotiations were broken off, and the Folkething again separated on April 1 without having voted the budget, which was consequently adopted only by the Landsting and promulgated by executive decree in the form of a provisional financial law. The ministry offered to make considerable retrenchments if the Folkething would pass a bill of indemnity legalizing the provisional laws of past years, and a majority was found to approve such a compromise, when the Minister of War made new demands for the partial reorganization and refused to modify his project for the fortification of Copenhagen on the land side.

In the spring a new agrarian party was organized in Fünen and Jutland, which has for its main objects the reduction of protective duties and the revision of the law relating to agricultural laborers.

DISASTERS IN 1893. A general survey of disasters during the year shows that storms were unusually frequent and disastrous. In the United States the hurricanes of August and September were quite unprecedented in our annals, and throughout the "tornado belt," in the middle section of the continent, wind storms followed one another with appalling violence and fatal results. Conspicuous among preventable shipwrecks was the loss of the British battle ship *Victoria*, and the most notable group of train accidents was consequent upon the culpable overcrowding of railways during the closing weeks of the Chicago fair. No general list of miscellaneous disasters can, under existing conditions, be more than approximately full and accurate. Current statements and estimates of the daily press must ordinarily be accepted as final. That they are often liable to be at fault is unavoidable. The nearest approach to official accuracy is in the monthly and yearly summaries of train accidents, for which credit is due to "The Railway Gazette."

January 1. Avalanche: Washington (State), snow-plow wrecked, 4 killed.

3. Severe cold in Europe, railways blocked.

4. Explosion: natural gas, Chicago, several firemen injured; another in a Russian mine, 15 killed.

6. An ice gorge breaks in the Ohio river at Cincinnati; many steamboats and other river craft destroyed.

7. Explosion: natural gas, Pittsburg, Pa., 3 killed, 4 hurt.

8. Another destructive ice gorge in the Ohio at Cincinnati.

10. Mining accident at Penzance, Cornwall, 30 drowned. Colliery explosion, Como, Col., 24 killed.

12. Snow, ice, and intense cold interrupt business all over the Northern States.

13. Train wrecked in Iowa, 2 killed, several hurt; collision near Chicago, many hurt, some fatally.

15. An ice gorge (the first on record) forms in the Mississippi at Memphis, Tenn. Trains in collision on the Congo Railway, Africa; dynamite explodes, 50 killed. Disastrous storm in England, many shipwrecks.

16. A building falls in Philadelphia, 3 killed; fire in Philadelphia, several fatally injured.

17. Fire on a Russian railway transport train, 45 soldiers perish, 20 hurt.

18. Railway accident at grade crossing near R. L., 8 killed, many hurt. Collision of fire engines at Evansville, Ind., 3 firemen killed, several hurt. Many deaths are reported as the result of extreme cold.

20. Train wrecked at Peru, Ind., bridge breaks, 2 killed, 7 hurt. Severe cold in Mississippi, much suffering at extreme southern points.

21. Trains in collision near Alton, Ill., 9 killed, 12 fatally hurt, and nearly 100 others more or less burned by blazing oil; train wrecked near Harrisburg, Pa., 7 hurt.

22. Explosion: oil, Wann, Ill., 5 killed, 16 hurt.

25. Collision at sea: British steamer *Cincona* sunk by German bark *Lake Ontario* in the English Channel.

27. Explosions: a kerosene lamp, in Brooklyn, N. Y., 3 fatally burned; fire damp in a Hungarian coal mine, 80 killed.

28. Train wrecked in Illinois, 1 killed, many hurt. Summary of train accidents in January: 104 collisions, 157 derailments, 12 miscellaneous; total, 273. Killed, 38 employees, 11 passengers; total, 49. Hurt, 170 employees, 155 passengers, 4 trespassers; total, 329.

February 1. Earthquake and tidal wave on the island of Zante, many lives lost, much property destroyed.

4. Train wrecked near Syracuse, N. Y., 4 killed, 2 hurt. Explosion: boiler bursts, Belleville, Ill., 3 killed.

5. Floods in Queensland, many drowned, enormous loss of property.

7. Shipwreck: Norwegian bark *Alice* ashore on Long Beach, N. J., 5 sailors drowned.

8. Train wrecked near Paseo, Ill., 1 killed, 30 hurt. Fire: Kansas City, 4 lives lost. Shipwreck: British steamer *Trinacria*, off the coast of Spain, 37 lives lost.

9. Fires: Dover, N. H., insane asylum burned, 44 lives lost; Cincinnati, 4 lives lost.

11. Landslide near West Rutland, Vt., 12 killed, many hurt. Disastrous ice gorges in many rivers. Disastrous storm at sea; British steamer *Pomerania* encounters an enormous wave in midocean, the captain, 2 officers, 4 of the crew, and 5 passengers lose their lives.

12. Unprecedented cold in the Northwest. More earthquake shocks in the island of Zante.

15. Electric car wrecked in Portland, Ore., 3 killed, 25 hurt.

18. Accident at a festival in Buda-Pesth, 20 killed, many hurt. Hurricane in Madagascar, great destruction of life and property.

18. Heavy snow in the Atlantic States, railway traffic blocked for many hours.

19. Destructive floods recur in Queensland.

20. Severe storm off the coast of Scotland, many fishermen perish.

21. Train wrecked near Palmyra, N. Y., 3 killed, 12 hurt. Mine explosion in Styria, 15 killed, 20 hurt.

22. Trains in collision near Philadelphia, 4 killed, 16 hurt. Train wrecked near Columbia City, Ind., 1 killed, 15 hurt. Shipwreck off Cuttyhunk Island, Mass., 5 volunteer life savers drowned in trying to rescue the imperiled crew.

28. Fire and falling walls in Chicago, 8 killed, 4 hurt.

During the month the British steamer *Naronic* was lost at sea with all hands, about 70 men. No trace of her found save a floating lifeboat.

Summary of train accidents in February: 84 collisions, 117 derailments, 13 miscellaneous; total, 214. Killed: 45 employees, 12 passengers, 2 trespassers; total, 59. Hurt: 127 employees, 172 passengers, 4 trespassers; total, 303.

March 1. Fire: dwelling house, Greenville, Ky., 5 lives lost.

3. Fire: New York, 5 children perish. Cyclone: Avoyelles Parish, La., 2 killed, many hurt. Collision at sea: bark *Cacique* sunk, 13 lives lost.

4. Several tornadoes in the South, some loss of life, much damage to property.

5. Landslide near Sandgate, England, the ground sinks several feet, damaging 200 houses.

6. Hurricane in Madagascar: 10 vessels sink in the harbor of Tananary, much loss of property and destruction of human life.

7. Several severe earthquake shocks in Oregon. Cyclone in Mississippi, more than 300 families homeless.

8. Earthquake shocks in New York and Long Island.

10. Destructive fire in Boston, several squares burned, estimated loss, \$4,500,000, much distress caused and many lives lost.

11. Ice gorges and destructive floods in many rivers.

14. Explosion in coal mine at Ardmore, Indian Territory, 9 killed, many hurt.

15. Violent electrical storms in the Eastern States. A building falls in Chicago, 2 killed, several hurt.

16. Trains in collision near Lackawaxen, Pa., 10 hurt, several fatally. Fire: Paterson, N. J., 2 killed, many firemen injured.

18. Fire: Milwaukee, Wis., estimated loss, \$500,000.

19. Fires: Boston, Tremont Temple burned, loss, \$375,000; St. Sebastian, Spain, 22 killed.

21. Fire and explosion: Litchfield, Ill., 1 killed, much damage done.

23. Tornado: Mississippi, several towns destroyed, estimated damage, \$2,000,000; at least 18 lives were lost, hundreds injured. Violent wind storms in Minnesota, South Dakota, and Wisconsin. Fires: Cleveland, Ohio, 4 lives lost; Purvis, Miss., probably the work of negro incendiaries, the town nearly destroyed.

24. Earthquake: Colombia, several lives lost, many houses wrecked.

29. Fire: Kaernten, Germany, 2 churches and 65 houses burned, 15 lives lost, many hurt.

Summary of train accidents in March: 72 collisions, 102 derailments, 12 miscellaneous; total, 186. Killed: 36 employees, 4 passengers; total, 40. Hurt: 71 employees, 118 passengers, 1 trespasser; total, 185.

April 1. Fire: Bradford, Pa., many killed and hurt. Mine explosion: Shamokin, Pa., 10 killed. Train derailed: Denver, Col., about 20 hurt. Fire in Manila, 4,000 houses burned, many lives lost.

2. Boiler explosion: Indianola, Iowa, 4 killed.

3. Sailboat upsets on Lake Pontchartrain, La., 4 drowned. Fire: Maywood, N. J., 5 lives lost. Mining accident: Hazleton, Pa., 5 drowned.

4. Fire at sea: ship King James burned off San Francisco, nearly half the crew lost.

5. Shipwreck: steam yacht of the Sultan sinks near Constantinople, 60 lives lost.

7. Severe wind storms in the Western States, and a destructive tidal wave in Lake Michigan near Chicago; some of the World's Fair buildings damaged, other buildings blown down. Extensive prairie fires rage in Nebraska. Building falls at Romeo, Ill., 9 killed, 6 hurt.

8. Widespread damage by prairie fires in several Western States; tornado in western New York, devastating a wide tract of country.

9. Earthquake in Serbia, several lives lost, many buildings wrecked. An aerolite breaks the arm of a bronze statue to John Brown, of Ossawatimie, in Kansas City.

11. Cyclone in southern Kansas: towns of Everest, Willis, and Powhatan nearly destroyed, several killed, and many hurt. Many earthquake shocks reported in the San Fernando mountains, Cal. Colliery explosion in Wales, 53 killed.

12. Destructive storms in the West, 64 killed, hundreds hurt. Fire in Brooklyn, N. Y., 8 lives lost.

17. Trains in collision near Farwell, Mich., 2 killed, several hurt. More earthquakes in Zante, additional lives lost.

18. Explosions: nitroglycerin at Lima, Ohio, several killed; in the Rusk-Ivanhoe tunnel, near Leadville, Col., 4 killed, several hurt. Destructive tornadoes in several Western States; 7 killed, many hurt, at Boies, Ark.

19. Cyclone at Osage City, Kan., many buildings destroyed, several persons killed. Earthquakes continue in the Island of Zante; scarcely any houses remain habitable.

20. A terrific storm rages over a wide tract of country from the Rocky mountains to the Lakes; the city of Milwaukee badly damaged, and a score of lives lost; the World's Fair buildings at Chicago suffered considerably.

21. Mining accident at Butte, Mont., 9 killed.

20. Fire at Wardner, Ida., business houses burned, estimated loss, \$650,000.

23. Fire at Hull, England, supposed to be incendiary, loss, about \$2,500,000.

25. Trains in collision near Somerset, Pa., 5 killed, many hurt. Fire in a Chicago armory, 2 lives lost.

26. Tornado: Oklahoma Territory, about 90 killed, 250 hurt, some fatally, and much damage done, all within a few minutes.

29. Tornado in Texas, the town of Cisco destroyed, many killed and hurt; another tornado near Ponca Agency, Indian Territory, 5 killed.

30. Fire in Burlington, Iowa, 6 lives lost.

Summary of train accidents in April: 72 collisions, 92 derailments, 9 miscellaneous; total, 173. Killed: 33 employees, 2 passengers; total, 35. Hurt: 93 employees, 23 passengers, 6 trespassers; total, 122.

May 1. Disastrous floods in the Mississippi river. Shipwreck: an Arab dhow capsize off the coast of Africa, 120 negro slaves drowned.

3. Explosion: dynamite, El River Station, Ind., 3 killed. Fire: Louisville, Ky., several buildings burned, estimated loss, \$300,000.

4. Severe gale along the Atlantic coast, several vessels lost and seamen drowned. Fire at sea: British steamer Khiva burned off the coast of Arabia, all hands lost.

6. Train wrecked near Lafayette, Ind., 10 killed, many hurt. Destructive storms all over the Northern States.

7. Train wrecked at Lafayette, Ind., 10 killed, many hurt; cause, failure of the air brake. Explosion: steam boiler on the Mississippi river, 12 killed, many hurt. Tornado near Gainesville, Texas, a railroad train blown from the track and wrecked.

8. Destructive gale in Arkansas.

13. Explosion: locomotive boiler at Lebanon, Pa., 2 killed, several hurt.

14. Mining accident: Calumet and Hecla mine, Michigan, 10 killed. Collision at sea: ship Countess Evelyn sunk by steamer City of Hamburg off Cornwall, 25 lives lost.

16. Floods in the Mississippi: levees give way in several places in Arkansas and Louisiana.

17. A storm of great violence on Lake Erie, more than 20 lives lost, including a United States life-saving crew, drowned in attempting to rescue shipwrecked sailors. Explosion in a factory at Geneva, Ill., 6 killed. Two more crevasses reported in the Mississippi.

18. Heavy rains in western Pennsylvania and eastern Ohio cause great damage to railroads, estimated at \$1,000,000.

20. Faulty construction: a floor gives way in a building at the World's Fair, 9 women very badly hurt, many injured. Fire: Saginaw, Mich., more than 200 houses burned, loss, \$1,000,000.

21. Extended forest fires in Michigan, 12 lives lost.

22. Shipwreck: Brazilian man-of-war Almirante Barrosa.

23. Tornadoes: Ohio, Michigan, Indiana, and Kentucky, much damage to property; 3 killed and several hurt at Cleveland. Landslides in Norway, more than 100 people killed.

28. Fire: Baltimore, Md., sugar refinery burned, estimated loss, \$1,000,000.

Summary of train accidents in May: 123 collisions, 106 derailments, 5 miscellaneous; total, 235. Killed: 39 employees, 6 passengers, 21 trespassers; total, 66. Hurt: 94 employees, 67 passengers, 14 trespassers; total, 175.

June 1. Fire: New York city, 5 lives lost; colliery fire, Fuente, Mexico, 60 lives lost.

5. Lightning: 3 killed near Frankfort, Ky. Shipwreck: German steamer Kaiser Wilhelm II sinks at her wharf at Genoa.

7. Fire: Fargo, N. Dak., estimated loss, \$3,000,000. Floods in Austria, 50 villages destroyed. Collision at sea: steamer Servia sinks ship A. McCullum, 1 life lost.

9. Faulty construction: Ford's Theater falls in Washington, D. C., 21 killed, 68 hurt.

13. Fire: New York city, 4 killed, many hurt.

14. Severe thunderstorm in western Missouri, many buildings struck by lightning, 4 killed, 4 hurt.

17. Numerous breaks occur in the Mississippi levees near New Orleans.

18. Fire: Mesaba Range, Minn., several thousand people homeless, estimated damage, \$1,000,000.

20. Fire: Tillamook, Ore., business houses burned. Train wrecked near New York city, 7 killed, many hurt. Earthquake in parts of Georgia and the Carolinas; very severe heat.

21. Fire: Duluth, Minn., 4 lives lost. Lightning: a circus tent struck at River Falls, Wis., 7 killed, many hurt. Train wrecked near Prospect, Ohio, 3 killed, several hurt. Explosion: benzine, Odessa, Russia, 16 killed.

22. Tornado: eastern Kansas, 16 killed, many hurt; violent storms in other neighboring States.

23. Collision at sea: British battle ship Victoria sunk by the Camperdown while manœuvring in the Mediterranean, 400 lives lost.

24. Train wrecked near Paterson, N. J., 5 killed.

26. The Tremont Hotel, Fort Scott, Kan., falls, several lives lost, many injured.

Summary of train accidents in June: 72 collisions, 96 derailments, 5 miscellaneous; total, 173. Killed: 25 employees, 7 passengers, 8 trespassers; total, 40. Hurt: 104 employees, 81 passengers, 15 trespassers; total, 200.

July 4. Explosion: Ann Arbor, Mich., a small cannon bursts, injuring several firemen. Many minor accidents, fires, and injuries from the carelessness with fireworks. Drowned: 4 men at Carson, Nev. Explosion: fire damp in a colliery at Thornhill, Yorkshire, England, more than 100 probably killed.

5. Hailstorm: eastern Pennsylvania, great damage to crops and buildings, many lives lost. Lightning: house struck at Fostoria, Mich., 5 killed.

6. Gale in Iowa: the town of Pomeroy almost totally destroyed, scarcely a house left standing, 53 killed, 75 perhaps fatally injured.

8. Several deaths reported from lightning, widespread damage by thunderstorms.

10. Fire in the cold-storage warehouse at the World's Fair, Chicago, 16 firemen perish.

12. Fire: Princeton, Ind., business houses burned. Earthquake: Albuquerque, New Mexico, two shocks reported. Accident at grade crossing near Springhill, W. Va., 3 killed. Train wrecked near Newburg, N. Y., 5 killed, several hurt.

15. Lightning: one soldier killed and several hurt at the Wisconsin State Camp.

17. Train accident: Chicago, horse car run down, 4 killed, many hurt. Fire in London, estimated loss, \$7,500,000.

18. Destructive tornado in Piedmont.

19. Excursion train of Sunday school scholars wrecked at East Aurora, N. Y., about 20 hurt.

20. Explosion: a can of naphtha in Brooklyn, N. Y., 4 killed.

23. Destructive forest fires in New Hampshire and Wyoming.

24. Train wrecked at Akron, Ohio, 30 hurt.

26. Violent thunderstorm in New England and the Central States.

31. Destructive thunderstorms in Ohio and West Virginia.

Summary of train accidents in July: 89 collisions, 87 derailments, 5 miscellaneous; total, 181. Killed: 34 employees, 10 passengers, 12 trespassers; total, 58. Hurt: 79 employees, 86 passengers, 11 trespassers; total, 176.

August 3. Explosion on the German war ship *Ledan*, 9 killed.

4. Steamer sinks on Lake George, N. Y., 9 lives lost.

6. Train wrecked near Lindsey, Ohio, 3 killed, 8 hurt.

7. Fire: Oakland, Cal., nail works burned, loss, \$200,000. Excursion steamer capsizes near Port Talbot, Wales, 22 lives lost.

10. Newark, N. J.: three young girls drowned while bathing.

11. Tornado near Larned, Kan., many buildings destroyed.

12. Train wrecked in Wales, 17 killed, 40 hurt.

13. Fire: Minneapolis, 1,500 people homeless, estimated loss, \$2,000,000. Collision at sea: British steamer *Kirby* sunk by the cruiser *Forth*.

14. Fire: hotel burned at Chicago, 5 lives lost.

16. Train wrecked at Milton, Va., 7 killed, many hurt. Destructive tornado in Nebraska. Boating disaster in Ireland, 17 excursionists drowned.

20. Explosion in a German coal mine, 57 killed, many hurt.

23. A hurricane swept the whole Atlantic coast of the United States, 60 lives lost, many vessels wrecked; one of the most destructive storms that has occurred in many years. Fire: South Chicago, 250 houses burned, 7,000 people homeless, estimated loss, \$800,000.

24. Collision at sea: two freight barges sink in Long Island Sound, 16 lives lost.

26. Train wrecked near Berlin, L. I., 16 killed, 50 hurt.

28. Another hurricane on the Atlantic coast; many lives lost in the neighborhood of Savannah and Charleston, owing to a high tide. Several hundred lives lost on the Sea Islands in the neighborhood of Beaufort and Port Royal; many shipwrecks, including the steamer *City of Savannah*, which was a total loss, all hands saved.

31. Bridge breaks near Chester, Mass., cause, careless supervision of repairs, 15 killed, 15 hurt.

Summary of train accidents in August: 50 collisions, 90 derailments, 7 miscellaneous; total, 147. Killed: 28 employees, 30 passengers, 8 trespassers; total, 66. Hurt: 67 employees, 89 passengers, 6 trespassers; total, 162.

September 7. Train wrecked near Colehour, Ill., 11 killed, 6 hurt.

8. Tornado near Lockport, La., 6 killed, many hurt.

15. Cloudburst at Valla-Canas, Toledo, Spain, 60 lives lost.

19. Train wrecked near Manteno, Ill., 8 killed, more than 20 hurt.

21. Explosion in a mine at Wilkesbarre, Pa., 5 killed, 5 hurt. Two soldiers killed and 5 fatally hurt during the autumn manoeuvres of the Austrian army.

22. Trains in collision near Wabash, Ind., 11 killed, about 20 hurt.

25. Fire at sea, Russian steamer *Alfons Zeevecke* burned, 60 lives lost; St. Louis, Mo., loss, \$1,000,000.

28. Panic in a synagogue in Poland, 9 killed, 100 hurt.

29. Mine flooded near Mansfield, Mich., 28 lives lost. Snow fell in the New England and Middle States. Frost ruined the outdoor floral display at Chicago.

Summary of train accidents in September: 77 collisions, 75 derailments, 6 miscellaneous; total, 158. Killed: 82 employees, 35 passengers, 12 trespassers; total, 79. Hurt: 101 employees, 88 passengers, 11 trespassers; total, 200.

October 2. Destructive hurricane in the Gulf of Mexico, many lowlands submerged, and many lives lost along the coast of Florida, Alabama, Louisiana, and Texas. The storm passed north, and was very heavy on the coast of New Brunswick and Nova Scotia.

5. Fire in military barracks at Roslav, Russia, 34 soldiers killed and 5 hurt.

10. Train wrecked, Indiana, 8 killed.

12. Hurricane along the coast of Georgia, Florida, South Carolina, much damage done. Fire: Sioux City, Iowa, 80 buildings burned, loss, \$500,000.

14. Violent storm on the Atlantic coast, extending from Florida to Maine, many shipwrecks, many lives lost. The gale also extended to the Great Lakes, where about 20 lives are reported lost.

15. Fire: Detroit, Mich., buildings burned, estimated loss, \$200,000.

17. Trains in collision at Wellsville, Ohio, 4 killed, 3 hurt. Shipwreck: French steamer *Marseilles* lost at sea with all hands.

18. Fire in New York city, estimated loss, \$1,500,000.

19. Fires: Springfield, Ill., estimated loss, \$140,000; Shanghai, China, cotton mill burned, loss, \$500,000.

20. Trains in collision at Battle Creek, Mich., 26 killed, several fatally hurt, many injured.

21. Fire: East Douglass, Mass., factory burned, estimated loss, \$200,000.

23. Heavy snowfalls in North and South Dakota and Minnesota.

25. Fire in San Francisco, estimated loss, \$150,000. Trains in collision in Michigan and Texas, 6 killed, several hurt.

27. Fire: Pittsburg, Pa., estimated loss, \$1,000,000. Shipwreck: Pacific Mail steamer *City of New York* ashore near San Francisco.

Summary of train accidents for October: 182 collisions, 116 derailments, 12 miscellaneous; total, 280. Killed: 45 employees, 42 passengers, 10 trespassers; total, 97. Hurt: 140 employees, 166 passengers, 22 trespassers; total, 328.

November 1. Open drawbridge, Portland, Ore., electric car falls, 20 lives lost.

2. Boiler explosion, New York city, 5 killed. Fire at sea: steamer City of Alexandria burned, about 35 lives lost. Fire at Dixon, Ohio, sawmill burned, estimated loss, \$200,000. Fire at Zanesville, Ohio, planing mill burned, loss, \$100,000.

4. Boat sinks in New York harbor, 10 drowned. Fire: Galena, Ill., factory burned, loss, \$100,000. Explosion: cargo of dynamite at Santander, Spain, 165 killed and several hundred people hurt.

7. Fire: Danvers, Ill., business houses burned. Explosion: Barcelona, Spain, dynamite bomb thrown by an anarchist, 30 killed, 80 injured.

8. Trains in collision near Chicago, 5 killed, 10 hurt. Fire: Memphis, Tenn., theater and other buildings burned, loss, \$380,000.

9. Fire: Chicago, cable-road buildings burned, loss, \$100,000.

11. Explosion of ether in Poland, 21 killed, several houses destroyed.

15. Fire: Fergus Falls, Minn., wheat and flouring mills burned, estimated loss, \$100,000.

17. Fire: Madison, Wis., Seminary of the Dominican Sisters burned, loss, \$75,000. Gale on the English coast, many vessels wrecked, about 500 lives lost.

18. Boiler bursts at Czernowitz, 16 killed, 20 hurt.

21. Earthquake in Persia, about 12,000 lives lost.

22. Fire: Springfield, Mass., 7 blocks burned, loss, \$450,000.

28. Fire: Detroit, Mich., buildings burned, 7 lives lost, estimated damage, \$800,000.

24. Fire: Pottendorf, Austria, great cotton mill burned.

27. Earthquake shock felt in Massachusetts, Vermont, New York, and Canada.

39. Train wrecked near Milan, Italy, 40 killed.

Summary of train accidents in November: 92 collisions, 101 derailments, 7 miscellaneous; total, 200. Killed: 48 employees, 14 passengers, 14 trespassers; total, 71. Hurt: 108 employees, 84 passengers, 8 trespassers; total, 195.

December 1. Many wrecks and mishaps on the Lehigh Valley Railroad, result of a strike, several lives lost.

2. Fire: New York city, Cornell Building burned, damage, \$250,000.

4. Violent gales along the coast of Nova Scotia. A falling embankment buries 14 men at Homestead, Pa.

15. Bridge breaks at Louisville, Ky., 20 workmen killed. Trestle breaks near Dunkirk, N. Y., 5 killed, several hurt. Freshet at Buffalo, N. Y., 2,500 people homeless, \$100,000 damage.

16. Severe storms in the north Atlantic; steamer Rhynland ships a heavy sea, and about 30 of her crew are disabled.

20. Severe storm on the southern coast of Great Britain, many maritime disasters.

22. Two fires in Boston, Mass., 1 killed, loss, \$200,000.

25. Explosion: torpedoes at Columbus, Ga., 4 people hurt.

26. Fire: steamship Seneca burned at Havana.

28. Very severe weather at sea.

29. Dense fog at Amsterdam, Holland, 15 persons drowned by falling into the canals. Chicago, explosion of natural gas, 8 killed.

30. Ice breaks under a crowd on the Volga at Nijni Novgorod, 28 drowned.

31. Collision at sea: British steamer Cythraeus sunk by La Flandre. Fire: Omaha, Neb., 4 lives lost.

Summary of train accidents in December: 84 collisions, 77 derailments, 5 miscellaneous; total, 166. Killed: 24 employees, 5 passengers, 2 trespassers; total, 31. Hurt: 89 employees, 116 passengers, 4 trespassers; total, 209.

Summary of train accidents in the United States in 1893: 996 collisions, 1,212 derailments, 99 miscellaneous; total, 2,307. Killed: 424 employees, 178 passengers, 89 trespassers; total, 691. Hurt: 682 employees, 517 passengers, 43 trespassers; total, 1,242.

DISCIPLES OF CHRIST. The General Missionary Convention met in Chicago, Ill., in September. The Christian Woman's Board of Missions, the first of the societies to hold its session, reported that though not enough had been raised to make good its pledges, its receipts were in advance of those of the previous year. Reports were made of missionary work in Utah, Colorado, and Montana; of the school at Hazel Green, Ky., in connection with the mountain mission work; of the "Bible Chairs" at Ann Arbor, Mich.; of the Chinese work at Portland, Ore.; of the foreign mission in India, which was to be enlarged by establishing a new station at Jamalpur, among English and Eurasians, with three missionaries; and of the mission in Jamaica.

The net income of the Foreign Christian Missionary Society for eleven months had been \$58,355, against \$54,535 in the previous year. The expenditures amounted to \$61,794. The Sunday schools had contributed \$18,671, and the Endeavor societies \$1,717. From the missions in Japan, China, India, Scandinavia, and England were returned 646 additions. The policy had been adopted, in view of the many pressing calls from the heathen fields, of reducing the appropriations in England year by year until the mission-churches became self-supporting. The Board of Missions therefore advised that each English church be expected to raise a definite sum for the support of the evangelists, the amount to be named each year by the board in the United States, after corresponding with the English churches and ascertaining their numerical and financial strength. An annual decrease of 10 per cent. in the appropriations was recommended, under which all the English churches might be expected to become self-supporting in nine years. Pledges for \$12,000 in support of the foreign missionary work were made during the meeting of the society.

A deficiency of funds was reported in the domestic missions department of the General Convention, in view of which the sum of \$12,000 was subscribed in the meeting.

The sum of \$35,000 had been pledged among the churches during the year for church extension, to which were added \$1,500 pledged in the convention.

For colored evangelization and education more than \$7,000 had been collected, besides contributions for the Southern Christian Institute, in addition to which \$3,600 were raised at the meeting.

DOMINION OF CANADA. Government.—The third session of the seventh Parliament of the Dominion opened on Jan. 26, and closed on April 1. In consequence of the retiring of Sir John J. C. Abbott, through illness, Sir John S. D. Thompson succeeded him as leader of the Government, with the following reconstituted Cabinet: Minister of Trade and Commerce, Hon. Mackenzie Bowell; Postmaster-General, Sir A. P. Caron; without portfolio, Sir John Carling; Secretary of State, Hon. John Costigan; without portfolio, Hon. Frank Smith; Minister of Justice (Premier), Sir J. S. D. Thompson; Minister of Finance, Hon. G. E. Foster; Minister of Marine and Fisheries, Hon. C. H. Tupper; Minister of Public Works, Hon. J. A. Ouimet; Min-

Minister of Militia and Defense, Hon. J. C. Patterson; Minister of the Interior, Hon. T. M. Daly; Minister of Agriculture, Hon. A. R. Angers; President of the Privy Council, Hon. W. B. Ives.

EARL OF ASHERDEEN, GOVERNOR-GENERAL OF CANADA.

The Governor-General, Lord Stanley, of Preston, opened Parliament with an address, the main features of which are subjoined:

It affords me pleasure to congratulate you on the continued progress which the history of the past year unfolds with regard to Canada. The increase in trade, as illustrated by the exports and imports during the period for which the official returns have been prepared, has been most gratifying, and that increase has continued down to the present time, with the promise that the volume of trade during the current year will exceed that of any year in the history of the Dominion. The revenues of the country have likewise provided for all the services for which Parliament has made appropriation, and the operation of the Government railways has been less burdensome, as regards the difference between income and expenditure, than has been the case for a long term of years previously.

In Manitoba and the Northwest Territories the increase in immigration has been decidedly encouraging, both as regards the number of persons who have come from other countries, and as regards the number of homestead entries made by settlers of all nationalities.

Measures have been taken to carry into effect the agreements arrived at with the United States on the subjects of the boundary of Alaska, the boundary line in Passamaquoddy Bay, and the prevention of destructive methods of fishing, and the preservation and increase of fish life. With regard to reciprocity in wrecking and towing, a correspondence has taken place which indicates that privileges are demanded for United States vessels in Canadian canals which were not anticipated; but it is not impossible that a satisfactory conclusion of the discussion may yet be reached.

The statutes of 1887 relative to a department of trade and commerce, and to the office of solicitor-general, have been brought into force, and the appointments were made which were contemplated by these acts.

It is to be regretted that the Government of the United States was unable to accept the suggestions made by my Government on the subject of canal tolls, and that the President should have thought it necessary to impose exceptional tolls on Canadians using the Sault Sainte Marie Canal, which has so long been free to the people of both countries. My Government, while ready to consider in a friendly

spirit any proposals which may be made by the Government of the United States, have caused efforts to be made to hasten the completion of the Canadian Canal works, which will soon afford to the commerce of the Dominion a highway within our own country.

Measures will be laid before you for the improvement of the franchise act, for the amendment of the laws relating to the civil service, and the superannuation of civil servants, for regulating the admission of evidence in causes and matters under the control of the Parliament of Canada, for extending the system of voting by ballot to the Northwest Territories, and for simplifying the laws relating to lands and land transfers in the territories.

Mr. Laurier, the Opposition leader, moved, in amendment to the address of the House, in reply to His Excellency's speech, that the following paragraph be attached to it:

That in the present condition of the people of Canada substantial reductions should be made in the taxation which presses so heavily on the great bulk of the community; and we regret that in the speech from the throne your Excellency was not advised to hold out promises of reductions in the oppressive duties now imposed.

The question being put on the amendment, it was negatived by a vote of 108 to 53; and being then put on the main motion, it was agreed to.

The session was one of the briefest and yet the busiest in the Dominion. The large Government majority rendered successful opposition impossible, which resulted in adoption of the measures introduced by the administration without prolonged discussion.

The treaty of commerce that had been negotiated with France in behalf of Canada was laid before the House, together with the correspondence that passed during the negotiations; but owing to the late period of the session at which the treaty was received, and the pendency of its bearing in respect of most-favored-nation treatment and the interpretation of certain of its clauses, the Government thought it advisable to postpone its ratification by Parliament.

Early in the session Mr. Edgar (Liberal) moved:

That in the opinion of this House the evidence taken by the royal commission appointed last session to inquire into certain charges made against the Hon. Sir A. P. Caron, which was reported to the Government Nov. 24, 1892, and is now laid before us, establishes facts which should have prevented the subsequent appointment of Sir A. P. Caron to be an adviser of the Crown, and also renders it highly improper that he should continue to hold such office.

The motion was negatived by a vote of 119 to 69.

During the session seven decrees of divorce were granted. There is no divorce law in the Dominion—at least, divorces can not be granted by the courts—and the only resource when a dissolution of marriage is desired is by petitioning Parliament, which may grant divorce by a special act. The process is not only tedious but expensive.

The most important acts of the session are subjoined:

To give effect to an agreement between the Grand Trunk Railway Company, the Canadian Pacific Railway Company, and the corporation of the city of Toronto.

Respecting the Lake Erie and Detroit River Railway Company.

To amend the act to incorporate the Buffalo and Fort Erie Bridge Company.

To incorporate the Eastern Trust Company.

To amend the Wrecks and Salvage act.

To incorporate the Ocean Guarantee Company.

To incorporate the Canada Northwest Land Company.

To incorporate the Cleveland, Port Stanley and London Transportation and Railway Company, and to confirm an agreement respecting the London and Port Stanley Railway.

To incorporate the Automatic Telephone and Electric Company of Canada.

To incorporate the Canada Atlantic and Plant Steamship Company.

To incorporate the Canadian Gas Association.

To incorporate the Canadian Live Stock Insurance Association.

To incorporate the North American Canal Company.

To amend the criminal code, 1892.

To amend the act respecting the Royal Military College.

To amend the act respecting ocean steamship subsidies.

Relating to the granting of subsidies in land to railway companies.

To amend the Homestead Exemption act.

To prevent the manufacture and sale of filled or imitation cheese, and to provide for the branding of dairy products.

Collection of the Revenue.—The following sums required for the service of the Dominion for the year ending June 30, 1894, were granted by Parliament at its last session: Customs: Nova Scotia, \$115,720; New Brunswick, \$90,260; Prince Edward Island, \$19,475; Quebec, \$210,345; Ontario, \$303,080; Manitoba, \$33,300; Northwest Territories, \$5,200; British Columbia, \$59,495; miscellaneous, \$61,600. Excise, \$480,647. Railways: Intercolonial Railway, \$3,200,000; Windsor Branch Railway, \$30,000; Prince Edward Island Railway, \$250,000. Canals: Repairs and working expenses, \$522,800; salaries, etc., \$43,000; miscellaneous, \$15,000. Post-Office: Mail service, \$2,046,842; salaries, etc., \$1,185,420; miscellaneous, \$206,120; mail subsidies and steamship subventions, \$438,000.

Included in the last item is \$103,000 for lines of steamers running between the ports of Halifax and St. John or either, and the West Indies and South America.

Senate of Canada, salaries and contingent expenses, \$61,488 (this does not include the sessional allowance of \$1,000 granted for life to each member of this body); House of Commons, \$183,094; immigration, \$170,000; lighthouse and coast service, \$527,110; ocean and river service, \$206,900; scientific institutions and hydrographic surveys, \$68,150; geological survey, \$60,000; Northwest mounted police, \$625,000; government of Northwest Territories, \$257,650; pensions, \$33,192; militia, \$1,216,382. Canals: Saulanges, \$1,000,000; Cornwall, 530,000; Rapid Plat, \$275,000; Galops, \$250,000; Sault Ste. Marie, \$1,906,000; St. Lawrence River and Canals, \$250,000.

The preceding list of sums voted for the present fiscal year does not include the large annual grants to railways, Indians, public works, administration of justice, etc., and even in the items mentioned it can not claim to be perfect.

Revenue, Expenditure, and Debt.—The following is a statement of the revenue of Canada,

according to returns received at the Finance Department, Ottawa, for the fiscal year ending June 30, 1893:

SOURCES.	1891-'92.	1892-'93.
Customs	\$20,191,294	\$30,707,971
Excise	7,884,439	8,264,986
Post-office	2,658,414	2,815,452
Public works	3,556,521	3,741,144
Miscellaneous	1,566,260	1,690,708
Total	\$35,902,028	\$57,188,256

Increase for 1892-'93, \$1,281,228.

The expenditure for the fiscal year 1892-'93 appears from the statement to have been \$30,652,653, or \$614,586 less than during the fiscal year 1891-'92, so that, with the \$1,281,228 increase in revenue, the Dominion is financially richer by \$1,895,796 than at the close of the preceding year.

The net debt of the Dominion on June 1, 1893, amounted to \$287,443,000 or about \$48 for each man, woman, and child in the country. This, of course, does not include provincial indebtedness, which for some of the provinces is quite large. Most of the national debt of Canada was contracted for constructing railways and canals, for opening up the country for settlement, for public buildings and public works, compensating the Hudson Bay Company for relinquishing its claim to territory to the Dominion, etc., and that expenditure is now represented by assets worth vastly more than the original sums spent in their acquirement. For railways and canals alone the Dominion Government will have expended by June 30, 1894, about \$158,000,000.

Government Railways and Canals.—The Intercolonial, a Government railway, has been an almost yearly source of expenditure to Canada; but during the past year important changes were made in the management and working of the railway by the Minister of Railways and Canals, Hon. John Haggart, with the gratifying result that the frequent deficits of preceding years were changed into a profit. The figures for the past two fiscal years are as follow:

ITEMS.	1891-'92.	1892-'93.
Earnings	\$2,945,441	\$3,065,499
Working expenses	8,439,377	8,045,317
Profit	\$20,152
Loss	\$493,936

For the seventeen years that the Intercolonial has been in operation it has showed profits during five, the aggregate being \$47,858; while for the remaining twelve years the excess of working expenses over revenue was \$4,614,485. The Prince Edward Island Railway, also belonging to the Government, shows as well a very considerable reduction in working expenses for the past year.

Last year the revenue derived from the Dominion canals, exclusive of hydraulic rents, was \$358,711, and for the year preceding it was \$350,351. Last year 261,954 tons of grain passed from the upper lakes to Montreal, against 295,509 tons in the year before. The falling off in the amount of grain passing east by way of the canals was doubtless owing to the fact that

the railways are getting a steadily increasing share of the grain trade. The quantity of grain that passed through the Welland Canal for ports in Ontario last year was 8,942 tons, and through the same canal from one port in the United States to another 201,540 tons.

Trade and Commerce.—The following is a statement of the exports and imports of Canada for the periods indicated :

YEARS.	Exports.	Imports.
1890-'90.....	\$96,749,149	\$121,858,241
1890-'91.....	98,417,296	119,967,688
1891-'92.....	118,000,000	127,400,000
1892-'93.....	118,619,750	129,074,268

Of the imports for the fiscal year 1892-'93 the value of dutiable goods was \$77,378,091; of free goods, \$51,696,177; and the customs duty collected, \$21,161,710.93.

In dealing with the United States the balance of trade has been against Canada. Taking food articles alone, Canada during 1892 imported of these from the United States \$16,855,054, and exported \$5,079,615. During the past five years the exports to Great Britain have increased (in round numbers) from \$40,000,000 to over \$65,000,000. During the same period the tonnage of vessels on the Great Lakes has risen from 15,000,000 to 18,500,000, and the tonnage of the coasting-trade vessels from 18,000,000 to 25,000,000. The entire number of vessels now engaged in this trade is 7,639.

Insurance.—Since 1888 the amount of life insurance in Canada has increased from \$211,000,000 to nearly \$280,000,000. In the spring of 1893 the Superintendent of Insurance submitted to the Hon. George E. Foster, Minister of Finance, his abstract of the insurance business in Canada for the year ending Dec. 31, 1892. From this statement it appears that the total amount of policies in existence in the regular life companies operating in the country was almost \$280,000,000, of which amount \$155,000,000 were carried by the native home companies. The new business transacted during the year amounted to \$45,000,000, of which \$26,000,000 was secured by Canadian companies. The total assets of the latter at the close of the year were nearly \$26,000,000.

Unclaimed Balances.—The annual blue book, giving a list of unclaimed balances and dividends remaining unpaid in the chartered banks of Canada for five years prior to Jan. 1, 1893, was published in the spring. In it the amount of the balances at the close of 1891 is given as \$457,357, and at the close of 1892 as \$427,931. The list is curious. While it discloses balances of \$5,000 in one case, and many over \$1,000, one man is credited with a balance of 1 cent. The late Sir John A. Macdonald is credited with an unclaimed balance of 20 cents in the Toronto branch of the Bank of Montreal. The bulk of the unclaimed money is in the Province of Quebec, to whose credit \$344,220 is placed, while Ontario has only \$46,706.

Post-Office Savings Banks.—The Post-Office Savings Banks had the following sums on deposit for the years indicated: 1890-'91, \$21,738,648; 1891-'92, \$22,298,401; 1892-'93, \$24,153,193.

In 1891 the Government reduced the rate of interest on deposits in the Post-office Savings Banks from 4 per cent. to 3½ per cent., which tended to reduce the deposits temporarily. Since 1888 the deposits in the chartered Government and special savings banks have increased from \$182,000,000 to \$239,000,000 nearly.

Fisheries.—The total value of the fisheries of the Dominion for 1892 was \$18,941,171. In the maritime provinces the catch fell short of that of 1891 by over \$1,000,000, but this was more than compensated for by the large increase of the inland fisheries of the Northwest Territories and Ontario. The gulf division of the province of Quebec was the only deep-sea fishing province actually showing an increase over the take of the previous year. The following is the value of the most important products of the fisheries for the year: Cod, \$4,063,458; salmon, \$2,242,847; herring, \$2,035,630; lobsters, \$1,991,829; white fish, \$1,498,523; mackerel, \$1,346,977; trout, \$711,112; seals, \$633,119; haddock, \$586,524; hake, \$392,191; fish oil, \$359,904; halibut, \$275,207; smelts, \$235,958; pike, \$224,253; pollack, \$222,882; pickerel, \$188,573; and oysters, \$167,659. The lobster yield for 1892 was less than that of the year before by \$260,000, which was doubtless due to exhaustion of certain localities by overfishing. During the year first mentioned 626 canneries were in operation on the littoral of Canadian seas, using 768,476 traps and other plant valued at \$1,284,821. The pack amounted to 12,524,498 pound cans, besides 6,012 tons disposed of fresh or shipped alive, representing a drain of about 80,000,000 of these crustaceans from Canadian waters during a single season.

During 1892 63,678 men were employed in the Canadian fisheries, and the total amount of capital invested in the industry was \$7,647,835. Altogether, 1,000 schooners and steam tugs, of 37,200 aggregate tonnage, and 30,500 boats were used in prosecuting the fishing in that year.

To prevent violation of the fishery laws the Government of Canada has a fishery protection fleet of 8 vessels, which cost for maintenance and repairs about \$100,000 a year. There are also fish-breeding establishments in various parts of the country, lobster hatcheries, and beds for oyster culture, which cost the Government over \$59,000 for 1893.

Agriculture.—The vast majority of the population of Canada is engaged in farming operations; but, though crops generally have been good, during recent years the industry has not been profitable, in consequence of the low prices for farm produce. Manitoba possesses the most productive wheat areas in the Dominion, but the appearance of early frosts at intervals of a few years, which greatly injure the wheat crop, renders its production somewhat precarious. Last year such a misfortune befell the farmers of this province, and much of the injured grain was unfit for other use than fodder. To add to their hardships, the railways, which had been built largely by grants of public money and public lands, charged as much per bushel for transporting the damaged grain as for the carriage of that which commanded a full market price.

The season of 1893 was productive not only in Manitoba but in Ontario and throughout the

Dominion generally. The estimated wheat product for Canada is 50,000,000 bushels, which is less by 11,592,822 bushels than the product for 1891. Of the whole amount of wheat produced in Canada this year, 40,000,000 bushels were grown in Manitoba and Ontario. It is estimated that the Dominion requires for home consumption 39,800,000 bushels, which would leave over 10,000,000 bushels for export.

The Government of Canada does much to foster the agricultural interests. For the maintenance of the experimental farm and the dairying interests in affiliation therewith, Parliament voted over \$107,000 for the present year, and sums were granted to struggling agricultural societies in the Northwest Territories.

Immigration.—To defray the expenses to be incurred in connection with immigration during the fiscal year 1893-'94 Parliament voted the sum of \$210,000. Immigration agents are employed in Great Britain and Ireland and on the Continent; but, liberal as are the inducements offered, Canada so far has not been popular with emigrants. Recently the Dominion Government was notified by the governments of Germany and Sweden that Canadian emigration commissioners would be prohibited from carrying on active work in these countries. But this restriction has been more than compensated for by emigration from France and Holland—countries which rarely sent many emigrants to Canada. There has been, however, a decline in the number of emigrants from the British Isles. During 1892 the number of immigrants arriving at the ports of Halifax, Quebec, and Montreal was 52,000, and of those, 28,000 declared their intention of settling in Canada. The homestead entries for the year numbered 4,840, embracing 774,400 acres. Of the entries, 518 were made by persons from the United States.

Railways.—The Canadian Pacific Railway is the only one of the two great railways of Canada not operated by the Government which can show a substantial surplus. At the last annual meeting of the company, held in Montreal, it was shown that the gross earnings of the road for the preceding year were \$21,400,000, and the year's expenses \$18,000,000, leaving a surplus, after all expenses and dividends were paid, of \$7,000,000, which was carried forward for the security of stockholders.

The mileage of the road and its branches is now 7,000 miles, while there are 1,800 miles of tributary lines in the Northwestern States. By its new "Soo" line St. Paul and Minneapolis can be reached in seventy hours from the coast. This railway has also a multitude of subsidiary but important enterprises connected with it, among them being the line of ocean steamers linking Canada with China and Japan.

The freight and passenger traffic of the Grand Trunk Railway has suffered for a number of years by the competition of the Canadian Pacific; but recently, through an extension of its connections, and from other causes, an improvement in its trade has taken place. To meet the requirements of its increased and prospective traffic the company will build a new double-track open bridge across the St. Lawrence, at Montreal. It will be built alongside the old bridge, and on the old piers extended.

Mineral Statistics.—From the preliminary statement furnished by the Geological Survey Department at Ottawa it appears that the product and value of the metallic and of the most important nonmetallic substances in Canada for last year were as follow:

Metallic.—Copper, 7,042,195 pounds, \$821,589; gold, 49,985 ounces, \$900,488; iron ore, 103,248 tons, \$254,206; lead, 1,205,420 pounds, \$49,422; nickel, 6,057,482 pounds, \$3,513,339; platinum, \$3,500; silver, 805,026 ounces, \$264,510.

Nonmetallic.—Asbestos, 6,042 tons, \$888,462; coal, 3,290,897 tons, \$7,181,610; coke, 56,135 tons, \$160,249; gypsum, 226,568 tons, \$225,260; mica, \$100,923; mineral water, 640,380 gallons, \$75,848; petroleum, 779,753 barrels, \$962,489; phosphate, 11,932 tons, \$157,424; pyrites, 59,770 tons, \$179,810; salt, 45,486 tons, \$162,041.

The total value of the metallic products for the year amounted to \$5,807,049, and of the non-metallic to \$13,234,267, which, added to \$458,864—estimated value of mineral products not returned when the statement was made—aggregate \$19,500,000.

Coal.—The most important mining industry in Canada is coal, the extent of the coal fields being estimated at 100,000 square miles. Much of this coal area is very productive, and 9,000,000 tons per square mile is regarded as a moderate estimate of the possible product. The most extensive coal fields are found in the Northwest Territories and British Columbia, but owing to lack of transportation facilities, cost of carriage from the mines, and want of capital, they have not been worked to any great extent. At present the bulk of the coal product of the Dominion is mined in Nova Scotia, at Pictou and Cumberland; and of the entire amount produced last year in Canada, 2,175,913 tons were mined in that province. The coal is usually of excellent quality; and the anthracite mined at Banff, almost on the boundary between British Columbia and Alberta, now finds a ready market in San Francisco.

Gold.—The production of gold in Canada is confined almost exclusively to British Columbia and Nova Scotia, though a small quantity is annually produced in Quebec, and it has also been obtained from some parts of Ontario. Future exploration of the region north and west of Lake Superior may disclose valuable deposits of gold, as it is known to exist in many localities, and has been found in several places in small amounts. Very limited quantities of the metal are also obtained yearly from Saskatchewan river, near Edmonton. Since 1860, when gold was first discovered near Tangier harbor, Nova Scotia, the entire value of the product of that metal in the province has been \$10,723,779. The value of the gold product of British Columbia since 1858 has aggregated \$53,634,509.

The marked decrease in the present annual product of gold in Canada, rendered apparent by the figures for 1892, can be accounted for from the fact that the British Columbia gold mines have been for some years much less productive than they were before, and the same is probably true also respecting the gold mines of Nova Scotia.

Iron.—Iron ore, except in Manitoba, is found almost everywhere in Canada, but it can scarcely

be said to have been mined to any extent proportionate to its quantity. There is now, however, a marked increase in the product of this metal, its value for the past year being \$112,201 more than for the preceding year.

Nickel.—This is one of the most valuable mineral products of Canada, though only discovered in 1883, when a deposit of nickeliferous pyrrhotite was found in cutting through a small hill at Sudbury, Ontario, for the Canadian Pacific Railway. The increased value of nickel, from its use in the manufacture of nickel steel, has so stimulated enterprise at the Sudbury mines that, in addition to the four companies operating there for some time, 20 others have been formed in the district. The value of the output of nickel for last year exceeded that of the year before by \$737,353.

Of the other valuable mineral products, copper has been found by employees of the Geological Survey and others over vast tracts of country in Nova Scotia, Quebec, New Brunswick, and British Columbia, but as yet the production of ore is not over 500 tons a day. Silver is found in considerable quantities near Lake Superior and elsewhere, but so far the mines have not been as productive as they might be made by additional capital and enterprise.

Amber.—A discovery of an extensive deposit of amber at Cedar Lake, Manitoba, has been reported by J. B. Tyrrell, of the Geological Survey. It occurs mixed with sand and fragments of partially decayed wood, on a low beach and along the face of a deep, wet spruce swamp. The pieces of amber were for the most part smaller than a pea, but somewhere found as large as a robin's egg. The amount of amber on this strip of beach has been estimated at 1,457,280 pounds, which at a minimum value of 25 cents a pound would represent a total of \$364,320. Amber has been found frequently in the coals and lignites of the Northwest.

Much of the capital invested in Canadian mines is owned by Americans, and the development of the mineral resources of the country, notably within recent years, is largely due to American enterprise.

Political.—The principal political events of the current year in Canada were the retiring of one Governor-General from office and the installation of his successor. Lord Stanley, of Preston, was appointed Governor-General, May 1, 1893, and administered the duties of this office till July 15, 1893, when Lieut.-Gen. Montgomery-Moore, commanding the British forces in Canada, was sworn in as administrator of the Government, until the arrival of the newly appointed Governor-General, the Earl of Aberdeen.

In closing the last session of Parliament the retiring Governor-General concluded his address as follows:

I feel with deep regret that the period of my official connection with the Dominion is drawing toward its close, and that in all probability I am taking leave of you for the last time. Lest this should be the case, I desire to avail myself of the present occasion to express my abiding interest in all that concerns the welfare of Canada, and my sincere affection to her people, who have never failed to testify their loyalty to the person and throne of our sovereign, and to show kindness and consideration to her representative. It will ever be my sincere desire to be of service

to the Dominion, and I shall continue to cherish feelings of the warmest solicitude for the welfare and prosperity of those among whom I have been placed during the past five years. I pray that the blessing of Almighty God may at all times attend you.

Through the death, in the spring, of his brother, the Earl of Derby, Lord Stanley, of Preston, succeeded to that title. The new earl took his final leave of Canada on July 15.

The Right Hon. John Campbell Hamilton Gordon, seventh Earl of Aberdeen, was sworn in as Governor-General of Canada, on Sept. 18, in the Legislative Council Chamber in the Provincial Parliament building, Quebec.

His Excellency was afterward presented with an address, and his reply, indicating his policy and his views relative to the responsibilities and duties of his office, is of sufficient importance to warrant its reproduction in an abbreviated form.

It is surely appropriate that the first greetings of Her Majesty's Canadian subjects to a new Governor-General, and the first public utterance by the occupant of that position, should be upon this historic ground, and amid the inspiring traditions of this ancient and beautiful city. And your demonstration takes place in an eminently opportune manner immediately after I have been installed in the distinguished office to which I have been appointed. It is indeed an office of high honor, as well as of grave and serious responsibility. But, gentlemen, does the honor and dignity of the position exclude the holder of it from the common lot, the common heritage of service? Nay, it implies, it includes, it conveys this privilege, this grand principle and purpose of life. . . . To foster every influence that will sweeten and elevate public life, to make known the resources and development of the country, to vindicate, if required, the rights of the people and the ordinances of the Constitution, and, lastly, to promote by all means in his power, without reference to class or creed, every movement and every institution calculated to forward the social, moral, and religious welfare of the inhabitants of the Dominion. Such, gentlemen, I venture to assure you, is the aim and purpose which, in dependence on the one ever effectual source of health and strength, we desire to pursue. I say 'we,' for by your kindly and appreciative allusion to Lady Aberdeen you have shown that you understand why I contemplate these duties only in conjunction with my wife.

The new Governor-General was born in 1847; was educated at St. Andrew's and Oxford Universities, and graduated at the latter in 1871. In 1870 he succeeded to the earldom of Aberdeen on the death of his brother, and entered the House of Lords as a Conservative; but, disagreeing with the policy of Mr. Disraeli, he has since year after year identified himself more closely with the Liberal party. His brief *régime* as Lord Lieutenant of Ireland, secured him great popularity in that country—a popularity shared by the countess, who materially helped to make his tenure of office a success. The Lord of Aberdeen is no stranger in Canada. Not long ago he resided for some time in Hamilton, Ontario, and he has invested a considerable amount of capital in the country. He has brought with him to Canada a most enviable reputation for philanthropy, and the countess is well known for her active efforts in promoting the moral and physical improvement of girls and others requiring her sympathy and assistance. She instituted the Scottish Girls' Friendly Societies, which have been productive of great good; and much

wholesome advice and wise instruction for both old and young have been disseminated through the medium of two little magazines which she conducts. The efforts of the Countess of Aberdeen in connection with the Irish village at the Columbian Exposition, and her zeal in securing the best possible exhibit of Irish industries there, are well known.

Political Parties.—Though an early dissolution of Parliament was not anticipated, and a general election was still distant, considerable activity had been displayed in the sphere of party politics since the Canadian Parliament was prorogued in the spring. On June 21 a Liberal convention was held at Ottawa, which was productive of great enthusiasm, and though no important changes were made in the party platform, a better organization of the Liberal forces was effected than existed heretofore.

Though no material change in the Conservatives' policy of protection is expected, it is probable that a revision of the tariff will be attempted at the next session of the Canadian Parliament. At a Conservative demonstration held in honor of Sir John S. Thompson, Premier, in Montreal, Sept. 12, he announced that such a revision would be made, and that the Government would endeavor to serve the interests of all and favor no particular class. At a meeting held at Berlin, Ontario, Sept. 26, Sir John declared that the issue before the country was free trade or protection—a statement which is sufficient to indicate that whatever changes are contemplated respecting the tariff, they will not be such as to alter materially the policy of protection pursued by Canada since 1879. At the same time he made the announcement that an intimation had been conveyed to Washington of Canada's willingness to treat for freer trade relations with the United States.

Opposed generally to both Liberals and Conservatives, Hon. H. Mercier, late Premier of Quebec, delivered numerous addresses before his French Canadian countrymen in the New England States, in which he bitterly inveighed against both political parties in Canada, and recommended annexation as the panacea for all the ills afflicting their native country.

Military.—The militia of Canada, numbering about 50,000 men, has always been commanded by a British officer, the commander now being Major-Gen. Herbert. In the summer this officer prepared a scheme of changes in the militia, which was agreed to by the Minister of Militia and Defense, the most important being that the post of quartermaster-general, recently created, be bestowed upon an officer of the British army. The proposal was regarded with disfavor by militia officers generally, who thought that a Canadian should be appointed to the office. Notwithstanding their and other protests, Major P. H. Lake, of the East Lancashire regiment, was assigned to the post. Other changes proposed and made were the retiring of Lieut.-Col. Straubenzie, district adjutant general of the Ottawa and Kingston district, and Lieut.-Col. Villiers, of the Winnipeg district. A still more sweeping change was the transference of all the brigade majors excepting Major Roy, of Montreal.

A much more serious change, involving the

removal of the fortification walls of the city of Quebec, has also been under consideration by the Dominion Government, but has not yet been determined upon. These fortifications were constructed by the British Government early in the century, at a cost of \$25,000,000, on a general plan drawn up by the Duke of Wellington, and including the best features of the fortified towns of France and Spain. Though they are now regarded as practically useless and involving needless expenditure to the Dominion Government, besides being supposed to retard the progress of the city, the attempt to remove them would probably provoke more than a mere protest. They add much to the picturesqueness and attractiveness of Quebec, and the inhabitants and Canadians generally, as well as tourists, would regret the change.

The only garrison maintained now by the British Government in Canada is at Halifax, Nova Scotia, where usually 2,000 troops are stationed. Gen. Sir John Ross, who for several years commanded the British land forces in Canada, retired from the command in May, and was succeeded at Halifax by Lieut.-Gen. Montgomery Moore. There is also a naval station at Esquimaux, British Columbia, and the Dominion Government contributed \$105,000 at its last session as its share of the expenditure for the works and buildings being constructed there.

Religious.—Heretofore the metropolitan, usually the Bishop of Montreal, was the highest dignitary of the Church of England in Canada. Recently, however, two Canadian archbishops were appointed—Rev. Dr. Lewis, past bishop of the diocese of Ontario, and Rev. Dr. Machray, Past Bishop of Rupert's Land. The Church of England in the Dominion has now 2 archbishops, 19 bishops, about 1,000 clergymen, and 644-106 adherents.

The Roman Catholic Church is presided over by 1 cardinal, 5 archbishops, and 1,250 priests, and has a membership of 1,990,465. The Roman Catholic is a state church in the province of Quebec, and clergy tithes are a legal impost, collectable like the state tax. The Church owns much valuable property in Montreal and Quebec and throughout the province, and nearly all of it is exempt from taxation. There are 51 parishes in the province, in which the taxable property amounts to \$24,000,000, while the exemptions are valued at \$12,775,000, nearly all of the latter being on church property.

The Presbyterian Church of Canada has a membership of 754,142, 1,000 ministers, and 2,358 churches. At the General Assembly of this denomination, convened at Brantford, June 13, Prof. Campbell, of the Presbyterian College at Montreal, was tried for teaching views supposed to invalidate the authority of the Bible. The assembly referred the matter back to the Presbytery of Montreal, and the latter, by a vote of 21 to 13, found Prof. Campbell guilty.

Of the other churches, the Methodists have 1,712 clergymen and 847,469 adherents, and the Baptists 500 clergymen and 303,749 adherents.

Educational.—The Dominion census commissioner recently tabulated the educational statistics of the last census. Taking the adult population, 84.65 per cent. can read and 80.34 per cent. can write. Canada is below the

United Kingdom, France, Germany, Holland, Switzerland, and Scandinavia in the proportion of those who can read and write, but is about equal to the United States, and ranks higher than Belgium, Italy, Austria, Spain, and Russia.

According to provinces, Manitoba takes the lead in the Dominion for the largest proportionate number of adults able to write. New Brunswick does not make as favorable a showing as the other provinces. The adult population of the province is not as generally able to read or write as twenty years ago. All the other provinces have improved.

Criminal Statistics.—During the past year 5,924 persons were charged with indictable offenses in the courts of Canada—a decrease of 64, compared with similar returns for the year before. Of the entire number accused, 4,080, or 8·23 per 10,000 inhabitants, were convicted last year, against 3,964, or 8·20 per 10,000 the previous year. Of the whole number convicted last year, 289 were women, 714 were under sixteen years of age, 820 were unable to read or write, 2,996 had received an elementary education, 91 a superior education, 2,158 used liquor moderately, 1,740 used liquor to excess, 79·4 per cent. belonged to the cities, and 20·6 per cent. to the country districts.

The more important sentences passed were: 5 sentenced to death, 4 to penitentiary for life, 111 to imprisonment for five years or over, and 249 to imprisonment for two years and under five. The prerogative of mercy was exercised last year in 194 cases, including 5 death sentences commuted to imprisonment for life, against 120, including 1 death sentence, for the year before.

If to the number of convictions for indictable offenses the summary convictions by justices of the peace be added, the total is 84,415, or 2,418 fewer than for the preceding year.

Criminals, as represented by the convictions reported, have increased faster than the population in British Columbia, Quebec, New Brunswick, and Ontario; while the provinces of Manitoba, Nova Scotia, Prince Edward Island, and the territories show increases of population greater than the increase in criminal convic-

tions. Manitoba is remarkable for having an actual decrease of convicted criminals while increasing its population 131 per cent.

Summing up the results obtained from the study of the criminal statistics of Canada, we find that crime is on the decrease; that the number of convictions proportionate to indictments is larger than in most countries; that the female population of Canada supplies fewer criminals than that of other countries; that juvenile crime is on the increase among boys, while decreasing among girls; and that crime has slightly increased in the cities and decreased in the rural districts.

Imperial Honors.—A titled class has been steadily growing in Canada for some time, and though such dignities do not confer prestige and social position to the degree they do in Great Britain, they are, nevertheless, eagerly sought after by many of the official and other classes. There are now two Canadian peers—Sir George Stephen, created Lord Mount Stephen a little over a year ago for his connection with the Canadian Pacific Railway; and Charles Colmor Grant, Baron De Longueuil. This feudal barony originated in a patent of nobility signed by Louis XIV, granting the title to Charles Le Moyne for distinguished services, and is remarkable as creating not only a territorial barony, but as also conferring a title of honor upon himself and his descendants, whether male or female. The cession of Canada to Great Britain made no change in the legal right to hold honors, and since this period each successive head of the family has, by assumption of right, used the title, but it was not officially recognized by the British Government until 1880. There is also a Canadian peeress, the Baroness Earncliffe, who received that title after the death of her husband, Sir John A. Macdonald, in 1891.

Of Canadian baronets there are: Sir William George Johnson, fourth baronet, created in 1755; Sir James L. Robinson, second baronet, created in 1854; Sir Charles Stuart, second baronet, created in 1840; Sir William Rose, second baronet, created in 1872; and Sir Charles Tupper, first baronet, created in 1888. There are about 54 persons in Canada who hold the various grades of knighthood.

E

EAST AFRICA. By the Anglo-German agreements of Nov. 1, 1886, and July 1, 1890, the British and German spheres in the coast and lake regions of Africa east of the territories of the Congo Free State are divided by a line starting at the north bank of the Umbo or Wanga river, where it flows into the Indian Ocean, extending in a northwest direction, passing round the north side of Mount Kilimanjaro, so as to leave it within the German territory, then continuing northwestward till it strikes the shore of the Victoria Nyanza in 1° of south latitude, and following that parallel across the lake and to the westward till it reaches Mount Mfumbiro, passing to the southward of the mountain so as to leave it within the British sphere, and recurring to the northward till it

strikes the boundary of the Congo State in 30° of east longitude. By the Anglo-Italian agreement of March 24, 1891, the English and Italian spheres are divided by a line that ascends the channel of the Juba river to 6° of north latitude, follows that parallel westward to 35° of east longitude, and then that meridian northward to the Blue Nile. German East Africa, conterminous on the west with the Congo Free State, the boundary line running for the greater part of its length through Lake Tanganyika, is on the south separated from the Portuguese East African possessions by the Rovuma river, and from British Nyassaland by Lake Nyassa and a line, defined in 1890, which runs to the northward of the Stevenson road, from the northern extremity of Lake Nyassa to the

southern extremity of Lake Tanganyika. Portuguese East Africa extends from the German boundary to Tongaland, and is bounded on the west by territories over which Great Britain assumed a protectorate and assigned to the British South Africa Company, and in the north by Nyassaland, which was proclaimed a protectorate of Great Britain on May 14, 1891.

British East Africa.—The British East Africa Company, chartered by the Crown on Sept. 3, 1888, with an authorized capital of £2,000,000, of which £1,000,000 were offered for the subscriptions of the public, leased from the Sultan of Zanzibar for fifty years the strip of coast 10 miles wide north of the German boundary, and in 1891 acquired all his sovereign and proprietary rights within the British sphere in consideration of a perpetual annuity of \$80,000. In the same year the ports north of Kismayu were retroceded to the Sultan in order that they might be transferred to Italy. The district of Witu, previously occupied by Germany, was ceded to the company in 1890. The area claimed as the British sphere embraces the region north of the agreed German boundary, west and south of the Italian boundary, and east of the treaty limits of the Congo State and the entire Nile basin as far as the frontier of Egypt. Treaties have been made by the chartered company with the King of Uganda, various native chiefs between the coast and Victoria Nyanza, some of the chiefs on the west side of the lake to a point beyond Semliki river, and some of the Somali coast tribes between the Juba and Tana rivers. The revenue of the East Africa Company is derived mainly from customs duties, which amounted to about \$100,000 in 1892. The principal exports are cloves, sesame, ivory, rubber, gum arabic, copra, coir, orchilla weed, and hides. The imports are cotton goods, beads, and iron and copper wire. The company employs an armed force of about 800 Soudanese and 200 Sikhs. The acting administrator at Mombasa, the chief port and seat of government, is J. R. W. Pigott.

The East Africa Company was unable to continue its operations, even after abandoning Uganda, without a subsidy from the Government, and unless this was forthcoming the directors proposed to turn the country over to Zanzibar on being reimbursed for the outlay. Of the £1,000,000 of stock offered to the public, £526,000 had been subscribed, and of this £872,000 had been paid up. The expenditure up to April, 1893, had amounted to £448,000, of which £225,000 represented the cost of exploration, the acquisition of territory, the making of treaties with native chiefs, and the maintenance of stations in the interior, including the expenses incurred in the occupation of Uganda. Pending the result of further efforts to obtain Government aid for the administration and military defense of the country or for the construction of a railroad to Lake Victoria or as far as Kikuyu, or of the alternative proposition to cede the territories back to the British protectorate of Zanzibar for a sum sufficient to wind up the company without loss to the stockholders, which the Sultan of Zanzibar could furnish by surrendering the 4,000,000 marks received from the Germans for their coast and other funds, the directors voted in May, 1893, to call on the share-

holders for a part of the 80 per cent. not yet paid up on their shares. The railroad route surveyed by Captain Macdonald to the northeast corner of the lake, in Kavirondo, is 657 miles. The estimated cost of building the line is £3,409 per mile, or £2,240,000 altogether. The company's main source of revenue was cut off by the extension, according to treaty, of the free-trade zone of the Congo basin to its coast on July 1, 1892. The duty of 5 per cent. authorized by the Brussels act of 1890 was still collected, but it could only be applied to the purposes specified, relating to the suppression of the slave trade. Commander F. G. Dundas, who had previously explored the Tana river and Mount Kenia, led an expedition up the Juba river which promised to open up that highway to Somaliland and afford commercial communication with the Gallas. But the result was the opposite of what was intended; for one of the officials of the company, by his high-handed and aggressive procedure, provoked the Somalis and involved the company in hostilities. The condition of Witu necessitated the continued military occupation of that sultanate by a considerable force of Indian troops, the cost of which was so great that the company contemplated abandoning that district as well as Uganda. The Somali outbreak was caused by the agent stationed by the company at Kismayu, one Todd, whom the Somalis threatened to kill. The police of the company fired on the natives, killing several, and the rest were dispersed by the guns of the British gunboat "Widgeon." The native quarter of the town was burned, and all the Somalis were chased into the interior, while the company's military force was re-enforced to guard against another attack. Those Somalis who signed papers declaring their submission to the company were afterward allowed to return. On Aug. 11, 1893, some of the native soldiers mutinied and joined the tribesmen, who attacked and killed the officer of the East Africa Company, Mr. Hamilton. On Aug. 18 they attacked Kismayu, but were repelled by the garrison under the command of Count Lovatelli, an Italian traveler. The fort of Turk's Hill and the English steamer "Kenia" were captured by them and 3 Englishmen taken prisoners. On Aug. 23 the British war vessel "Blanche" arrived and relieved the garrison at Kismayu. Guided by Count Lovatelli, Lieut. Lewes with 35 bluejackets recaptured the fort at Turk's Hill, then proceeded up Juba river, rescued the "Kenia" and the captive Englishmen, after engaging the mutineers and Somalis and killing a large number, and destroyed Magareda, Hajowen, and other villages.

Before this Rennell Rodd and Gen. Mathews had gone with the war vessels "Blanche," "Swallow," and "Sparrow," to re-establish British power and prestige in Witu, where the company's forces had been unable to cope with the Sultan, Fumo Omari. The negotiations opened with the latter by the acting consul-general proved unsatisfactory. On Aug. 7 the Zanzibar troops and British marines stormed the town of Witu and captured it after an obstinate resistance. The English losses were 2 men killed and 15 wounded, including Lieut. Fitzmaurice and Lieut. Gervis. The Sultan having retired to Jongeni, that town was also attacked and

taken by storm. The deposed Sultan then abandoned the struggle. A Soudanese garrison was left to defend Witu, where Mr. Thompson endeavored to restore order under British rule.

Zanzibar.—After the ports and territories of the Sultan of Zanzibar on the African mainland had been ceded, with the forts, buildings, harbors, and other improvements, to German and English companies, the protectorate over the islands of Zanzibar and Pemba, the remaining possessions of the Sultan, was conceded to Great Britain by the new Anglo-German agreement of 1890. The British protectorate was established in October, 1891, when executive officers were appointed by the British Crown to take charge of the different departments. The regular Government thus instituted consisted of Gen. Lloyd Mathews, who was made president of the Government and took charge of the interior department and the disbursements of the treasury; Hugh Robertson, who attended to the collection of the revenue; Capt. Hatch, commander of the military forces and the police; Capt. Hardinge, officer of the port and director of lighthouses; Bomanji, placed in charge of the public works; and Mohammed Ben Saif, treasurer. Mr. Robertson was succeeded as collector by Mr. Strickland in 1892. Zanzibar was declared a free port for all articles except arms, powder, spirits, and kerosene, on Feb. 1, 1892. Gradually the authority of the Sultan was entirely superseded and his officers and retainers dismissed. The property and revenues of the Seyyid or Sultan having been taken away from him, he was allowed a civil list sufficient to maintain his diminished establishment. On March 5, 1893, the Seyyid Ali ben Said, who had succeeded his brother Burgash on Feb. 18, 1890, died. This gave an opportunity to cut down the civil list by 200,000 rupees and appoint a successor who would be more completely under the control of the British consul-general, who already had power and authority to decide on all the acts and expenditures of the Zanzibar Government. The Sultan's son, Kali Burgash, claimed the succession, and relying on the rebellious spirit that had long been rife among the natives, gaining admittance to the palace, he proclaimed himself Seyyid. Capt. Campbell had landed 250 marines from the British cruiser "Philomel" and drawn them up in front of the building. This force at once, in anticipation of trouble, seized the palace and made Kali a prisoner before the native troops and civil population showed the first signs of revolting. The people were so thoroughly cowed that the acting consul-general, Rennell Rodd, was enabled to proclaim Hamid ben Thwain, a grandnephew of Ali ben Said, and install him as Sultan without exciting the least symptom of insubordination or insurrection. The arrangement whereby the ports of the Benadir coast were given up to Italy was carried out on July 16 in a proclamation of the new Sultan, granting the administration of the ports and territories to the Italian Government for the period of three years.

Uganda.—The Kingdom of Uganda, inhabited by an intelligent and progressive race, extremely susceptible to educational influences, has possessed an organized government in which the King is an absolute monarch, next to whom is

the Katikoro, who is chief judge and commander of the army, and acts as King during his absence. The country is divided into 10 administrative districts, each under a great chief, who is responsible to the King. Of equal rank with these chiefs are the Mujasi and the Kimbugwe, and under the 12 great chiefs are innumerable leaders of various grades. The King is Mwanga, son of Mtesa, whom he succeeded in 1884. Capt. F. D. Lugard arrived in Mengo, the capital, in December, 1890, with a force of soldiers in the pay of the British East Africa Company, built a fort at Kampala commanding the capital, and exacted a treaty, by which the King accepted the direction of the company in financial, military, and foreign affairs. The King had prayed for the assistance of the company in his war with the Mohammedan party, but at first refused to sign the treaty accepting the sovereignty of the East Africa Company. While his people stood outside threatening to shoot him if he signed, and Capt. Lugard's Soudanese guards were drawn up with fixed bayonets and Capt. Lugard threatened to set a Mohammedan king on the throne, Mwanga signed, but called out, "If another white man, greater than this one, shall come up afterward these words shall be wiped out, and we make another treaty." Uganda had been placed within the sphere of British influence by the international agreements with Germany and Italy, but in attempting to establish a protectorate the company acted on its own responsibility without the direct sanction of the British Government. Mwanga had been expelled a year or more before, and, after several changes of kings, the Mohammedans finally arose against the Christians and drove them from the country. The Catholic and Protestant Christians entered into a league to recover their country and reinstate Mwanga on the throne, and they had accomplished this shortly before the arrival of Lugard. The treaty and the presence of the company's garrison excited the jealousy of the Catholic party, the most numerous of the four groups who made their religious affiliations a stepping stone to honors and offices and had before rushed into internecine strife on that account. The Catholics, with the Kimbugwe at their head, prevailed in the King's council, though the Katikoro was the leader of the Protestants, and they kept him from hoisting the British flag in spite of the arguments and threats of the English officers, for the people looked upon the flag as a Protestant emblem and the Catholics knew that their supremacy was at an end if the King raised the flag and embraced the Protestant religion. The Catholic priests told them that the British East Africa Company was a trading concern that had no authority to declare British sovereignty and impose the Protestant religion on the country. While the Waganda were excited by partisan feeling on this question and the missionaries were encouraging the rival parties to stand firmly on their rights, Capt. Lugard with a large part of his force set out on an expedition to enlarge the company's territory, to which he added the district of Ankoli, southern Unyoro, and Toru, gaining access to the great ivory-producing district round Lake Albert Edward and acquiring an invaluable salt lake. The Soudanese soldiers who formerly

served in the Egyptian Equatorial Province, and after being abandoned by Stanley's Emin Pasha relief expedition had settled at Kavalli on the west side of Lake Albert Edward, were brought down with their families and slaves, numbering altogether 4,500 individuals, and were settled in the newly acquired territory, where they could defend the line of forts built in southern Unyoro against an incursion of Kaba Rega or could be enlisted in the company's service if the garrison in Kampala needed strengthening. He had left Uganda with only a small guard under Capt. W. H. Williams, in his eagerness to forestall and frustrate the German expedition to the lakes, and when he returned he found the factions on the point of breaking out into open hostilities, and the King and the Catholic party ready to defy his power. A Protestant chief, Mulondo, precipitated matters by suddenly leaving the capital with his retainers, on the plea that the Catholics intended to burn his shamba, or plantation. The King sent out a large force to capture or kill him, but recalled it at the solicitation of the English. The war spirit could not be quelled, however, though drums were beaten and armed men gathered repeatedly without actually coming to blows. At last a man was shot in a quarrel about the ownership of a gun, Jan. 20, 1892. The King tried the case and discharged the homicide. Capt. Lugard then demanded through a native messenger that the murderer should be punished and other grievances of the Protestants redressed; otherwise there would be war. The King said calmly that he would abide by his decision, and the Catholics standing by retorted that the English "might fight if they would, but if they did they would be killed and their property confiscated." The King wrote on the following day a letter in which he enumerated a list of Catholic grievances and demanded their rectification in uncompromising terms. The Catholic bishop, when appealed to by Capt. Lugard to avert war, replied that his flock had suffered so severely through the partiality of the British officers that they would rather die with guns in their hands than submit to constant injustice. Lugard thereupon distributed arms among the Protestant natives, 450 altogether, while he remained with his troops in the fort. A battle took place in the town, Jan. 24, 1892, and the Catholics were fired on from the fort with the Maxim guns. The Catholic mission and church were burned, and the King and his party were put to rout, taking refuge on an island. The English then attacked them with their Maxim guns on the island, and when they attempted to escape in canoes sank the boats, drowning the natives in immense numbers. The King and the remnant of his party escaped to the large island of Sese, and when he was dislodged from this by Capt. Williams, went over to the district of Budu with the Catholic bishop and missionaries. A treaty was then imposed upon the Catholic party which assigned to them the Budu province, which formerly was Protestant, and prohibited them from extending their possessions or propagating their religion outside of its limits or from leaving it with arms in their hands, and which stipulated that the British flag should be hoisted in Budu, and the company's officers have supervision over

it and be allowed to establish stations there. Some of the best provinces in the neighborhood of the capital had been destined for the Catholics, but Capt. Lugard suddenly changed his mind and assigned these to the Mohammedans after he got the King into his power. The British officers used every inducement to get the King to return to Mengo, and promised the Catholics an equal distribution of lands if they would send him back. The Catholic missionaries, relying on this promise, persuaded Mwanga to return, and he then identified himself with the British or Protestant party, who henceforth held all the offices as well as three fourths of the lands. The Catholics, overcrowded in the narrow province to which they were exiled, forming only one seventh of the area of the country, died from starvation and pestilence, and becoming more and more desperate and discontented at the failure of Capt. Lugard to fulfill his promises, sold their property in order to procure arms and ammunition, imported through German East Africa, for the purpose of avenging their wrongs. Capt. Williams and Capt. Macdonald used their influence in vain with the King and his Protestant counselors to induce them to grant the Catholics lands enough to support them and some share of the court offices, and thus avert a new war and the establishment by the Catholics of an independent kingdom with one of the princes, sons of Karema, whom they refused to deliver up to Mwanga, as their King. The Mohammedan population also, less numerous than the Protestants or the Catholics, were dissatisfied at the conditions resulting from the ascendancy of the Protestants brought about by the British protectorate, which was confirmed in perpetuity by a new treaty signed by Mwanga on April 5, 1892. The Mohammedans were also banished to a province selected for them, while the Protestants had appropriated for their own use the choicest lands in the country—four times more than they needed for their support. The former Mohammedan King, Mbogo, and his principal followers were kept as prisoners in quarters close to the fort of Kampala. This was the situation still when Sir Gerald Portal, who had filled the post of British consul-general at Zanzibar for three years, arrived at Kavirondo on March 8, 1893, with 230 Zanzibari soldiers to take over provisionally the authority of the British East Africa Company in Uganda. The company, having failed to obtain an imperial subsidy, and being unwilling to continue the occupation at its own cost, was authorized to evacuate the country on March 1, 1893. Capt. Lugard had returned to England some months before, leaving Capt. Williams in command at Kampala. Capt. Macdonald departed before him, but returned on receiving instructions from the Government of Lord Salisbury to make a report on affairs in Uganda. The first directions sent to Captain Williams were to evacuate Uganda and its dependencies on Dec. 31, 1892, but a subsequent order postponed the operation for three months. The King and his officers had no more influence or power in the country, having been reduced to the position of mere puppets of the company. The Protestants, more ignorant and unruly than the Mohammedans or the Catholics, committed robberies and depredations

against the other Waganda and the Wasoga and other neighboring tribes. Capt. Williams decided to collect a regular tribute in Usoga, which was divided in equal shares by the company and the King. He acquired a large quantity of ivory for the company and imposed a tax of 10 per cent. on ivory brought down by traders. Negotiations were entered into with King Kaba Rega, of Unyoro, who was willing to purchase peace if he could make satisfactory terms with the company.

When the Conservative ministers decided to terminate the authority of the chartered company in Uganda and ordered it to withdraw its forces, their policy was to continue the occupation with imperial forces and to build a railroad from the coast to Victoria Nyanza. They were careful, however, not to commit the Government to either part of this scheme, and when they retired they left the Liberals to decide whether Uganda should be retained or abandoned. Sir Gerald Portal, as imperial commissioner for the sphere of British influence, was instructed to endeavor to make British influence felt by the natives, to maintain peace and order, to develop legitimate trade, to secure the safe circulation of traders, and generally, "without undue interference with tribal government and native habits and customs, to pave the way for conferring on the natives the benefits of civilization." On Dec. 10, 1892, he was instructed by Lord Rosebery to go to Uganda with an adequate armed force on a special mission of inquiry. The results of this mission would enable the Government to form an opinion as to whether and in what form the official action of England should be substituted for that of the private company, or whether all European authority should be withdrawn; but the ministers promised to take no decisive action without submitting the question to Parliament after receiving the commissioner's report "on the best means of dealing with the country, whether through Zanzibar or otherwise." Meanwhile Sir Gerald Portal had a free hand to make any temporary arrangements in Uganda that seemed best. He was empowered to take over the stores and establishments of the East Africa Company in that country; he might for the moment subsidize the King, and was enjoined to impress upon him the wisdom of following advice tendered to him and to meet "with firmness and caution" every occasion that might arise. Points to be borne in mind in communications with the King and his chiefs were "the prevention of broils stirred up under the name of religion, the promotion of peace, the encouragement of commerce, the security of missionary enterprise, and the suppression of the slave trade." Besides the treaty of perpetual friendship with Mwanga, to which the British Government was not a party, there were 83 others with native chiefs that had been approved by the Secretary of State, and it was feared that the evacuation of the country in the face of these engagements "might have a prejudicial effect on the British good name in those regions." Sir Gerald Portal was therefore desired to report on the course to adopt with reference to this difficulty.

Before the dispatch of this mission on the receipt of Capt. Macdonald's report, the French

Government, Aug. 30, 1892, laid before the British Foreign Office the complaints of the French missionaries against the chartered company. M. Ribot subsequently explained that there was no question of the French going to Uganda, which was beyond the sphere of French influence; all that the French Government desired was that due consideration, respect, and fair dealing should be shown to the French Catholic missionaries. On Oct. 21 M. Waddington, French ambassador in London, submitted the question whether the British Government admitted the principle of indemnity for losses and grievances of French missionaries. Lord Rosebery replied that he must consult with his colleagues before acceding to the wide and novel principle of making a government liable for the acts of officials of a chartered company.

The internal condition of Uganda improved after the arrival of Sir Gerald Portal at Mengo, March 17, 1893. On March 30 he sent Capt. Portal and Major Owen to Toru to carry out a plan for the disposal of the Egyptian soldiers who had been stationed in 7 forts in Toru, and being without European commanders or obligations to the company, had committed depredations on the neighboring tribes. The entire force of 450 soldiers were enlisted into the English service. The two most distant forts were abandoned, and their garrisons brought down to the nearer ones, which still covered a line of 100 miles. The English officers remained to organize and discipline the Soudanese, diminished by 100 men, who were brought down to take the place of the Soudanese that Capt. Williams took back with him to the coast when he left Kampala on April 3. The slaves and followers of the Soudanese drafted to Kampala were formed into a colony near the fort. There were thus left in Toru 3,500, as the family and slaves of each soldier numbered about 10 individuals. Capt. Macdonald was appointed resident at Kampala and commandant of the district.

Sir Gerald Portal next gave his attention to the representations of Mgr. Hirth, the French bishop, regarding the Catholics who, in spite of the promises of Capt. Lugard, though they were not responsible for the war and had been defeated by the troops of the company, after gaining a victory over the Protestants, were still confined as rebels in the district of Budu, where they were gradually perishing from plague and starvation. After a long controversy Mgr. Hirth and Bishop Tucker, of the English Church Mission, were induced by Sir Gerald Portal to sign an agreement, April 7, whereby the Catholics were readmitted to the councils of the King and obtained several important offices and an extension of territory nearly as large as Budu. Besides Budu, the Catholics received the province of Kaima, the island of Sese, the district of Lwekula, and the shambas, or plantations of Mwanika in Mugema. In return they delivered up the young princes, not to Mwanga, but to the British resident, who took them under his guardianship, to reside within the precincts of the fort. After the death of the Catholic Rubuga, the King's sister, her office becomes extinct. The office of Kimbugwe was abolished forthwith, and instead of a single Katikoro, or minister of justice, a single Gabunga, or com-

mander of canoes, and a single Miyai, or commander of troops, one was to be appointed for the Catholics and one for the Protestants, subject to the approval of the resident and the last-named under his orders. The missionaries, the British special commissioner, and the military men were at one in the opinion that the Protestants and Catholics in Uganda could not be allowed to intermingle again without a recurrence of disorders, and that spheres of missionary activity should be settled upon to prevent the occurrence of similar religious wars in the neighboring countries. The local heads of the missions had no authority to divide the field definitively, but they entered into a temporary verbal agreement to confine their labors, the Catholics to the north and west, the Protestants to the countries east of the Nile toward the Indian Ocean. Both were desirous of establishing missions near Mount Ruwenzori, and Bishop Tucker would not consent to abandon to the Catholics the country between the lakes, but he agreed to establish no stations in Toru for six months.

Capt. Lugard, when his position was precarious, went out of his way to conciliate the Mohammedans, who are the most intelligent and civilized, though the least numerous of the three religious factions of the Waganda, or four, counting the adherents of the old pagan religion of Lubare, a kind of Nature worship, who have so dwindled latterly as to be unable to take a part in the struggle for supremacy. The Mohammedans knew that they were doomed to extinction if the country was annexed to the British Empire, and as soon as they saw that Sir Gerald Portal's proceeding tended to no other result they decided to frustrate it if they could. In the middle of June Sir Gerald Portal departed for the coast, and immediately afterward the Mohammedan chiefs, acting under the advice of Selim Bey, a former lieutenant of Emin Pasha, began to raise legal difficulties regarding the way that they had been treated. They made advances to the Catholic party to form an alliance for the purpose of sweeping the Protestants and the English out of the country and defending its independence. Capt. Macdonald, co-operating with the French priests, induced the Catholics to join with the Protestants, and Selim's own Nubian soldiers, having taken the pay of the English and eaten their salt, refused to rebel. The Mohammedan Waganda rose in rebellion, and were crushed by the united Protestants and Catholics and driven out of the country. Sir Gerald Portal, who had turned back on receiving a dispatch from Capt. Macdonald, conveyed Selim Bey and Mboko, the Mohammedan King, as prisoners of war on his return journey to the coast, which he reached about the end of September, Selim having died on the journey.

German East Africa.—The German possessions in East Africa, estimated to have an area of 380,000 square miles and 1,760,000 inhabitants, passed out of the control of the German East Africa Company after the suppression by the German imperial forces of the Arab revolt of 1899. The German Government appointed an imperial commissioner to administer the country, leaving the company its commercial development. The value of the imports for

1890 was \$2,654,919, and for 1891 it was \$2,820,264. The exports were valued at 5,015,915 rupees in 1890, and in 1891 at \$2,353,000. The export of ivory was valued at \$1,330,000, and of rubber at \$239,565. An antislavery committee undertook to discharge the German obligations regarding the suppression of the slave trade. Under official patronage it raised a capital of 2,100,000 marks by a lottery and private subscriptions. Of this, more than 1,500,000 marks had been expended before the spring of 1893, of which 660,000 marks went for the expedition of Capt. Wissmann, having for its object the establishment of stations on Lake Tanganyika and the placing of a steamer, the "Wissmann," on the lake. Owing to the disturbed condition of the interior, resulting from the operations of the Congo State against the Arab slave raiders, Capt. Wissmann was unable to establish himself on Tanganyika and attack the slave trade in its stronghold among the Yaos. He launched the steamer on Lake Nyassa instead, and built a station at the north end of that lake. This station and the steamer were transferred to the Imperial Government in July, 1893. Baron von Soden, who was made imperial commissioner after the pacification of the coast Arabs in 1890, returned to Germany in April, 1893, and was replaced by Freiherr von Schele. A company has been formed for the construction of a railroad from Tanga to Karagwe, to open up to commerce the rich Usambara district. A central railroad from Dar-es-Salam to the Victoria Nyanza or to Tabora is also contemplated. The boundary between the German and English possessions in the vicinity of Mount Kilimanjaro has been delimited by a joint commission consisting of Dr. Karl Peters and C. S. Smith, British consul at Zanzibar, and defined in an agreement signed at Berlin in July, 1893. Freiherr von Schele set out from the coast for Kilimanjaro on July 6 to re-establish in that district the authority of the German Government, which had been set at naught by Meli, the son and successor of the Sultan Mandara since his victory over the German troops in June, 1892. On Aug. 12 Meli's fortified camp was stormed by the Askari soldiers and taken after a sharp fight, in which a German lieutenant and 4 men were killed and 24 were wounded. Another expedition was sent out to punish and subjugate the Wahehes in Ugogo. The colonial troops stormed Kanjenje, the stronghold of the chief Sinjangaro, and captured it, with the loss of several men, including 1 lieutenant killed and 1 wounded.

Nyassaland.—The districts that were the scene of operations of Scotch missionaries and of the African Lakes Company, situated west of Lake Nyassa and south of it along the Shire river, were declared to be within the sphere of British influence in 1889, and were proclaimed a British protectorate on May 14, 1891. The population is about 2,000,000, of whom 900,000 are in 8 districts administered by British officials. The imperial commissioner is H. H. Johnston. A military force of 100 Sikhs and 150 Zanzibaris is maintained, and there are besides two gunboats on the lower Shire, an armed steamer on the upper Shire, and two gunboats on Lake Nyassa. The regions not occupied by British forces are

subject to murderous raids not only of Arab slave hunters, but of the Angoni, a branch of the Zulu race who live by pillage. The people of the settled districts are Christianized to some extent by the six missionary societies and have been taught to labor. The exports are ivory, hippopotamus hides and teeth, oil seeds, and tobacco. The revenue from customs and taxation is about £8,000.

Portuguese East Africa.—The Portuguese possessions on the eastern side of the African continent, restricted by the Anglo-Portuguese agreement of June, 1891, to the coast region and the banks of the Zambesi up as far as Zumbo, were constituted by the decree of Sept. 30, 1891, into the State of East Africa, divided into 2 provinces, Mozambique and Lourenço Marques, which are divided by the Zambesi river. The executive head of the whole state is a commissioner, appointed for three years, who resides alternately at the towns of Mozambique and Lourenço Marques. The imports for 1891 were valued at 3,771,855 milreis, and the exports, consisting principally of oil nuts, rubber, and ivory, at 1,416,397 milreis. Besides the Delagoa Bay line, 57 miles long, there are plans to construct 428 miles of railroad. The telegraphs have a length of 280 miles.

In the latter part of 1892 the negroes who formerly followed Manuel Antonio began to raid and plunder in the Zambesi district of the Portuguese dominion. The Portuguese officers west of Sena took refuge in that town. Col. Pavia d'Andrade took a considerable force up to Sena, and garrisoned the fort of Ignacerera, a few miles up the river, but did not venture to engage the enemy, who were well armed and numbered 3,000 or 4,000. The rebels were afraid to attack the fort, but they sacked the station of Chupanga, belonging to the Mozambique Company. Peace was finally restored, but not by the subjugation of the rebels. A new commercial corporation, the Nyassa Company, was chartered in March, 1893, with a nominal capital of 5,000,000 milreis, which has undertaken to build a railroad to Lake Nyassa.

ECUADOR, a republic in South America. The Congress, which meets annually on June 10, at Quito, consists of a Senate and a House of Representatives. The Senators are elected for four years, by provinces, 2 for each of the 16 provinces, and the Representatives for two years in the proportion of 1 to every 30,000 inhabitants, all by the direct suffrage of Roman Catholic citizens twenty-one years of age who can read and write. The President and the Vice-President are likewise elected by popular suffrage, each for four years, but not at the same election. The Vice-President is the chief of the Council of State. Luis Cordero was elected President on June 30, 1892. The Vice-President is Dr. P. Herrera. The Cabinet was composed of the following members in the beginning of 1893: Minister of the Interior and of Foreign Affairs, V. L. Salazar; Minister of the Treasury, A. de Icaza; Minister of Public Instruction, P. J. Cavallos Salvador; Minister of War and Marine, Gen. J. M. Savasti.

Area and Population.—Ecuador has an area of about 200,000 square miles, and 1,271,880 inhabitants, of whom about 100,000 are

whites, 300,000 mixed, and the rest Indians. Quito, the capital, has a population of about 50,000, and Guayaquil, the chief port, has 44,515.

Finances.—The budget for 1891 estimated the revenue at 10,834,536 sucres (1 sucre=62 cents), of which 4,090,387 sucres were derived from the national bank, 2,499,670 sucres from customs, 1,549,129 sucres from exchange, 361,226 sucres the surplus of 1889, 132,566 sucres from taxes, 166,337 sucres from stamps, 416,888 sucres from monopolies, 81,698 sucres from sales of lands, and 1,036,635 sucres from various other sources. The expenditure was estimated at 10,112,436 sucres, of which 5,022,165 sucres were for financial purposes, 1,535,864 sucres loss by exchange, 1,152,714 sucres for the army and marine, 638,005 sucres for public buildings, 491,493 sucres for public instruction, 206,335 sucres for posts and telegraphs, 1,906 sucres for the legislature, 20,944 sucres for the executive, and 1,042,810 sucres for various other purposes.

Defense.—The standing army consists of 3,341 officers and men, who are distributed among 1 brigade of fortress artillery, 1 brigade of field artillery, 4 battalions of infantry, 2 columns of light infantry, and 1 regiment of cavalry. The navy consists of a small cruiser, 2 small gunboats for river service, and 1 transport, manned by about 120 men.

Commerce.—The total imports in 1891 amounted to 7,241,095 sucres, compared with 10,016,352 sucres in 1890, and 9,681,450 sucres in 1889. The exports in 1891 were valued at 7,351,800 sucres, in 1890 at 9,761,634 sucres, and in 1889 at 7,910,205 sucres. The principal imports and their values in 1891 were: Cotton and other tissues, 2,074,510 sucres; provisions, 1,091,440 sucres. The principal articles of export in 1891 were: Cocoa, 4,544,398 sucres; coffee, 659,061 sucres; India rubber, 415,776 sucres; hides, 107,812 sucres; straw hats, 315,874 sucres; sugar, 154,531 sucres.

The following table shows the trade with the leading countries in 1891, in sucres:

COUNTRIES.	Imports from.	Exports to.
France.....	1,790,568	2,498,943
Great Britain.....	1,628,816	985,816
United States.....	1,496,062	999,410
Germany.....	1,042,359	1,091,575
Spain.....	180,519	599,849
Peru.....	512,016	159,046
Chili.....	246,045	411,498
Colombia.....	46,687	218,884

The exports of gold and silver in 1891 amounted to 532,536 sucres.

Navigation.—During 1891 there were 296 sailing vessels, of 26,682 tons, and 370 steamers, of 346,891 tons, entered at the ports of Ecuador, and 239 sailing vessels, of 26,755 tons, and 375 steamers, of 349,993 tons, cleared. Of the total number of vessels entered, 307, of 249,057 tons, were British; 176, of 8,394 tons, were Ecuadorian; and 123, of 116,122 tons, were of other nationalities.

Communications.—The only railroad open to traffic is the one running from Duran to Chimbo, 63 miles, but an extension to Sibambe is under construction. The length of telegraph wires is about 1,074 miles. The number of letters, postal cards, samples, and printed mat-

ter expedited by the post-office in 1891 was 3,024,034.

Political Discontent.—The advanced Liberals, who rose in rebellion in 1884 and attempted to start a revolution in 1886 in the hope of annulling the close union of church and state that was reaffirmed in the Constitution of 1883, have persistently opposed every administration that has been in power since the overthrow of the dictator Veintemilla. They complain of heavy taxes levied for the maintenance of the clergy, especially of a property tax of 3 per mille imposed for purely ecclesiastical purposes, and of interference by the clergy in affairs of state. The revolutionary spirit, damped for a time by the severe repression of the former outbreaks, has been rife since the election in an irregular manner of Señor Cordero, although he is a representative of the moderate section of the party in power. In February, 1893, there was an attempt to start an insurrection in the province of Esmeraldas, where a state of siege was proclaimed. A fight took place in the town of that name, in which the Government troops were victorious. The Government forbade the circulation of the Radical Spanish-American newspaper "El Progreso," published in New York, and endeavored to induce the United States postal authorities to refuse to forward copies destined for Ecuadorian subscribers, by representing that it was an immoral publication.

EGYPT, a principality in northern Africa, tributary to Turkey. The Government is an almost absolute monarchy, and the succession is direct from father to son. The ruling prince bears the title of Khedive, and, by a firman of the Sultan issued in 1873, has the right of maintaining an army and of concluding commercial treaties with foreign powers. The present Khedive is Abbas Pasha, born July 14, 1874, who succeeded to the throne upon the death of his father, Mohammed Tewfik, Jan. 7, 1892. The administration is by a ministry, subject to the ruling of the Khedive. Since the intervention of England to restore the authority of the Khedive, in 1882, the country has been occupied by a British army, and since January, 1883, the Khedive appoints an English financial adviser, who has a seat in the Council of Ministers. Without his advice no financial decision can be made. The Council of Ministers comprises the following six departments: Interior, in charge of the President of the Council; Finance, Justice, War, Public Works and Instruction, Foreign Affairs. There are also, under an organic law promulgated by the Khedive in 1883, a Legislative Council, a General Assembly, and provincial boards, all of which are elective. All legislation is submitted to the Legislative Council, but the Government is not bound by its advice. The General Assembly is summoned every two years, and no new direct personal or land tax can be imposed without its consent.

Area and Population.—Egypt proper extends from Wady Halfa, in 21° 40' of north latitude, to the Mediterranean, and has a total area of about 400,000 square miles; but the Nile valley and delta, which constitute the settled and cultivated area, cover only 12,906 square miles. The population of this settled portion of the country, according to the census of 1882, was as

follows: Egyptians, sedentary, 6,480,600; Egyptians, nomad, 245,779; foreigners, 90,886; total, 6,817,265. Of the total population, 3,401,498 were males and 3,415,769 females. The number of foreign residents has increased largely within recent years. Cairo, the chief city, had a population of 368,108, and Alexandria 208,755.

Finances.—The International Commission of Liquidation, appointed in 1880 to examine the financial situation of Egypt, estimated the annual revenue for and after 1882 at £ E. 8,411,622 (£ E. = \$5), £ E. 35,513,784 being assigned to the debt and £ E. 4,897,888 to the expenses of the Government. The budget for 1893 estimates the revenue at £ E. 10,010,000, of which £ E. 4,956,000 are derived from the land tax, date-tree tax, etc., £ E. 129,000 from urban taxes, etc., £ E. 1,410,000 from customs, £ E. 210,000 from *octroi* duties, £ E. 180,000 from salt and natron duties, £ E. 85,000 from fisheries, £ E. 79,000 from navigation dues, £ E. 1,600,000 from railways, £ E. 40,000 from telegraphs, £ E. 115,000 from the port of Alexandria, £ E. 222,000, from posts, £ E. 110,000 from light-houses, £ E. 370,000 from Ministry of Justice, £ E. 90,000 for exemption from military service, £ E. 86,000 from rents on Government property, £ E. 15,000 from governorship of Suakin, £ E. 154,000 from pension fund, and £ E. 254,000 from other sources. The total expenditure is estimated at £ E. 9,550,000, of which £ E. 4,004,000 are for the service of the debt, £ E. 665,041 are for tribute to Turkey, £ E. 114,127 for the Khedive's civil list, £ E. 114,127 for the civil lists of Ismail Pasha and his family, £ E. 54,934 for the Khedive's private cabinet, £ E. 460,949 for the Ministry of Public Works, £ E. 383,783 for the Ministry of Justice, £ E. 319,969 for the administration of the provinces, £ E. 110,294 for the Ministry of Finance, £ E. 117,151 for the Ministry of the Interior, £ E. 92,544 for the Ministry of Public Instruction, £ E. 115,554 for other ministries, £ E. 132,376 for administration of the customs, £ E. 40,311 for the collection of *octroi* duties, £ E. 46,896 for the collection of the salt and natron duties, £ E. 7,978 for the fisheries, £ E. 2,979 for navigation, £ E. 771,703 for railroads, £ E. 39,200 for telegraphs, £ E. 23,000 for the port of Alexandria, £ E. 203,221 for the postal service, £ E. 25,142 for lighthouses, £ E. 712,000 for public security, police, prisons, Ministry of War, and the British army of occupation, £ E. 119,360 for the administration of Suakin, £ E. 435,000 for pensions, and £ E. 50,556 for the suppression of the *corrée*, and £ E. 50,556 for sundry other purposes.

The public debt at the end of 1892 amounted to £ E. 106,372,160, of which £ E. 8,936,800 represent the guaranteed loan at 3 per cent., £ E. 29,400,000 the privileged debt bearing interest at 3½ per cent., £ E. 55,986,580 the unified loan at 4 per cent., £ E. 7,223,020 the Daira Sanieh loan at 4 per cent., and £ E. 4,826,460 the Domains loan at 5 per cent.

Military Forces.—The Egyptian army has a total strength of 13,000. It has about 60 English officers, and is commanded by an English general officer, who bears the title of Sirdar. The present Sirdar is Brig.-Gen. Horatio Herbert Kitchener, who was formerly British governor-general of the Red Sea littoral and com-

mandant at Suakin. The British army of occupation numbered in December, 1891, 3,108 men, but was increased, after the ministerial crisis in January, 1893, to about 4,000, and is commanded by Maj.-Gen. Forestier Walker.

Commerce and Production.—The imports for 1891 amounted to £ E. 9,201,390, an increase of over £ E. 1,200,000 over the preceding year, while the exports for 1891 were £ E. 13,878,628, exceeding those of the preceding year by over £ E. 2,000,000. The imports of specie amounted to £ E. 2,824,861, and the exports to £ E. 1,523,950. Of the total imports, 37 per cent. came from Great Britain and her Mediterranean possessions, 18 per cent. from Turkey, 8 per cent. from the Eastern possessions of Great Britain, 9 per cent. from Austria-Hungary, 10 per cent. from France and Algeria, 1 per cent. from Greece, 3 per cent. from Italy, 4 per cent. from Russia, and 10 per cent. from other countries, including £ E. 21,439 from America. Of the exports, 47 per cent. went to Great Britain and her Mediterranean possessions, 2 per cent. to Turkey, 4 per cent. to Austria-Hungary, 6 per cent. to France and Algeria, 4 per cent. to Italy, 8 per cent. to Russia, and 29 per cent. to other countries, including £ E. 81,295 to America.

The chief imports in 1891 and their values were: Cotton goods, £ E. 1,943,892; silk, woolen, and linen goods, £ E. 1,187,331; coal, £ E. 473,845; hosiery and apparel, £ E. 349,985; timber, £ E. 426,552; coffee, £ E. 294,998; wine, beer, and spirits, £ E. 291,570; tobacco and cigars, £ E. 464,426; petroleum, £ E. 302,287; machinery, £ E. 161,497; iron and steel goods, £ E. 465,649; indigo, £ E. 173,680; fruits, £ E. 267,577; animals, £ E. 181,552; wheat and flour, £ E. 107,933; rice, £ E. 131,057; refined sugar, £ E. 56,393.

The chief exports and their values were: Cotton, £ E. 8,988,826; cotton seed, £ E. 1,544,963; sugar, £ E. 572,694; beans, £ E. 908,441; wheat, £ E. 531,264; rice, £ E. 125,654; maize, £ E. 434,146; hides and skins, £ E. 85,879; onions, £ E. 87,525; lentils, £ E. 80,100.

The agricultural population amounts to about 60 per cent. of the whole, and over 5,000,000 acres of land were under cultivation in 1891. There are three crop seasons. Winter crops, consisting of cereals, are sown in November and harvested in May and June; summer crops, such as cotton, sugar, and rice, are sown in March and harvested in October and November; and autumn crops—rice, sorghum, and vegetables—are sown in July and gathered in September and October. The most important crop is cotton, of which upward of 850,000 acres were planted in 1891, and the yield was about 550 pounds an acre. Cattle and farm animals, including horses and camels, numbered 1,668,860.

Navigation.—The number of vessels arriving at the port of Alexandria in 1891 was 2,163, of 1,807,717 tons, and the number cleared was 2,158, of 1,765,716 tons. The arrivals and clearances at the other ports numbered 6,456, of 8,605,236 tons. Of the vessels entered at Alexandria 647, of 858,437 tons, were British; 130, of 276,227 tons, were French; 932, of 231,018 tons, were Turkish; 106, of 154,568 tons, were Austrian; 73, of 107,970 tons, were Russian; 100, of 89,252 tons, were Italian; 94, of 24,279 tons, were Greek;

33, of 38,679 tons, were Swedish and Norwegian.

Internal Communications.—There were 1,158 miles of railroad in operation in 1891, and 88 miles under construction. The number of passengers carried in 1891 was 5,469,202, and the amount of freight, 2,308,463 tons. The gross earnings were £ E. 1,631,611, and the expenditure £ E. 706,602. The Government, at the beginning of 1892, had 3,168 miles of telegraph, with 5,430 miles of wire. The number of telegrams in 1891 was 1,303,537. The post-office handled 9,871,000 letters and cards, of which 3,250,000 were foreign; and 7,245,000 newspapers and packets, of which 2,343,000 were foreign.

The Suez Canal.—The number of vessels that passed through the canal in 1891 was 4,207, of 12,217,098 gross tons. Of these, 3,217, of 9,484,608 tons, were British; 171, of 616,964 tons, were French; 318, of 870,548 tons, were German; 116, of 275,861 tons, were Italian; 147, of 369,347 tons, were Dutch; 51, of 169,399 tons, were Austrian; 55, of 114,016 tons, were Norwegian; 28, of 98,627 tons, were Spanish; 21, of 64,554 tons, were Russian; 40, of 60,619 tons, were Turkish; 29, of 74,798 tons, were Portuguese; 6, of 12,794 tons, were Japanese; 5, of 4,571 tons, were Greek; 1, of 619 tons, was American; 1, of 963 tons, was Danish; and 1, of 294 tons, was Egyptian. The number of passengers carried through the canal in 1891 was 194,467. The total receipts for the year were £ E. 2,196,673, and the net profits 50,591,892 francs.

Ministerial Crisis.—A ministerial crisis, which partook of the nature of a *coup d'état* on the part of the young Khedive, occurred in January, 1893. Near the close of 1892 the Premier, Mustafa Fehmi Pasha, was very ill, and, as his death was expected, the matter of appointing his successors engaged the attention of the Khedive, and he had a conversation on the subject with Sir Edwin Palmer, Financial Adviser of the Government. On Jan. 1, Lord Cromer, the British consul-general and representative in Egypt, conferred with the Khedive, and was informed of his desire to appoint Tigrane Pasha. Tigrane is an Armenian and a Christian, and, as a member of the Mustafa Cabinet, had exhibited considerable ability; but Lord Cromer objected to his appointment, on the ground that under the existing circumstances the Premier should be a Mohammedan, and he suggested to the Khedive the appointment of Riaz Pasha. Meantime Mustafa Fehmi became convalescent, and it was agreed that, inasmuch as he would soon be able to resume his duties, there was no longer any question of naming another Prime Minister. But on Jan. 15, without further consultation with the representative of Great Britain, the Khedive, acting, as was believed, in resentment of the dictation of Lord Cromer and largely upon the advice of Roullier Bey, his former tutor and secretary, demanded the resignation of Mustafa Fehmi, and, upon its being refused, peremptorily dismissed him, as well as the Ministers of Finance and Justice, and named Fakhri Pasha as Prime Minister. Fakhri, who is a Turk, believed to entertain strong Turkish and French proclivities, had formerly been Minister of Justice, from which position he was dismissed on Lord Cromer's advice on account of his op-

position to judicial reform. Upon being notified of the Khedive's action Lord Cromer asked for an explanation of what he deemed a violation of the recent understanding between them. The Khedive based the change upon the ground that the state of Mustafa's health would not permit him to resume his work for a long time. The Khedive, at the urgent request of Lord Cromer, promised that he would stop the issue of any official notification of the change until the English representative could communicate with his Government. Meantime the British officials in Egypt did not recognize the Fakhri ministry, and two days later Lord Cromer communicated to the Khedive the reply of the British Government, to the effect that the Government expected to be consulted in so important a matter as a change of ministry; that no present change seemed necessary; and that the proposed nomination of Fakhri Pasha could not be sanctioned. Lord Cromer further informed the Khedive that in the event of the reinstatement of Mustafa Fehmi Pasha no objection would be made to the proposed changes in the Departments of Finance and Justice. On the following morning the Khedive expressed to Lord Cromer his regret at the occurrence of the recent incident, but said that it would humiliate him and make him lose all authority if he were obliged to reinstate Mustafa Fehmi, and he therefore requested that he might be permitted to name Riaz Pasha in the place of Fakhri. This was assented to by Lord Cromer, and the Khedive further expressed his earnest wish to entertain friendly relations with the British Government, and said that in future he would be willing to follow the advice of that Government in all important matters.

The New Cabinet.—The reconstructed Council of Ministers was constituted as follows: President of the Council and Minister of the Interior, Riaz Pasha; Minister of Finance, Butros Pasha; Minister of Justice, Mazlum Pasha; Minister of Public Works and Instruction, Zeki Pasha; Minister of Foreign Affairs, Tigrane Pasha; Minister of War, Jussef Chuhdi Pasha. Riaz Pasha, the new Premier, had held that office for a time during the reign of the father of the present Khedive, but received his dismissal in 1891 on account of his attempts to thwart English policy in Egypt. During his retirement, however, he showed himself more favorable to the existing condition of affairs, and approved most of the reforms introduced by the English. He has amassed great wealth, and his ability, knowledge of the country, and independence of character were generally conceded. The Ministers of Public Works, Foreign Affairs, and War were members of the old Cabinet. A formal protest was laid by France against the action taken by Lord Cromer with regard to the nomination of Fakhri Pasha, and the attitude of the British Government was also condemned in Russia; but in Germany and Austria it was commended. Notwithstanding the fact that the Khedive had yielded, apparently without reservation, to the demands of Great Britain, he allowed it to appear in the local press that he had gained a substantial victory, and virtually established the principle of independence in ministerial appointments. Large native deputa-

tions who came with congratulations were received by him, and the ultra-Mohammedan press became very violent against the English. The belief became quite general that the Khedive had determined to put to the test the whole question of British occupation and control, and a general feeling of public insecurity was prevalent in Cairo, and to a less extent elsewhere in Egypt. This condition of affairs led Lord Cromer, after conference with Gen. Walker, commanding the army of occupation, to request on Jan. 19 that his Government should permit him to make the announcement that the garrison would be increased. He received such authority on Jan. 23, and the announcement at once had a calming effect and was accepted as a decisive answer to the question of the continuance of English control in Egyptian affairs. Early in July the Khedive paid his first visit to his suzerain, the Sultan, at Constantinople. He was attended by Tigrane Pasha, Minister of Foreign Affairs, and a suite of nine important Egyptian officials, and as he was followed during the succeeding week by a considerable number of prominent members of the National party, the opinion prevailed quite generally that it was the Khedive's intention to make his visit the occasion for an appeal praying the Sultan to demand the evacuation of Egypt by the English. But if the young viceroy entertained such views, there was no evidence that they were encouraged by the Sultan; on the contrary, it was believed in diplomatic circles that the Khedive had been advised to modify his anti-English attitude.

The Dervishes.—On Dec. 31, 1892, two attacks were made by dervishes. One party of 400 camelmen made a raid on the village of Gania, a few miles south of Wady Halfa, but were repelled by a detachment of Egyptian soldiers. Another party of 350 dervish camelmen arrived at Gania the following day, expecting to join their comrades. They were vigorously attacked by the Egyptians, and retreated so hurriedly as to leave their dead and a considerable quantity of arms and provisions. They were pursued by a camel and cavalry corps and overtaken at Ambigol Wells, Jan. 2, and defeated with heavy losses on both sides, the dervishes again retreating southward. Osman Digna, at the head of a band of dervishes, made a raid in the vicinity of Tokar, on April 8, and captured a number of cattle. He was pursued by a detachment of mounted infantry, and the cattle were recaptured and 12 of the dervishes killed. On July 26 a body of dervishes 500 strong arrived at Bayress, in the Great Oasis, 180 miles from Ghirgeh, the Upper Egypt Railway terminus. Troops were sent out, but did not succeed in intercepting the band. Osman Digna was established in the hills at Amet, about 80 miles southwest of Suakin, from which stronghold his swift-moving parties were dispatched in all directions. His operations had stopped trade on the Suakin-Berber road.

Courts and Police.—The annual statistics issued by the native tribunals in April showed that no arrears existed on the criminal side, and none on the civil side except such as were caused by the parties themselves, and that the courts of summary jurisdiction, spread over the country, were doing the bulk of the work. The litigants

were mostly poor and the amounts involved small, and it was noted that there were but few appeals from the summary courts, and that the majority of appeals did not succeed. On the criminal side there was a diminution of the graver crimes, such as murder and brigandage, while an increased number of convictions for lesser offenses proved greater activity on the part of the tribunals and the police. The number of murders had decreased from 347 in 1891 to 289 in 1892. The activity and efficiency of the courts was attributed to the surveillance of the Judicial Committee of Inspection.

The mixed tribunals were instituted in 1876 as a substitute for consular jurisdiction, and have done good service. In February, 1894, these courts may, in accordance with the rules of their creation, either expire or be prolonged for another period of five years. Looking forward to that date, the Judiciary Adviser to the Khedive, Justice Scott, proposed that the jurisdiction of the mixed tribunals should be more strictly defined, in order to check a tendency to encroach on the native courts. His reforms proposed that it should be authoritatively settled that the mixed tribunals have no jurisdiction concerning land where only natives were affected; that the Land Registry Office should be placed under the control of the Minister of Justice, but be clerically administered by qualified Europeans; that a court of revision, composed partly of Europeans and partly of native lawyers, should be instituted with a view to the establishment of a system of jurisprudence on all purely land questions; that a *cour de conflit*, similarly constituted, should settle in final appeal all differences as to the due competency of the two systems; that the mixed tribunal at Mansura should be dissolved and replaced by four mixed courts of summary justice, with jurisdiction up to £ E. 100, to be located at Port Said, Mansura, Tanta, and Assiut. The Council of Ministers threw out the propositions relating to the Land Registry Office and the Court of Revision as being against the interests of Egyptians, but agreed to submit the other three to the powers for their decision. The entire plan of Justice Scott had received the approval of the Mustafa Fehmi Cabinet.

On April 18 a circular was issued by Riaz Pasha, settling differences that had arisen between the ministry and the Inspector-General of Police. It recognized the Inspector-General as the head of the police, and declared him responsible to the Premier for the public security. It also provided that the provincial commandants should be responsible to the provincial governors, and that the latter should correspond on police matters with the Inspector-General. As the police is an entirely English department, this circular was regarded as showing a disposition to adopt English views, and to substitute a conciliatory for a hostile policy.

ENGINEERING. Canals.—The North-Sea-Baltic Canal has been carried forward with the slow carefulness characteristic of German engineering. Its completion for service is officially announced for 1894. The ship canals from the sea to Manchester, England, and across the peninsula at Corinth, Greece, have been opened to commerce, and the Chicago Drainage Works are

fast approaching completion. All these have been described in recent issues of the "Annual Cyclopædia."

Water Supply.—The city of Galveston, Texas, has acquired an apparently exhaustless supply of pure water by the operation—unprecedented, it is believed—of damming a subterranean river. It was known that such a river existed within a practicable distance, its bed being in a valley about 1,000 feet wide. The city engineer, after much opposition and derision, succeeded in getting an appropriation, and sank five trial wells to define the width of the stream. This done, he tunneled from well to well, making a continuous excavation, against the down-stream side of which he built a masonry dam, its foundation going below the bed of the stream, which was clearly defined. Water accumulated so fast that a central section had to be left open, and during the last days of active work a powerful steam pump was employed to keep the water down so that the workmen could finish. The trial wells still remain open, and although the city mains are full, water is constantly flowing over the top of the subterranean dam.

Tunnels.—The Continental Divide has been pierced by the engineers of the Colorado Midland Railroad, about 20 miles west of Leadville. The work is known as the Busk-Ivanhoe Tunnel, from the two stations at its respective ends. It is 9,394 feet long, 1,800 feet below the crest of the mountain range, and 10,800 feet above the sea level. Work was begun at both ends Oct. 8, 1890, and the divide was pierced 1,000 feet west of the middle point, on Oct. 17, 1893. As usual in such works, there was a race between the two gangs of workmen, but the eastern gang won, owing partly to troublesome inflows of water in the western half of the work. Mr. B. H. Bryant, chief engineer of the road, conceived the idea of this tunnel, which avoids 10 miles of heavy grade track, and will, it is estimated, save the railroad \$70,000 a year in running expenses. The total cost of the work was about \$1,000,000, which is very moderate, since this portion of the backbone of the continent is nearly all solid granite. Mr. W. H. Leffingwell was the engineer in charge of the work.

Ferry Bridge.—At Bilbao, Spain, a new type of bridge has been opened recently, which possesses merits that commend themselves for comparative cheapness and utility, where it is desirable to keep a water way open for the passage of large vessels and at the same time provide for the accommodation of shore-going traffic. A suspension bridge is first erected at such height above the water as is demanded by the local conditions. Upon this a truck is arranged to run back and forth, and from the truck a platform is suspended, by means of wire ropes, suitable for the use of passengers or vehicles. No costly approaches are necessary, since the roadway of the bridge is used only by the truck or traveler, and the suspended passenger platform is readily adjustable to its piers without reference to the rise and fall of tides. Don Alberto de Palacio is the inventor of this device. He is also the designer and architect of a superb combination of bridge and building in Bilbao, which rests upon arches over a river, permitting the passage of barges and the like, and rendering

available for public purposes a portion of the city heretofore unsightly and objectionable.

Submarine Foundations.—A new process of construction is described by F. Neukirch, of Bremen, in a paper published in the "Transactions of the American Society of Civil Engineers." It has been tested practically near Bremen, with the alleged result of producing monolithic submarine foundations. The conversion of sand and gravel *in situ* is effected by forcing commercial cement in the form of powder through a pipe to the desired depth. Air pressure is used, and cement is driven through several small holes with considerable force, causing a bubbling action in the wet sand, so that an intimate admixture is effected. Observation shows that a natural bed of sand, after having one fifth of its volume of cement injected into it, occupies less space than before. The space to be concreted is divided into small sections 8 to 12 inches square, and each of these is successively impregnated with cement, so as to secure uniformity. To suspend the operating tube a movable tripod is erected, and the air blast is carried through a flexible tube. The hardening process is slow but sure, and is comparatively inexpensive. It is also applicable to imbedding piles in cement, to inclosing sewers already in place, and to numerous other engineering operations of the greatest practical utility on land and sea.

Dynamite Dredging.—Off Brunswick, Ga., some interesting and successful experiments are reported. The harbor of this port is formed by St. Simon's Sound, opening into the Atlantic through a channel having a natural depth of about 17 feet at mean low water. This was closed by a wreck in 1890, and although the ebb and flow of the tides opened new channels, the practicable depth was reduced to about 11½ feet. Failing in an effort to secure a share of the river and harbor appropriation, Brunswick wisely determined to act for herself, and, failing again to procure a dredger, C. P. Goodyear, a lawyer, suggested experiments with dynamite. Work was begun July 8, 1891, and on Aug. 22 following a depth of 13.3 feet at mean low water was reported in a straight new channel. On the strength of this result authority was obtained from Congress to continue the work. At latest accounts about 60,000 pounds of dynamite had been exploded, at an expenditure of about \$30,000, and a uniform gain of 4 feet in depth is reported. Mr. Goodyear began with small charges of 15 pounds, but, learning from experience, increased them to 50, 100, and 200 pounds. No tendency to shoal has developed, and apparently the undertaking affords another example of successful engineering on the part of a layman.

Electricity is and must continue to be the absorbing subject of investigation for engineers of the younger school. No engineer, indeed, of whatever school, can afford to ignore its demands. Not only are such gigantic enterprises as the conversion of Niagara into light, heat, and power commanding the attention of the world, but everywhere the perennial forces of nature are harnessed for the service of man. The time is fast approaching when every considerable waterfall will have its value, and sooner or later the tremendous forces of ocean waves and tides will contribute to the same end. Thus is one great

obstacle to the use of electricity overcome—namely, the heavy expense of running electrical plants by artificial means, involving the consumption of costly fuel. Only a year or two ago the transmission of power from available waterfalls and rapids was limited to short distances, but now one can not read the news items of a daily paper without learning of fresh instances where enterprising towns draw light, heat, and power from streams 5 or 10 miles distant, whose only mission has heretofore been to furnish recreation for a few fishermen. It is often the case that where coal is dear, water power is cheap and near at hand, rendering it possible to light streets and houses better, and run machinery and cars at a comparatively inexpensive rate. In many States the legislatures have been so overwhelmed with petitions for charters for electric railways that they have been obliged to postpone action in individual cases until general laws could be framed in the interest of all concerned.

That the unsightly, inconvenient, and dangerous overhead trolley systems are destined to give way to conduit lines, and these eventually perhaps to storage batteries, must be evident to any one who watches the progress of electrical sciences; but whatever the ultimate outcome of invention, natural sources of power, whether of air or water, must retain a definite value.

Electric Propulsion.—The electric tramway, as used mainly for passenger traffic on short lines, is acquiring such importance that some brief account of its principles is desirable. At present, power, whether exerted by wind, water,

FIG. 1.—CONVERSION OF POWER INTO ELECTRICITY.

or steam, is essential to the production of electricity, which must in turn be converted back into power before it can do its work. The great advantage of this lies in the marvelous facility with which electricity can be sent along a wire, just as water can be carried along a flume. The conversion of original power into electricity is effected by means of a dynamo, which consists of a number of spools of soft iron wound with insulated copper wire. A, Fig. 1, shows such a spool in a simple form. Now suppose several such spools mounted upon a wheel so placed in relation to a powerful magnet that one end of the soft wire-wound iron will nearly touch the two poles of the magnet when the wheel revolves. Such is the mysterious and lightninglike action of electricity that its nature changes whenever it passes a pole of the magnet, and an electric current flashes not only through it, but through its surrounding wire, and may be transmitted thence to a fixed wire or rod leading anywhere, provided it comes back to its starting-point. From any part of the fixed wire electricity may be drawn merely by touching it with

a metal conductor, and if led to another dynamo will set it in motion in sympathy with the original. This second dynamo is called, to distinguish it from the original, a "motor," but it is practically identical in construction, and is con-

FIG. 2.—THE CONDUIT SYSTEM.

nected by the ordinary mechanical devices with the driving wheels of the car. Precisely why a wheel (dynamo) revolving at one end of a wire should drive another wheel (motor) at the other end, no one has yet found out. It simply does it, and we accept the service half incredulously as yet, but recognizing it as full of promise to the engineer. The connection between the fixed wire and the moving motor is usually effected by means of a grooved wheel fixed upon the end of a slender pole and pressed firmly against the wire by a spring at the foot of the pole. Metallic connection is formed through the pole leading down to the motor under the car, whence, after doing its work, it is allowed to return to the power house by way of the rails and a protected auxiliary conductor of copper which takes up the current when the rails fail to act. Such is the trolley system now in use.

In the conduit system, which bids fair to be the next step in advance in electric railway engineering, the fixed wire is carried under ground as in Fig. 2, which represents the Love conduit

FIG. 3.—PROPULSION OF HEAVY TRAINS.

system, now in use on a section of road in Washington. The feeder and the return wire run side by side in a cement conduit about 16 inches deep by 12 inches wide. A "hanger" provided with grooved wheels rests on the wire and forms the connection, precisely as in the case of the overhead trolley. A chief difficulty with the conduit system is the danger from an always possi-

ble rush of water too great in volume to be instantly carried off. Should the water rise to the circuit wires the line would forthwith be paralyzed. There is small doubt, however, that these difficulties will eventually be overcome, and the subways at present used for cable cars may become available as electric conduits.

Fig. 3 shows the probable beginnings of heavy traffic traction with overhead wires.

Electric Locomotive.—As a pioneer in its class, the electric locomotive sent to the Columbian Exhibition by the General Electric Company of Lynn, Mass., was highly interesting. It would perhaps be unsafe to predict that it will ever be to the electric locomotive of the future what the early steam locomotives are to the mighty engines of the present day, for, in proportion, far more mechanical science has gone into its construction. It is, however, strictly a pioneer, intended for the comparatively light work of elevated roads and branch lines. Its weight is 80 tons, nominal speed 80 miles an hour, draw-bar pull 12,000 pounds. It is 16.5 feet long, 11.5 feet high, 8.33 feet wide, and rests on four 44-inch wheels. The power is furnished by 2 motors, acting directly, without gearing, and supported on spiral springs resting upon the truck frames, permitting automatic adjustment to irregularities of the roadbed. The armatures are mounted upon hollow iron cylinders surrounding the axles. In a trial "tug of war" with a steam locomotive intended for similar work, electricity was easily vanquished, but the absence of smoke, cinders, and noise, and the presence of general handiness, cleanliness, and adaptability went far to square the account and serve as a foretaste of what may come with the advance of electrical science.

The Intramural Railway at Chicago suggests possibilities not heretofore realized in regard to rapid transit for large cities. The cars were 47 feet long, with transverse seats for 96 passengers. The obvious advantage of this arrangement is the ease of entrance or exit, even when the car is crowded. At the worst, a passenger has only to crowd past five seatmates, instead of 25 feet of passage and platform packed with standing humanity. Sliding gates were provided at each seat, all controlled by a lever within reach of the motorman, and with the peculiarity of closing only to within about 6 inches of one another, so that there was no danger to the limbs of heedless passengers, while the reckless were effectually held in check. In external appearance the motors were hardly to be distinguished from the passenger cars, but each had 4 axles, with a dynamo on each, aggregating 532 horse power—considerably more than twice as much as the steam engines used on the New York elevated roads. These motors could start their train of 4 cars each and attain a speed of 10 miles within twice the train length. The electric current was supplied by an iron rail laid outside of the track rails, and the current was taken up by a copper shoe. There were many other interesting features in the equipment and construction of the road, and the service that it rendered during the crowded months of the exhibition certifies to its efficiency, notwithstanding it was confessedly designed to make money, not to demonstrate a principle.

Electric Launches.—One of the conspicuous electrical successes of the year was the use of electric launches at the World's Fair. The consent of the management to their introduction was looked upon as a questionable experiment, but a pretty fleet of fifty launches was ready at an early date, and served without a serious break during the entire exhibition. About 1,000,000 passengers were carried, and the launches averaged something more than 8,000 miles each, at an average cost per mile for running expenses of 5½ cents. The total average cost per day for each launch was \$1.48½.

The launches were provided and operated by the Electric Launch and Navigation Company of New York. Each boat was 85 feet 10 inches over all, 31 feet 6 inches on the water line, 6 feet 2½ inches beam, and 27 inches draught. The storage batteries used were of the Consolidated Electric Storage Company's type, with 66 cells for each boat. These cells were stowed under the seats, quite out of sight, and were charged at night, so that the whole fleet was ready for duty early in the morning. None of the steersmen had ever handled electric launches before, though they were all experienced watermen. The current is controlled by a small lever switch beside the steering wheel, adjusted for four rates of speed forward and two backward. The nominal speed is 6 to 7 miles an hour, but they have a reserve speed of 8 to 10 miles. On Chicago day the boats averaged 40 to 50 miles each, without exhausting their supply of electricity. Upon the whole, the supposed doubtful experiment resulted most favorably, and is rich with promise for the future of the storage battery.

Whaleback Steamers.—Seagoing craft approximately cylindrical in shape, and intended

was intended to shorten the transatlantic passage. She was a total failure. In 1878 a craft somewhat similar in design was built to bring the great Egyptian obelisk known as Cleopatra's Needle from Alexandria to London. It had no motive power of its own, making the trip in tow of a steamer. It was abandoned during a gale in the Bay of Biscay, but remained afloat nevertheless, and was eventually picked up by a passing steamer and towed into port. It was a comparatively small craft, but its seaworthiness was unquestionable. It remained for Alexander McDougall, a shipmaster of the Great Lakes, to reduce the principle to practice. In 1888 he designed and built the first whaleback barge, of 437 tons registry and 1,400 tons capacity. She was an object of ridicule to all lake navigators, but her cost was only \$45,000, and within two years she had netted her owners nearly twice that amount. That settled the question of whalebacks. Sailormen still call them "pigs," but the epithet is no longer applied in derision. The American Steel Barge Company have turned out an enormous fleet of these eminently useful craft, large self-propelling steamers, as well as vessels for towage only. A "whaleback" crossed the Atlantic in 1890, and provoked much curious and largely adverse criticism among British naval architects. The influence of the type is visible, however, in the "Turret Cargo Steamer" (Doxford's patent), which may or may not turn out to be an improvement. The success of whalebacks as carriers at once suggested their adaptability for passenger traffic, but the inventor's designs in this direction were not realized until the Columbian Exhibition afforded the desired opportunity. The "Christopher Columbus" was finished and on duty throughout the

A WHALEBACK STEAMER.

to live with the waves sweeping over them from stem to stern, are no new invention. Such a one was built for Mr. Winans, of Baltimore, about 1860. She was cigar-shaped in model, and

season, carrying many thousand passengers between the city and the fair; her full capacity was 5,000. In all essentials she is a "whaleback," 302 feet long, with 7 elliptical turrets rising from

her deck. These contain all the deck machinery, windlasses, winches, etc., and some of them inclose the stairways leading up to the passenger quarters above, or down to the less exposed between-deck salons below. That the whaleback principle, modified by experience, is destined to play a prominent part in the seagoing traffic of the future is confidently predicted by those who have the most familiar knowledge of its capacities.

The Naval Ram.—The destruction of a ship when economically effected is as legitimate a feat of engineering as her construction. Nearly all modern war vessels are designed upon occasion to serve as rams. Their tremendous efficiency in this respect was demonstrated by the sinking of the British battleship "Victoria" by her sister ship the "Camperdown" while manœuvring in the Mediterranean, June 23, 1893. The efficiency of the blow was in this instance largely diminished by the fact that at the moment of collision both vessels were doing their utmost to avert the disaster that followed. In an actual encounter between two hostile ships

one at least would usually be struck while seeking to avoid the full force of impact. It is believed that the United States armored cruiser "San Francisco" is the first war ship that has ventured to use her ram under favorable conditions. The "San Francisco" is a protected cruiser 310 feet long, of 4,000 tons displacement, and 10,000 horse power. Under command of Admiral Benham she was cruising for dangerous derelicts off the Carolina coast, and in October found a lumber-laden schooner, water-logged and dismasted. She was a stanch new craft, and after vainly attempting first to tow her into port and secondly to blow her to pieces, the admiral decided to ram her. A private letter from an officer, published in "Harper's Weekly" of Nov. 25, thus describes the result:

"The first time we went at her slowly, and did not do much harm. Then the captain backed off to a good distance, sounded the siren to close all water-tight doors, and went at her full speed. I do not think you ever saw such a manifestation of power and force as I had the good fortune to see from a favorable position forward. The ship weighs 4,000 tons, as much as 64,000 men, and we went at that wreck at the speed of a charge of cavalry. We cut it right in two. One part went one way and one the other, and the lumber floated out and covered acres of the sea; and yet the parts of the wreck floated defiantly, so I had to go out again and blow up the two parts."

So far as is of record this exploit is unique.

The risk of seriously damaging his own ship was no doubt duly considered by the commanding officer of the "San Francisco," and since she not only accomplished her purpose but came out of the encounter uninjured, he escaped censure from the department. It should be noted in this connection that in a ramming encounter it is expected that the attacking vessel will suffer some injury. The "Camperdown," for instance, had to undergo extensive repairs after sinking the "Victoria."

A simple device for coaling vessels at sea is shown in the illustration.

COALING AT SEA.

Naval Architecture.—The arctic polar expedition under Dr. Fridtjof Nansen, the Norwegian explorer, brought about the construction of the first vessel especially designed for work of this character. The vessels heretofore used in such expeditions were adaptations. The "Fram" ("Advance") is built to order. From keel to truck she is planned for battling with the ice, and enabling her crew of 12 men to survive the several winters that they expect to pass in the arctic ice cap, drifting, as they hope, across or near the North Pole itself. The "Fram" is capable of steaming about 7 knots an hour, expending 3½ tons of coal a day. Her total coal capacity is 350 tons, with which she can steam continuously about two hundred days at 4 to 5 knots an hour. While this represents her nominal minimum of steam efficiency, her possible radius is largely increased by the adaptation of her furnaces for petroleum, blubber, or wood. Her immense strength of frame will enable her, it is hoped, to resist crushing pressure to the point of lifting rather than collapsing under all save the most adverse conditions. Heavy ice-sheathing protects her to a considerable height above the load-water line. Electric lights are provided throughout, with a reserve supply of ordinary lamps in case of accident. The dynamo, however, can be worked either by steam, wind, or hand power, so that electricity will probably be the main reliance. It is intended, indeed, when other resources fail, to require all hands to take turns at working a deck winch for exercise. The

THE FERRIS WHEEL.

"Fram" was loaded to excess when she sailed from Christiania, every available foot of space being necessarily packed with the stores required for her long absence from any possible base of supplies. Seven large boats are carried, including a naphtha launch, and there is an abundant supply of sledges and "Ski," or Norwegian snowshoes, such as proved so highly efficient in the Peary expedition.

The Ferris Wheel.—Paris, in 1889, saw the loftiest structure ever reared by mortal hands—the Eiffel tower—which still remains a monument of lightness and strength (see "Annual Cyclopædia" for 1888). Chicago, in turn, might have built a still loftier tower, but she wisely decided in favor of originality, and the largest piece of mechanism in existence was the result. The general plan of the wheel is evident from the illustration. Its diameter was 250 feet; circumference, 825 feet; width, 30 feet. The axle was of steel, 32 inches in diameter and 45 feet long. Its ends rested upon two skeleton iron towers of pyramidal design, properly supported upon concrete foundations. The two wheels that in combination formed the great revolving structure depended for strength upon the familiar bicycle-wheel principle, iron rods $2\frac{1}{2}$ inches in diameter being substituted for wires. But this spoke-rod system reached only to an inner crown, or tire, 40 feet within the extreme periphery. The outermost tire consisted of a curved hollow iron beam $25\frac{1}{2} \times 19$ inches. The outer and inner tires were held together by truss-work, and the 2 twin wheels were united by similar connections. Each wheel had a huge iron hub to which the adjustable spoke rods were made fast. The carriages, 36 in number, with a seating capacity for 40 passengers each, were hung at regular intervals to the outer tire. The total weight of the wheel with its full complement of passengers was 1,200 tons; and the fact that it did the work expected of it without a hint of failure certifies to the accuracy with which all the structural calculations must have been made. The driving power was applied through sprocket wheels and driving chains to cogs on the outer tires, and a system of clutch brakes kept the whole machine under perfect control. To George W. G. Ferris,

of Pittsburg, Pa., is due the credit of the design. Mr. L. V. Rice superintended the construction. It is understood that the wheel is destined to find a permanent home in New York.

Tide Indicator.—In July there was erected on the Government wharf at Fort Hamilton, New York harbor, a tide indicator of novel construction, as shown in the engraving. The disk is 20 feet in diameter, and the index numerals are large enough to be read with the naked eye at a distance of a mile or two. The indicator is in 3 sections: 1. The scale, 0 indicating mean low water, and the other numerals marking feet. 2. The pointer, which sweeps back and forth in the semicircular space immediately below the scale. 3. The arrowhead, which, by pointing up or

TIDE INDICATOR.

down, tells whether the tide is rising or falling. There are many tide indicators in use, but they are mainly for scientific observers. This is for mariners, showing at a glance from a distance just what every skipper wants to know. The mechanism is simple, an adaptation of float and counterpoise attached to a wheel that operates the pointer. The device deserving especial mention is the arrowhead, which is reversed by the tilting of its barbs, pivoted at their inner angles.

The action of the float and counterpoise are evident from the drawing. The arrow is reversed by the action of the lever A, which bears up or down according to the pull of the line attached to the float, which renders through a group of 3 friction pulleys marked B. A simple system

TIDE INDICATOR—MECHANISM.

of levers at C actuates the pivoted wings so that the arrow assumes the different aspects shown in 1, 2, and 3, which respectively indicate rising, falling, and slack water. This device is the invention of E. G. Fischer, of the United States Coast Survey. The indicator was set up in July, 1893, and survived the two hurricanes that shortly followed. It is now regarded as having passed the experimental stage. Such indicators, set at suitable points along the coast, would prove of great advantage to navigators, giving them information that they can usually obtain only by communicating with the shore.

Railway Speed.—It has fallen to the lot of engine "No. 999" of the New York Central Railroad to outstrip all rivals in the matter of speed. On May 9, 1893, this engine ran 1 mile in thirty-five seconds. On the next day, May 10, a more extended speed test was made over a straight reach of track. After passing Batavia, at 60 miles an hour, the speed was increased until the record of the preceding day was beaten, and a mile was accomplished in thirty-two seconds. In actual service, drawing a train, she has run 112½ miles in an hour, and the railroad officials hope that she will accomplish her mile in thirty seconds when she is fairly in running order. This triumph of American mechanical skill was exhibited at Chicago, and experts were much interested in comparing her with an Eng-

lish passenger locomotive of the best and newest design. While steam is thus approximating its limit, electricians are planning trains capable of running 120 miles an hour.

EVENTS OF 1893. The year was not conspicuous for great events of a sensational order. The Columbian Exhibition at Chicago was perhaps the most sensational, and certainly attracted world-wide attention. Probably the financial crisis in Australia, India, Italy, and America may have a far-reaching influence in the adjustment of international relations. The Hawaiian incident, begun in 1893 and extending over into 1894, may prove of consequence before it is finally settled. There have been no great wars, although the insurrectionary movement in Brazil has at times seemed threatening. There has been more or less fighting between native tribes and the European occupants of Africa, north and south, between the French and natives in Siam, and between the English and the hill tribes in India. The year opened in the United States with promise of great commercial prosperity, and closed with the country in a state of financial distress almost unprecedented.

January 1. Mexico: Battle between Government troops and revolutionists.

2. Netherlands: Troops called out to suppress riots among unemployed workmen, 3 killed, many wounded.

3. Legislatures convene in many States. (See State articles.) Spain: A large aérolite falls in the province of Valladolid. The Duke of Almodovar del Valley appointed minister to Washington.

4. North Carolina: Attempted lynching at Bakersville; a desperate fight follows, 11 men of the sheriff's posse killed, as many more of the lynchers. The President issues a proclamation of amnesty to Mormons liable to prosecution for polygamy. Germany: A riot among miners in the Saar district.

5. Pennsylvania: Thirteen members of the Amalgamated Association placed on trial for acts during the strike at the Carnegie Steel Works. Egypt: Fighting with the dervishes; the Government troops repulsed with heavy loss.

6. Completion of the extension of the Great Northern Railroad to the Pacific coast, the fifth transcontinental line. Paris: Large anti-Hebrew meeting; riot occurs in consequence of a speech by the Marquis de Mores; danger of further riots because of the Panama scandal.

9. German miners' strike, anarchist bomb explodes.

10. Indiana: A local feud known as the Lawson-Swinford vendetta culminates in a fight; several killed and wounded on each side. Pennsylvania: Twelve of the 13 Pittsburg strikers found guilty of riot. Roumania: Marriage of the Princess Marie of Edinburgh and Prince Ferdinand, Crown Prince of Roumania, at Sigmaringen. India: An English officer and 5 Sepoys killed by a hostile tribe at Sima. Belgium: Catholic clubhouse at Searing blown up with dynamite. France: The Rebot ministry takes office.

11. Kansas: Republican and Populist factions claim control of the Legislature, but agree to a truce pending settlement of the differences in court.

12. Kansas: Governor Llewellyn recognizes the Populist House. Philadelphia: The American Academy of Political and Social Science; annual meeting.

13. Four Russian nihilists expelled from France.

14. Appointment by the Pope of Monsignor Satolli as permanent apostolic legate to the United States. Paris: Full confessions made by many persons prominently connected with the Panama scandal.

16. Washington: Twenty-fifth convention of the National Women's Suffrage Association. Rome: Fourteen new cardinals created by the Pope. Hawaii: The reigning queen dethroned by revolutionists; a

provisional government established; all foreign powers, save England, recognize the new Government.

17. Pennsylvania: United States Senator Quay re-elected by the Legislature. Egypt: The Khedive appoints a new ministry.

18. New York: Edward Murphy, Jr., elected to the United States Senate. Egypt: The Khedive yields to the demands of the English and dismisses his new ministry. Germany: Socialists hold disorderly meetings in Berlin.

19. Judge R. R. Nelson declares that the Chinese exclusion act is unconstitutional. England: The French ambassador protests against British interference in Egypt. Belgium: A large body of riotous workmen dispersed by troops.

20. Pennsylvania: Hugh F. Dempsey, master workman of the Knights of Labor, found guilty in the Homestead poisoning case. Washington: Annual session of the National Board of Trade. Holland: Riotous proceedings in Amsterdam.

22. Rome: Attempts made by supposed anarchists to blow up a hotel. Several large banking houses seriously embarrassed.

24. Re-enforcements of British troops sent to Egypt.

25. Kansas: Populists and Democrats combine to elect John Martin United States Senator. Lord Dufferin reassures the French Government in regard to British occupation of Egypt. Germany: Marriage at Berlin of Princess Margaret, sister of the Emperor, and Prince Frederick Charles of Hesse.

26. Boston: The National Divorce Reform League in session. Italy: The bank scandals involve many prominent names.

27. Wisconsin: Congressman Mitchell elected United States Senator. Paris: Bills of accusation in the Panama matter returned against 14 prominent men.

30. Washington: The British minister protests against the action of the United States in Hawaii.

31. Meeting of the British Parliament; Mr. Gladstone takes the oath as Prime Minister.

February 1. Hawaii: Mr. Stevens, the American minister, assumes a temporary protectorate on the part of the United States pending the result of negotiations at Washington.

2. Michigan: Both branches of the Legislature pass an act repealing the Miner election law. Illinois: An act passed repealing the compulsory school law.

3. Arrival of the Hawaiian commissioners in Washington. Dartmouth College: Rev. Dr. W. J. Tucker elected president.

4. Pine Ridge Agency: Encounter between Indians and cowboys, 4 cowboys killed. United States of Colombia: Riots at Bogota result in the death of something like 100 persons, 500 wounded.

8. Washington: The electoral vote counted in the House of Representatives; Grover Cleveland declared President. Texas: An alleged murderer lynched near Hickory creek.

9. Paris: Ferdinand and Charles de Lesseps and others, including Eiffel, sentenced to imprisonment and fine for their connection with the Panama scandal.

10. Mississippi: Two negro boys hanged by a mob in Amite County.

12. Washington: The Hawaiian commissioners call officially upon the President. England: The Queen's speech read officially in the House of Commons.

17. Kansas: The rival Houses of the Legislature reach a peaceful settlement, leaving the Republicans in possession.

18. Alabama: Both branches of the Legislature adopt an Australian ballot system. Wyoming: Adjournment of the State Legislature. Homestead, Pa.: The jury in the case of Hugh O'Donnell, a strike leader charged with murder, find him Not guilty.

19. Rome: Sixty thousand people gather in St. Peter's to attend the Pope's jubilee mass.

20. North Dakota: W. N. Roach chosen United States Senator.

21. Rome: A director in the National Bank makes a statement implicating many prominent statesmen in the existing scandals.

22. New York: The President and other Government officials take part in the ceremony of hoisting the American flag on the steamer City of New York.

23. Washington: Meeting of the American Bimetallic League. Paris: First meeting of the Bering Sea Commission, adjourned to March 23.

25. The President issues a call for an extra session of the Senate on March 4. Kansas: The State Supreme Court decides that the Republican House is the legally constituted body.

27. Rome: Twenty-six anarchists arrested while at work in a bomb factory.

28. Philadelphia: Launch of the United States battle ship Indiana.

March 1. Arrival in New York of the Princess Kaiulani, of Hawaii, to present her claims before the President. The President receives Gen. Canevaro, the new Peruvian minister; also Mr. Haenpjen, the new minister from Hayti.

2. Washington: Arrival of President-elect Cleveland and his party. Ireland: A large Orange or anti-Nationalist meeting held in Belfast. Rome: Celebration of the Pope's eighty-third birthday.

3. Washington: President-elect Cleveland and Mrs. Cleveland dine at the White House, according to custom. Homestead, Pa.: The two men charged with conspiracy to poison nonunion workmen plead guilty to the indictment.

4. Grover Cleveland inaugurated President of the United States. Homestead, Pa.: The indicted poisoners sentenced to seven years in the Penitentiary. England: Celebration of the arrival of the American line steamer New York at Southampton.

6. Zanzibar: An attempted seizure of the throne defeated by the British.

7. Washington: Most of the members of the new Cabinet take the oath of office.

9. The President recalls the Hawaiian annexation treaty submitted by his official predecessor.

11. New Jersey: The State Legislature adjourns *sine die* after passing a bill prohibiting horse racing in the winter months. Washington (State): The Governor appoints Mr. Allen United States Senator.

13. Washington: The Hawaiian princess received unofficially at the White House by the President and Mrs. Cleveland.

14. East Africa: Fighting between the German and native tribes. India: British troops along the northern frontier have subjugated a number of the most warlike hill tribes and strengthened their approaches against Russian encroachments; the British lost 23 killed and 20 wounded.

16. London: The Russo-Jewish committee has sent an appeal throughout Europe to Hebrew financiers to refuse all Russian loans.

17. A dynamite bomb explodes in the official residence of the United States minister at Rome.

18. Rome: A lighted dynamite bomb found on the steps of the Palazzo Alfieri. It is extinguished before explosion. Tennessee: A desperado and murderer taken from the jail in Jacksborough and hanged by a mob.

20. Special Representative Blount sails from San Francisco for Honolulu. United States Minister Bayard appointed ambassador to the Court of St. James.

21. Rhode Island: The Republicans nominate D. Russell Brown for Governor; the Democrats nominate David S. Baker. Paris: The Panama trials end with the conviction of Charles de Lesseps, M. Bahaut, and M. Blondin; the other defendants are acquitted. Dynamite outrages continue in Rome. Havana: The two Columbus caravels arrive from Spain. Russia: Assassination of the Mayor of Moscow.

22. England: University boat race; Oxford wins.

23. Paris: M. Schallemel-Lacour elected to the French Academy in place of Ernest Renan.

24. It is officially announced that the British representative in the United States is to be raised to the rank of ambassador (this announcement was followed within a few days by similar action on the part of

most of the European powers). A resolution passed in the British Parliament providing for the payment of members.

25. New Orleans, La. : Judge Billings decides that the ordering of a great strike in that city was unlawful. New York : A general strike begun among the clothing cutters. Hayti : A decisive battle reported between the Government and the insurgents, the latter being victorious. Rome : King Humbert narrowly escapes injury by a religious fanatic.

26. Oregon : 67 Chinese illegally landed at Portland.

28. New York : Dr. Joseph A. Senner appointed Commissioner of Immigration. Indian Territory : Fighting between the hostile factions of the Choctaw nation, 20 men reported killed. France : A German correspondent who has been expelled by order of the Government is mobbed on his way to the station.

29. Nebraska : Impeachment proceedings begun against 3 State officials for irregularities connected with the Board of Public Lands and Buildings.

April 8. Washington : The Hon. Thomas S. Bayard, first ambassador of the United States to Great Britain, takes the oath of office.

4. Chicago : Carter Harrison elected mayor by a majority of 18,000. Paris : Case opens before the Bering Sea Court of Arbitration. Ireland : A great anti-home-rule demonstration held at Belfast.

5. The Colombian Government grants an extension of twenty months to the Panama Canal Company.

6. Utah : Dedication of the great Mormon temple at Salt Lake City. Rhode Island : State election, both Democratic congressmen chosen.

7. England : Riotous proceedings in Hull by striking dock laborers.

8. The President issues a proclamation prohibiting the taking of seals in Alaska or the Bering Sea during the present season. England : Troops called out to restrain the dock laborers. Spain : A band of anarchists captured at Xeres. Riotous proceedings in Trafalgar Square, London.

9. England : The Hull strikers attack the military escort of crews on their way to the wharves. Norway : The viking ship sails from Christiania, bound for Chicago and the World's Fair. Cuba : The third of the Columbus caravels reaches Havana.

10. Chicago : Four thousand workers on the Fair buildings go on strike, but a settlement is effected. Hungary : An attempt made to assassinate the Cardinal Primate of Hungary. Egypt : A raid led by Osman Digna, the dervish, repulsed by the Egyptians. Peru : The Government has taken steps to comply with the demands of the United States for reparation for the outrage committed on the consular agency at Molendo.

11. Sir Julian Pauncefote becomes dean of the diplomatic corps in Washington, since he is senior among the ambassadors. Belgium : Workmen go on strike at Brussels because the Chamber of Deputies votes against universal suffrage. Japan seizes the Pellow Islands.

12. New York city : The two hundredth anniversary of the introduction of printing celebrated by the allied trades. Chicago : The American Railway Union organizes, comprising all railway employees. Belgium : Rioting in consequence of the antisuffrage action of the Chamber of Deputies is spreading with dangerous rapidity. Australia : One of the great chartered banks fails, with liabilities estimated at \$30,000,000. Arabia : A complete Syrian text of the four gospels, discovered by Mrs. Lewis at Mount Sinai.

13. Hawaii : The United States flag hauled down by order of United States Commissioner Blount. Rioting continues in Belgium with serious results.

14. Ohio : The city of Toledo begins a suit for damages against the Standard Oil Company on the ground of conspiracy. Georgia : A negro murderer lynched near Fort James. Serbia : Alexander, the young King, establishes his authority by a *coup d'état*.

15. Arrival in New York of the Duke of Veragua

and his party. Belgium : Encounters between the strikers and the military.

16. Belgium : The Mayor of Brussels attacked and beaten by strikers.

17. Celebration of Emancipation Day by a parade of the colored inhabitants of the District of Columbia. The United States cruiser Detroit makes a record of more than 18 knots an hour, showing herself the speediest vessel of her class. England : A bill providing for the arbitration of labor disputes passes a first reading in the House of Commons.

18. Washington : Annual meeting of the National Academy of Sciences. Belgium : The Chamber of Deputies passes a vote adopting universal suffrage, and the leaders of the revolutionary movement immediately advise the abandonment of the general strike; rioting, however, still continues in the principal cities. England : The Dowager Duchess of Sutherland sentenced to 6 weeks' imprisonment for contempt of court.

19. Arkansas : Twenty-five masked men break into the jail at Morrilton and hang a negro murderer.

20. Australia : Failure of Joint-Stock Bank; liabilities are \$65,000,000. Bulgaria : Marriage of the Princess Maria Louise and Prince Ferdinand. Mexico : A band of rebels captures three towns, and routs a body of Government troops with considerable loss in killed and wounded.

21. Ratification of extradition treaty between the United States and Russia. Belgium : Action of the Chamber of Deputies in regard to the suffrage confirmed by the Senate.

22. Naval representatives of all powers gather at Hampton Roads preparatory to the review in New York harbor.

24. The naval squadrons sail from Hampton Roads for New York. Washington : The Duke of Veragua and his party received by the President and entertained at a ball. The Trans-Mississippi Congress meets at Ogden. Chicago : Strike among the Columbian guards at the World's Fair; subsequently adjusted. Norway : The Congress has suspended its sittings in defiance of the King. Ireland : Riots between Orangemen and Catholics in the ship-yards of Belfast.

25. American and foreign naval vessels arrive in the lower bay of New York.

26. The naval squadrons steam to their anchorage in the Hudson river. The Ericsson statue unveiled in Battery Park.

27. The President reviews the naval squadrons in the Hudson river.

28. Four thousand marines and sailors land from the naval squadron and march down Fifth Avenue and Broadway in New York, where they are reviewed by the Governor and the Mayor.

29. The Liberty Bell is received at Chicago with suitable honors. Dedication of the Woman's Building at the Chicago Fair grounds. A hostile outbreak takes place among the Navahoe Indians, but it is believed to have been effectually checked.

30. Failure of the National Bank of Australasia, with liabilities of \$37,500,000.

May 1. Chicago : Formal opening of the World's Fair. Ohio : Twenty thousand coal miners go on strike. France : Disorderly proceedings on the part of socialists; a number of arrests made. Scotland : Ten thousand mill hands go on strike at Dundee.

2. Nineteen thousand jute workers join the strike at Dundee.

3. Paris : Mr. Coudert presents the American case before the Bering Sea Tribunal of Arbitration.

4. Massachusetts : Dean William Lawrence chosen bishop to succeed the late Phillips Brooks. A deputation of foreign naval officers leaves New York on a special train to visit the World's Fair. Kentucky : A horse thief hanged by a mob at Sherman.

6. Minnesota : A suspected criminal captured and hanged by a mob at Duluth. South Carolina : A negro, an escaped convict, lynched near Columbia. Germany : The Army bill rejected by a vote of 210

to 162; the Emperor immediately dissolves the Reichstag. Paris: United States Ambassador Eustis presents his credentials to President Carnot.

7. The President announces that hereafter the White House will be closed to office seekers. England: Great demonstration in favor of the eight-hour working day held in Hyde Park; similar meetings in other large cities of Great Britain. Bomb explosion in Four Courts, Dublin. Detroit: Eighth annual convention of the National League of Musicians. Massachusetts: Opening of the Borden trial.

9. The President appoints James H. Blount, of Georgia, to succeed John L. Stevens as the representative of the United States at Hawaii. Medical Inspector J. R. Tryon appointed surgeon general of the United States navy. Three colored men lynched in Arkansas. Australia: The Bank of Victoria, at Melbourne, suspends, with liabilities of \$11,000,000.

10. Louisville, Ky.: Meeting of the National League of Republican Clubs. Paris: Sir Charles Russell begins the presentation of the British case before the Bering Sea Tribunal. London: Queen Victoria opens the British Imperial Institute; it is announced as her last public appearance.

11. Nicaragua: A revolution is said to have been practically successful. Canada: The Earl of Aberdeen becomes Governor-General. New York: Engine No. 999 runs at the rate of 112½ miles an hour on the Central Railroad.

12. A large number of Western banks suspend, following the failure of the Columbia National Bank at Chicago. Controversy begins regarding Sunday opening of the Fair grounds. The new steamship *Campagna* reaches Queenstown in 5 days, 17 hours, and 27 minutes from New York, breaking the record for the eastward passage.

15. The Supreme Court of the United States affirms the constitutionality of the Chinese exclusion act. Chicago: Opening of the Women's Congress.

16. Another lynching near North Indianapolis. Failure of the City of Melbourne Bank, Australia.

17. Australia: The Royal Bank, Queensland, fails.

18. Washington: The one hundred and third General Assembly of the Presbyterian Church. Georgia: Meeting of the Southern Presbyterian General Assembly at Macon. The General Government purchases the Cherokee strip lying between Kansas and Oklahoma for \$3,500,000. Germany: The Emperor William unveils a monument to his grandfather. A treaty of commerce concluded between Spain and Germany.

19. Washington: The President and Mrs. Cleveland give a reception to Presbyterian delegates. New York: The Spanish Infanta Eulalie received in New York. England: The dock laborers' strike has been settled. Italy: Resignation of the Cabinet. Russia: A new order issued expelling Hebrews from the Asiatic provinces.

20. Washington: The Infanta Eulalie received by the President and Mrs. Cleveland.

22. Trial trip of the United States cruiser *New York*. A speed of 21.09 knots developed, winning for her builders a large premium. Italy: The Cabinet reconstructed, with Signor Gioiotti as President of the Council. England: Enormous demonstration in favor of the Irish Nationalists in Hyde Park.

23. Washington: The Spanish Infanta entertained at the White House at a state dinner. Michigan: A supposed murderer taken from jail at Corunna and lynched. Paris: Acrimonious discussions between the English and American representatives before the Bering Sea Tribunal.

24. Georgia: A monument to the memory of Alexander H. Stephens unveiled at Liberty Hall.

25. The Spanish Infanta returns to New York. England: The Royal Thames Yacht Club Regatta won by Britannia. Poland: A great Nihilist plot discovered at Warsaw; more than 100 arrests made. Italy: Several anarchists arrested in Naples.

26. Texas: Masked robbers hold up a train at

Coleman and rob the express car. New York: A ball given in honor of the Spanish Infanta.

27. New Orleans: The body of Jefferson Davis disinterred preparatory to its transfer to Richmond.

28. Australia: The prime ministers of the different colonies recommend the adoption of uniform banking laws, in view of the recent financial disasters.

29. The trial of Prof. Briggs for heresy begins before the Presbyterian General Assembly. Graduation week at the United States Naval Academy.

30. Washington (State): Steamer Haitian Republic seized for smuggling opium at Seattle.

31. Prof. Briggs convicted of heresy by the Presbyterian General Assembly; vote, 383 to 116. Richmond, Va.: the remains of Jefferson Davis buried in Hollywood Cemetery. Nicaragua: A treaty of peace signed with the revolutionists, and a provisional government formed.

June 1. Washington: The Presbyterian General Assembly suspends Dr. Briggs from the ministry. New Castle, Pa.: Meeting of the sixty-fourth annual Synod of the Reformed Presbyterian Church of North America. Rhode Island: The Senate refuses to meet with the House of Representatives, and adjourns till January. Hawaii: L. A. Thurston appointed minister to the United States by the Provisional Government.

2. Rhode Island: The Governor prorogues the session of the Legislature in consequence of the action of the Senate. Annapolis, Md.: The graduating cadets of the Naval Academy receive their diplomas.

3. Illinois: A negro taken from the jail at Decatur and lynched. Tennessee: The impeachment trial of Judge Dubose, of Memphis, results in his conviction.

4. The Duke of Edinburgh has been made admiral of the British fleet.

5. New York city: Charles W. Drayton appointed postmaster. Kentucky: The office of a local-option temperance paper in Catlettsburg blown up with dynamite. Chicago: Opening of the Temperance Congress; Convention of the Anti-Trust Society, representing 24 States.

6. Chicago: Runs on several of the city savings banks. Many failures of banks reported from various parts of the country. The Spanish Infanta reached Chicago and was suitably received. Washington: Official promulgation of the Russian extradition treaty. Arkansas: A band of 6 men, heavily armed, rob the People's Bank at Little Rock; six men wounded in the fight that follows.

7. Ohio: Opening of the Republican State Convention at Columbus. Minnesota: Convention of the International Reciprocity League at St. Paul.

8. Chicago: The Princess Eulalie visits the World's Fair. Annual meeting of the National Printing Association. Ohio: Gov. McKinley and the present State officers unanimously renominated.

9. Washington, D. C.: The new Hawaiian minister, Mr. Thurston, is presented to the President. Chicago: Strike and riot on the works of the drainage canal; several men killed and many hurt.

10. Chief Justice Fuller issues a stay of proceedings in the World's Fair Sunday-closing case.

11. Indiana: A desperado named Hawkins, with 30 followers, attacks Shelbyville, and a bloody fight ensues.

12. Chicago: Forty-first Annual Convention of the International Typographical Union; Meeting of the International Union of Charities, Correction, and Philanthropy. Antwerp: The residence of the public prosecutor damaged by a dynamite explosion of supposed anarchist origin.

13. Kernstown, Va.: A negro man lynched.

14. Washington: Baron Fava, minister from Italy, presented to the President in his new rank of ambassador.

15. Chicago: German day at the Fair; dedication of the national building. Germany: Election for the Reichstag (see article on GERMANY).

16. Chicago: Congress of the American Sons of the

Revolution. England: The House of Commons passes a resolution favoring arbitration for the settlement of international controversies.

17. In the Federal Court of Appeals, Justice Fuller delivers the opinion that the World's Fair corporation may lawfully keep the gates open on Sunday. Massachusetts Day and the anniversary of Bunker Hill commemorated at the World's Fair. New York: arrival of the Norwegian viking ship.

20. New Bedford, Mass.: The Borden trial ends with a verdict of Not guilty. Newport: Arrival of the Spanish Infanta. Prussia: Riotous demonstrations in Breslau suppressed by the military, many rioters wounded. Spain: A large dynamite bomb exploded, probably by anarchists, near the house of a prominent official.

21. Chicago: The Ferris wheel set in motion.

22. California: A financial crisis in San Francisco. England: Mr. Bayard presents his credentials to the Queen as ambassador from the United States. Austria: A socialist mob loots the town of Andrichow; several people killed by the police.

23. Philadelphia: The Duke and Duchess of Veragua entertained at a reception by Mr. and Mrs. George W. Childs. Several bank suspensions.

24. Mississippi: An assassination by White Caps in Marion County in revenge for testimony as a witness.

25. Chicago: Statue of Gladstone unveiled, and religious services held on the Exposition grounds. A granite monument unveiled to the memory of the anarchists executed 1888.

26. Illinois: Gov. Altgeld pardons the anarchists who were imprisoned for the Haymarket riot. Germany: Second ballots for the Reichstag have caused riots. England: A court-martial has been ordered to try Rear-Admiral Marquand, who commanded the Camperdown when she sank the Victoria. India: The Council passes an act closing the mints of the country to the free coinage of silver.

27. Boston: Annual meeting of the Association of the Army of the Potomac. Gen. Nelson H. Miles chosen president.

28. The Western railroads agree to a one-fare-one-trip rate to Chicago. Boston: The Farragut statue unveiled. California: A number of convicts try to break jail at Folsom, 3 are killed and 2 hurt. The attempt defeated.

29. Cleveland, Ohio: First international conference of the Epworth League. Portland, Ore.: Seizure of the steamer Haitian Republic with 500 contraband Chinese. New York: The Clearing House banks prevent a money panic by advancing a loan of \$6,000,000.

30. The President issues a call for an extra session of Congress on Aug. 7. New London, Conn.: Annual boat race between Yale and Harvard; Yale wins.

July 1. Chicago: Dominion day at the World's Fair. Mayor Harrison is hissed for speaking in favor of annexation. Harvard wins the decisive game from Yale in the contest for the intercollegiate baseball championship. New York: The Duke of Veragua and party sail for home. South Carolina: The Evans liquor law goes into effect.

2. Gettysburg, Pa.: Nearly 7,000 New York veterans assemble for the dedication of the State monument. Lieut. Peary's expedition sails for the arctic regions. Chicago: Eighth annual convention of the Socialist Labor party.

3. Chicago: The World's Congress of Musicians opens in the Art Palace. Paris: Students' riot in consequence of recent action of the Chamber of Deputies. Malta: A court-martial ordered to inquire into the loss of the Victoria.

4. Chicago: Large attendance at the Fourth of July exercises at the Fair grounds; dedication of the new Liberty Bell. Newburyport, Mass.: A bronze statue unveiled in memory of William Lloyd Garrison.

5. Germany: Opening of the new Reichstag by the Emperor. New Mexico: Convention held at Silver City to advocate the repeal of the Sherman act and

in favor of free coinage of silver. Paris: Almost the whole city under guard, in consequence of the riots by students and their sympathizers.

6. It is announced that more than 300 silver mines in the United States have shut down since the action of the Government of India. London: Marriage of the Duke of York and the Princess May of Teck. Montreal: Christian Endeavor Congress opens.

7. Chicago: Arrival of the Spanish caravela. Paris: Renewed rioting and threats of general strike. Germany: Introduction of the amended Army bill in the Reichstag.

8. Italy: Great excitement in the Chamber of Deputies over alleged implications of members in the bank scandals. England: Bimetallists in Parliament protest against the closing of the Indian mints. Montreal: A mob of Catholics attacks the tent where the Christian Endeavor meeting is held, and are dispersed by the police.

9. Kentucky: A riot at Woodbine, 4 killed, including the city marshal, and 4 wounded. Montreal: More than 50 arrests for the attack upon the Christian Endeavor Society.

10. Michigan: A desperate attempt to break jail at Ionia, several convicts killed, and others hurt.

11. England: An exciting scene in the House of Commons during the debate on the Home-Rule bill; the amendment rejected by a vote of 251 to 219.

12. Colorado: The State Silver Convention issues an appeal in favor of bimetalism. Chicago: Arrival of the viking ship, which is received with much pomp and ceremony. Italy: Over 200 Senators and Deputies charged with complicity in the bank scandals.

13. Utah: Great mass meeting in the silver interest held at Salt Lake. Chicago: Sessions of the Society of Librarians and Congress of Authors; meeting of the American Philological Association, the Folklore Congress, and the Historical Congress. Indianapolis: International Convention of the Baptist Young People's Union, several thousand delegates. Samoa: Hostilities have broken out between the rival claimants of the throne. Siam: Hostilities between the French and natives.

14. Suspension of about 2,500 pensions under Secretary Smith's order. New York: The French societies celebrate the one hundred and fourth anniversary of the fall of the Bastille. Seizure of the steamship Red Sea, with 794 immigrants, by the immigration authorities.

15. Germany: The Army bill passes the Reichstag by a vote of 201 to 185. Nicaragua: Another revolution breaks out.

17. Chicago: Opening of the Educational Congress; numerous failures announced. California: Discovery of a comet by the Lick Observatory. Siam: The French capture a number of native ports.

18. Denver, Col.: Four banks close their doors, and there are runs on other financial institutions. Lynchings reported in Georgia and Arkansas.

19. More banks close their doors. Chicago: Dedication of the Brazilian building at the Fair.

20. Kansas: Fight between strikers and nonunion miners at Weir City; a number hurt on both sides.

21. New York: Arrival of an East Indian prince, with a large retinue of servants, to visit Chicago. Siam: The French forces have been victorious, and have offered terms of submission to the Siamese.

22. Two bank failures in Milwaukee, and runs on banks in many other places. Massachusetts: Annual cruise of the State Naval Brigade.

23. Scranton, Pa.: Race war between Hungarians and Poles. A negro lynched at Memphis, Tenn.

24. More bank failures in the West.

26. New York: Two Stock Exchange firms fail.

27. Ten banks suspend, most of them Northwestern. Other business failures reported. England: Exciting scene in the House of Commons over the enforcement of closure in the Home-Rule bill; the trouble terminated in what was little better than a free fight.

28. New York: Appointment of James T. Kilbreth as collector of the port. More failures and suspen-

sions, including 9 banks in the West and 1 in Kentucky.

29. Siam accepts the terms of the French ultimatum.

August 1. Collapse of the Chicago provision deal; many failures of commission houses; great excitement in the Board of Trade. The Siamese Government gives the guarantees demanded by France.

6. Switzerland: Meeting of the International Socialist Congress at Zurich.

7. Washington: The Fifty-third Congress meets in extra session.

8. New York: The Chemical Bank, one of the strongest in the country, is unable to fill its weekly orders for currency in small denominations.

9. New York: Madison Square Bank suspends.

10. Ohio: Lawrence T. Neal nominated for Governor by the Democrats. Cuba: General E. Calleja appointed Governor-General.

12. Launch of the United States cruiser *Minneapolis* at Cramp's shipyard, Philadelphia. Rhode Island: The Supreme Court decides in favor of the Republicans in the legislative controversy.

13. Riots in Bombay, India; all available troops called out to suppress the disturbance.

14. Pittsburg, Pa.: Several large steel and iron mills resume work.

15. San Francisco: Arrival of United States Minister Blount on his return to Washington. Receivers appointed for the Northern Pacific Railroad. Paris: Announcement of the finding of the Bering Sea Tribunal (see *BERING SEA ARBITRATION*). Argentina, South America: Martial law proclaimed in consequence of revolution.

17. New York: Much excitement among Hebrew laborers on the east side of the city. Police reserves called out. France: Fatal encounter between French and Italian workmen in Aigues-Mortes.

18. Chicago: Celebration of Austria's day.

20. New Jersey: Interdenominational Bible Congress at Asbury Park.

22. New York: An encounter between anarchists and socialists averted by the police. Chicago: Convention of French Canadians.

23. New York: Meeting of anarchists broken up by the police. South Carolina: The first liquor dispensary opens at Charleston under the new law. England: Lord Dunraven's yacht *Valkyrie* sails for New York to compete for the America's cup.

24. New York: Mass meeting in favor of silver and against the repeal of the Sherman act.

25. Chicago: The colored people celebrate their special day at the Exposition. Italy: Fighting between strikers and troops in Naples.

28. Repeal of the purchasing clause of the Sherman law.

29. Spain: Fatal riots in San Sebastian. Denmark: The King receives a visit from the Russian Czar. Africa: A native fort captured by German troops with considerable sacrifice of life.

30. St. Louis: Seventh annual convention of the International Sunday-School Union. Nicaragua: A receiver appointed for the canal company. Wisconsin: Sixteenth annual meeting of the American Bar Association at Milwaukee. Kansas: Coal-miners' strike ends with nothing gained.

31. Chicago: After numerous contradictory findings and orders, it is decided that the Fair shall be open on Sunday. England: End of the great coal strike.

September 1. England: The Home-Rule bill passes the House of Commons, 301 to 267; read in the House of Lords. Prussia: Meeting of the Emperor of Germany and the Crown Prince of Italy at Coblenz. Indianapolis: Annual meeting of the Grand Army of the Republic; about 25,000 men present. Kansas: Express train robbed near Mound Valley.

3. Washington: The President asked to arbitrate between the Argentine Republic and Brazil.

4. General observation of Labor Day. Pittsburg, Pa.: General resumption of work by the Carnegie Steel Mills. Washington: Meeting of the Pan-

American Medical Congress. The German and Chinese ambassadors present their credentials. Ireland: Congress of trades unions in session at Belfast.

5. Indianapolis: Grand parade of veterans at the national encampment. Arrival announced of the Peary expedition in Greenland on Aug. 3. Russia: About 100 suspected Nihilists arrested in Moscow. Washington: The President opens the Pan-American Medical Congress.

7. Brazil: General revolt of the navy under the lead of Admiral Mello. Germany: The Emperor abolishes the exceptional laws heretofore enforced in Alsace-Lorraine. Spain: Dynamite bombs thrown by rioters in the streets of Villa Nueva. England: The House of Lords rejects the Home-Rule bill; vote, 419 to 41. The Campagna lowers the ocean record from Sandy Hook to Queenstown by nearly three hours. Brazil: Bombardment of Rio threatened by the navy.

8. England: The House of Lords rejects the Home-Rule bill.

9. Washington, D. C.: A daughter born to the President and Mrs. Cleveland in the White House.

11. Chicago: Opening of the Parliament of Religions.

12. Masked robbers hold up a train on the Lake Shore road in Indiana; the engineer shot and dynamite used to blow up the express car. New York: A convention called by the Board of Trade passes resolutions approving the President's message and urging the unconditional repeal of the Sherman law.

13. Indiana: Several arrests made in connection with the recent train robbery. Montreal: The Presbytery has found Prof. Campbell guilty of heresy.

14. Chicago: Celebration of Ohio day at the World's Fair. Washington: A convention of colored Baptists from all parts of the country. Detroit, Mich.: Annual convention of the St. Andrew's Brotherhood. Brazil: Bombardment of the forts at Rio by the Revolutionists.

15. Michigan: Train robbers hold up a train on the Mineral Range Railroad.

16. Opening of the Cherokee strip to settlers; about 100,000 persons compete for land claims; many are hurt, some killed. Chicago: Celebration of New Mexico and Texas day.

17. Louisiana: Four negroes lynched. Dubuque: Investiture of the Roman Catholic Archbishop Hennesey, Monsignor Satolli being present.

18. Brazil: Renewal of the bombardment of Rio. Washington: Anniversary of the foundation of the Capitol.

19. Chicago: Opening of the Congress of Evangelical Associations. Philadelphia: Arrest of Henry S. Cochran for robbing the United States mint. New Mexico: Meeting of the Southwest Silver Convention at Albuquerque. New York: Second annual conference of Christian Prohibitionists.

20. Virginia: A mob attacks the jail at Roanoke, and is repulsed, with a loss of 7 killed and several wounded.

21. Virginia: Second and successful attack upon the jail at Roanoke; the negro who caused the riot taken out and hanged. Illinois: A train held up by robbers on the Central road; 1 robber and 3 trainmen shot; no booty secured. Chicago: Organization of the Brotherhood of Christian Unity as a result of the Parliament of Religions. Cleveland, Ohio: Twenty-fourth annual reunion of the Army of the Cumberland.

22. England: Adjournment of Parliament.

23. Washington: The Attorney-General announces that the Treasury Department will pay expenses for deporting the Chinese.

24. Vienna: Arrest of 14 anarchists and discovery of many dynamite bombs. Spain: During a military review at Barcelona anarchists throw bombs at the commanding officers; 1 soldier killed and others wounded; the offenders arrested.

25. Missouri: A gang of robbers hold up a train near St. Joseph; 2 of them killed and 4 captured.

26. Hartford, Conn.: Thirtieth annual convention

of the order of Good Templars. Philadelphia: Eighteenth annual convention of the Knights of St. John of Malta. Chicago: Odd-Fellows' day at the Fair.

27. Pennsylvania: Meeting of the State League of Republican Clubs at Reading. Chicago: Indiana day at the World's Fair: ex-President Harrison delivers an address.

28. Chicago: Opening of a convention of Spiritualists. Congresses of several religious denominations.

29. Spain: Discovery of an anarchist bomb factory in Barcelona.

30. Labor riot at Auburn, Me.

October 1. Final settlement announced of the Siamese difficulty.

2. Spain: More attempts to explode dynamite bombs at Barcelona.

3. St. Louis: Meeting of the Pan-American Bimetallic Convention. Morocco: The Spanish garrison at Melilla attacked by a large force of Moors, 18 Spaniards killed and 85 wounded. The Moors repulsed. England: Opening of the English congress at Birmingham. Belgium: Spread of the strike among coal miners. Alabama: Troops called out by the Governor to quell riots of railroad strikers. Brooklyn, N. Y.: A bronze statue of Alexander Hamilton unveiled. Morocco: Strong Spanish reinforcements sent to the garrison at Melilla. South Africa: A warlike native tribe, the Matabeles, attack the British outposts.

5. Massachusetts: The Rev. Dr. William Lawrence consecrated Episcopal Bishop of the State. Indiana: Twenty-fourth Convention of the Evangelical Lutheran Church opened at Fort Wayne. Buffalo, N. Y.: Meeting of the Society of the Free Baptist Church. Brazil: Bombardment of Rio continues. Belgium: Collapse of the coal miners' strike.

6. Spain: Execution of an anarchist at Barcelona.

7. Chicago: Celebration of Poland's day at the World's Fair. India: Seven native mutineers blown from the cannon's mouth in Cabul.

9. Washington: Meeting of the Supreme Court. Chicago day at the World's Fair, more than 700,000 people present. Bohemia: Attempt on the part of anarchists to blow up a railroad train.

10. California: Meeting of the Irrigation Congress at Los Angeles. New York: Meeting of the annual convention of the Commercial Travelers' Association of Syracuse. Massachusetts: Eighty-fourth annual meeting of the American Board of Commissioners for Foreign Missions at Worcester. Centennial of Williams College. Chicago: North Dakota day at the World's Fair: Public Health Congress in the Art Building. Brazil: Bombardment of Rio continues.

11. New York: Annual Indian Congress at Lake Mohonk. Chicago: Connecticut day at the Fair.

12. New York: Celebration of the fiftieth anniversary of the Jewish order of B'nai B'rith. England: British miners lately on strike return to work at the old wages, having essentially gained their point against the owners. The International Peace League urges Mr. Gladstone to introduce a bill in Parliament favoring a permanent international court of arbitration. South Africa: Sharp fighting has taken place between the British and the Matabeles.

13. The Union Pacific Railway passes into the hands of receivers. New York: The American yacht Vigilant wins the third of the series of races for the America's cup off Sandy Hook, thus defeating the Valkyrie and retaining the cup for the New York Yacht Club. Ohio: Trial of the Rev. Dr. H. P. Smith, of Lane Theological Seminary, for heresy. France: Enthusiastic reception of Russian war ships at Toulon. Guatemala: The President dissolves Congress and assumes dictatorship.

14. Washington: Meeting of the National Association of Local Preachers of the Methodist Episcopal Church.

16. Chicago: Second biennial convention of the World's Women's Christian Temperance Union.

17. National encampment of the Medal of Honor Legion in New York. Paris: Reception of the Rus-

sian naval officers. Rome: A mob of anarchists breaks up a political meeting and burns the theater in which it was held.

18. Chicago: Meeting of the Supreme Council of Masons. Twentieth annual convention of the National Women's Christian Temperance Union. Baltimore: Celebration of the twenty-fifth anniversary of Cardinal Gibbons's elevation to the episcopate.

19. Trenton, N. J.: Unveiling of the battle monument with appropriate ceremonies. Chicago: Congress of Agriculture, Fisheries, Forestry, and Good Roads in session. Baltimore, Md.: Celebration by the Societies of Colonial Dames and the Sons of the American Revolution.

20. The Cunard steamers *Campagna* and *Lucania* respectively, break the westward and eastward records for quick voyages. South Africa: Continued fighting between the British and Matabelea. Morocco: About 12,000 Spanish troops are now available for the reduction of the Moors.

23. Chicago: Opening of the Missionary Council of the Protestant Episcopal Church: Congress of Real-Estate Men. Washington: The United States Supreme Court decides that the State of South Carolina has a right to the word "Palmetto" as a trade-mark under the new liquor law.

24. Michigan: The Supreme Court decides that the recent law permitting women to vote at municipal elections is unconstitutional. Illinois: Forty-seventh annual meeting of the American Missionary Association at Elgin. Paris: The visiting Russian naval officers depart for Lyons.

25. Acting Rear-Admiral Stanton recalled from the command of the South American squadron for saluting the flag of the Brazilian insurgents.

26. Launch of the United States battle ship *Oregon* at San Francisco. Germany: Mr. Runyon presents his credentials to the Emperor as ambassador for the United States.

27. Boston: Session of the Brotherhood of Railroad trainmen.

28. Chicago: Assassination of Mayor Carter Harrison at his home. Morocco: Engagement between the Spanish and Moorish forces; heavy loss of the Spaniards. Palestine: Fatal riot in the Church of the Nativity, Bethlehem.

30. Chicago: Close of the World's Fair, the intended ceremonies being much curtailed because of Mayor Harrison's assassination. Russia: The formation is ordered of 15 new reserve brigades, adding 150,000 men to the army. Switzerland: A general election results in defeat for the socialists.

November 1. South Africa: The British have gained decided advantages over the Matabeles, capturing their principal town. Morocco: Continued fighting between the Spaniards and tribesmen.

2. England: Reassembling of Parliament.

3. England: Mr. Gladstone announces that he will favor a bill providing a board of arbitration in the matter of strikes.

4. Chicago: Members of the City Council almost come to blows over the election of a successor for Mayor Harrison.

6. Washington: Appointment of Brigadier-General George B. Ruggles to be Adjutant-General, *vice* Adjutant-General Williams, retired. France: A riot at Marseilles by striking tramway men.

7. Mississippi: Indicted members of the White Cap Association burn the courthouse and all the county records.

8. Montreal: The chiefs of several Indian tribes meet to form a confederacy of North American Indians independent of the United States and Canadian governments. Spain: Anarchist outrage at Barcelona, 30 killed, 80 hurt, in a theatre.

9. An extradition treaty ratified between the United States and Norway. Spain: Further anarchist outrages in Barcelona, 50 arrests made. South Africa: Desperate engagement between the British and Matabeles; the British use their repeating guns, and about 2,000 natives are killed; slight British loss.

10. Secretary Gresham reports in favor of restoring the monarchy in Hawaii.

11. Kentucky: Robbers hold up a train on the Illinois Central Railroad.

12. Chicago: Anarchists are permitted to commemorate the executions following the Haymarket riots of six years ago. New York: Congress of the Salvation Army in session.

14. Georgia: Opening of the Exposition in Augusta. Trial trip of the new United States cruiser Columbia, off Marblehead; she proves to be the fastest war vessel afloat. Illinois: A train robbery attempted near Lincoln.

15. New York: Annual session of the National Grange Patrons of Husbandry (Grangers). London: The Bank of England a large loser through one of its trusted officials.

16. Philadelphia: General Assembly of the Knights of Labor in session.

19. Strike of trainmen, Lehigh Valley railroad.

20. Washington: Correspondence relating to Hawaiian affairs made public. The Supreme Court decides that the Great Lakes are included under the term "high seas." New York: The Brazilian dynamite cruiser Nietheroy sails for her destination.

21. Washington: Permanent headquarters established for the Republican National Committee. Iowa: A criminal taken from the courtroom at Ottumwa and lynched by a mob.

25. Washington: Further publications of the Hawaiian correspondence. New York: The Brazilian war ship America sails for the South. The Nathan Hale monument unveiled. Yale defeats Harvard at football, Springfield, Mass.

26. Philadelphia: Resignation of Master-Workman Powderly of the Knights of Labor. He is succeeded by J. T. Sovereign, of Iowa.

27. Scotland: The strike of the coal miners has raised the price of coal 25 per cent., and threatens all branches of trade.

28. South Carolina: Meeting of the Legislature. England: Memorial to James Russell Lowell unveiled in Westminster Abbey.

30. New York city: Princeton defeats Yale at football. Cambridge: Harvard defeats the University of Pennsylvania. Russia: Troops are sent to close a Catholic church at Krosche; a riot ensues, 20 are killed, 100 wounded.

December 1. Brazil: Admiral Mello leaves Rio harbor with his flagship.

2. Annapolis Naval Academy: The West Point football eleven defeated by the naval cadets.

8. London: Anarchist meeting dispersed by the police in Trafalgar Square.

4. The Supreme Court decides that the alien contract-labor law is constitutional. Scotland: More than 100,000 miners on strike.

9. Paris: An anarchist attempts to blow up the Chamber of Deputies while the House was in session; no fatal results, but many injured; the perpetrator is arrested.

12. Savannah, Ga.: Session of the National Farmers' Congress, 20 States represented. England: Another meeting of the unemployed dispersed in London.

13. Chicago: The American Federation of Labor adopts resolutions approving the anarchists.

14. Announcement of the arrival of the Brazilian cruiser Nietheroy at Brazil.

15. Mr. Thurston, the Hawaiian minister, sails for home from San Francisco, probably anticipating trouble in consequence of the recently announced Administration policy. Washington, D. C.: J. S. Morton, Secretary of Agriculture in President Cleveland's Cabinet, has been elected President of the American Forestry Association.

17. Paris: A number of dynamite cartridges discovered.

18. The President sends to Congress a message on the Hawaiian business. Texas: Four train robbers confess their crime and are each sentenced to thirty-five years' imprisonment. Italy: An antitax riot in Palermo.

26. Christmas: Commemorative services held throughout Christendom. Riot between Austrians and Magyars at Berringer, Pa.; attempt to blow up with dynamite a house where a wedding ceremony was in progress; a fight ensues, many severely injured. Spain: Further arrests of anarchists in Barcelona. Italy: Antitax riots in Sicily, Palermo, and elsewhere; 6 killed, 24 wounded, military reserves called out.

28. The United States cruiser New York sails for Rio de Janeiro, Brazil. Alleged negro riot at Wildwood, Fla.

27. Spain: Panic in the opera house at Madrid; cause, the alleged attempt of a dynamiter to throw a bomb. New York city: Dr. Parkhurst appears in court as a witness to prove negligence on the part of the police.

28. Africa: A large number of hostile tribesmen surrender to the Spanish authorities.

30. France and Spain sign a commercial convention.

F

FARMERS' CONGRESS. The thirteenth annual session of the Farmers' Congress of the United States met at Savannah, Ga., Dec. 12, 1893. The representation is the same as that of the Congress of the United States, with the addition of a representative from each State agricultural society and each agricultural college, all appointed and commissioned by the governors of the various States. The session was called to order at the Guards' Armory by Vice-President Hon. D. G. Purce, and welcomed to Georgia by Major P. M. Weldrem, whose speech was responded to by Judge C. B. Rounds, of Maine. J. T. Wade and Mayor McDonough gave the congress a hearty welcome in behalf of the Georgia State Agricultural Society and the city of Savannah, and were responded to by Colonel Needham, of Massachusetts, and by Secretary Clayton, of Iowa. The roll-call showed the presence of representatives from 30 States.

The hospitalities of the city were extended to the body, and invitations were received and accepted to visit the Telfair Art Gallery, Georgia Historical Society, Savannah Board of Trade, Guards and Oglethorpe clubrooms, and other places of interest.

The second day the congress accepted an invitation to board the steamship "City of Macon," and was taken down Savannah river and out on the Atlantic Ocean. Returning, they were banqueted on board ship, and received at the wharfage of the city by a display of flags and the blowing of whistles from vessels representing nearly all nations.

The following subjects were discussed during the three-days' session: "Interstate Dependence of Business Relations," by Mr. Needham, of Massachusetts; "Agriculture South and West," by Mr. Burkitt, of Mississippi; "Organized Cooperation," by Mr. Slaughter, of Tennessee; "Our

National Wealth," by Mr. Stahl, of Illinois; "Business Methods in Farming," by Mr. Warren, of Georgia; "Thorough Agriculture," by Mr. Rankin, of Tennessee; "The Oyster as Human Food," by Dr. A. Oemler, of Georgia; "Profitable Stock on the Farm," by Mrs. A. E. Edwards, of Nebraska; "Farming in the West," by Mr. Hefelbower, of Kansas. These subjects, as well as the report of the Committee on Resolutions, were debated at length.

The following officers were elected to serve for two years: President, B. F. Clayton, Indianola, Iowa; Vice-President, Major G. M. Ryals, Savannah, Ga.; Treasurer, Henry Haden, Indianola, Iowa; Secretary in Chief, J. M. Stahl, Chicago, Ill.; First Assistant, W. J. Whidby, Atlanta, Ga.; Second Assistant, T. J. Appleyard, Sanford, Fla.

Parkersburg, W. Va., was selected as the place for the next meeting, which is to be held in October, 1894.

The following resolutions were adopted:

Whereas, Among many farmers of the various States of the Union certain prejudices exist as to railroads, or what some are pleased to call railroad monopolies, when in reality there is no just cause for such prejudices; and

Whereas, These prejudices are often induced and intensified by the speeches or arguments of persons seeking official positions, mainly for the purpose of influencing the favor and votes of farmers and others in aid of their desires for office; and

Whereas, Under such circumstances men are sometimes elected as members of legislative bodies, pledged to inaugurate and support, in the supposed interests of farmers, such unnecessary and radical measures as would interfere with the just rights and privileges of railroads, when there was no proper cause for such interference or need of the measures named: Therefore, be it

Resolved, By the Farmers' National Congress of the United States now assembled:

1. That we regard such prejudices on the part of farmers as unjust, as a general rule, and would herein condemn any action on the part of office-seeking politicians that is calculated to induce or intensify such prejudices as wrong, and which are often detrimental to the true interests of those whom they are seeking to represent.

2. That in many respects we regard the interests of farmers and railroads as being identical; that the general prosperity of one often depends mainly upon the prosperity of the other; and that for the true interests of both there should exist, as far as possible, proper harmony and friendship between them.

3. That while we would favor, and even recommend, such just and proper State and national legislation as would guard and fully protect farmers and other classes from unjust discrimination or wrongful imposition of any kind on the part of railroad companies or other corporations or combinations of capital, we are opposed to, and would herein condemn, as contrary to all principles of right and justice, any such unjust and radical legislative enactments as would seriously hamper or interfere in any manner with the proper constitutional and vested rights or interests of the railroad system of our country, unless some just and rational cause for the same is known to exist and is fully understood, before action is taken in the matter.

4. That members of our legislative assemblies, both State and national, be, and are hereby, requested to give due consideration to the subject contained in the foregoing resolutions; trusting that their actions as regards the matter may be controlled by such wisdom and forethought as the true principles of right and justice would demand.

Resolved, By the Farmers' Congress of the United

States, that the legislature of each State in the Union should enact such measures as will render more effective the work of the department of agriculture and of the experimental station, and that the results of their labor may be more widely disseminated.

Resolved, further, That statistical information is of great importance to agriculturists and the advancement of the interests of the farmer, and we urge that means should be adopted in all States to secure more extended and trustworthy data in that line.

Resolved, That we are in favor of the economical improvement of our water-ways and harbors, by liberal appropriations systematically expended in conformity with comprehensive plans and specifications prepared by a board of competent engineers; and

Resolved, That we commend especially to the favorable consideration of the Congress of the United States the connection of the Mississippi and Great Lakes by means of a ship canal, and the substantial improvement of the Mississippi and its tributaries, as well as the important harbors on the Gulf and Atlantic coasts.

Whereas, It has been proved by actual test that free mail delivery can be extended to villages and the more thickly settled farming communities with but little, if any increase, in the net expense of the Post-Office Department; therefore

Resolved, That we are heartily in favor of rural free mail delivery; and we hereby call upon the Congress of the United States and upon the Post-Office Department to extend the free delivery of mail into the country as fast as the same can be done without an onerous increase in the expense of the same; and

Resolved, That there should not be any lowering of the present rate of letter postage until mail is delivered at least 3 times each week throughout all townships having a population of ten or more to each square mile.

Resolved, In view of the great benefit not only to agricultural interests but to all others accruing from a well-conducted system of improved highways, we urge upon the governors of the several States of the Union to specifically call the attention of their State legislatures to the importance of action in devising such a system of highway improvements.

Resolved, That we urge upon all who are interested in the business of agriculture, and on those who are interested in pursuits on which agriculturists depend for supplies, to associate together in business organizations for the protection of crops and supplies, and for the transportation and marketing of the same.

Resolved, That the Farmers' Congress of the United States, by virtue of its constitution and organization, is not a political organization, but was founded for the purpose of benefiting the agricultural and other productive interests of the country, and to elevate and enlighten these great industrial interests.

FINANCIAL REVIEW OF 1893. The event of paramount importance this year was the repeal, after one of the most disastrous panics of the century, of the act of July 14, 1890, which required the Secretary of the Treasury to purchase monthly 4,500,000 ounces of silver bullion. Soon after the opening of the year there was a partial recovery from the feeling of depression which marked the close of 1892, encouraged by the hope that Congress would promptly act upon the measure introduced in the Senate in December for the repeal of the silver-purchase law; but when it was seen that there was a disposition to delay action, hope was almost abandoned, and public attention was directed to the efforts of the Treasury Department to postpone that crisis which, it was evident, would ere long be precipitated. Gold continued to move to Europe, and by the end of February \$6,775,000

had been sent to Germany and \$15,900,000 to France for the account of the bankers who were under engagement to supply Austro-Hungary. The net gold in the Treasury was then \$103,284,218, against \$108,181,714, Feb. 1, and \$121,266,662, Jan. 1. Manifestly, if gold shipments continued, and if the reserve in the Treasury was not augmented, there would very soon be a reduction in the net gold below the sum of \$100,000,000 which the unwritten law of the department had held to be a reserve exclusively for the redemption of United States notes. Upon the advent of the new Administration efforts were made to increase the gold reserve by exchanging legal tenders for the coin in the banks, but these efforts resulted in only a slight gain, for on April 1 the net gold was \$106,692,224. Gold shipments were then actively resumed, and by April 18 the reserve was reduced to \$1,040,000. Then followed the first stage of the panic caused by the expectation that redemption of Treasury notes of 1890 in gold would be immediately suspended, thus bringing about that which had long been predicted, the sudden change of the currency from a gold to a silver basis. But the prompt declaration of the President of a determination to exercise every power to preserve the parity between gold and silver restored confidence, and although the net gold in the Treasury was subsequently reduced much below the \$100,000,000 limit, falling to \$81,551,385 on Oct. 19, the redemption of all Treasury notes in gold served to dispel fears of a renewal of the crisis, at least from this cause. The gradual reduction of the gold reserve of the department caused withdrawals by interior banks of their deposits in the New York institutions, and brought about a general hoarding of gold all over the country in anticipation of the approach of the period when, unless relief were afforded, Treasury payments in gold would have to be suspended. The rapid depletion of New York bank reserves, these being drawn down to \$5,481,975, June 24, from \$25,489,925, May 27, and the absence of the least indication of anything more than temporary relief, laid the foundation for the acute stage of the panic, which was reached June 27, when the cable announced that the Indian Government had suspended the public coinage of silver. The tension relaxed, however, on the 30th, on news of the calling by the President of a special session of Congress for Aug. 7, to take action upon the silver-purchase law, and the panicky feeling partially subsided. But during the greater part of July the entire country felt the effect of the absence of confidence; the distress among banks, merchants, manufacturers, and all classes of the people was very severe; failures were frequent, large in number, and important; values of all share property shrank regardless of intrinsic merit, and the situation was deplorable. One encouraging fact, however, was developed, and that was that the trials and suffering of the masses of the people served to intensify the feeling that the silver-purchase law was the root of the existing trouble; and as this conviction grew, there arose a demand, which soon became almost universal, for the prompt repeal of this measure. This popular demonstration had its effect upon the direct representatives of the people in Congress,

and, soon after that body assembled in special session, Aug. 7, measures were formulated for the immediate and effective consideration of a repeal bill. The opposition were given every opportunity for the expression of their views not only upon free coinage at the various ratios from 1 to 16 to 1 to 20, but upon the question of the re-enactment of the act of 1878. Voting began upon the ratio amendments Aug. 28. That of 1 to 16 was defeated by 103 majority; 1 to 17 by 140; 1 to 18 by 185; 1 to 19 by 134; and 1 to 20 by 101. The majority for unconditional repeal was 129. This result was hailed with general satisfaction, and recovery from the depression was rapid, materially aided by large imports of gold and by easier money, until it was checked by the delay of the Senate in acting upon its repeal bill; but there was no recurrence of panic, and on the final passage of the Senate bill confidence in the stability of the currency was restored, and the question whether the obligations of the United States will be paid in coin current in all the markets of the world was settled probably for all time. Business recuperation was somewhat retarded by the agitation of measures for tariff reform; and, moreover, the delay of the Senate on the repeal measure had prevented merchants from taking advantage of the trade of the season, and it was not until late in November that there was much revival in business. Soon after Congress reassembled, in December, the majority of the Subcommittee of Ways and Means presented a detailed statement of the changes in the tariff which had been decided upon, and this report had a depressing effect upon many manufacturing enterprises, the opinion prevailing that there would be great delay in passing the tariff bill by reason of conflicting views of members. Woolen and iron manufacturing establishments closed down, thereby greatly increasing the number of the unemployed, and adding to the distress of the poor. Customs receipts fell to unprecedentedly low figures for December, contributing to a reduction in the Treasury cash to \$88,989,887, including \$81,475,335 net gold, by the end of the year. Secretary Carlisle recommended, in his annual report, an amendment to the resumption act of 1875, authorizing the department to issue \$200,000,000 3-per-cent. five-year bonds with the object of relieving the Treasury, and for other purposes. Realizing and speculative sales of stocks, encouraged by the financial embarrassments of the Atchison, Topeka and Santa Fé, which was placed in receiver's hands on the 23d, turned the market downward, and the feeling at the close of the year was gloomy.

Events abroad were more or less exciting at intervals during the year. The political tension in France resulting from the investigation into the Panama Canal scandal, which was severe at the end of 1892, was relaxed at the beginning of this year, and there was nothing of a disturbing character in that country until March 30, when the Ribot Cabinet resigned in consequence of a disagreement between the Chamber and the Government regarding the liquor amendment to the budget. A new Cabinet was promptly formed, to be again changed in April, and again early in December. In May there was a feeling of financial distrust, which was reflected by a fall in

rentes, and deposits were largely withdrawn from the savings banks. In July and August the demands of France upon Siam for reparation for violations of treaty stipulations attracted the attention of the English Government; but the compliance of Siam with the French demands prevented English interference and probably averted a crisis. In April there were very important failures of Australian banks, brought about by the fall in silver, the low prices for wool, and the collapse of land speculations. These failures had a decided influence in London, and before the troubles ended 18 Australian banks had failed, with liabilities aggregating about \$450,000,000. One event in April was a *coup d'état* by the young King of Serbia, who dismissed his regents and assumed control of the Government. On June 26 the announcement was made in the British Parliament that the Government of India had decided to suspend the public coinage of silver. Thereupon there was an unsettling fall in the price of bar silver in London from 88½ pence per ounce early in the month to 80½ pence on the 30th, and a derangement of Eastern exchange was prevented only by the Indian Government fixing the price of the rupee at 1 shilling 4 pence. With the exception of silver stocks the general market in London was not greatly affected. In August large withdrawals of gold from London for shipment to New York led to an advance in the bank of England rate of discount to 5 per cent. The great lockout of coal miners, who had resisted an attempt to reduce wages, began in August, and about 350,000 men were out of work until the middle of November, when the differences were compromised through the intervention of the Government, and the men resumed work at the old scale of wages. It is estimated that the lockout involved seven of the railroad lines of Great Britain in a loss of about \$9,000,000, and a loss to important industries of \$150,000,000. Toward the end of August an insurrection in Brazil, led by Admiral Mello, caused a fall in the bonds of that country, and the tension of political and financial affairs in Italy and Spain affected Internationals in all the European markets. In October the visit of the Russian fleet to Toulon and the extravagant demonstrations of welcome to the visitors by the French officials and people attracted the attention of the other powers, and gave color to reports that an alliance had been formed between the two nations in opposition to the *Dreibund*. Early in November there was a panic on the Italian bourses, caused by the financial embarrassments of the

16th of the affairs of Overend, Gurney & Co., who failed May 10, 1866, for \$55,000,000, involving six banks with an aggregate capital of \$150,000,000. The ultimate loss to stockholders was \$15,000,000. Another feature was the retirement of Mr. Frank May, who for twenty years had been cashier of the Bank of England, in consequence of indiscretions connected with the house of Coleman & May, which resulted in a loss to the bank of about £25,000. On Nov. 25 there was a Cabinet crisis in Italy, caused by disclosures in connection with the affairs of the Bank of Rome; a similar crisis in France, growing out of differences between President Carnot and M. Dupuy, Prime Minister; and also a confession by the Premier of Greece of the insolvency of that country. On Dec. 9 the explosion of a bomb, thrown upon the floor of the French Chamber of Deputies by an anarchist named Vaillant, had a startling effect in all the European capitals, and at once led to the adoption of vigorous repressive measures against anarchists, particularly by the French Government; the Italian Cabinet was reorganized by Signor Crispi; there were indications of a revolutionary movement in Sicily, and although the political tension in Europe was somewhat relaxed, there was more or less anxiety at the close of the year.

The following tabular survey of the economical conditions and results of 1893, contrasted with those of the preceding year, is from the "Commercial and Financial Chronicle":

ECONOMICAL CONDITIONS AND RESULTS.	1892.	1893.
Coin and currency in the United States, Dec. 31.....	\$1,764,985,923	\$1,846,161,308
Bank clearings in the United States.....	\$62,109,062,074	\$54,890,806,822
Business failures.....	\$114,044,167	\$344,779,889
Imports of merchandise (year).....	\$840,980,955	\$776,745,661
Exports of merchandise (year).....	\$988,490,660	\$876,148,022
Gross earnings 194 roads (year).....	\$564,064,489	\$552,823,299
Railroad construction, miles.....	4,648	2,680
Wheat raised, bushels.....	515,949,000	894,181,725
Corn raised, bushels.....	1,628,464,000	1,619,495,151
Cotton raised, bales.....	6,717,142	7,275,000
Pig iron produced (tons of 2,240 pounds).....	9,157,000	7,194,502
Steel rails, Bessemer (tons of 2,240 pounds).....	1,458,782	1,084,467
Anthracite coal (tons of 2,240 pounds).....	41,969,884	48,018,526
Petroleum (runs) production, barrels.....	82,761,466	80,457,172
Immigration into the United States (year).....	548,497	488,775

The prices of leading staples on or about the 1st of January, 1894, compared with prices at the same date in 1893 and 1892, were as follow:

STAPLES.	1892.	1893.	1894.
Cotton, middling uplands, per pound.....	7½	9½	8
Standard sheetings, per square yard.....	6½	6½	6½
Wool, Ohio XX, per pound.....	30 to 31	28 to 29	34
Iron, American pig No. 1, per ton.....	\$16 to \$17	\$15 to \$15 50	\$14
Steel rails at mills, per ton.....	\$30 00	\$29	\$24
Wheat, No. 2 red winter, per bushel.....	\$1 04½	79½	65½
Corn, Western mixed No. 2, per bushel.....	52½	49½	48
Pork, mess, per barrel.....	\$10 00	\$16 25	\$14 to \$14 25

Government, which somewhat affected Berlin; and there was also an uneasy feeling at Vienna growing out of a rise in the gold premium and a break in Government securities. One feature in London was the final settlement on the

The Crops.—The yield of wheat, corn, and oats was small in 1893, while that of cotton was better than during the previous year, and, compared with the heavy cereal crops of 1891, the returns of this year seemed to be failures, and

particularly so as regards corn, which was affected by the drought in the summer. The wheat crop of 1893 was estimated at only 396,181,725 bushels, the smallest since 1885. Corn was estimated at 1,619,495,181 bushels, only a little larger than in 1890, although early in the season the indications pointed to a much more abundant yield. The oat crop was estimated at 688,854,850 bushels. The inclination to plant cotton was encouraged by a better range of prices. There were large stocks of wheat in nearly all the countries of the world, and notwithstanding the decrease in the crop in the United States, the visible supply was large and prices were very low in the fall months. The depression in the cotton trade operated against the price of the staple, and as the year closed it was selling about two cents below the figures at the end of the previous year. The agricultural bureau in November reported average prices by farmers and planters of the various staples as follow: Wheat, 52.1 cents per bushel against 62.4 in 1892; rye, 51.8 against 54.8; oats, 2.88 against 31.7; barley, 40.6 against 47.2; corn, 37 against 39.4; and cotton, 6.99 cents per pound against 8.04 cents.

Taking prices in New York, Jan. 1, if the whole of the crops could have been laid down at that point on that date, the values would have been as follow:

New England, Manhattan, Whisky, and Sugar, and the tone was more or less favorably influenced by the temporary suspension of gold exports and by an improvement in the condition of the banks. Gradually the whole list advanced, and the tendency was generally upward until near the end of the month, when a bearish demonstration upon Whisky, Manhattan, and Consolidated Gas had an unsettling effect upon the market; and the tone was heavy at the close, when it was to some extent influenced by an unexpected renewal of gold exports. Selling of Whisky by members of a disrupted pool had a disturbing effect upon the general market early in February, but soon after there was a recovery, led by Manhattan, Cordage, New England, and the Grangers, and a better feeling due to the news that a few of the banks would exchange their gold for legal tenders at the Sub-Treasury. Before the middle of the month, however, the market again fell off, influenced by continued shipments of gold to Europe, by the partial abandonment of the efforts of the banks to relieve the Treasury, and by the increasing gravity of the currency situation. Western railroads were more or less affected by the threatening attitude of some of the employees, who were disposed to take advantage of the necessities of the roads and demand increased wages; and severe storms in the

Stocks.—The unsettled feeling which prevailed at the end of last year continued to grow more intense during the first half of 1893, when the panic occurred, and it was not until the passage by the House of Representatives of the Wilson bill, repealing the silver-purchase law of 1890, that there was any substantial recovery in the stock market, and then the improvement was checked by the delay of the Senate in acting upon the Voorhees measure. After this passed the market was irregular, growing more active and stronger until toward the end of the year, when prices fell off, and the tone was unsettled by the Atchison and the New York and New England receiverships, and the market closed generally lower.

The feature of the market early in January was selling of Reading, based upon evidence of the embarrassed condition of the company, which compelled the borrowing of \$6,000,000 on collateral trust bonds for the purpose of meeting the floating debt and to provide for payments of interest obligations, net earnings having been diverted to other purposes. The stock was also affected by the severance of the Central New Jersey from the Reading system, in compliance with the order of the Chancellor of New Jersey. Toward the middle of the month there was a recovery in this stock and a reaction in the whole market, due to rebuying to close out short contracts, and the most important advances were in

West promised materially to reduce railroad net earnings. During the third week in the month the feature was liquidation by the pool in Sugar, which directly influenced the other industrial stocks, and there was free selling of Reading, the Grangers, Manhattan, New England, General Electric, and Chicago Gas, and at times the market was panicky. On the 25th the Philadelphia and Reading road was placed in the hands of receivers for the third time in its history, thus confirming the rumors of financial embarrassment which had been current since December. The receivership was precipitated by the inability of the company to pay a demand loan for \$200,000, and by the suspension of payments of interest on the third preference incomes. The announcement of the appointment of receivers was followed by liberal selling of Reading, New England, all the coal shares, and almost everything on the list, and the business of the 25th was unprecedentedly large, amounting to 1,476,283 shares, of which 963,030 were Reading. The market was quite feverish for the remainder of the month, although there was a feeble reaction in stocks other than the coal shares at the end, due to news of the practical defeat of the anti-option bill and also by easy money. In March the market opened excited and lower, with Reading, New England, Northern Pacific preferred, Sugar and Cordage weakest, the first-named property being affected by reports that the floating debt was \$17,000,000;

New England by a statement that Mr. McLeod had control, and the general market by the reduction in the Treasury gold reserve, through shipments to Europe, and by the demand by banks in the interior for part of their New York balances, indicating a disturbed feeling, particularly at the West regarding the currency situation. The unsettled movement in the stock market increased during the second week in consequence of a manipulated advance in the rate for money, and the most important declines were in the Industrial stocks and in General Electric. There was a partial recovery in the third week, due more to rebuying to close short contracts than to any improvement in the situation, although exchange was below the gold-exporting point, but this was because of activity in money. In the closing days of the month the Treasury showed an accumulation of gold, the result of the check to the European drain, and this in part aided in a recovery in stocks, and in some of the specialties the upward reaction was quite decided, the demand for rebuying developing a scarcity of stock. The action of the managers of the Toledo, Ann Arbor and North Michigan in appealing to the United States Court for relief from the striking engineers and switchmen had a good effect upon the market for Western stocks, because it seemed to prepare the way for a resort to the courts by corporations who might be embarrassed by the aggressive course of dissatisfied employees. Although irregular, the market was generally stronger for the remainder of the month. The leading features in April were a fall on the 8d of 10 points in Manhattan, due to a decision by the Rapid-Transit Commission to consider plans for an underground road; the resignation on the 5th of Mr. McLeod as President of the Reading; and a recovery in Manhattan on the 12th because of the abandonment by the Rapid-Transit Commission of the underground scheme. The tone of the market was generally strong until the middle of the month, when there was a panicky fall, caused by the rumor that gold payments of Treasury notes would be suspended; but when this was denied the excitement subsided, and the stock market reacted. Prominent features in the last week in the month were a fall of 17 points in Toledo, Ann Arbor and North Michigan, followed by the appointment of a receiver; a decline in Whisky on the passing of the dividend; and an advance in Reading on the report of a reorganization scheme. The market was irregular and generally lower at the close of the month, and it was unsettled and weak during the greater part of May. One feature was the placing of the National Cordage Company in the hands of a receiver. The stock fell sharply on the news that the company would issue \$2,500,000 preferred stock for the purpose of carrying on the operations of the concern. The selling of Cordage stock caused the failure of several brokerage firms, and precipitated a receivership. There was free selling of General Electric on news of the sale by the company of its holdings of Edison Illuminating stock, and the fall in this property and in Cordage more or less affected the other Industrials. Richmond Terminal and Reading securities fell off on news of the failure of the reorganization schemes.

There was a gradual decline in nearly all the active stocks, due to the deranged financial situation, as shown by the failure of the Chemical and Columbia Banks in Chicago; the suspension of several institutions in Illinois, Indiana, Ohio, and Michigan, which were organized on an insecure basis; the inability of merchants freely to borrow even at comparatively high rates; and there was a feeling that the situation would not be relieved while the silver-purchase act of 1890 remained in force. The unsettled movement in stocks continued until the third week of the month, when rebuying to cover short contracts and a manipulated advance in some of the specialties brought about an irregular recovery, but in the closing days large shipments of gold and mercantile failures throughout the country induced a renewal of the selling movement, and the tendency was generally downward to the end of the month, with the most important declines in General Electric, Cordage, Sugar, the Grangers, Reading, the other coal shares, and New England. One feature was a fall in some of the leading investment properties, which had a disturbing effect upon the whole market. Although the short interest was large at the beginning of June, the bears did not hesitate to attack prices, and one feature was a sharp fall in Whisky, followed by General Electric. The whole market was influenced by a large movement of gold to Europe, caused by the Australian crisis, and although there were occasional reactions the tendency was downward during the entire month. One minor disturbing factor was news of a defalcation in the Irving Savings Bank. The growing stringency in money was another factor, and even the decision of the New York Clearing House to issue loan certificates for the purpose of relieving the situation as far as possible was regarded as indicating a strained condition of some of the banks. Everybody was looking for some action by the President; and when, on the 26th, it was semiofficially stated that no extra session of Congress would be called before September, there was a panicky plunge downward in stocks and still greater activity in money, which induced the Clearing House Loan Committee to take out for their respective banks \$6,800,000 certificates, which action temporarily averted a crisis. On the following day, however, news that the Indian Government had suspended public coinage of silver brought about the acute stage of the panic; the fall in some of the specialties was rapid, and the excitement was intense, with an urgent demand for money at 72 per cent. as one feature. Silver certificates representing bullion sold at 62. The panicky feeling was increased by the extreme urgency in the inquiry for money from all quarters, more particularly from the main distributing points, and also by news of a decline in wheat at Chicago to 61½ cents. On the following day the market feverishly rallied on a rumor, later confirmed, that a special session of Congress had been called for Aug. 7. Activity in money, failures of Colorado banks, unfounded rumors of trouble in New York institutions, which were solely based upon applications for Clearing House loan certificates, and free selling of stocks by the arbitrage houses for European account caused the market to grow

feverish and lower in July, and during the first week the bears took advantage of the fact that the issue of \$21,665,000 Clearing House loan certificates thus far exceeded by \$5,020,000 the amount of those issued in the Baring panic of 1890, and it was represented that this indicated that the situation was very grave. Early in the second week of the month the news of the failure of the London branch of a large Australian house, and a vigorous raid upon General Electric and demonstrations upon all the leading stocks, kept the market in a demoralized condition until near the close, when there was a rally. In the third week the suspension of the Schlessinger ore syndicate directly affected Chicago and Northwestern, and during the entire week there was quite general liquidation of all leading speculative stocks, and more or less free selling of many of the first-class investment properties, the market experiencing a still panic with a gradual shrinkage of values regardless of intrinsic merit. The special influences operating were runs upon banks in the Northwest and the placing of the Erie in the hands of receivers. In the last week of the month the tendency continued downward, affected by activity in money, vigorous bearish demonstrations, the failure of two stock houses in New York, of the Mitchell Bank at Milwaukee, and of institutions at Indianapolis, Louisville, and other parts of the country, and the market was weak until the closing days of the month, when there was a partial rally, caused by news of the shipment of \$1,500,000 gold from London to New York. The most important declines for the month were: 20½ per cent. in Sugar, common, 14½ in the preferred; 10 in Atchison; 16½ in Central New Jersey; 30½ in Chicago Gas; from 11½ to 17½ in the Grangers; 21½ in Manhattan; 81½ in General Electric; 14½ in Louisville and Nashville; 13½ in Northern Pacific preferred; and 9½ in Western Union. There was almost a complete revolution in the market during August. It was influenced in the first week by the shipment of large amounts of gold from London for New York, by a sharp fall in wheat in Chicago, and the collapse of the pork and lard deals at that center which promised liberal exports of those staples. These events brought about a covering of short contracts in leading properties and buying for the long account. Congress assembled in extraordinary session on the 7th. The message of the President, setting forth that the object of assembling Congress was to secure the prompt repeal of the act of July 14, 1890, which required the purchase of silver bullion, was promptly followed by the preparation of a bill for that object by the House Finance Committee and the agreement by the Democratic caucus upon a plan for the consideration of the measure. Although the movement in stocks was irregular, due to the renewal of raids by the bears and to more or less important failures throughout the country, the tone was generally strong during the second week, and the favorable influences were comparatively easy rates for money on call, receipts of over \$14,000,000 gold from Europe, and an important increase in national bank circulation. In the third week the tone was irregular and lower, caused by the unfavorable condition of the banks, as shown by the statement, indicating that the gold which came

from Europe had gone into the savings banks and trust companies instead of into the deposit banks. One feature was a fall in the Northern Pacifics caused by the placing of the road in the hands of receivers. There were vigorous attacks upon General Electric, the Grangers, Sugar, and Chicago Gas. After the 16th there was a partial recovery due to rebuying to close short contracts, and the improvement in the general market was gradual, although there were occasional periods of depression, until toward the close of the month, when there was a very decided advance caused by indications that the Wilson repeal bill would pass the House. News of the majorities against free coinage at the various ratios of from 1 to 16 up to 1 to 20 had a stimulating effect upon the whole list, and the market was buoyant on the 28th, when the Wilson bill passed by a decided majority. Thereafter to the close of the month the market was strong. There was a further marked improvement in the general situation during the first half of September, which was reflected in an advance in the stock market. Failures were less frequent, some of the banks which had suspended resumed business, cotton and iron mills started up, the premium on gold and currency disappeared, exchange was restored to a normal condition, and confidence began to grow in the belief that the Senate would speedily act upon the repeal bill. The outlook was encouraging, and the market was quite strong until the 13th, when there were indications of a withdrawal of support by bull combinations who had marketed their lines of stock, and then came bearish demonstrations and free selling of Union Pacific, General Electric, and Chicago, Burlington and Quincy, on reports that the holdings of Mr. Frederick L. Ames, who had died suddenly, would be thrown upon the market. This was followed by an upward reaction in these properties, but the movement was irregular and lower after the 15th, and it felt the effect of the delay of the Senate in acting upon the repeal bill. In the last week the market was irregular and generally heavy, influenced by a rise in exchange to near the gold-exporting point, by the obstructive tactics resorted to in the Senate to prevent action upon the repeal bill, and by more or less vigorous bearish demonstrations. The tone was irregular at the close of the month. The movement was dull and almost featureless during the first few days of October, and about the only really active stock was Lackawanna, which advanced 10 points on a manipulation of the short interest in it. Thereafter until the middle of the month the speculation was more active and prices lower, and there was free selling of Union Pacific in anticipation of the appointment of receivers, and on the 13th this event occurred. About the only strong stock was Hocking Valley, which advanced on the news of the decision of the Burke suit in favor of the company. Influenced by the prospects for a speedy ending of the debate upon the silver repeal bill in the Senate, the market improved in tone after the 16th, and the feature on the 23d was a rapid advance in Lackawanna on the announcement that 40,000 shares of the stock had been transferred to Mr. W. K. Vanderbilt. It was at first supposed that this was part of a plan for a new coal combination, but later it appeared that control

of the Lackawanna was sought in the interest of the Vanderbilt trunk lines, and then Lake Shore, New York, Chicago and St. Louis, and Michigan Central sharply advanced, stimulating an improvement in the whole list. The tendency of the market was very decidedly upward until the 30th, when realizing sales, bearish pressure, and European selling brought about a decline, and the market was irregular at the close of the month, although the repeal bill passed the Senate on the evening of the 30th, and it was concurred in by the House on Nov. 1, when it was signed by the President. The failure of the London market to respond to the news of the passage of the bill encouraged bearish demonstrations upon some of the specialties, notably Louisville and Nashville and Chicago Gas, and the tendency was downward until the 8th, when there was a sharp recovery, stimulated to some extent by news of the elections, and it was claimed that the decided Republican gains in Ohio, Pennsylvania, and Massachusetts indicated a popular feeling against tariff revision. When the short interest in the market was closed out prices fell off, and then the bears operated against the stocks of Western roads on the theory that, the World's Fair having been closed on Oct. 31, the railroads would show a decided falling off in revenue for the succeeding months. The tendency was irregularly downward, with General Electric, Reading, Sugar, and Louisville and Nashville weakest, until the 20th, when there came a recovery. The coal shares were favorably affected by a strike of employees on the Lehigh Valley, on the theory that this would restrict the output of coal; the Grangers were influenced by a smaller decrease in earnings than was expected; Sugar, Chicago Gas, and Western Union improved in consequence of manipulation; and General Electric was about the only really weak stock. The bullish feeling was encouraged by indications of an improvement in general trade reflected in an important auction sale of domestic dry goods, and also by the extremely easy market for money, which induced investment purchases. On the 27th the news of an agreement by the Democratic members of a subcommittee of the Ways and Means Committee of the House of Representatives upon a tariff bill had a specially disturbing effect upon Sugar and the other industrial stocks, the bill providing for a reduction of one half in the tax upon refined sugar, the gradual abolition of the bounty upon raw sugar, and important changes in the tax upon lead and cordage. But the market soon reacted under the lead of the Grangers and other railroad properties, and the tone was generally strong at the close of the month, and one feature was a good demand for railroad mortgages and dividend-paying stocks for investment. The tendency was irregularly downward early in December, influenced by realizing and speculative sales, disappointing traffic returns of important railroad lines, and evidence of an increase in business depression. There were rumors from London that the Atchison, Topeka and Santa Fé would be placed in the hands of receivers, and until this story was officially denied the stock and bonds were freely sold. But on the 23d receivers were appointed. The catastrophe was precipitated by the

death on the 20th, of Mr. George C. Magoun, of Baring, Magoun & Co., the fiscal agents. The suspension of the St. Nicholas Bank, on the 20th, had a disturbing effect, encouraging vigorous demonstrations by the bears, and during the closing days of the year the whole market was weak. The New York and New England was placed in receivers' hands on the 27th, and this stock and Atchison fell to the lowest prices on the 30th.

Total sales of stocks at the New York Stock Exchange for 1893 were 80,977,839 shares, against 85,875,092 in 1892; 69,031,689 in 1891; 71,282,885 in 1890, and 72,014,600 in 1889.

The following table shows prices of leading stocks at the beginning of the years 1892, 1893, and 1894:

STOCKS.	1892.	1893.	1894.
New York Central.....	116½	100½	98½
Erie.....	84½	24	14½
Lake Shore.....	128½	138½	130
Michigan Central.....	106	104½	92½
Rock Island.....	82½	82½	65
Northwest, common.....	116½	112	96½
St. Paul, common.....	82½	78½	56½
Dela., Lackawanna and Western.....	189	164	161½
Central New Jersey.....	113	126	113

The following shows the highest prices of a few of the speculative stocks in 1892, and the highest and lowest in 1893:

STOCKS.	1892.	1893.	
	Highest.	Highest.	Lowest.
American Sugar Refining Co. . .	115½	194½	61½
Atchison, Topeka and Santa Fé. .	46½	36½	9½

Foreign Exchange.—The imports of merchandise for the year ending Dec. 31, 1893, were \$64,185,274 below those for 1892, and the exports of domestic and foreign merchandise were \$62,272,637 less. The excess of merchandise exports over imports for the year was \$99,402,342, against \$97,489,705 for 1892. The excess of exports over imports of merchandise, coin, and bullion for 1893 was \$134,362,942, against \$170,820,397 for 1892. Gold exports were \$7,001,965 in excess of the imports in 1893, against \$59,081,110 in 1892.

Foreign exchange opened in January at \$4.86 to \$4.86½ for sixty-day, and \$4.88½ for sight. There was an advance to \$4.87 for the former and \$4.89 for the latter by the middle of the month, when the demand was good for long sterling, in consequence of easier discounts in London. The tone was easier at the close, because of offerings of bills drawn against purchases of securities for European account. Exports of gold during the month amounted to \$8,925,000. The defeat in the House of Representatives of the measure known as the Andrews-Cate bill, having for its object the repeal of the silver-purchase law, and the refusal of the Senate to consider a resolution having a similar object, had an unfavorable effect upon exchange early in February, and after opening at \$4.86 to \$4.86½ for sixty-day and \$4.88 to \$4.88½ for sight, it advanced to \$4.87½ for the former and \$4.89½ for the latter, and it continued strong until toward the close, when the market was affected by dearer money, but it subsequently reacted, and at the end of the month rates were \$4.86½ to \$4.87 for sixty-day and \$4.88½ to \$4.89 for sight. The shipments of gold amounted to \$13,750,000. In March the opening rates were \$4.86½ for long and \$4.88½ for short. There was an advance on the 3d to \$4.87 for the former and \$4.89 for the latter, but on the 6th the market was unsettled by active money, and on the following day there was a fall to \$4.85 for sixty-day and \$4.87 for sight, rates subsequently reacting 1½ cent per pound sterling for both. On the 18th and 14th the market was again unsettled by active money and by liberal offerings of loan bills, but when money grew easier and the supply of drafts was absorbed there was a recovery, and the market closed at \$4.87 for sixty-day and \$4.89 for sight. Gold shipments were \$3,300,000. In April the market was strong throughout the entire month. The opening rates were \$4.87 for sixty-day and \$4.89 for sight, and they remained unchanged until the 17th, when there was an advance of half a cent per pound sterling, and on the 20th there came a further rise to \$4.88½ for long and \$4.90½ for short, caused by reports that the Secretary of the Treasury would refuse to redeem Treasury notes of 1890 with gold. This caused an urgent demand for exchange, and much excitement prevailed until the uncertainty regarding the policy of the Secretary was set at rest by the semiofficial declaration by the President that the parity between gold and silver obligations of the Treasury would be maintained, whereupon there was a sharp fall in exchange to \$4.86 for sixty-day and \$4.89½ for sight, and the rates at the close of the month were \$4.86 to \$4.87½ for the former and \$4.89 to \$4.89½ for the latter. Gold shipments for the month amounted to £17,290,000. In May liberal offerings of bills against outgoing securities brought about a fall, on the 3d, from \$4.86½ for long and \$4.89½ for short at the opening to \$4.85½ for the former and \$4.88½ for the latter, but these drafts were promptly absorbed, and then came a gradual advance to \$4.87 for sixty-day and \$4.90½ for sight by the close of the month. Gold shipments to Europe were \$13,250,000. Early in June the market was quiet at \$4.87 to \$4.87½ for sixty-day and \$4.90 to \$4.90½ for sight until the 9th, when it was unsettled by easier discounts in London

and dearer money in New York, and there was a decline to \$4.86 for long and \$4.88 for short. On the 16th offerings of loan bills brought about a fall to \$4.84½ for sixty-day and \$4.88½ for sight, and on the 21st the market was demoralized by stringency in money, and liberal offerings of loan bills and rates fell to \$4.82½ for long and \$4.84½ for short, the lowest since Dec. 28, 1891. It was then announced that \$500,000 gold had been bought in London for shipment to New York, and on the following day rates sharply reacted to \$4.84 for long and \$4.86 for short. There was another unsettling fall on the 28th and 29th in consequence of active money, and the rates at the close of the month were \$4.83 for sixty-day and \$4.84 to \$4.85 for sight. Exports of gold to Europe were \$9,000,000, but none was sent after the 7th. The arrivals of gold from Europe were \$500,000 on the 80th. In July exchange was firm early in the month at \$4.83½ to \$4.84 for long and \$4.85½ to \$4.86 for short in consequence of a demand to remit for July interest and dividends, but the tone grew easier when this inquiry was satisfied, and rates gradually fell to \$4.83 to \$4.83½ for sixty-day and \$4.85 to \$4.85½ for sight, so remaining until the 26th, when a pressure of security bills and active money forced rates to \$4.81 for long and \$4.82 for short, although some bankers posted at the same time \$4.83 for the former and \$4.84 for the latter. Rates at the close were \$4.81 to \$4.81½ for long and \$4.84½ to \$4.85 for short. The arrivals of gold from Europe during the month were \$2,285,500. In August exchange opened at the rates ruling at the close of July, and the market was in an abnormal condition during the entire month, affected by the premium in currency upon gold in transit and to arrive, and rates moved between \$4.81 and \$4.84½ for long and \$4.85 and \$4.89½ for short. The premium for gold enabled bankers to buy the metal in London, remitting exchange therefor, and sell it while in transit or on arrival, and make a profit on the transaction. In this way gold to the amount of \$40,921,665 was imported during the month from Europe. With the close of August the premium on gold disappeared, and at the opening of September exchange resumed a normal condition, but the delay in action upon the silver repeal bill in the Senate prevented the market from feeling the full effect of the improved foreign trade conditions. The movement of cotton, which had been delayed by a late season and by financial stringency, was moderately free, but the derangement in the currency situation prevented bankers from dealing extensively in futures, and consequently the market was dependent upon offerings of bills against actual shipments of the staple. Operators in grain in Liverpool, after obtaining pretty full supplies, traded in the markets in such a way as to limit exports, buying grain for shipment and selling it before it reached the seaboard, repeating the operation as long as it could be made profitable. The uncertainty regarding the outcome of the silver repeal bill in the Senate kept Europeans out of the market for American securities, and the mercantile demand for remittance and settlement of credits and the bankers' inquiry for bills to cover those previously sold, in the expectation of being

covered by the shipment of staples, tended to absorb offerings as fast as they were made, and thus the market for exchange was kept generally firm. The opening rates were \$4.83 to \$4.88½ for sixty-day and \$4.86½ to \$4.87½ for sight, and there was no particular change until the third week, when in consequence of a demand for mercantile settlements there was an advance to \$4.87 for the former and \$4.89 for the latter, but by the end of the month rates declined to \$4.84½ to \$4.85 for sixty-day and \$4.87½ to \$4.88 for sight. The Bank of England rate of discount was reduced during the month from 5 to 3½ per cent. Gold to the amount of \$3,712,449 came from Europe, chiefly in the first week. The market was lower in October, influenced by a liberal supply of cotton bills, and by a lighter demand for remittance. The rates at the opening were \$4.86 for sixty-day and \$4.88 for sight. There was a decline to \$4.83½ for the former and \$4.85½ for the latter by the 10th, when there came a reaction due to the delay of the Senate in acting upon the repeal bill, but soon after rates declined, and by the 27th \$4.81 for long and \$4.84 for short were recorded, and then \$500,000 gold was ordered out from London, followed by the engagement of \$1,000,000 more. An advance in open market discount rates in London and selling of stock for European account caused a reaction in the rates to \$4.82 for sixty-day and \$4.85 for sight by the close of the month. In November the market gradually grew stronger, influenced by very cheap money in New York, which induced purchases of long sterling for investment, and bankers refrained from drawing except for current needs. The export movement of cotton was comparatively light, and consequently the market was kept bare of bills and exceedingly narrow and sensitive. Toward the end of the month a demand for mercantile remittances and for bankers' settlements carried rates up to \$4.84½ for sixty-day and \$4.87½ for sight. Gold arrivals were \$3,400,000, but these came early in the month. Influenced by a demand for investment, induced by the extremely low rates for money, and also by purchases to anticipate maturing settlements, the market grew stronger early in December, and sterling advanced to \$4.86 for sixty-day, and \$4.88½ for sight. As rates for the latter showed a slight profit for exports of gold, foreign bankers shipped \$2,200,000 of the metal to Germany, where discounts were high, but this movement ceased after the middle of the month. When the inquiry for remittance for January interest was satisfied, the exchange market grew easier, and rates closed at \$4.85 to \$4.85½ for sixty-day and \$4.87½ to \$4.88 for sight.

Manufacturing Industries.—The consumption of cotton in the United States for the year ending Aug. 31 was estimated by the "Chronicle" at 2,683,701 bales, against 2,706,471 for the previous year. Cotton spinning was mainly affected by the financial depression during the last half of the year. The Fall River companies, on a capital of \$21,458,000, paid average dividends of 7.95 per cent. for the calendar year 1893, against 7.52 per cent. in 1892, but in the last six months of 1893 many mills were closed for part of the time and dividends were probably not paid from earnings. The wool and woolen trade gave

promise of good business at the beginning of the year, but the financial crisis had a depressing effect, and in the summer many mills were shut down, while in the fall proposed tariff changes had an unsettling influence, and the trade in goods and raw material was discouraging and prices were near the lowest point. Production of iron in the first six months of 1893 was very near the large total of 1892, and the output of pig iron for the first half of the year was 5,110,468 net tons, against 5,342,045 in the same period of 1892. But in the remaining six months the iron industry suffered extraordinary depression, the number of furnaces in blast decreasing from 251, May 1, with a weekly capacity of 181,551 tons, to 114, Oct. 1, with a capacity of 73,895 tons. After this date there was some improvement, and on Dec. 1 the active furnaces increased to 120, with a weekly capacity of 99,379 tons. There was a good business in anthracite coal, but the petroleum product decreased.

The record of business failures shows that the year 1893 was the most disastrous ever experienced, especially to the industries of the country. The total does not include bank or railroad failures, embracing only mercantile suspensions. These were 16,115, involving \$346,779,869 liabilities, against 10,344, involving \$114,044,167, in 1892. The average of losses was \$23,320, against \$22,869 in 1878, when the 10,478 failures involved an aggregate of \$234,383,132. Even in the first quarter of the year the liabilities and the average exceeded the figures for every quarter of 1892, and the second quarter of 1893 was the most disastrous. The number of national, State, and savings banks and private bankers failed was 613, and the Comptroller of the Currency reports that 158 national banks suspended, of which, however, 86 subsequently resumed. Of the 200 State banks which failed, only 48 resumed; and of 202 private bankers who suspended, only 30 had resumed at the end of the year.

Money.—The extremes for money on call at the New York Stock Exchange during 1893 were 72 and ¼ of 1 per cent. The highest rate was recorded June 27, partly the result of manipulation aided by the strained financial situation. Concurrently with the action of the New York savings banks in requiring notice from depositors of an intention to withdraw their deposits, there arose a premium upon all kinds of currency, gold and silver as well as paper, which amounted for a short time to as much as 2 per cent. The premium on gold in currency greatly facilitated the import of the metal from Europe during August, and the bankers were aided by the issue of Clearing House loan certificates by the associated banks, securities being deposited by the bankers with their respective banks, which took out certificates against the collateral and loaned the money for a fixed period at an agreed-upon rate. On the arrival of the gold the loans were repaid. The first issue of these Clearing House loan certificates was made June 17, when \$2,550,000 were issued. The largest amount issued was \$41,490,000, and the greatest outstanding at any time was \$38,280,000, Aug. 29. After Sept. 6 there came a gradual reduction to \$24,745,000 by Sept. 30, and cancellations grew rapid during October. The last certificate

was canceled Nov. 1. The Boston, Pittsburg, Philadelphia, and some Southern clearing houses also issued certificates in moderate amounts, but though the Chicago banks drew heavily upon New York, the Clearing House of that city persistently refused to issue certificates. The surplus reserve of the New York banks, Jan. 7, was \$8,942,450, and on the 28th it was \$23,143,300. Then there was a gradual fall to \$4,643,275, March 1, followed by a rise to \$25,439,925, May 27. From that point the fall was comparatively rapid to \$16,545,375 deficiency, Aug. 12, making a loss of \$41,985,300 in eleven weeks. By Sept. 9 the surplus was \$2,966,375, influenced by a return flow of currency from the interior and by imports of gold from Europe, and on Oct. 21 the surplus was \$42,640,775, a gain of \$59,186,150 in reserve compared with the low point on Aug. 12, a period of ten weeks, and this was mainly the result of receipts of currency from the interior and of large payments in gold by the Sub-Treasury of debit balances at the Clearing House, which together increased the cash holdings of the banks by \$71,557,000, while the deposits were augmented during this period only \$49,465,400, but loans were reduced from \$411,795,700, Aug. 12, to \$392,145,600, Sept. 23, and it was not until the retirement of loan certificates became rapid that loans were increased. The surplus reserve of the banks was steadily augmented during the last quarter of the year, and at the close it was \$80,815,150.

In January money on call opened at 7 per cent., gradually falling to 2 by the 21st, and it closed at 2½. Time money was in fair demand at 5 per cent. early in the month, but it was freely offered at 4 for thirty to sixty days by the 15th. Indorsed commercial paper ruled at 5¼ to 5½ per cent. at the beginning and at 4½ to 5 at the end of January. Early in February the New York and Boston banks made liberal exchanges of gold at the sub-treasuries in those cities for legal-tender notes, the object being to enable the Treasury to meet the drain of gold to Europe without encroaching upon the \$100,000,000 of reserve, and about \$8,000,000 gold was turned over to the Treasury by the New York banks alone. Money on call at the Stock Exchange loaned at 2 per cent. early in the month, irregularly advancing to 12 by the 20th in consequence of apprehensions of trouble arising from the refusal of the Treasury Department to issue bonds with which to procure gold for the reserve fund, but by the end of the month the rate fell to 3. Time money on stock collateral advanced from 3¼ to 4 per cent. for thirty to sixty days to 6 for all dates by the close, and lenders discriminated against industrial securities. The city banks were out of the market for commercial paper during nearly the entire month, and rates were 5 to 5½ per cent. for indorsed names. In March money on call was active, loaning at 12 per cent. on the 8d and at 60 on the 18th, in consequence of a demand for currency from the interior banks, who were fortifying themselves against a possible crisis. Then came a supply from the proceeds of exchange loan bills, and a return of some money from the West and from parties who had looked it up for speculative purposes, and on the 21st loans were made as low as 1½ per cent. There was a more confident feeling resulting

from an advance in the Treasury net gold from \$100,982,410 on the 9th to \$107,109,963 by the 20th. On the 30th there was a rise in call money to 25 per cent., due to calling of loans preparatory to the April settlements. After the middle of the month time loans were 6 per cent. for all dates, and indorsed commercial paper was nominally 6 per cent., with little doing. There was a very close approach to a currency crisis in April. Gold moved to Europe in moderately large amounts, reducing the net gold in the Treasury, and on the 17th it was announced that this balance was \$100,040,000. On the afternoon of that day there was a rumor that the Secretary of the Treasury had decided to regard the reserve of \$100,000,000 as exclusively for the redemption of legal tenders, and that when this reserve was encroached upon the option under the law of July 14, 1890, of paying silver for Treasury notes issued by virtue of that act, would be exercised. The Secretary had on the 15th directed the suspension of the issue of gold certificates, and foreign bankers who were under engagement to ship gold were apprehensive that when they wanted the metal it would be refused unless they presented gold notes or legal tenders. Exchange at once advanced to above the normal gold-exporting point, and bankers arranged to ship gold on the 24th and 25th, and Canadian bankers began to withdraw their balances. All the markets were excited until, on presentation by a foreign banker of Treasury notes of 1890 and his receipt of gold therefor, it was shown that there had been no change in the department's policy, and it was asserted that no change would be made. This was confirmed on the 24th by a statement by the President that the parity between gold and silver obligations would be maintained as contemplated by the act of July 14, 1890. The excitement then subsided, and confidence was fully restored on the following day. The rate for money on call was easy, at an average of 4 per cent. in April until the 21st, when there was an advance to 15 because of withdrawals of gold for export, but it fell to 5 on the 22d, reacting to 12 on the 24th, and closing at 8. Quotations for time loans were 5¼ to 6 per cent. for all dates, and commercial paper was nominally 6 per cent., and there was little disposition to buy, Eastern banks being affected by failures in Minnesota and at Nashville. Early in May money on call was active, and on the 4th it was bid up to 20 per cent., falling immediately to 6. On the 5th there was an advance to 40, the movement being affected by the disturbed condition of the stock market, due to shifting of loans and discrimination against certain collateral. Toward the middle of the month call money grew easier, because of a lighter demand, resulting from the large short interest in stocks and liquidations by commission houses, and the rate fell to 1 per cent. on the 11th. There was no special feature in this branch of the market for the remainder of the month, although failures of banks and mercantile houses throughout the country were frequent and important. Time contracts on stock collateral were in good demand at 6 per cent., and in many cases repayment in gold was stipulated. The business in commercial paper was almost stagnant, and quotations were 6 to 7

per cent. for the best double-named paper. The supply was large, and in some cases mercantile borrowers found difficulty in obtaining accommodation at their banks. The failures throughout the country made buyers of paper very cautious, and the banks, while disposed to extend all possible accommodation, were forced to pursue a very conservative course. The demands upon the banks of this city from their correspondents in the interior for rediscounts was quite noticeable at the end of May, and it grew urgent early in June, resulting in a material reduction in the bank reserves. Consequently accommodations to the regular customers of the institutions had to be restricted, commercial paper ruled at high rates, and there was more or less distress among merchants. Bank and mercantile failures throughout the country grew more numerous, and the stringency in money was felt in every city in the country, some banks hoarding their funds, capitalists refusing to lend, and general distrust prevailing. The New York, Boston, Baltimore, Philadelphia, and New Orleans clearing houses issued loan certificates for the purpose of relieving the stringency, but this action only partially restored confidence among the depositors of the banks in those cities. The rate for money on call at the New York Stock Exchange at the beginning of the month was from 2 to 3 per cent. On the 9th there was an advance to 12, in consequence of large shipments of currency to the West, and on the 15th the rate moved up to 25 per cent. Then came a fall to 5, and the market was only moderately active until the 27th, when money loaned at 72 per cent., because of the panic and general demoralization on the news of the action of the Indian Government in closing the mints of India to the public coinage of silver. Early in the month very choice time loans on stock collateral were made at $4\frac{1}{2}$ to 5 per cent., but soon after 6 per cent. was demanded for all dates on the best security. The business in commercial paper was almost stagnant, and the few transactions made were on the basis of 7 per cent. for the best double names. Money on call loaned at 25 and at 3 per cent. during the first week of July, averaging about 9; in the second week the range was from 20 to 3, averaging 6; in the third week loans were made at 7 and at 1; and in the last week at 72 and 1, the high rate then being due to the urgent demand for currency from Western cities, and particularly Chicago, where the rate of exchange on New York was as low as \$10 per \$1,000 discount. The drain of currency was caused by the general closing of mines in the silver-producing States, bringing about great depression in that section of the country, and failures of banks in Colorado, Idaho, and elsewhere in the West because of inability to realize upon ample assets. A material reduction in New York bank reserves created alarm throughout the country, balances belonging to interior banks were called home, money was hoarded, and confidence was completely unsettled. After the middle of the month money grew easier on call, chiefly because many lenders, who would under other circumstances have employed it on time, were unwilling to place it for fixed periods, and they offered it in the call-loan branch of the

market. The demand for time loans was urgent at $\frac{1}{2}$ of 1 per cent. commission and interest for thirty days, and $\frac{1}{4}$ of 1 per cent. and interest for sixty days on undoubted collateral, and some merchants, who could not sell their paper at any rate, negotiated time loans at these high figures, for the purpose of obtaining funds necessary for their business. A few private lenders bought commercial paper at from 8 to 15 per cent. for the best names. On the 31st of July the savings banks of this city gave notice that they would require from thirty to sixty days' notice from depositors intending to withdraw their deposits. This caused a demand for currency of all kinds, and as soon as it commanded a premium it was hoarded to a large extent. Banks had difficulty in obtaining currency for pay rolls, some being obliged to buy it from brokers for their customers; in a few cases institutions refused payment of checks where there was good evidence that the currency was wanted for hoarding or sale; bank customers were requested to draw their checks payable through the Clearing House; the demand for notes was urgent in all the principal cities, and the currency famine extended to gold. Brokers paid as high as 5 per cent. for paper currency, and from 1 to 2 per cent. for either silver dollars or gold. The foreign bankers took advantage of this premium upon gold to import the metal from Europe and Canada; the Treasury Department brought \$7,000,000 of gold coin by express from California, in order to supply the demand at this center, the Sub-Treasury being entirely drained of notes, and the currency famine continued until toward the end of the month, when some relief was afforded by the arrivals of gold from Europe. Bank failures, suspensions of mercantile houses, and closing of cotton, iron, and other mills were of daily occurrence. Early in the month the Chicago money market was disturbed by the collapse of the pork and lard deals, and by the sharp fall in wheat. The suspensions of national banks reported by the Comptroller of the Currency for the year to Aug. 28 numbered 155, and of State and private banks 580. Although money on call was in fairly good supply, with loans at 10 and at 2 per cent., averaging about 5, at no time could contracts for money for fixed periods be negotiated at less than 6 per cent., and a commission of 1 per cent. for the shortest dates, and 3 per cent. commission and interest was demanded for four months. Commercial paper could not be sold except at from 12 to 18 per cent. for the best names. The action of the House of Representatives on the 28th in passing the Wilson bill for the repeal of the silver-purchase law, by a vote of 239 to 110, had a marked influence upon the situation in September. Money on call loaned at 7 and at 2 per cent. during the month. Time loans were firm at $\frac{1}{2}$ to $\frac{1}{4}$ of 1 per cent. commission and interest until after the middle of the month, when they were freely offered at 5 to 6 per cent., although prime collateral was required. Commercial paper was 8 to 12 per cent. for double names until the 15th, when the rate fell to 7 and 8 per cent. After the House of Representatives passed the bill for the repeal of the silver-purchase law the measure was sent to the Senate for concurrence, but the Finance Committee of that body

had already formulated a new bill having the same object, and in the last week of August debate upon this measure began. The outlook for its passage was encouraging until Sept. 20, when it became evident that a few Senators, notably those from silver-producing States and from Kansas, the Dakotas, and Nebraska, were determined to obstruct the progress of the repeal measure, and it was feared that it might be defeated. This caused an advance in exchange, a policy of extreme conservatism by bank officials, a depressed feeling among manufacturers and merchants, and a general disposition to wait for the action of the Senate; but the month passed without much progress being made, although at the end of September it was hoped that the advocates of repeal would soon be able to force a vote upon the bill. The debate on the measure was continued almost without interruption throughout October, with a resort by Senators from the silver States to filibustering after the 10th, until the 21st, when an agreement for a compromise was made, but this was unsatisfactory to the Administration and it was abandoned. Efforts for unconditional repeal were renewed, and on the 28th voting on the amendments began. The repeal bill was passed Oct. 30 by the Senate and Nov. 1 by the House, and it became a law the same evening. Money on call was easy at 1 to 3 per cent. throughout October. Time loans were in abundant supply after the middle of the month at $4\frac{1}{2}$ per cent. for thirty days on good mixed collateral, but the demand was light. Commercial paper of really first class was scarce, but the demand was good, and gradually rates of indorsed bills fell to $5\frac{1}{2}$ per cent. by the close of the month. Early in November the supply of money was so abundant that loans on call were made at an average of $1\frac{1}{2}$ per cent., but after the first week transactions were generally at 1 to $1\frac{1}{2}$ per cent. Time contracts were eagerly sought, but commission houses were indisposed to borrow, and rates fell from 3

to $3\frac{1}{2}$ per cent. for thirty days; 4 to $4\frac{1}{2}$ for sixty days to four months; and $4\frac{1}{2}$ to $5\frac{1}{2}$ for five to six months; to 2 per cent. for thirty to sixty days; $2\frac{1}{2}$ to 3 for ninety days to four months; and $3\frac{1}{2}$ to 4 for five to six months by the end of November. Commercial paper of first class was difficult to obtain, and the demand for good names was urgent, resulting in a fall in rates to $3\frac{1}{2}$ to 4 per cent. for indorsed names against 5 to $5\frac{1}{2}$ early in the month. The surplus reserve of the banks was unprecedentedly large, amounting to \$70,835,175 by the 25th; the New York institutions were overburdened with deposits of interior banks upon which they were required to pay interest; merchants sought to employ their idle capital in loans upon stock collateral and in purchases of long sterling for investment, and many importers anticipated settlements of obligations due abroad at the end of the year. The gold in the banks increased beyond the capacity of the vaults, and a special place of deposit was secured, and Clearing House gold certificates were issued. In December money on call ranged between $1\frac{1}{2}$ and $\frac{3}{4}$ of 1 per cent., the lowest since 1884, when transactions were recorded at $\frac{1}{2}$ of 1 per cent. Time money was in abundant supply, with an insignificant demand, by reason of the limited requirements of the commission houses, whose wants were satisfied in the call-loan branch of the market, and quotations were 2 per cent. for thirty to sixty days; $2\frac{1}{2}$ for ninety days to 4 months, and $3\frac{1}{2}$ to 4 for five to six months. There was a good inquiry for the best grades of commercial paper, but offerings were small, and prime short indorsed bills receivable were quoted at $3\frac{1}{2}$ to $3\frac{3}{4}$ per cent.

The condition of the New York Clearing House banks, the rates of interest or premium for money, exchange, and silver, and the prices of United States bonds, on Jan. 6, 1894, compared with the same items for the preceding two years, are as follow:

ITEMS.	1892.	1893.	1894.
NEW YORK CITY BANKS:			
Loans and discounts.....	\$498,616,400	\$441,288,700	\$418,807,600

October 7.....	892,494,450	80,786,200	14,395,600	890,980,400	41,079,400
December 31.....	417,606,900	104,816,400	18,111,900	506,437,800	101,108,300

Railroads.—Early in the year the principal railroads of the country, particularly those centering at Chicago, completed their preparations for the World's Fair passenger traffic and agreed upon popular rates which, it was hoped, would prove remunerative. They were subsequently threatened with strikes of employees, but demands for an increase of wages were resisted, and managers were encouraged by the legal proceedings taken at the instance of the Toledo, Ann Arbor, and North Michigan officials, who successfully appealed to the United States courts for protection against strikers on that road who refused to handle cars of connecting lines. Freight traffic was disappointingly small during the first quarter of the year, and net earnings

and Northern Pacific, the Union Pacific, the Detroit, Bay City and Alpena, and the Fort Worth and Denver, in October; for the Toledo and Ohio Central extension and the Lake Erie, Alliance and Southern, in November; and for the Atchison, Topeka and Santa Fé, the New York and New England, the Union Pacific, Denver and Gulf, the Utah Central, and the Chesapeake and Ohio Southwestern, in December. The mileage of roads in receivers' hands at the end of the year was 25,375, nearly one seventh of all the lines in the United States. The indebtedness of these roads was \$1,212,217,033, and the capital, \$674,412,487.

The following shows gross and net earnings of the principal trunk lines:

ROADS.	1887-'88.	1888-'89.	1889-'90.	1890-'91.	1891-'92.	1892-'93.
PENNSYLVANIA:

Net earnings.....	6,152,980	6,492,158	7,445,226	7,452,163	7,444,403	7,172,525

decreased because of the low rates and augmented expenses. The World's Fair passenger business did not reach expectations until after midsummer, when the volume became large, but rates were so low as to be only fairly remunerative, and about the only road which had a profitable season on this account was the Illinois Central, which enjoyed extraordinary facilities for handling the traffic at Chicago. The depression in business resulting from the panic severely affected railroad lines in all parts of the country during the summer. After the World's Fair closed, Oct. 30, Western roads showed marked decreases in earnings, and the business of the year for nearly all of them was very unsatisfactory. At the East about the only interest which was fairly prosperous was that of anthracite coal, and the coal-carrying companies were not materially affected by the business depression. A strike on the Lehigh Valley, in November, had a temporarily paralyzing effect, compelling the passing of the dividend. The railroad suspensions of the year were numerous and important, beginning with the Reading, Feb. 20. This was followed by the appointment of receivers for the Western New York and Pennsylvania and the Toledo, Ann Arbor and North Michigan, in April; for the Toledo, St. Louis and Kansas City, May 19; for the Little Rock and Memphis, the Manitoba and Northwestern, the St. Louis, Chicago and St. Paul, and the Seattle, Lake Shore and Eastern, in June; for the Pittsburg, Akron and Western, the Northern Pacific, the Philadelphia and Reading, and New England, in August; for the Evansville and Terre Haute, the Cleveland, Canton and Southern, the Chicago, Peoria and St. Louis, and the Wisconsin Central, in September; for the Union Pacific, the branch lines of the Northern Pacific, the Kentucky and Indiana, the Sioux City and Northern, the Chicago

FINE ARTS IN 1892-'93. Under this title are treated the principal art events of the two years ending with December, 1893, including especially the great exhibitions in Europe and the United States, sales and acquisitions of works of art, and erection of public statues and monuments.

Paris: Salon of the Champs-Élysées, 1892.—The exhibition of the Société des Artistes Français, in the Palais de l'Industrie (May 1 to June 30), comprised 3,999 numbers, classified as follows: Paintings, 1,718; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 432; sculptures, 999; engraving on medals and precious stones, 79; architecture, 212; engraving and lithography, 509.

Awards in 1892.—Section of painting: Medal of honor, Albert Maignan, for his "Carpeaux." First-class medals: Eugène Auguste François Deully, Albert Lynch. Second-class medals: Frank Bramley, Pierre Vauthier, Gaylord S. Truesdel, Édouard Vimont, Frédéric Humbert, Théophile Decanis, Émile Merlot, Joseph Bouchor, José Salgado, Clement Quinton, Albert Rigolot, Jean Jacques Scherrer. Third-class medals: Henri Foreau, Paul Thomas, John Henry Lorimer, Antoine Grivolas, Albert Bréauté, Maxime Dastugue, Charles Amable Lenoir, Mme. Hortense Richard, Auguste Zwiler, Alfred Rouby, Charles Lebayle, Léon Gagneau, Gustaf Théodor Wallen, Étienne Joannon-Navier, Henri Paul Mottez, Marius Perret, Louis Galliac, George William Joy, Mme. Vilma Parlaghy, Émile Charles-Bitte, Constantin Le Roux, Mlle. Joséphine Houssay, Antoine Calbet, Octave Guillonnet, Léon Brunin, Charles Kuwasseg, J. Ernest Breun, Francis Mathias.

Section of sculpture: No medal of honor awarded. First-class medals: Théophile Barrau, Félix Soules, Honoré Icard. Second-class

medals: Hippolyte Peyrol, Henry Vidal, Jacques Perrin, Jean Ossaye Mombur, Joseph Vacslav Myslbek, Frederic Charles Vernon. Third-class medals: Eugène Thivier, Auguste Seysses, Henri Greber, Paul Capellaro, Bénédicte Rougelet, Ferdinand Faivre, Édouard Drouot, Louis Convers, Paul Loiseau-Rousseau, Daniel Chester French.

Section of engraving: Medal of honor, Paul Maurou. First-class medal: Auguste Boulard. Second-class medal: Jean Patricot, Léon Louis Chapon, Gustave Fuchs, Albert Ardail, Hippolyte Fauchon. Third-class medals: Émile Jean Sulpis, Mlle. Juliette Leluc, Jules Payrau, Henri Dillon, Abel Mignon, Léon Perrichon *fils* , Maurice Deville.

Section of architecture: Medal of honor, Louis Cordonnier. First-class medals: Charles Nicolas Normand, Hector Expony. Second-class medals: Georges Chédanne, Pierre Lafargue, Paul Hannotin, Marc Galdà. Third-class medals: Albert Tissandier, Charles Nizet, Lucien Tropey-Bailly, Hippolyte Boussac, Henri Loyan, Nicolas Escalier.

One of the pictures of the Salon of 1892 most talked about was "Les Conquérants" of Pierre Fritel, an immense canvas, occupying the place held in 1891 by Roehgrosse's "Morte de Babylon." Through the Valley of the Shadow of Death, whose limits are obscured in darkness, advance, hollow-eyed and remorseful, the conquerors of all ages, marching in close ranks between a double row of corpses, stripped and rigid, lying packed close together with their feet toward the procession. The *cortège* is led by Julius Cæsar, mounted and laurel-crowned, with Rameses on his right and Alexander on his left, both in chariots. Behind ride Napoleon, Charlemagne, Attila, Tamerlane, Hannibal, etc., each conqueror in the costume of his time, the long line stretching backward amid a forest of military weapons and standards until lost in the obscurity.

Among the military pictures Detaille's "La Sortie de la Garnison de Huningue, 20 Août, 1815," is remarkable. Gen. Barbanègre, who had defended the place with 200 men against an Austrian army of 30,000 under the Archduke John, is represented as marching out with the honors of war, at the head of a handful of tattered soldiers, who defile through a double hedge of applauding Austrians. In the background are the citadel and the ruined ramparts.

Another large canvas is Albert Maignan's "Carpeaux," which shows the great sculptor seated dying in his studio, surrounded by the finest of his creations, who have left the marble for the semblance of life to console his last moments. The figures from his principal works—the fountain of the Observatoire, the "Danse" of the opera house, the "Flore" of the Tuileries—are all around him, one of the nymphs bending over to kiss him farewell.

Henri Martin's "L'Homme entre le Vice et la Vertu" represents a man, apparently in a state of ecstasy, holding out his hand to a virgin veiled in white who glides before him robed in light, and turning his back upon a troupe of girls attired so as to exhibit their forms, who represent the Vices.

The central incident of the immense picture "Entrée de Louis XI à Paris, 30 Août, 1481," by

Francis Tattetgrain, is best described by the quotation on the frame from the "Chroniques de Jehan de Troyes et de du Clerc": "And at this point the king stopped to gaze at the fountain of Ponceau Saint-Denys, out of which rose three fair women representing naked sirens," and singing to him motets and pastorals." Louis; seated upon his horse under a canopy borne by four men, is listening to the sirens, singing on the right, while the great crowd of spectators is pushed back by men at arms. The windows and the roofs are filled with people looking down on the pageant.

Among the noteworthy portraits of the year are the "Renan" of Léon Bonnat, the "Leo XIII" of Théobald Chartran, and the "Gladstone" of John McLure Hamilton.

Most remarkable among the sculptures is Gérôme's life-size "Bellone," the limbs of which are of solid ivory, and the torso, head, and draperies of colored gilt and jeweled bronze. The "Goddess of War" stands tiptoe upon the world, with glaring eyes and wide-open mouth, as if uttering a terrible cry, waving aloft her falchion and buckler. Circled about her feet is a hideous hooded snake, with its mantle expanded, rising and hissing. The marble groups "Matho et Salammbô," by Théophile Barrau, "Les Droits de l'Homme," by Honoré Icard, and "Enlèvement d'Iphigénie," by Félix Soulés, were awarded first-class medals.

Paris: Salon of the Champ de Mars, 1892.—The third annual exhibition of the Société Nationale des Beaux Arts (May 10 to July 10), comprised 1,770 numbers, of which 1,086 were paintings.

Puvis de Chavannes exhibited a great decorative canvas, "L'Hiver," a pendant to the "L'Été" of last year, now in the Hôtel de Ville. Carolus-Duran was well represented by several characteristic portraits, and Cazin by eight landscapes and by two decorative panels for the apartment of the rector of the new Sorbonne. Jean Béraud's principal contribution, "La Déescent de Croix," is one of the most remarkable of his remarkable productions. The body of the Saviour, just lifted from the cross, is received into the winding sheet by a group of persons in the costume of Parisians of 1892. Hard by are a workman in a blue blouse, a few artisans, and some street boys, while at the left another workman shakes his fist at the city below. Of American artists, Whistler was represented by six works—nocturnes and harmonies; Alexander Harrison, by his "Baigneuses," nude women and girls disporting on the borders of the sea, and four other pictures; and J. S. Sargent by "Étude de Femme" and "Carmencita," the latter exhibited in 1891 at the Royal Academy, and now in the Luxembourg.

London: Royal Academy, 1892.—The twenty-third winter exhibition of works by the old masters represented chiefly the English, Italian, Flemish, Dutch, and German schools. Among the principal attractions were the Italian pictures from the Dudley Gallery, sold later in the season.

The one hundred and twenty-fourth (1892) annual exhibition was up to the average in merit, though some notable names were unrepresented. Sir Frederick Leighton's principal

contributions were: "And the Sea gave up its Dead" and "The Garden of the Hesperides." The former picture, which has been acquired by Henry Tate for the new Gallery of British Art, represents on a large upright canvas part of the drama of the Resurrection, corpses emerging from the waves. The latter shows the three fair daughters of Hesperus, attired in semidiaphanous robes of rose, amber, and green respectively, reclining at the foot of the Hesperian tree, whose branches are laden with gold. The dragon guard has wound its length around the trunk of the tree, under the boughs of which is seen the garden—a beautiful Greek landscape.

Orchardson's "St. Helena, 1818; Napoleon dictating to Count Las Casas the Account of his Campaigns" was exhibited in the same gallery. The Emperor is standing with feet apart, and the floor is strewn with maps and plans.

Alma-Tadema's "The Kiss" represents a terrace of white marble, approached from the side of a bay or lake by a flight of steps, and ornamented on its topmost balustrade by a splendid bronze tripod. In the waves and on the beach are seen girls and children bathers, while up and down the steps move other women and children. On the terrace a mother stoops to kiss a little girl fresh from the bath, accompanied by the balneatrix.

Sir John Millais's "Blow, blow, thou Winter Wind!" depicts a winter landscape with a road passing along a sloping bank flanked by trees. A woman in the foreground huddling a baby in her shawl has evidently been deserted by the man moving away in the mid-distance—more unkind than the winter wind itself.

In Mr. Watts's "She shall be called Woman" Mother Eve is depicted as a colossal nude figure, a type of eternal spring, standing erect, with both hands clenched, looking up at the firmament in a flood of golden light.

Mr. Hook exhibited two Cornish coast scenes, "Nereids" and "The Sea Mews' Nest." Henry Moore also sent two sea pieces, "Perfect Weather for a Cruise" and "Machrihanish Bay, Kintyre." Luke Fildes contributed only portraits. George Hitchcock's "The Scarecrow" represents a Dutch peasant girl sitting motionless in a field blazing with scarlet poppies, duly armed to frighten away the birds.

London: New Gallery.—Among the principal pictures at the summer exhibition was Mr. Watts's "Sic Transit," a large, ambitious work, representing in life-size the whole-length shrouded figure of a man recumbent on a bier raised on an altar tomb of stone, and accompanied by insignia of earthly power, pomp, and pleasure, grouped at the foot. Another picture which attracted great attention was the artist's "Portrait of Walter Crane."

Sir John Millais contributed "Sweet Emma Moreland," a vigorous picture of a Scottish beauty, with ruddy complexion and auburn hair, in black hat and skirt and a blue jacket, with a basket of flowers on one arm.

"A Silent Greeting," by Alma-Tadema, represents a Roman lover putting flowers in the lap of his mistress, who has fallen asleep on a marble bench, part of a terrace lying in the shadow of an Italian sky. Another picture, called "Dreaming," comprises the figure of a Roman

leaning on a marble parapet looking down upon gardens and a country landscape. The artist sent also a portrait of Paderewski, full face, in an atmosphere illuminated by bright sunlight.

London: Miscellaneous.—The year 1892 was remarkable for its picture sales and for the prices obtained. In London alone 55 canvases were sold at prices ranging from 1,400 guineas and upward, against 37 in 1891, and 38 in 1890.

At a sale of pictures belonging to the Earl of Dunmore, Mr. Samson Wertheimer, and others, March 19, Rembrandt's "Hendrikje Stoffels" brought £5,250. Among others were: A Watteau, "L'Accord parfait," £2,205 (James sale, 1891, £3,675); Sir J. Reynolds, "Lady Sondes," £4,305; Romney, "Lady Hamilton as a Welsh Girl," £2,205; "Mrs. W. Pitt and Son," £1,155; "Lady Augusta Murray," £3,990.

The collection of the late David Price was sold April 2. Among the best prices obtained were: J. M. W. Turner, "Modern Italy," 1838, £5,460 (Novar sale, 1867, £3,465; Fallows sale, 1868, £2,961; Novar sale, 1878, £5,260); Rosa Bonheur, "Landais Peasants returning Home," 1858, £1,627; "The Alarm," 1866, £1,102; "Changing Pastures," £3,150; "Cattle in the Highlands," £1,785; Meissonier, "Regnard in his Studio," £1,890; J. Linnell, Sr., "Welsh Drovers crossing the Common," 1836, £1,050; "The Haystack," 1875, £630; "Opening the Gate," 1849, £798; "The Timber Wagon, 1852, £3,255; Edwin Long, "Diana or Christ" (replica), £2,625; Sir J. Millais, "Sound of Many Waters," £3,045.

The pictures and drawings of the Messrs. Murrieta, sold April 30 and May 14, brought good prices. Among the highest were: David Cox, "Vale of Clwyd," £4,725; "Reapers returning Home," £1,186; "Going to the Hayfield" (drawing), £1,102; "Barden Tower" (drawing), £1,155; Copley Fielding, "Scottish Landscape" (drawing), 1849, £1,260; Alma-Tadema, "Un Amateur Romain," £1,365; "Etruscan Vase Painters," £477; "Antisteus Labeon," £945; "Un Jongleur," £850; "Patron of Sculpture," £1,470; "Vespasian," £514.

The collection of the late Lord Cheylesmore (H. W. Eaton, M. P.) were sold May 7. Among the most noted works were: Landseer, "Monarch of the Glen," £7,245 (Londesborough sale, 1884, £6,500); "Lady Godiva's Prayer," £945 (Landseer sale, 1874, £3,400); "Lion and Lamb," £997; "The Pretty Horsebreaker," £1,205; "Flood in the Highlands," £1,680; "W. Collins, "Cromer Sands," £2,205 (Gillott sale, 1872, £3,990); T. Faed, "Sunday in the Backwoods," £1,785; P. Delaroche, "Execution of Lady Jane Grey," £1,575.

The collection of the late Earl of Egremont, sold May 21, realized upward of £11,400. Among the pictures were: T. Gainsborough, "Portrait of Charles Frederick Abel," £1,470; Signor Raphael Franco, £882; "Youth in Blue," akin to Duke of Westminster's "Blue Boy," £1,302; Sir J. Reynolds, "Artist's Portrait," 1778, £294; "Mrs. Blake," 1764, £1,050; "Miss Francis Harford," £1,260.

The sale of the collection of the late Frederick R. Leylands, of Woolton Hall, Liverpool, May 28, aroused great interest on account of the excellent examples of Gabriel Rossetti, Burne-

Jones, Whistler, and other modern masters contained in it. It was for Mr. Leylands that Whistler painted the famous Peacock Room. Among the pictures disposed of were: E. Burne-Jones, "Mirror of Venus," £3,570; "Merlin and Vivien," £3,780; "The Seasons" (four water colors), £1,207; "Night and Morning" (pair water colors), £1,417; "Phyllis and Demophoon" (water color), £850; "The Wine of Circe" (water color), £1,417; "Cupid and Psyche," £945; D. G. Rossetti, "Proserpina," £567; "Mnemosyna," £325; "Veronica Veronese," 1873, £1,050; "Sea Spell," £441; "La Pia de Tolomei," £315; "Dis Manibus," £273; "The Salutation of Beatrice," £567; "The Blessed Damozel," £1,029; "Lady Lillith," £525; "Monna Rosa," £462; "The Loving Cup," £861; Sir J. Millais, "Eve of St. Agnes," £2,205; J. M. Whistler, "La Princesse du Pays de Porcelaine," £441. Among works by old masters were: Rembrandt, "Head of a Young Man," £304; Giorgione, "Holy Family," £840; Botticelli, "Virgin and Child," £1,312; "Four Illustrations to the Decameron," £1,865; F. Lippi, "Adoration of Magi," £735.

The collection of the late Earl of Dudley, sold in London, June 28, consisting of 91 canvases, brought a total sum of £101,000. Among the highest prices obtained were the following: Hobbema, "View in Holland," £10,800; "Wooded River Scene," £1,995; "Landscape," £2,415; Raphael, "The Crucifixion" (Fesch collection), £11,130; "La Vierge à la Légende," £3,102; C. Crivelli, "Virgin and Child with Saints," £7,850; F. Mieris, "The Enamored Cavalier," £3,570 (Bredel sale, £4,315; Levy sale, 1876, £3,675); A. Ostade, "Interior of a Kitchen," £2,625 (Schneider sale, 1876, £4,120); "An Interior," £1,470; J. Ostade, "Scheveningen Beach," £1,050; Rembrandt, "St. John preaching in the Wilderness," £2,625; J. Ruysdael, "The Ruin," £1,470 (Bredel sale, £2,310); P. Wouvermans, "Halt of a Sporting Party," £3,675; Early Netherland School, "Shutter of a Triptych," £3,570; A. Cuyp, "Grand Landscape," £1,890; Rubens, "Juno transferring the Eyes of Argus to the Tail of the Peacock," £1,575; "Woody River Scene," £593; Murillo, "La Vieja," £1,890; "St. Anthony of Padua and Infant Christ," £1,215; G. Bellini, "Madonna and Child," £1,155; Bonifacio, "Madonna with Saints," £1,018; Botticelli, "The Nativity," £1,215; Canaletto, "View in Venice with the Colleoni Monument," £2,047; "View on Grand Canal," £2,205; L. di Credi, "Virgin and Child with St. John," £2,520; F. Lippi, "La Simonetta," £1,680; P. Perugino, "Christ and Woman of Samaria," £1,050; Titian, "Mother and Child," £2,520; A. del Sarto, "Pieta," £1,092.

Paris: Salon of the Champs Élysées, 1893.—The exhibition comprised 4,206 numbers, classified as follows: Paintings, 1,828; cartoons, water colors, pastels, miniatures, enamels, porcelain pictures, etc., 659; sculptures, 972; engraving on medals and precious stones, 83; architecture, 164; engraving and lithography, 466; objets d'art, 83.

Awards in 1893—Section of painting: Medal of honor, Ferdinand Roybet, for his "Charles le Téméraire à Nesles." First-class medals, none awarded. Second-class medals: Paul Saïn, Casimir de Pochwalski, Maurice Orange, Tito Lessi,

Camille Dufour, Henri Danger, Gabriel Thurner, Raoul Arus, Paul Buffet, Paul Thomas, Antoine Calbet, Gustave Garaud, Albert Bréauté, Émile Noiret. Third-class medals: Lucien Simonnet, Albert Charpin, Daniel Léon Saubès, George Olivier Desvallières, Maurice Mitreccy, Charles Jules Duvent, Pascal Blanchard, Henry Pinta, Paul Albert Laurens, Jean Enders, Édouard Pail, Albert Charles Wallet, Joaquin Sorolla-Bastida, Pierre de Bengy, Paul Jobert, Émile Maillard, François Morisset, Jules Georges Bon-doux, Georges Washington, Fernand Le Quesne, Ernest Léménorel, Louis de Clermont, Charles Desmarquais, Mario Carl-Rosa, Julien Massé, Auguste Balouzet.

Section of sculpture: Medal of honor awarded to Félix Maurice Charpentier for his marble group, "Les Lutteurs." First-class medals awarded to Raoul François Larche, Jules Jacques Labatut, and Georges Tonnelier (engraving in medals). Second-class medals: Augustin Peénne, Eugène Jean Boverie, Paul Gasq, Georges Ernest Saulo, Henri Amédée Fouques, Louis Holweck, Antonin Larroux, Henri Dubois (engraving in medals). Third-class medals: Emanuel Fontaine, Eugène Depléchin, Georges Bareau, Julien Causé, Louis Durnbauer, Joseph Antoine Bernard, Henri Godet, Jean Balloni, Maurice Bouval, Armand Hildebrand (engraving in precious stones).

Section of engraving: Medal of honor awarded to Alphonse Louis Lamotte (burin). First-class medals: none awarded. Second-class medals: Étienne Corpet, Pierre Alphonse Audebert (lithography), Émile Louis Derbier, Frédéric Godefroy Vintraut, Léon Ruffe (wood). Third-class medals: Jules Leonard, Charles Richard, Étienne David (lithography), Joseph Gilardi (wood), Edmond Adolphe Rudaux, Georges Louis Pélicier (etching), Émile Buland, William Barbotin, Louis Isidore Journot (burin).

Section of architecture: Medal of honor awarded to Alphonse Defrasse for his plan entitled: "Restauration de l'enceinte sacrée d'Epidaure." First-class medal: Émile Camut. Second-class medals: Jules Godefroy, Édouard Bauhain, Antoine Nodet, Paul Normand, Proeper Bobin. Third-class medals: Auguste Rives, Pierre Joanny Bernard, Charles Édouard Naudin, Henri Petit, Paul Hèneux, Gustave Majou, Louis Joseph Yperman.

Among the largest pictures of the year was Munkacsy's "Arpad," an immense work intended for the Palace of the Parliament at Budapest. The scene is at the foot of the Carpathians, where the great plain begins. Arpad, in Asiatic costume and surrounded by his chiefs and warriors, receives the representatives of the indigenous tribes, who bring him, in token of submission, water from the Danube, some hay, and a little of the earth henceforth to take the name of Hungary.

Another immense canvas is Ferdinand Roybet's "Charles le Téméraire à Nesles." Charles the Bold, angered at his defeat before Amiens, took Nesles, June 9, 1472, and gave the town and its inhabitants a prey to his soldiers. The scene is the church of Notre Dame, where the unfortunates who have taken refuge are given over to massacre.

Another large picture without a title, by Henri Camille Danger, illustrates the text of I John iii, 23, "And this is his commandment, that we should love one another." On a great plain, under a cloudy sky, glare the reflections of a fire, with the foreground strewn with naked and bleeding corpses, fragments of arms and standards, and ruins. In the midst, through the devastation, passes the pitiful Christ, veiling his eyes from the indications of human passion and hatred.

Among historical compositions Alma-Tadema's "Roses d'Héliogabale," previously exhibited in London, Georges Rochegrosse's "Pillage d'une Villa gallo-romaine par les Huns," Aimé Morot's "Retraite de St.-Jean d'Acre," and Cormon's "Grenadiers de la Garde à Essling" deserve mention.

Landscape art was well represented by Hubert Herkomer's "Notre Village," Émile Michel's "En Forêt," Alexandre Nozal's "Canal abandonné," and Fernand Quignon's "Les Sainfoins."

Noteworthy among many fine portraits are Léon Bonnat's "Portrait de Mme. B..." (his mother), Benjamin-Constant's "Lord Dufferin," and Marcel Baschet's "Francisque Sarcey."

In sculpture, the marble statue "Caton d'Utique," by Jules Labatut, and the marble group "Le Prairie et le Ruisseau," by Raoul Larche, were awarded first-class medals.

Paris: Salon of the Champ de Mars, 1893.

—The fourth annual exhibition of the Société Nationale des Beaux Arts comprised 1,897 numbers, classified as follow: Paintings, 1,093; designs, etc., 362; sculpture, 136; engraving, 113; objets d'art, 171; architecture, 22.

Noteworthy among the large canvases is Alfred Roll's immense picture "Le Centenaire," designed to perpetuate the ceremony commemorative of the centenary (May 4, 1889) of the meeting of the States-General at Versailles, on which the artist has labored the past three years. The President, M. Carnot, followed by the ministers, Gen. Saussier, and other officers, has stepped down from the tribune and is passing through the crowd, the ranks of the official procession being broken up. This picture is to occupy the place at Versailles left vacant by "Le Sacre" of David, removed to the Louvre.

Puvis de Chavannes's principal exhibit, "Homage de Victor Hugo à la Ville de Paris," is a drawing (in camafeu) of a ceiling intended for the principal staircase of the Hôtel de Ville.

Ary Renan's "Saint Brandan" shows the saint landing, on a beautiful morning, on a desert island, where the sea birds are astonished but not alarmed at their friendly visitor. The missionary holds in one hand a Bible and in the other the anchor of his boat, which he is evidently about to fasten in the grass.

Burne-Jones contributed three pictures, "Persée," "Les Profondeurs de la Mer," and the portrait of a little child; Alexander Harrison, "La Solitude," and 3 marines and 3 studies of the nude; and Julius Gari Melchers "Les Vèvres."

Paris: Miscellaneous.—The pictures in the Luxembourg have been rearranged, and many recent additions hung for the first time. Among the new ones are Meissonier's "L'Attente," Bas-

tien Lepage's "Les Foins," Detaille's "Reddition d'Huningue," Whistler's "Portrait of my Mother," Sargent's "Carmencita," McLure Hamilton's "Portrait of Gladstone," and three drawings by Burne-Jones.

An exhibition of the works of Meissonier (March 6 to April 8) in the Galerie Georges Petit, Rue de Sèze, comprised more than 1,400 numbers, including paintings, water colors, studies, designs, and wax models. The proceeds—50,000 francs—were devoted to several charitable institutions. A second Meissonier exhibition, organized by Madame Meissonier at the École des Beaux-Arts (March 15 to April 25) comprised principally the works of the last twenty years of the master's life.

M. Chauchard, of Paris, whose gallery includes the "Angelus" of J. F. Millet, and many fine Troyons, Corots, Duprés, and other painters of the Barbizon school, has bought nearly the entire Van Praet collection of Brussels. Among the pictures acquired is Millet's "La Bergère," for which he paid 700,000 francs. This work, which ranks with the "Angelus," was exhibited by Millet in the Salon of 1865, and sold to John Wilson, another Belgian collector, for 2,000 francs. Wilson exchanged it for the "Angelus," which he sold in 1891, and now the two have found a common home.

The sale of the studio effects of Meissonier, in Paris, in May, realized a total of 2,216,600 francs; the first part, comprising paintings and painted studies (May 12, 13, and 15), producing 1,741,000 francs, and the second, water colors and designs (May 18, 19, and 20), 475,600 francs. The principal picture, "Le Graveur à l'eau-forte," brought 272,100 francs from M. Bague, a Paris dealer. Among others were "Le Trompette de 1807," 17,500 francs; "Gentilhomme Louis XIII," 35,000; "Portrait de Charles I.," 16,000; "Dragon en vedette," 20,000; "Le Pont de Poissy," 20,000; "Le Maréchal Lannes," 50,000, Marseilles Museum; "Bessières," 50,000, Montpellier Museum; "Pasquale," 33,000; "L'Ordonnance," 31,000; "1806," 66,000; "Le Matin de Castiglione," 25,500; "Un Philosophe," 23,000; "Dragon en vedette," 36,000; "L'Attente," 17,000. Among the water colors, "Le Guide" brought 58,000 francs; "Dragon de l'Armée d'Espagne," 38,000; "Antibes," 14,000; "Dragon en vedette," 16,000; "Le Peintre," 14,000; "Un Soupçon," 13,000.

The Coquelin collection, sold in Paris, May 27, produced in the aggregate about 530,000 francs. Among the highest prices obtained were: Meissonier, "Gentilhomme Louis XIII," 56,000 francs; Daubigny, "Les Marais d'Optevroz," 38,200; Delacroix, "L'Éducation d'Achille," 37,500; Cazin, "Sur la Route," 32,000; "Les Meules," 26,500; "Crépuscule d'Été," 13,000; Troyon, "Un Bœuf," 19,500; J. F. Millet, "Le Semeur" (pastel), 24,000; "Au Moulin" (pastel), 11,200; Alma-Tadema, "Farniente," 25,500; "L'Attente," 15,000; J. Duprez, "Le Ruisseau," 20,000.

London: Royal Academy, 1893.—The twenty-fourth winter exhibition was composed chiefly of portraits and figure pieces of the British school, pictures of the Low Countries, and Spanish and Italian art. In the water color and black-and-white rooms were comprehensive ex-

hibitions of the works of Samuel Palmer, Edward Calvert, and William Blake.

The one hundred and twenty-fifth summer exhibition, though scarcely up to the average in oils, was strong in water colors and in statuary. Sir Frederick Leighton was represented by several good works. "Corinna of Tanagra" is a half-length figure of the poetess, a noble brunette crowned with golden laurel, draped about bust and shoulders with amber red, resting, as if she had just stopped singing, with both hands upon the gilded lyre, which is the prize of victory. "Rizpah" is conceived in a different spirit. The mother, gaunt and pale, yet resolute, leans against the dead body of her son, which is covered with purple drapery, clutching a sickle as a weapon against the birds of prey. "Hit" represents a half-clad Bowman of the cave period, seated on a rock near a cavern, with his son, a boy of twelve, whom he is instructing in shooting, standing at his knee.

Sir John Millais's "Girlhood of St. Theresa" tells a story connected with her childhood, how, when only seven years old, she set out with her little brother from Avila, in Spain, to go to the country of the Moors in hope of dying for the faith. But on the bridge over the Adaja the two were met by an uncle who brought them back to their mother, who had sent to seek them. The twain are depicted crossing the bridge, the early morning light upon the towers of Avila behind casting pearly shadows that harmonize with the black and crimson velvet of the children's costumes.

Alma-Tadema's "In my Studio" shows a portion of his own sumptuous working room, with a nymphlike damsel in purplish costume, standing beside the piano, enjoying the scent of a bunch of Maréchal Niel roses. This picture is a present to Sir Frederick Leighton. "Comparisons," another contribution, represents a Roman interior and two stately ladies seated. Both have been reading, but one has dropped her book and looks with interest over the shoulder of her companion, who reads a passage aloud.

Mr. Poynter, too, contributes a classic picture called "Chloe," an elegant figure in white seated in an atrium, holding double pipes in her hand, while her lyre leans against a neighboring column.

Briton Riviere's "The King's Libation" represents a monarch of a dimly known antiquity, standing, a life-size figure, in a vast and lofty chamber before an altar of dark marble, from which the smoke of incense rises in a blue cloud. In one hand he holds his hunting bow, in the other he raises aloft a golden bowl, from which, while uttering the consecrating words, he pours a libation of wine. At the foot of the altar lie the huge bodies of four lions and a lioness, spoils of his bow and spear, his offering to the god.

J. W. Waterhouse's "Hamadryad" is a graceful figure hiding within the hollow trunk of an ivied oak and listening with rapt attention to a pipe played by a satyr couched near the tree. In "La Belle Dame sans Merci" the knight of Keats's poem has met the weird lady in the gloom of the pine wood, through the boughs of which is seen an azure stream in harmony with the purplish blue of the siren's robe.

Noteworthy among the sculptures were Gé-

rôme's "Bellona," shown at the Salon of 1892; "The Rescue of Andromeda," by H. C. Fehr, showing the dragon crawling over the prostrate Andromeda, with Perseus hovering over; and "The Housemaid," a bronze figure of a comely English girl kneeling beside her pail and wringing the cloth she has been using.

London: New Gallery, 1893.—The winter exhibition was devoted to the works of Burne-Jones, including 67 oil and water-color paintings, and more than 100 studies, crayons, chalks, and pencil drawings, many of them life-size. Among the paintings, which illustrate the artist's labors from 1861 down to the present time, are: "Merlin and Nimue" (1861), "The Merciful Knight" (1863), "Astrologia" (1865), "The Wine of Circe" (1869), "Phyllis and Demophoon" (1870), "Love among the Ruins" (1873), "Sibilla Delphica" (1877), "The Mirror of Venus" (1877), "The Beguiling of Merlin" (1877), "Laus Veneris" (1878), "The Annunciation" (1879), "Pygmalion" (1879), "Gray Graiae" (1880), "Feast of Peleus" (1881), "The Wheel of Fortune" (1882), "Flamma Vestalis" (1886), "Depths of the Sea" (1886), and "King Cophetua and the Beggar Maid" (1889).

In the summer exhibition one of the most remarkable pictures was Alma-Tadema's "Unconscious Rivals," in which he shows two Roman beauties in a balcony under a great arch, decorated in the Pompeian manner with arabesques on a red ground. The complex lights—that from the interior and the golden sunlight without—are marvelously well done.

J. W. Waterhouse sent a "Naiad," the complement of his "Hamadryad" at the Royal Academy. The Naiad has left her blue stream to peer, between the trunks of the trees upon its bank, at a faun sleeping in the shadow of the wood.

Mr. Watts's "Open Door" represents a slender country girl in a saffron-red frock, gray-green cap, and black apron, cautiously opening a cottage door to let enter from the storm outside a yellow butterfly. His "Neptune's Horses" is a large sea piece, in which, under a firmament decked with a few bright stars, a calm blue sea breaks in front into a huge wave whose crest assumes the half-defined forms of white horses.

E. Burne-Jones's "Pilgrim at the Gate of Idleness" and "The Heart of the Rose" are illustrations of William Morris's version of the "Romance of the Rose," parts of a series not yet complete.

The best portrait of the exhibition was J. S. Sargent's "Mrs. H. Hamersley," a superb life-size full-length figure in a rose-colored velvet dress, on the point of rising from a gray Empire couch, with a brownish-gray curtain for background.

London: Miscellaneous.—The offer of Mr. Henry Tate of a collection of modern pictures as the nucleus of a National Gallery of British Art has been accepted by the Government, and a site has been found where Millbank Prison now stands, the site formerly chosen at South Kensington having proved unsatisfactory. Among Mr. Tate's collection are Sir John Millais's "Ophelia" and "Vale of Rest," Luke Fildes's "The Doctor," Orchardson's "The Rift in the Lute" and "The First Dance," J. W. Waterhouse's "Lady of Shalott," and Sir Frederick

Donders, Josselin de Jong, J. H. Weissenbruck. Etching: C. L. Dake, Miss B. E. Van Houten, Ph. Zilcken, W. de Zwart.

Italy. Sculpture: A. Apolloni, A. Allegretti, C. Barbella, E. Biondi, L. Bracony, L. de Paoli, E. Maccagnani, A. Maltoni, E. Pellini, F. Soeböck, P. Troubetskoy, Adelaide Maraini. Oil painting: F. Carcano, M. G. Zanetti, G. Boldini, M. Corteggiani, E. Prati, A. Corelli, A. Dall'Oca Bianca, G. Bottero, P. Fragiaco, S. Novo, R. Santoro, O. Da Moli, G. Ciardi, L. Rossi, T. Lessi. Water color: A. Corelli, D. Pennacchini, P. De Tommasi, G. Simoni, C. Tiratelli. Line engraving: Regia Calcografia, Roma.

Japan. Sculpture: Okioka Asahi Eizo and Asahi Gyokzan, Okazaki Sessai, Otake Norikni, Suzuki Chokichi, Takamura Koun, Yamada Kisai, Schurak Baido. Oil painting, etc.: Kawabata Gyokusho, Imao Keinen, Mochizuki Gyokusen, Tasaki Sowun, Taniguchi Kokyo, Kubota Beisen, Noguchi Yukoku, Taniguchi Taichi, Hara Ryutarō, Mumemura Keizan, Ujii Sozan, Mori Shungaku, Asae Ryukyo, Takenchi Seiho.

Mexico. Oil painting: José Maria Velasco, Gertrudi Schmitlein.

New South Wales. Oil painting: W. Lister, Thomas Robert, A. H. Fullwood, Mrs. Ellis Rowan.

Society of Polish Artists. Oil painting: W. Pruszkowski, John Matejko, S. Kadzeński, J. Ryszkiewicz, W. Gerson, W. Teilmayer, Z. Jasinski, W. Pieckowski.

Spain. Sculpture: José Alcoverro y Amoros, A. Marinas y Garcia, Augustin Querol, Angel Trilles, Cipriano Folgueras, José Viziano y Marti. Oil painting: J. Garuelo, Felix R. Hidalgo, Santiago B. Rusiñol, José F. Tapiro, Degrain Antonio, Aureliano de Barnete, Juan y Rodriguez Planella, Dumond Alvarez, Luis Jimenez-Aranda, Fernandez y Pelayo, Carbonero Moreno, Gonzalo S. Bilbao, M. e Ibanez Ramirez, Luis Alvarez, Joaquin Sorolla, Enrique Simonet, José y Jimenez-Aranda, Sedano Santa Maria, M. Dominguez, José Gartner, Juan Loubre, Rosello, Ruiz Luna, Maria Poiala. Water color: José de Tapiro. Pastel: José de Pando. Black and white: J. Rios, J. L. Pelliser. Engraving: Ricardo de los Rios. Architecture: Domingo Dalet, Enrique Maria Repulles.

Sweden. Sculpture: W. Ackerman, Christian Eriksson, Per Hasselberg. Oil painting: Nils Kreuger, Carl Tradgardh, Alf Wallander, Bruno Liljefors, Ida von Schultzenheim, Carl H. Nordstrom, A. Schultzberg, O. Bjork, A. Jungstedt, O. Arborelius, Carl Larsson, Prince Eugene. Water color: Carl Larsson, Karl Kjellin. Pastel: Prince Eugene. Black and white: Bruno Liljefors. Etching: F. Boberg, A. H. Haig.

Turkey. Oil painting: Hamdi Bey.

Venezuela. Oil painting: A. Herrera Zoro, Arturo Michelena, Cristobal Rojas.
